NEW YEAR GREETINGS

THE CANADA LUMBERMAN

WOOD WORKERS' MANUFACTURERS' AND MILLERS' GAZETTE

VOLUME XXI. NUMBER 1. | TORONTO, CANADA, JANUARY, 1900 | TERMS, $1.00 PER YEAR. Single Copies, 10 Cents.

MAGNOLIA METAL

In Use by All the Leading Governments

BEST ANTI-FRICTION METAL FOR ALL MACHINERY BEARINGS.

BEWARE OF IMITATIONS

Genuine Magnolia Metal is made up in bars, of which this is a fac-simile :

The Name and Trade Mark appear on each box and bar, and besides this the words "Manufactured in U.S.," and "Patented June 3, 1890," are stamped on the under side of each bar.

MAGNOLIA METAL CO.

Owners and Sole Manufacturers 266 and 267 West Street, NEW YORK

Canadian Office, 318 St. Paul Street, Montreal, Que.
Chicago Office, Fisher Building, 281 Dearborn St. London Office, No. 49 Queen Victoria Street, London, E. C.
Cleveland, 15 South Water Street.

FOR SALE BY ALL DEALERS

Magnolia Metal is still selling at the same price it has always sold at—no advance.

R. H. SMITH CO., LIMITED

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

Simonds' Process

in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, Decemer 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test ette r than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

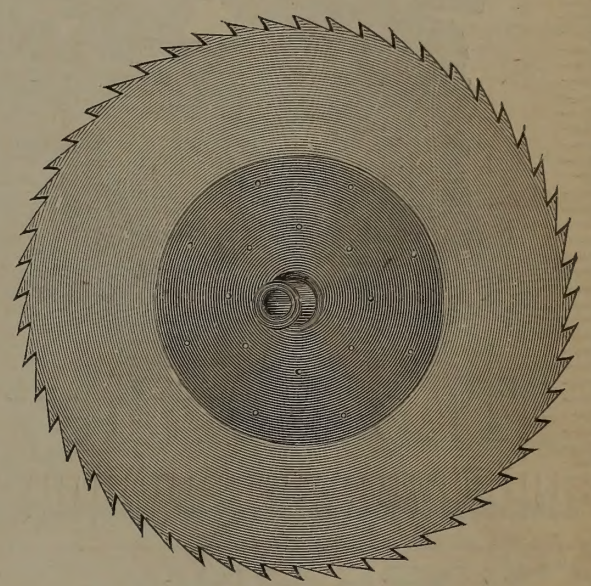
CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., LTD., St. Catharines, Ont.

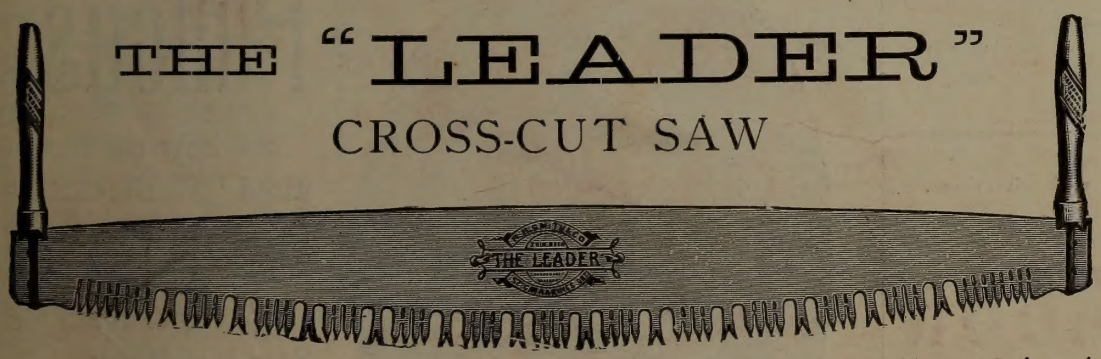
GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



THE "LEADER" CROSS-CUT SAW



These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

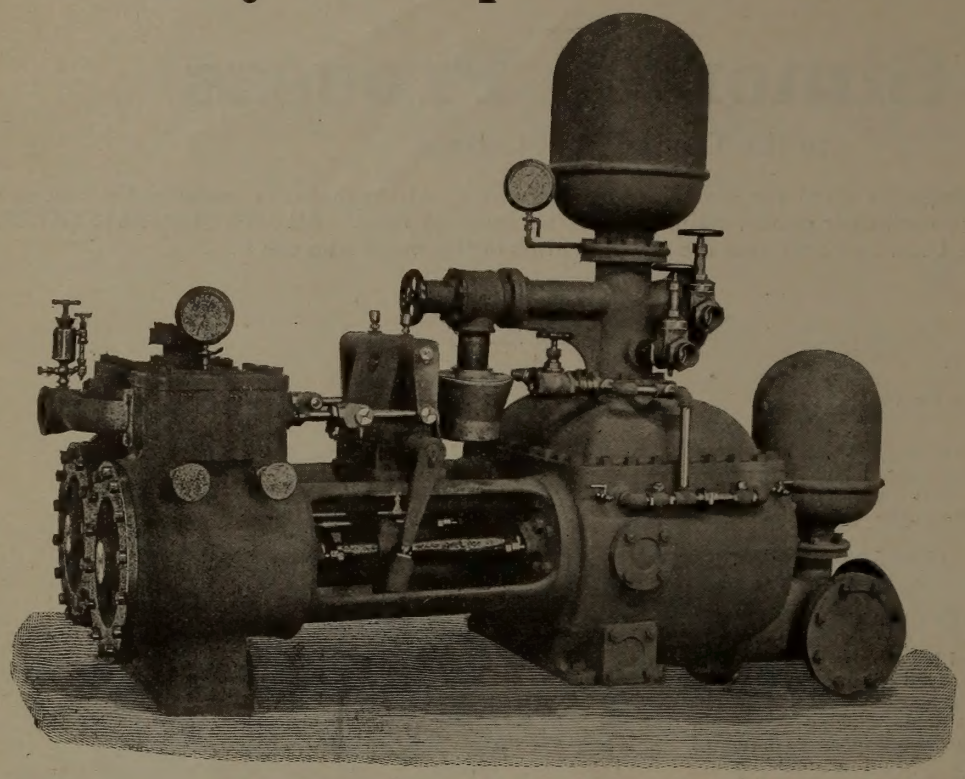
THE "LEADER" SAW SWAGE

Made in 3 Sizes—$2.00, $2.50, $3.00 Net.

OUR PRICES ARE RIGHT. KINDLY ALLOW US TO QUOTE YOU BEFORE PURCHASING.

R. H. SMITH CO., Limited, St. Catharines, Ont.

Northey Pumps—the Standard for Canada



Underwriters Fire Pump

This Pump fully satisfies the requirements of the Associated Mutual Insurance Companies. The Valve-Gear, Water Passages, Steam Ports and Air Chamber are all larger than in the ordinary Commercial Pump. Its construction leaves nothing to be desired in the way of Rust Proof, Strain Resisting Materials and Superior Capacity. A Pump of this description must command attention from every Factory or Mill Owner, as it is worth it's cost many times over in an Emergency.

We will be pleased to forward Catalogue and Specifications upon request.

THE CANADA LUMBERMAN

VOLUME XXI. NUMBER 1. | TORONTO, CANADA, JANUARY, 1900 | TERMS, $1.00 PER YEAR. SINGLE COPIES, 10 CENTS.

THE TIMBER RESOURCES OF THE RIVER COULONGE.

THE Coulogne river is one of the many large tributaries of the Ottawa, and therefore a great lumbering centre. It takes its rise about 125 miles to the north, not very far from the head waters of the Ottawa itself, and joins it about 80 miles above the capital, at the village of Fort Coulogne, one of the most beautifully situated spots on the Ottawa, with picturesque surroundings in the way of water falls, rapids, and many pretty islands.

The village of Fort Coulogne is also interesting as having been a trading station of the Hudson's Bay Company—that was in the early days. The old post is still standing on the banks of the river a mile or two from the village. It is now occupied as the residence of a retired Hudson Bay Company trader. The village is still the home of the Brysons, a family widely and favorably known on the Ottawa, where for fifty years they have been intimately connected with the lumber trade.

The Coulogne river is a continuous series of rapids and falls from its source to the outlet. Some of the falls are of considerable height, especially the last one, a few miles from the mouth. This one has been overcome by the erection of extensive dams and slides, the latter being thousands of feet in length. These improvements were made by the government to facilitate the driving of logs and timber, and have been in use for over thirty years. They were the first and only improvements on the main stream until quite recent years.

In 1895 the late John Bryson organized an improvement company, called the Coulogne and Crow River Boom Co., for the purpose of improving the upper stretches of the river. Prior to this time the log drives from that part of the stream rarely got out in one season; but after the company spent a considerable sum of money in making reserve dams and side piers along the river, the difficulties of driving were greatly reduced, and now logs and timber run into the boom at the mouth in from thirty to forty days from the very head of the stream.

THE COULOGNE A GREEN COUNTRY.

Any person who has travelled up other tributaries of the Ottawa, either by canoe or by the roads, must have often wondered where the lumbermen continued to get their supply of logs and timber, for as a rule there is not much else to be seen, from the usually travelled route, but brule waste—in many places veritable seas of dry pine. A trip up the Coulogne is a refreshing change in this respect. One sees very much less evidence of the passage of the destroyer of pine—the forest fire, which has wrought greater havoc than ever the axe has done.

SCENES ON THE UPPER COULONGE.—A LUMBER PORTAGE ROAD IN THE FOREST.

This contrast is especially noticeable on the upper section of the Coulogne, where, owing to the inconvenience of access, the squatter has not yet reached, and whose presence, it is to be hoped, the government and the lumbermen will not encourage.

The accompanying illustrations of scenes on the upper Coulogne will give the reader some idea of the vastness of the timber resources of this district. These illustrations were reproduced from excellent photographs and are of more than ordinary interest.

Supplies are put into the woods there during the winter months, and invariably and necessarily for one year in advance, as there are no summer roads into the upper country. Keep-overs are built at various points on the limits where it is intended the next season's operations shall be, and the supplies are delivered to them from a central depot. The men are taken in early in the fall in boats and canoes just as they used to be forty years ago. Extra hands required for the drives to replace those of the winter hands who may not wish to stay for the drive are taken up in the month of April, just before the break-up.

The Coulogne belongs to that pine belt which lumbermen speak of as a country which stands cutting. For upwards of forty years the axe has been at work there. Raft upon raft and logs by the hundreds of thousands have been continuously coming down this river, and yet it is not cut out; in fact, it stands to-day the most important of all Ottawa's feeders.

The quantity of standing pine may safely be put down as at least one billion feet board measure, besides which there are large quantities of spruce and cedar.

As previously mentioned, the head waters of this stream and the Ottawa are not far apart. Lumbermen have not yet made the last move north. When they do it is not unlikely that a railroad of about thirty miles length will be built to connect the waters of these two streams and divert about five hundred millions of pine into the Coulogne. A saving in the drive could be effected of about 300 miles.

RE-FORESTRY.

A year or two ago we heard much about re-forestry, and the planting of young pine on waste lands was advocated. There are thousands of miles on the Coulogne, Black and Dumoine and other streams where no planting would be necessary, for it is already growing up with a second crop of pine, which, although it may never reproduce the class of trees now being cut away (for that would require a couple of hundred years growth), will furnish a supply of eight and ten inch logs useful for local requirements in about thirty or forty years, providing fire is kept out. If our government would properly inform themselves in regard to these areas of young pine, and spend some money in protecting them, it is said

that they need never trouble themselves about doing any tree planting.

This present government system of fire ranging is indeed an excellent one, but not extensive enough to take in this young pine. The force would require to be doubled, but it would pay in the end. We will admit that there is about ten billion feet of pine standing in Ontario, of a growth sufficiently large to produce an average

SCENES ON THE UPPER COULOGNÉ.—A QUIET SPOT IN THE FOREST WHERE THE AXE HAS NOT BEEN.

of 12 logs to the thousand feet B.M., distributed as follows on lands under license :

Georgian Bay waters	3,000	millions.
Kippewa, Temiscamingue and upper Ottawa head waters	1,500	"
Mattawin	200	"
Amable du Fond	400	"
Dumoine	800	"
Petewawa	500	"
Bonnechere	100	"
Madawaska	800	"
Black	300	"
Coulogne	1,000	"
Gatineau	500	"
Lievre and Rouge	500	"
Total	9,600	millions.

The annual cut is not likely to be much less than 800 millions. That means a supply of good sized logs for twelve years. Unless our young pine is protected, therefore, where is the future supply to come from ?

True, the Ontario government has still considerable pine in the northern part of the province, but have they enough to supply many years cutting ?

Among the pioneers of the lumber trade on the Coulogne may be mentioned : John Usborne (succeeded by the Gillies Bros.), the Brysons, Alex. Fraser and Perley & Pattee.

Those principally interested now are J. R. Booth, Gillies Bros., Bryson & Fraser, W. C. Edwards & Co., Fraser & Co., McLachlin Bros., Alex. Barnet, the Eddy Co., and McLaurin & MacLaren.

Engineers sometimes blow down their boilers while the engine is running. In such a case the feed pump should be stopped, for otherwise a portion of the capacity of blow-off pipe will be used to convey fresh water away, thus reducing the rapid flow from the boiler, which is desirable for good effects.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN)

THE Ottawa Lumbermen's Association promises to become an important factor in the business. It has been formed with a view to establishing a uniform system or scale of culling, to be known as the Ottawa Culling Standard. Heretofore purchaser's agents have been stationed in the mill yard, where they decided the grading of the lumber their employers were securing. English buyers were particularly exact in this respect, and frequently raised the grade, thus lowering the price, for what the mill owners thought insufficient reasons. To remedy this, for what they claim is their own protection the Ottawa mill owners have formed the aforesaid association or board. A uniform system of culling will be adopted, and should the buyer complain of receiving lumber inferior to that of the particular class being bought, the matter will be dealt with and decided on by two or more members of the board. They will inspect the lumber in dispute and decide the merits of the buyer's and seller's contentions. Their ruling will be final. The association will both arbitrate between buyer and seller and faciliate the business. With American shipments the local dealers state they have little trouble, but on the English market, where the highest grades are accepted, the reverse is the case.

Messrs. James and R. J. Davidson, of the firm of Davidson & Thackery, have again both been nominated for positions at the Ottawa council board. Both brothers sat in the council last year, and their prospects of re-election are good.

Steps are being taken to establish the Ottawa Saw Works in Hull. The promoters of this established industry find the present premises too small to accommodate the business done, and they will build on a larger scale in Hull. The Hull council wass approached, and has agreed to grant the company a bonus of $15,000 as well as give concessions in the matter of taxes, etc. A by-law will be drawn up and presented to the ratepayers at an early date, by which means the loan will be procured. In the new establishment $35,000 will be invested in buildings and machinery. It will have three times the output of the present works, and will give employment to 40 men. All styles of saws and files will be turned out. Swedish iron will be used in the new establishment, as it is found more suitable to the purpose than other kinds. A member of the firm is now in New York arranging for a steady supply of this ore.

Mr. Edward Mackerall, Canadian representative of Watson & Todd, the Liverpool lumber merchants whose Canadian headquarters are at Ottawa, returned to his home in England early in December for the Christmas season.

Since taking possession of the planing factory of J. A. DesRiviares & Co., Ottawa, in July last, Mr. S. R. Poulin has doubled the output and business done. This is attributed to the brisk building operations carried on throughout the city. The staff has been increased to 45 hands and prospects are good for next season.

Smith & Heney, of this city, have secured a $30,000 contract from the Dominion government, to build a wharf at North Bay, Cape Breton island. The timber used will be North Carolina pine, treated chemically to prevent decay due to the action of the water.

A factory is to be erected in Ottawa for the manufacture of cotton rope and twine. This rope, which will displace the manilla, will also be used in mills and factories to transmit power.

The kilns just completed by the E. B. Eddy Company at their Hull factories are now running in full blast. The kilns are built of stone and are circular in shape, all three being covered by the one roof. By a new fan system of heating, the wood placed in the kilns is dried thoroughly, no matter what position it occupies, as the temperature is the same throughout the kilns. Neither the grain or color of the wood is much affected, and the wood after treatment is much more durable and suitable for manufacturing purposes.

The place of honor in the city office of the Ottawa Lumber Company at Ottawa is given to a rusted and battered tomahawk. This was secured in the heart of a 25" pine log, and judging from the workmanship of the hatchet, and the size of the log itself, the hatchet must have lain in the log for 75 years, having probably been imbedded when the tree was a mere sapling. On either side of the tomahawk can be noticed the marks where the wood had apparently eaten well into the wood.

Mr. J. R. Booth will in all probability erect a factory at no distant date, in which saw dust will be chemically treated for certain acids and oils to be found in this apparently useless product of the saw mill. Under Mr. Booth's orders experiments have been conducted for some time, and the lumber king and chemists interested are now fully satisfied that their theories are correct, and that valuable by-products can be obtained. The processes are of course secret, but it is understood that the saw dust is first burned in retorts, and the smoke driven off confined, and from it the acids and oils are obtained. Carbon, it is expected, can also be secured, as well as oil of tar, etc.

OTTAWA, December 27th, 1899.

SCENES ON THE UPPER COULOGNE.—A LUMBER HEADQUARTERS' DEPOT.

THE FOREST WEALTH OF SIAM.

IN a little booklet issued by the Philadelphia Commercial Museum, we find the following reference to the teak forests of Siam and the methods of lumbering : The teak forests of Siam are of immense extent. They are situated in the north, and the most productive region at present may be included in a circle, which, drawn round Chiengmai and Phree, encompasses all the head waters of the Meping, Mewang (Lakon river) and Meyom. The right bank of the Meping, from the Melayan down to the Klong Kong below Kampeng, is also a very productive district. Both sides of the range of hills here are scattered over with teak forests, the timber on the west side being floated down the streams to the Thouugyengh and thence into the Salween, and that on the east side into the Meping, and finally to Bangkok.

The lessees of by far the largest proportion of the forests in Siam are Burmans ; a few forests are leased by Siamese and a small one by a Dutchman ; but practically nearly the whole of the extensive teak forests of Siam are in the hands of British subjects, either by virtue o original leases or by an arrangement for working which is almost equivalent to handing over a lease.

An important item in the carrying on of the teak industry is the cost of elephants, which do all the dragging and arranging of the logs. The best elephants in the teak forests of Siam cost from 2500 rs. to 3000 rs. ($550 to $650), ordinary elephants 1000 rs. ($200), and as many as fifty or upwards are required in some forests.

To estimate the amount of capital which lies locked up in the teak forests is a matter of some difficulty, as it is of course impossible to ascertain the capital of each individual firm. But, roughly speaking, it can be calculated from the production. The average production of full-sized marketable logs, i. e., logs over 5 kam (21¼ inches) in semi-girth, may be put down at say 60,000 and valued at 35 ticals a log, which makes a total of 2,100,000 ticals ($630,000). A period of four years on an average elapses in the teak trade before any turnover is made ; that is, capital invested now will not be realized on till four years hence, when the timber is actually in the market. Therefore, multiplying 2,100,000 ticals by 4, we arrive at 8,400,000 ticals ($2,520,000), which necessary to work out the logs which are brought down to the Bangkok market.

Taking the average of the timber that floats into the Salween from Siamese forests at 40,000 logs, which is, if any, below the mark, we arrive at another sum of 5,900,000 ticals ($1,680,000). This sum, with the Bangkok capital, represents about $4,200,000 invested in the teak forests of Siam, by far the largest proportion of which is British.

IMPORTANT JUDGMENT AFFECTING BUSH FIRES.

MR. Aubrey White, Deputy Commissioner of Crown Lands, as referee appointed by the high courts to decide a claim by O'Neil & Ferguson, railway contractors, against the St. Anthony Lumber Co., has given an important decision of interest to lumbermen. The contractors were constructing a section of the Parry Sound railway when a fire broke out in the St. Anthony Co.'s limits near Whitney. At the request of the Ontario bush rangers the railway men fought the fire, about 200 men being engaged on and off for a week. The contractors asked the lumber company to pay the actual wages of the men for the time so employed. The request was refused on the ground that the railway contributed to the fire, and that the bush rangers were not agents of the company.

There was a great bulk of evidence, and judgment was given against the St. Anthony Lumber Company for $653. Mr. White found that the rangers have power to call for assistance in the event of fire at the expense of the lessees.

SCENES ON THE UPPER COULOGNE.—A DRIVING CAMP—SECOND LUNCH.

SCENES ON THE UPPER COULOGNE.—A LOG DUMP.

PERSONAL.

Mr. W. N. McEachren, lumber merchant, of Toronto, was a candidate for school trustee at the recent election in Toronto.

Mrs. Hurdman, wife of Mr. Robert Hurdman, lumberman, of Ottawa, died in that city on December 3rd, from an attack of paralysis.

We are pleased to learn that Mr. E. W. Rathbun, president of the Rathbun Company, Deseronto, Ont., who has been indisposed for some time, is now on the road to recovery.

Mr. E. Stewart, chief of the Timber and Forestry Department of the Dominion Government, has recently returned from attending the annual meeting of the American Forestry Association at Washington.

Mr. C. M. Becker, of the British Columbia Mills, Timber & Trading Co., Vancouver, left on December 6th for China. It is understood that he will tender for the supply of timber for the construction of the Tientsin railway.

MONTREAL LUMBER SHIPMENTS.

THE lumber exported by the principal shippers to the United Kingdom from Montreal, during the seasons of 1898 and 1899, was as follows :

	1898.	1899.
Watson & Todd.....	44,819,842	55,779,706
Dobell, Beckett & Co....	76,924,116	53,421,275
W. & J. Sharples.....	62,488,502	52,180,549
R. Cox & Co.....	39,626,140	35,732,949
J. Burstall & Co.....	30,802,571	26,887,315
McArthur Bros.....	35,395,533	24,368,952

These figures show a decrease for the season of 1899 of 41,885,958 feet, as compared with 1898. Five of the above shippers decreased their shipments against 1898 by some thirty million feet. The firm of Watson & Todd, however, increased their shipments over eleven million feet. It is understood that the past season has proved to be one of the healthiest in the trade for many years.

TO NON-SUBSCRIBERS.

This issue of the CANADA LUMBERMAN will be received by a number of persons interested in the lumberin business who are not regular subscribers, it being the aim o the publishers that every lumberman in Canada should b come acquainted with the paper. Those who are not subscribers are asked to peruse this number carefully, when we feel satisfied they will commence the new year by investing the sum of one dollar in a subscription. For this they will receive both the weekly and monthly editions. Send in your name to-day.

HISTORICAL OF THE LUMBER TRADE.

TWENTY years ago the CANADA LUMBERMAN made its bow to the lumber trade of this Dominion—a new venture, but relying for its support on a class of business men of whom generosity is a characteristic trait. Since that time the journal has gone forth regularly to its readers, and with this issue enters upon its twenty-first volume. It is, we hope, with pardonable pride that we make this reference, and at the same time give a brief history of THE LUMBERMAN and a review of some of the events associated with the lumbering industry, as gleaned from early numbers of the journal. This latter feature will serve to recall to the older members of the trade incidents which Father Time has well nigh blotted out, while to the younger members it may perhaps prove both interesting and instructive.

We reproduce on opposite page, to a somewhat smaller scale, the original heading of THE LUMBERMAN. It was first pubished as a semi-monthly journal, at the subscription price of two dollars per year, by A. Begg, of Toronto, whose introductory read as follows :

INTRODUCTORY.

In bringing before the public a new journal specially devoted to lumbering interests, and incidentally to milling, manufacturing and mining, as being kindred forms of development of the national industry, there is little apology needed. As there are special branches in trade, so there are special departments in journalism. The daily paper, morning and evening, rushes forth without regard or respect for any interest, but with an intention well formed to treat all fairly; and the result is a little general information here, a little special pleading there, and a large mass of the general gossip concerning things that occur upon the streets or elsewhere, but have very little practical interest for the business man, no matter what may be the branch in which he is engaged.

It is for this reason that specialists in journalism have in many cases achieved such remarkable success. Not to speak of the religious journals, whose existence depends on the zeal of the sects, there are others, such as the Bullionist, the Scientific American, the Grocer, &c., that represent special interests in trade and science, and they all receive a more or less generous support, from their own class—from those who are interested in the specialties they represent.

Though much attention has been given to the lumbering interests by the press of Canada, yet it is felt that a special organ, which would concentrate the views of those who understand the business, and present them to the public in a way in which they could be fairly discussed, with a full comprehension of the value of the vast interests involved, would not merely serve those who are engaged in the trade, and their employees, but also the country at large. Let it be remembered that the lumbering interest is the second greatest in Canada—being next to the agricultural. Now, mining, milling and general manufacturing naturally take a secondary and subservient position, as being dependent on the success and progress of the two great national industries—agriculture and lumbering. In proportion as they prosper, so will be the general prosperity of the country.

It would be out of place in this "Introductory" to enter into details as to the vast resources of Canada as a timber producing country. It has not unfrequently been sneered at as a "wooden country," and the taunt is neither without foundation, nor is it one to be ashamed of. Canada is indeed a wooden country, but its woods are fast disappearing, and one of the prime elements of its early growth is being ruthlessly destroyed by the old style of management on the part of the government, and the reckless indifference of the people. It will be the duty of the LUMBERMAN to point out the injuries annually inflicted on the wooden wealth of Canada, by reckless tree-felling, and the still more reckless starting of forest fires, whether by sportsmen or settlers. Even in the latter particular our journal may, by assisting in arousing public opinion, be the means of saving millions of dollars to the country in a single year.

But we are not ignorant of the great responsibility of starting this journal. Devoted as it is to a special class of operators, it must mainly look to them for support. It has not the whole of the reading community to appeal to directly, and hence must depend for success on the earnest and liberal support of those in whose interest it is published. Lumbermen, as a class, are noted for their public spirit and liberality, and we freely trust to their generous support as well as to that of lumber dealers generally. Nothing shall be wanting on our part to make this journal a full and complete record of the lumber business and all that relates to the trade in Canada. To this end the latest market reports, the contributions of trustworthy correspondents, trade circulars, etc., will be freely used, to give our readers the best, the earliest, and the most reliable information that can be obtained, concerning the important branch of business to which this journal will be especially devoted; while the mining, the milling, and the manufacturing interests will receive attention proportionate to their great claims on the public.

In short, it will be our endeavor to make the LUMBERMAN worthy of its title in every respect; and, while giving special attention to the great staple industry to which it is devoted, it will also furnish a carefully selected amount of general reading that will make it a welcome visitor in every family.

Advertisers, especially those dealing in mill, mining, and lumbering supplies and machinery, will find the LUMBERMAN a very favorable medium of reaching their customers, as it will circulate among these classes, and receive more attention from them than they have the time or inclination to bestow on a general newspaper.

SCENES ON THE UPPER COULONGE—A RAFT ON ITS WAY DOWN THE OTTAWA.

In March, 1881, THE LUMBERMAN was purchased by Toker & Company, of Peterboro', to which place the office of publication was removed. Toker & Company continued its publication twice a month until October, 1886, when it was purchased by A. G. Mortimer. It was then changed to a monthly publication and the subscription price reduced to one dollar per year. In April, 1890, the office of publication was removed to Toronto. In the spring of 1894 Mr. Mortimer disposed of the journal to the present owners, who, on January 1, 1895, commenced the publication of a weekly intermediate edition, the subscription price, however, remaining at the sum of one dollar per year.

The character of the journal in late years is so well-known as to make any comment superfluous. Glancing at the early numbers, one is immediately impressed with the amount of space devoted to the forestry question and to the advocacy of a proper system of reforestation. Twenty years ago the necessity of taking steps in the direction of perpetuating our forests seems to have been as fully recognized as it is to-day, and it must be admitted that in the intervening period very little has been accomplished.

The Commissioner of Crown Lands for Ontario, in his report for 1879, shows the quantity of square pine taken out in the ten years from 1868 to 1877 to be 119,250,420 cubic feet. He estimates that the waste is equal to one-third of the total, namely 39,750,140 cubic feet, or in round numbers 477 million feet, which, valued at $7.50 per thousand, represents a loss to the province of $3,577,500.

A sale of Quebec timber lands was held on October 15th, 1880, at which $280,000 was realized. Among the purchasers were W. C. Edwards, James Connolly, E. Fitch and S. Lynch.

Wm. Quinn, supervisor of cullers at Quebec, gave the following statement of timber, etc., measured and culled at that port up to October 22nd for the three years 1878-1880 :

	1878.	1879.	1880.
Waney white pine..	1,846,640	1,444,609	2,099,454
White pine.....	7,917,756	2,507,729	3,978,612
Red pine.....	1,359,756	741,499	1,017,606
Oak.....	1,516,223	828,407	1,539,141
Elm.....	177,653	318,074	932,784
Ash.....	36,507	47,161	237,142
Basswood.....	923	280	363
Butternut.....	39	70	645
Tamarac.....	29,306	6,691	30,803
Birch and maple....	180,416	121,224	575,464
Masts and bowsprits	93 pcs.	50 pcs.	4 pcs.
Spars.....	42 pcs.	26 pcs.	23 pcs.

In the issue of October 30, 1880, under the heading of "A New and Valuable Invention," it is stated that Finlay Ross, of Byng Inlet, Ont., has invented and patented a gang of circular saws which will probably supersede the ordinary stock gangs of upright saws. By a simple contrivance, it is stated, he can arrange on one mandrel any required number of saws, which may be taken off at pleasure as easily as the ordinary gang by shifting a key and coupling.

SCENES ON THE UPPER COULONGE—IMPROVEMENTS ON A CREEK.
(In the early days less of this was done than at present; now the tendency is to shorten the haul by improving the streams.)

Mills on the Georgian Bay in 1880 were those of the Collingwood Lumber Company, incorporated about 1871 at the instance of Hon. Mr. Dodge, of New York, and others, under the management of Mr. D. G. Cooper; Georgian Bay Lumber Co., including the Waubaushene and Severn mills, under the management of T. W. Buck; the Parry Sound Lumber Co., managed by J. C. Miller; and the Magnetawan Lumber Co., under the management of Mr.

J. H. Buck. These mills were incorporated as one concern under the general supervision of Mr. T. W. Buck, of Waubaushene.

Issues of THE LUMBERMAN in the year 1880 contain the advertisements of the Waterous Company, Brantford, Ont.; Wm. Hamilton Mfg. Co., Peterboro'; F. E. Dixon & Co., leather belting, Toronto; and J. Neill & Sons, saw mill machinery, foot of Esplanade street, Toronto.

In 1880 the principal firms carrying on lumbering operations on the Gatineau were Hamilton Bros., Gilmour & Co., and G. B. Hall & Co. Of these three firms only Gilmour & Co. are doing business to-day.

The annual report of Hon. Mr. Adams, surveyor-general of New Brunswick, for the year 1879 names 175 firms as operating in spruce and pine, of which the largest were Adams & Co., Cushing & Clark, J. S. Farley, A. Gibson, G. C. King, Wm. Muirhead, Geo. McLeod, J. B. Snowball, J. D. Ritchie & Co., Stephenson & McGibbon, P. R. Whitney and John Young.

In the season of 1880 the cut of lumber in the Ottawa valley was as follows: E. B. Eddy, 40,000,000 feet; Bronson & Weston, 37,000,000 feet; Perley & Pattee, 30,000,000; J. R. Booth, 30,000,000; Gilmour & Co., 30,000,000; Sherman, Lord & Co., 25,000,000; Capt. Young, 13,000,000; McLaren & Co., 15,000,000; McClemont & Co., 10,000,000.

J. Bell Forsyth & Co.'s wood circular for 1880 gives the following list of timber coves at Quebec, together with the names of the owners: Jacques Cartier Mills—E. L. Sewell. Alexandria—J. Bell Forsyth & Co. Cap Rouge—P. & W. Comy. Dalhousie—Forsyth & Dalkin. Victoria—M. Rockett. Ring's End—E. H. Jackson. New London—O'Connell & Co. Union—M. Stevenson & Co. Sillery—R. R. Dobell & Co., Safety & Bridgewater, Sharples, Bros. & Co., James Bowen. Pointe a Pizeau—R. R. Dobell & Co. St. Michael's—Cook Bros. & Co. Woodfield Harbour—S. Connolly. Spencer—Knight Bros. & Co. Wolfe's—John Roche. Cape and L'Ance des Meres—George Robinson. Stadacona—J. & W. D. Brown. St. Charles—John Home. New Waterford—A. F. A. Knight & Co. Montmorency Mills—G. B. Hall & Co. St. Nicholas Mills—W. G. Ross & Son. Chaudiere Basin—J. Breakey. North Liverpool—Ritchie Bros., Benson Bros., Hamilton Bros. Etchemin—H. Atkinson & Co. Hadlow West—G. B. Symes Young. Mill Cove—S. J. Bennett. Hadlow—Price Bros. & Co. St. Lawrence—W. Dock & W. Co. Windsor—G. B. Symes Young. South Quebec—Warehouse Co. Indian Cove—A. Gilmour & Co., James Patton & Co., J. MacLaren & Co.

REPRODUCTION OF ORIGINAL HEADING OF THE CANADA LUMBERMAN—1880.

The quantity of logs to be taken out in the Muskoka and Parry Sound districts during the winter of 1880-81 was estimated as follows: Georgian Bay Lumber Co., 70,000,000 feet; British Canadian Lumber & Timber Co., 26,000,000; T. Smith & Sons, 15,000,000; Rich Power, 12,000,000; Muskoka Mill & Lumber Co., 12,000,000; J. C. Miller, 15,000,000; Ontario Bank, 9,000,000; J. Thompson, 12,000,000; Dominion Bank, 6,000,000; Toronto Lumber Co., 7,000,000; Wm. Tait, 5,000,000; T. Meikle, 4,000,000; J. M. Dollar, 4,000,000; Cockburn & Sons, 4,000,000; Woodstock Lumber Co., 5,000,000; G. W. Taylor, 11,000,000; Wm. Bee, 3,000,000; S. S. Cook, 1,000,000; J. H. Hull, 2,000,000; A. Marshall, 1,000,000; B. Colwell, 3,000,000; G. Chase & Co., 1,500,000; other manufacturers, 10,000,000; total, 258,500,000.

A statement of timber limits granted in the North-West and Keewatin up to 1881 contains such names as: Richard Fuller & Co.; Macauley, Ginty & Sprague; Capt. H. S. Moore; Hugh Sutherland; Stephen H. Fowler; Dick & Banning; Patrick Kelly; and Pratt & Smith, few of whom are now connected with lumbering operations.

The Quebec government, in December, 1880, put in effect new timber regulations, reducing the fee charged on each transfer of timber limits from $4 to $1 per mile, and increasing the stumpage dues on pine saw logs from 15 cents to 26 cents on large logs and from 10 cents to 12½ cents on small logs. The lumbermen, in a body, objected to the increase in dues, and pointed out that in Ontario the dues were 75 cents per thousand, while the new tariff in Quebec would be equal to about $1.50. No immediate action, however, was taken by the government.

In the CANADA LUMBERMAN of April 15th, 1881, the formation of a lumbermen's association in Ontario was advocated.

A description of the process of making pulp from wood appears in THE LUMBERMAN of May 16th, 1881. This issue also contains an account of the sale of the Cook & Waddell timber limits on the Chippewa river. Mr. I. B. Tackaberry was the auctioneer. Sixty-eight square miles were sold to S. S. Cook for $88,400, or $1,300 per square mile, fifty miles to Gilmour & Co. for $40,000, another fifty miles to same parties for $32,500, and thirty-eight miles to E. B. Eddy for $6,460.

Theodore W. Buck, manager of the Georgian Bay Lumber Co.'s business at Waubaushene, Severn River, and Magnetawan, died in May, 1881. He was succeeded by G. S. Peckham.

A company is about to be organized to utilize the saw-dust produced by the different saw mills throughout the province of Nova Scotia by turning it into pulp, out of which paper is to be manufactured. The headquarters of the company will be at Bridgewater.—June 1, 1881.

Gilmour & Co.'s saw mill at Trenton, Ont., built in 1852, was wiped out by fire on May 18, 1881, but was rebuilt in the same year.

John Thompson, manager of the Longford Lnmber Co. at Longford, Ont., died on June 5th, 1881. Mr. Thompson was one of the first subscribers to THE LUMBERMAN.

On May 22nd, 1881, 30,000,000 feet of logs became jammed in the Miramichi river, causing one of the largest jams that has ever been known.

In the spring of 1881 the demand for coarse lumber exceeded anything that had been previously known in the trade. It was difficult to purchase mill culls, dry or green, and shingles and lath were scarce. The conditions, it will be observed, are much the same as those existing in the trade at the present time.

E. B. Eddy, of Hull, adopted the electric light in his factories in the summer of 1881. Upon the opening of the building it was crowded with visitors, and the event was freely commented upon by the local press. The Northwestern Lumberman, about that time, in a leading article, draws attention to the possibilities of electricity as a means of illuminating saw mills.

The Canadian Lumber Co., of Midland, was organized in 1879, with a capital of $1,000,000, under the presidency of H. H. Cook, now of the Ontario Lumber Co.

The Midland & North Shore Lumbering & General Manufacturing Co. commenced its existence in August, 1881, the directors being Dalton Ulyott, of Peterboro'; Malcolm McDougall, of Parry Harbor; R. C. Smith, of Port Hope; J. A. Barron, of Lindsay; A. P. Poussette and C. A. Cox, of Peterboro'; J. H. Beatty, of Thorold; and Hon. T. M. Gibbs, of Oshawa. The capital stock was $750,000, and the head office was in Lindsay, Ont.

Wm. Quinn, Supervisor of Cullers at Quebec, died early in August, 1881.

A large sale of timber limits in the Muskoka and Parry Sound districts was held by the Ontario government on December 6, 1881, under the direction of Hon. Mr. Pardee, Commissioner of Crown Lands. The auctioneer was C. D. Cowper, of the Crown Lands Department. The limits aggregated 1,411 square miles, of which 1,281 miles were sold for a total of $717,176, or an average of $560 per square mile. The highest price paid was $2,500 per mile for berth 2 in the township of McConkey, by J. M. Masten. Among the purchasers were T. G. Blackstock, Cook Bros., Mossom Boyd, A. Hill, McArthur Bros., H. H. Cook, T. Murray, M.P.P., R. Thompson, J. R. Booth, T. Mackay, J. L. Burton, M. Brennan, R. Gaffrey, and D. Moore.

We learn that C. H. Edwards, lumber dealer, has been shipping several car loads of dressed lumber from Toronto to Winnipeg.—April 1, 1882.

Rose & Co., of Quebec, are shipping board timber from Michigan to St. Ignace, Que., the ultimate point of destination being the European market. It is said that they will ship about $1,000,000 worth of board timber this season.—May 1, 1882.

The Lumberman's Gazette, of Bay City, Mich., in June, 1882, comments on the rapid exhaustion of the Michigan pine timber and refers to the possibility of obtaining a supply for the mills from the Georgian Bay district. This, it states, could only be accomplished by water transportation and the adoption of some method by which the logs could be towed in large rafts.

Thos. Moore, in THE LUMBERMAN of July 1, 1882, advocates the building of pole roads for lumbering operations instead of iron tramways. He estimated that a good pole road could be built for $120 per mile, and planked with slabs and covered with saw-dust for $50 additional.

A noteworthy feature of Chicago trade is the shipment of 75 cars of lumber to Manitoba. Mr. Getchell, of Getchell, Armour & Co., is entitled to the credit of working up this trade. The lumber forwarded was all dry stuff.—August 1, 1882.

On September 20th, 1882, a meeting of prominent men was held in the city of Montreal for the purpose of considering the formation of a Canadian association for the promulgation and protection of forests. The speakers included James Little, convener of the meeting, Hon. Mr. Joly, Hon. Mr. Lynch, Dr. H. Howard, Hon. Mr. Perrault, Hon J. K. Ward, Henry Lyman, Dr. Alloway and W. Drysdale. It was decided to organize "The Canadian Forestry Association of the Province of Quebec," a committee for the purpose being appointed.

An account is given in October, 1883, of a large raft of logs which was taken from St. John, N.B., to New York. The raft was 1,200 feet long, 24 feet wide, and 12 feet deep, and comprised 11 sections, each of which contained 500 logs. The distance which they were towed was 650 miles. Severe weather was encountered and a vessel was sent to the rescue of the supposed lost raft. The arrival of the raft in New York occasioned great interest among shippers, it being the first undertaking of the kind attempted.

Hon. James Skead, a pioneer and prominent lumberman of the Ottawa valley, died in July, 1884. He was a director of the Ottawa Association of Lumber Manufacturers and of the Madawaska River Improvement Company.

On July 1st, 1884, an International Forestry Exhibition was opened at Edinburgh, Scotland. The late Edward Jack represented the New Brunswick government and the New Brunswick Land & Lumber Company, and made an exhibit of pine, spruce and hardwoods.

James Conmee has purchased the mill and lumber business of Thos. Marks at Fort William. It is rumored that he is also about to secure the mill of the Algoma Lumber Company, situated on the Kaministiquia.—July, 1885.

In August, 1885, Hon. Mr. Costigan introduced a bill in the Dominion parliament to amend the act relating to the culling of timber in the provinces of Ontario and Quebec.

McBeth Bros & Co., of Craighurst, Ont., have purchased an extensive timber limit in the vicinity of Huntsville, and intend taking out board timber for the Quebec market.—September, 1885.

At the annual meeting of the American Forestry Congress, September, 1885, Hon. H. G. Joly, ex-premier of Quebec, was elected vice-president.

The Ontario government held an auction sale of timber limits on December 15th, 1887, at which $1,312,712.50 were realized. The buyers included: Wm. Murray, Pembroke; T. H. Moffat, Pembroke; Albert Pack, Osceola, Mich.; Jos. Riopelle, Ottawa; Wm. Fraser, Westmeath; A. Barnet, Renfrew; Callahan & Montrose, Alpena, Mich.; N. Dyment, Barrie; Alex. McArthur, Toronto; J. Cockburn, Gravenhurst; Wm. Mackey, Ottawa; Longford Lumber Co., Longford Mills.

THE CANADA LUMBERMAN
WOOD WORKERS MANUFACTURERS AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company of Toronto, Limited
CONFEDERATION LIFE BUILDING, TORONTO
BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Special pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

1880-1900.

THE first of the above numbers represents the year in which the CANADA LUMBERMAN was introduced to the lumber trade of the Dominion. The initial issue of the journal was somewhat unpretentious in character, although perhaps comparing favorably with other trade papers of twenty years ago.

During the intervening years the methods of lumbering have changed, year by year improvements have been introduced, until to-day the saw mill of 1880 would be considered of an antiquated character indeed.

Of the many improvements in saw mill equipment recorded in THE LUMBERMAN, and which were tardily adopted while in their experimental stage, but quickly applied after their success had been demonstrated, the most important, in our opinion, was the double acting band mill, introduced in Canada for the first time in the year just closed. This innovation may be said to have passed beyond the experimental stage, and it is certain to form a feature of the equipment of large mills containing band saws which may be built in the future. This is as it should be. Why should not the saw cut on the backward as well as on the forward run?

While aiming to chronicle interesting events affecting the important industry which it represents, this journal has also striven to so adjust itself to changed conditions as to be of the greatest value and usefulness to the trade. With the expansion of our export trade, it was felt by the publishers that a more frequent means of communication between the manufacturers and buyers of lumber was a necessity. Hence the weekly edition was established five years ago. More recently the publication af export numbers has been undertaken, in view of the manifest desire on the part of foreign importers for information regarding our timber products and manufacturing capabilities.

The CANADA LUMBERMAN is now cosmopolitan in character, with readers in nearly every civilized country in the world. The number of foreign subscribers added to our list during the past year is very gratifying. There is also ample evidence that the journal is appreciated by the lumbermen of the Dominion and by the manufacturers of lumbering appliances.

We refrain from promises regarding the future. It will, however, be our aim to further increase the value of this journal to its readers, and we hope to enter the new century with the names of almost every lumberman in Canada on our subscription list.

To our readers we extend New Year Greetings, and the wish that the era of prosperity which now characterizes the lumber trade may long continue.

MASS MEETING OF LUMBERMEN.

THE first mass meeting of lumber manufacturers of the United States was held in the city of St. Louis last month. The meeting is regarded as one of the most important events that has ever taken place in connection with the trade. A portion of the proceedings have a common interest for both United States and Canadian lumbermen.

Repors were submitted covering all sections of the country and all classes of lumber, showing the stocks on hand late last fall in comparison with the stocks of one year ago. The great scarcity of low grade lumber was a remarkable feature of these reports. While low grade stock is entirely cleaned out, stocks of the upper grades are about an average. The secretary of the Mississippi Valley Lumbermen's Association reported that returns from 68 concerns showed a total shortage of 334,477,000 feet of pine lumber on December 1 last, as compared with one year ago. In the territory covered by the Mississippi Valley and Wisconsin Valley Associations, it was estimated that the shortage was 506,000,000 feet. The shortage in yellow pine, as reported by the Southern Lumber Manufacturers' Association, was given as 337,000,000 feet. The reports covering the hemlock field were rather incomplete, but corresponded in character to those already given. In Canada the situation is much the same as in the United States.

These conditions have been brought about by an increased demand from maunfacturing establishments rather than by the farmer's trade, which is an important factor in the lumber business. While there has been a wonderful expansion in city trade, the demand for lumber from the farmer has not undergone a corresponding improvement.

Much time was devoted at the convention to the discussion of a tariff resolution memorializing the American Commissioners of the United States and the British Joint High Commission not to remove the present duty on lumber or to reduce such duties beyond the proposed twenty per cent. reduction agreed to by the representatives of the American lumbermen at Washington in January, 1899. A statement was presented from the treasury department at Washington showing the imports of Canadian lumber for the fiscal years ending June 30 from 1888 to 1899. Our readers are familiar with these figures, excepting, perhaps, those covering the latter year. For the year ending June 30, 1899, the imports were 423,000,000 feet, while for the previous year they were 353,000,000 feet. But for the four months since July, 1899, the imports have been 324,000,000 feet, as compared with 148,000,000 feet for the corresponding months of 1898. The reason for this increase is shown in the following table of lumber values for the two years:

	1898	1899.
July	$9.78	$9.85
August	$10.03	$10.31
September	$9.60	$10.75
October	$10.00	$11.10

These values are taken from the official report, but notwithstanding this, we believe they underestimate both the value of the lumber per thousand feet and the increase in value which took place during the year.

In discussing the tariff resolution, some of the speakers seemed to attribute the present prosperity in the lumber trade of the United States to the import duty on the Canadian product, while others took a more rational view and admitted that the importation of a few hundred million feet from Canada into a country producing several billion feet annually could have but little effect upon the market.

A COMMENDABLE TIMBER POLICY.

STEP by step the Ontario government are adopting a timber policy which will eventually accomplish two desirable objects—first, the establishment of extensive saw milling and woodworking plants within the confines of the province; and, second, the perpetuation of a timber supply necessary for the existence of such plants. The adoption of the manufacturing clause was the first step in this direction. This legislation has been upheld by the lower court, and by such a clear and decisive judgment that, even should an appeal be taken to the Imperial Privy Council, no fear of a reverse decision is entertained. But granting that this legislation should be declared void, it is certain that by some other means the exportation of logs from the province will be prevented.

Michigan lumbermen holding limits in the Georgian Bay district are again operating this winter. They will either erect new mills or contract to have their logs sawn at existing mills adjacent to the limits. In either case the great benefit to the province, in comparison with the logs being exported, is apparent.

The second step in the direction above referred to was taken by the Department of Crown Lands in connection with the sale of timber

limits held on the 20th ultimo. The conditions governing the sale of the limits contained the following clause: "The said timber berths will be sold subject to the further condition that no license for the cutting and removal of pine trees shall issue after the expiration of ten years from the 30th of April next, and that all pine trees remaining on the limits after the expiration of ten years from the 30th of April next shall be the property of the Crown." This is the first instance in which a clause of this character has been embodied in the regulations governing the sale of timber limits. It is one of paramount importance to the province and to the public, particularly in view of its relation to the forestry problem.

Heretofore the licensee of a timber limit could, by paying the annual ground rent, maintain the limit in his control for an indefinite period. In some instances the limits have been purchased entirely for speculative purposes, the licensee paying the ground rent and renewing his license each year, relying for his returns upon the growth of the young timber on the limit. This prevented the government from applying any system of reforestization to the property. In other cases lumbermen have taken off the most valuable timber, but still retained possession of the limit, without, however, adopting the necessary precautions against fire. As a result the young timber has frequently been destroyed.

Under the new regulation the land will revert back to the government at the expiration of the ten years lease, when, it is only reasonable to expect, all the timber of value will have been cut off. The government will then protect the young timber from fire by employing the necessary fire rangers. In this way, the timber supply will be perpetuated. This new condition will also, we believe, have a tendency to reduce the quantity of timber offered to the public by the government, as in order to realize the full value of the timber, the quantity sold to be taken off the land within ten years will have to bear some relation to the demand for timber products during that time.

There is little doubt but that this provision will be embodied in all future licenses for the cutting of timber on Crown lands. So far, then, as timber lands sold henceforth are concerned, the government will be placed in a position to apply a practical system of forestry. The next question to be considered, therefore, is the perpetuation of the supply on Crown lands sold previous to the adoption of the ten-year clause in the regulations. A partial solution of this question might be found by putting into effect the recommendations made by the Ontario Forestry Commission in their preliminary report presented to the legislature in the spring of 1898. Clauses 3 and 4 of the recommendations read as follows:

"3. That for all unworked limits on which the ground rent shall be two years in default on the termination of the present license year, the license shall not be renewed, but that the berths be held by the Crown as forest reserve."

"4. That license holders be not allowed to cut any trees for logs smaller than will measure 12 inches across the stump two feet from the ground, unless under special forest conditions, with the sanction and under the supervision of the district forest ranger."

It must be gratifying to the members of this commission that the government have taken a step in advance of the recommendations. In their final report which will be laid before the House at the forthcoming session, a line of policy will no doubt be outlined which will greatly assist the government in their further work of reforestization.

EDITORIAL NOTES.

In this issue will be found an article contributed by one of our readets outlining a method of piling clear red pine so as to prevent staining. This is a problem to which much consideration has been given, and the publishers are indebted to the writer for discussing the question in our columns. It is our wish that other readers also should submit their views, and that THE LUMBERMAN may become a means by which those actively engaged around saw mills may learn of the methods and experiences of others and profit thereby. Contributions on practical subjects are solicited.

BRITISH importers of wood goods from Canada complain that inconvenience as well as expense is sometimes caused owing to the vessels from the St. Lawrence arriving at destination before their papers. It is difficult to understand why this should be the case, as mail steamers almost invariably make greater speed than freight vessels. There is a possibility that the papers are not always dispatched with promptness, and if so, we would suggest that shippers give this matter the attention necessary to avoid further complaints. But a more certain remedy would be the inauguration by the Dominion government of a fast steamship mail service.

WEST INDIA ISLANDS.

Writing to the CANADA LUMBERMAN from Grand Turk, Turk Islands, West Indies, Mr. W. Stanley Jones says:

"There are very few merchants dealing in lumber in this small place, the principal being Messrs. Frith Brothers, J. D. Murphy, and myself. The trade being small, it is not advisable to solicit consignments from your manufacturers. The small lots imported are always paid for as soon as received. The total quantity of white pine and spruce lumber imported last year (1898), was only 136,950 feet, of which 50,459 feet came from the United States and the balance from Nova Scotia and New Brunswick. From 1894 to 1898 (5 years) the whole quantity imported was 639,830 feet, an average of 127,966 feet annually. Of this quantity Nova Scotia and New Brunswick furnished 416,176, or about 65 per cent. You will see by these figures, which are correct, as they come from the blue book, that the business is small, as compared with other West India Islands."

Writing from St. Kitts, West Indies, Messrs. S. L. Horsford & Co. say:

"The lumber in this Island has fallen off very considerably during the last few years. Formerly there was a large demand for spruce boards for heads of sugar hogsheads, but bags having taken the place of the latter, there is now very little enquiry for this description of lumber. For building purposes, preference is given to New York white pine shipping boards, though possibly a good deal of what is shipped as such is really Canadian lumber. The ordinary Nova Scotia white pine, however, which in former years was almost exclusively used for building as well as for heads of molasses puncheons, is not now enquired for, and when imported is neglected in favour of the so-called Albany boards shipped from New York. In the matter of scantling, yellow pine from Florida is still exclusively used for framing. There is no enquiry for spruce scantling or deals.

"On the other hand, there is a growing demand for spruce and cedar laying shingles, in bundles of 250, a large quantity of these having recently been required owing to the damage to the labourers' houses by the late hurricanes, and there is nearly always a fair sale for them."

MAPLE BLOCKS WANTED.

Mr. John Mitchell, of Liverpool, England, has been in Canada recently purchasing maple blocks. These maple blocks, which are about 26 inches long and 6½ inches through, are used in England for the making of rollers for wringing machines. These machines are manufactured of iron, with wooden rollers two to each machine, and as some 350,000 are manufactured yearly in England, there are required 700,000 rollers. Formerly sycamore was the wood used as rollers, but this becoming scarce in England, as an experiment Canadian hard maple was tried and it proved a success.

Canada does not, of course, supply all the maple required, as there is considerable export from the United States. Much of the wood that is sent from Canada, however, is secured in three counties—Huron, Bruce and Grey—as they seem to produce just the class of hard maple that is suitable. We understand that there is also a large quantity of hard maple in the province of Quebec, particularly in the Eastern Townships, which abound in all kinds of hardwoods. The rollers require the choicest hard maple, and according to Mr. Mitchell, the demand for these blocks has resulted in an advance in the price of maple, in some instances from $10 to $12 per thousand having been paid for the logs.

THE LIVERPOOL STAVE MARKET.

A correspondent furnishes to Barrel and Box the following answers to questions asked concerning the stave market at Liverpool, Eng.;

Query No. 1—I estimate the value of staves used in this market at from £250,000@£300,000 per annum. It would be difficult to give an approximate estimate of the number of staves used, as a portion of those imported are sold on the basis of St. Petersburg standard of 165 cubic feet, while others are sold in bundles called shooks, each shook containing the sufficient quantity to make a cask, and others again are sold per mille of 1,200 pieces.

Query No. 2—The kind of staves in greatest demand are made from oak, elm and fir timber.

Query No. 3—Oak staves are largely imported from the United States, Russia and Austria; elm staves from Canada; fir staves from Norway and Sweden. The cost to consumers of oak staves is from £10 @ £25 per mille of 1,200 pieces, according to size and quality and point of production; elm from £1-10s @ £2-10s per mille of 1,200 pieces; fir from £6-10s @ £7-10s per St. Petersburg standard of 165 cubic feet.

Query No. 4—The larger portion of oak staves used in this market are preferred in their roughly rived state (not manufactured or dressed). Elm staves are used, manufactured and shaped in the same condition as used in the United States, and the fir staves roughly sawed, flat and square edges.

Query No. 5—Oak staves are used from 26 to 72-in. long, and varying in thickness from ½ to 3-in.; elm from 20 to 34-in. long, and varying of about the some dimensions as oak.

Query No. 6—Oak staves are preferred in thickness from ¼ to ¾-in.; fir staves are required rived from timber reasonably free of defects, and which has been felled in the winter, or at a time when the sap is most inactive. Elm and fir staves should be cut from reasonably clear timber.

Query No. 7—Supplies of nearly all classes are at present about equal to the demand. An exception may be made in the case of elm staves, the scarcity of which is driving consumers to the use of fir staves for the time being.

Query No. 8—By far the larger percentage of oak staves used in this market comes from the United States of America.

As regards other information not called for by the above questions, it may be of interet to your government to know that the oak staves used in most English breweries are obtained from Russia, and at prices considerably in advance of those paid by other consumers for United States staves. The reason of this is that the Russian timber is said to be freer of tannic acid (which affects the color and taste of the beer) than is the oak timber from the United States.

When the pointer of a steam engine vibrates violently, the cock in the pipe connection should be partially closed in order to prevent it, as such action will do the gauge no good, to say the least.

THE RECENT SALE OF TIMBER LIMITS.

THE legislative chamber in the Parliament Buildings at Toronto proved inadequate to accommodate the large number of lumbermen who gathered there on December 20th, in response to the announcement of an auction sale of timber limits situated in the districts of Nipissing, Algoma and Rainy River. Lumbermen were there from all parts of the province, as well as from Michigan, the number probably reaching 150. Mr. Peter Ryan, the king of timber limit auctioneers, wielded the gavel, while on his right sat Hon. E. J. Davis, Commissioner of Crown Lands, and on his left Mr. Aubrey White, Assistant Commissioner.

Among the prominent lumbermen present we noticed the following: John Bertram, John Waldie, J. B. Miller, W. A. Charlton, M.P.P., Wm. Smith, H. H. Cook, E. L. Weller, Joseph Oliver, Geo. Cook, Geo. F. Marter, M.P.P., Toronto; E. C. Whitney, Alex. Fraser, R. Hurdman, Ottawa; Thos. Murray, T. Mackie, M. P., Geo. Gordon, J. W. Munro, Alex.

Peter Ryan.

Gordon, Robt. Booth, R. Shannon, W. R. Russel, J. W. Munro, jr., Pembroke; Jas. McFayden, John Ferguson, A. Barnett, Renfrew; A. Hill, Maurice Quinn, Saginaw, Mich.; Joseph Turner, J. W. Ritchie, B. W. Morgan, Bay City; S. O. Fisher, Alpena, Mich.; Peter McArthur, Detroit; J. H. Bishop, Wyandotte; N. Dyment, M. Burton, F. A. Lett, Barrie; C. Mickle, Gravenhurst; Mossom Boyd, Bobcaygeon; A. Sharples, W. Powers, Quebec; C. Beck, Dr. Spohn, Penetanguishene; W. J. Sheppard, Waubaushene; James Playfair, Midland; H. Brennan, Hamilton; John Conlon, Thos. Conlon, Thorold; D. G. Cooper, John Long, Thos. Long, W. T. Toner, Collingwood; H. L. Lovering, Coldwater; W. R. Beatty, M. P.P., Parry Sound; Angus McLeod, Geo. McCormack, M.P.P., Bracebridge; J. E. Murphy, Hepworth Station; H. L. Graves, Buffalo; Wm. Irwin, Peterboro; W. E. Bigwood, D. McDougall, Wahnapitae; C. MacPherson, Orillia; D. M. Robertson, H. E. Kennedy, Wm. Margach, Rat Portage; F. Cochrane, T. M. Kirkwood, Sudbury; P. McDermott, South River; John Collins, S. A. Marks, Sault Ste. Marie; Hon. John Charlton, Lynedoch; T. Charlton, Tonawanda; Geo. Cormack, Whitby; C. A. McCool, Geneva Lake; Jas. McBurney, Simcoe; John Loughrin, M.P.P., Mattawa; J. H. O'Leary, R. Sylvester, Lindsay; H. Cargill, M.P., Cargill; F. J. Gillespie, Uptergrove.

After a few introductory remarks as to the growing value of pine limits, the auctioneer read the terms and conditions of sale, which included a clause that after ten years the land and timber should revert back to the Crown. This is a new regulation.

In response to a question regarding mining locations, it was explained by the assistant commissioner that grants of mining lands had always included with them the right to cut the necessary timber required for mining purposes, and that the regulations of the sale did not differ in this respect from the conditions governing former sales.

From the beginning the bidding was brisk, and it was evident that the lumbermen were prepared to buy. Of the 398¼ miles offered, 360 miles were disposed of, realizing the total of $723,550, or an average of almost $2,010 per mile. For the berths in the Rainy River district the bidding was chiefly confined to H. H. Cook, Wm. Power, D. M. Robertson and H. W. Kennedy, the two latter, it is understood, representing the Rat Portage Lumber Co. For berth No. 4, in the township of Harty, the two chief contestants were H. L. Lovering, of Coldwater, and Thos. Mackie, of Pembroke, the latter being successful in securing the berth. The heaviest buyer of timber was Mr. Mackie. Although there were several Michigan lumbermen present, they did not, so far as is known, purchase any limits.

The complete result of the sale, as complied from the departmental books, is as follows:

Locality.	Area in Square Miles.	Purchaser.	Bonus per Mile.
Bowell Township	7½	F. Cochrane, Sudbury	$4,100
Bowell	9	W. J. Sheppard, Waubaushene	1,300
Bowell	13½	Dr. Spohn, Penetanguishene	100
Foy	36	Booth & Shannon, Pembroke	500
Harty	9	Victoria Harbor Lum. Co., Toronto	2,200
Harty	9	Victoria Harbor Lum. Co., Toronto	2,300
Harty	10	Thos. Mackie, Pembroke	3,600
Harty	10	Thos. Machie, Pembroke	7,200
Lumsden	31	F. Cochrane, Sudbury	2,400
Ryan	28	John Collins, Sault St. Marie	675
Craig	40	Booth & Shannon	700
Moncreiff	2	T. M. Kirkwood, Sudbury	200
Davis	8	Geo. Gordon & Co. Pembroke	100
Norman	7	C. Beck, Penetanguishene	3,600
Norman	5½	C. Beck, Penetanguishene	7,400
Norman	9	G. G. S. Lindsay, Toronto	8,500
Norman	9	H. H. Cook, Toronto	3,700
Capreol	9	Geo. Gordon & Co., Pembroke	5,000
Capreol	9	Holland & Emery Co., Wahnapitae	4,400
Capreol	9½	J. W. Munro & Son, Pembroke	6,600
Widdifield	4	P. McDermott, South River	2,300
Widdifield	6½	T. W. Murray, Pembroke	1,400
Widdifield	5½	H. H. Cook, Toronto	4,000
Widdifield	¾	H. H. Cook, Toronto	2,000
Miccampbell	9½	H. W. Kennedy, Rat Portage	300
Pipestone Lake	3	D. M. Robertson, Rat Portage	800
Pipestone Lake	18	Wm. Power	400
Lake Rowan	7	Wm. Power	400

Pipestone Lake	12½	D. M. Robertson, Rat Portage	60
Clearwater Lake	3	H. W. Kennedy, Rat Portage	250
Kingsford	2¾	D. M Robertson, Rat Portage	1,100
Pipestone Lake	8	Dr. Spohn, Penetanguishene	325
Long and Storm Lakes	3½	Stewart & McLellan, Wabigoon	450

Berths G6 on Rainy Lake, G7 on Jack Fish Lake, and G11 east of pipestone Lake, were withdrawn.

CANADIAN FORESTRY EXHIBIT.

In addition to the list published in our December issue, the following have contributed material for the forestry exhibit at Paris: J. H. Still, St. Thomas, handles and whiffletrees; Hawkesbury Lumber Co., Hawkesbury, square timber and deals; W. C. Edwards Co., Ottawa, parquetry flooring, and material for sashes and doors.

We learn from Mr. Macoun, who has charge of the exhibit, that the Canadian Commissioners have instructed him to prepare a weekly circular letter during the exposition, which will include the names and addresses of all who make enquiries about lumber and wood specialties. These circulars will be sent to all who have contributed to the forestry exhibit.

We understand that although everything necessary to make the exhibit a complete and representative one has been procured, room can still be found for additional exhibits if application for space is made at once. There is, as we have before pointed out, a growing demand in England for chair parts and other hardwood specialties, and in these lines especially full exhibits should be made.

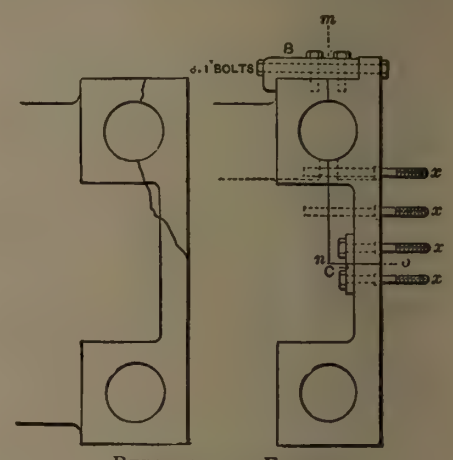
A word to the wise should be sufficient.

OUR REVIEW NUMBER.

THE February number of the CANADA LUMBERMAN will contain the annual review of the lumber trade for the year 1899—a year which passes into history as one of the most remarkable known by the lumber trade. In this number it is hoped to present such statistics and other information as will be of value to the trade. Circular letters have been sent to mill owners throughout the Dominion, some of which have been returned with the necessary information. It is hoped that those who have not responded will kindly do so as early in the month of January as possible, in order that there may be no delay in the preparation of our review. While specific questions are asked by these circulars, the publishers will appreciate any additional comment or information which will serve to give an understanding of the conditions which existed during the year.

REPAIRING AN ENGINE.

An interesting repair job undertaken at the Corliss shops at Providence is shown in the accompanying illustration from Power. An engine, probably from an overdose of water, had knocked out the cylinder head, carrying with it a portion of the flange and of the steam valve bonnet as shown in the left-hand sketch. The broken metal was planed away along the central lines (mn no) of the valves and cylinder bores and a casting made to replace

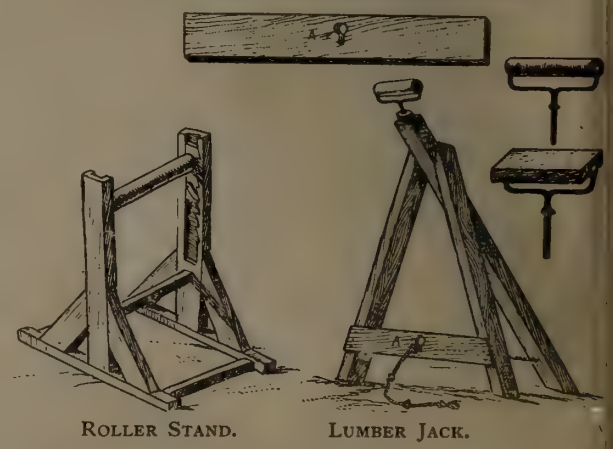


REPAIRING AN ENGINE.

the missing section now regular in shape. Fourteen collar studs were put in the end as shown (x), four of which passed through the port. The joint was made of copper. After the patch was in place the cap (B) was put on and the valve chamber rebored. Links were shrunk on C to make the joint on the plane (n o). The engine is now running regularly and giving no trouble.

A PAIR OF HANDY CONTRIVANCES.

THE engravings show a couple of very handy contrivances for mill and yard use. Fig. 1 is a movable stand arranged to carry a roll, the roll to be raised and lowered as desired. The stand is designed to carry a board after it leaves the planer, to prevent the board sagging



ROLLER STAND. LUMBER JACK.

after the greater part of it has passed the knives. The sketch shows the construction.

Fig. 2 shows an adjustable lumber jack, which can be easily adjusted to different heights. The timber carrying the roller works as on a hinge on the bolt between the two legs, the rope preventing the tripod spreading.—American Lumberman.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES AND OTHER FOREIGN MARKETS.

VOL. V. TORONTO, ONT., JANUARY 3, 1900 No. 50.

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE.

36 FOOT 8 INCH PRESCOTT FEED STEAM Jump Saw, 40 to 56 inch saw; three block girder steel Carriage, opens 40 inches, Boss dogs, good setworks; Endless Log Haul Up hundred feet chain, could be lengthened; a number of Engines, Boilers and Mill Machinery taken on new machinery. WATEROUS, Brantford, Canada.

BOX SHOOKS

ADVERTISER DESIRES TO COMMUNICATE with Saw Mills favorably situated to Montreal, Portland or St. John, to ship Spruce and Pine Box Shooks to Scotland. Apply CANADA LUMBERMAN office for name and address.

AUCTION SALE

OF

Saw Mill Property, Mill Plant, Village Lots, Lumber, Etc.

THERE WILL BE OFFERED FOR SALE BY public auction, at the Village of Young's Point, County of Peterboro', on TUESDAY, JANUARY 9TH, 1900, at 10 o'clock a.m., the property of Cornelius Young, consisting of the following: Saw Mill, equipped with large circular saw, butting-off saws and edgers, operated by two Giant water wheels; Shingle Mill, equipped with one Perkins machine, two jointers and blocking saws, driven by Giant water wheel; Planing Factory, containing one large planer and matcher, one four-sided moulder and one iron-framed re-saw, driven by two Leffel wheels; about 300 Boom Chains, one patent Capstan one Hoisting Derrick, quantity of Boom Timber, Pike Poles, Peevies, Horses, Waggons, Sleighs and other chattels used in connection with mill property; quantity of Shingles; about 200,000 feet of Pine and Hardwood Lumber; quantity of house finishing Moulding; two car loads of Cedar; also 15 Village Lots situated in the village of Young's Point. The mill property and other real estate will be offered subject to a reserve bid. The terms of sale of real estate will be 10 per cent. at time of sale, balance within thirty days. All purchases of chattel property under $10 to be cash, balance within three months.

JOHN HAGGART, Auctioneer.

FOR SALE.—40,000 FEET DRY HEMLOCK, 2×6 inches, 12 feet. Write REID BROS., Hepworth Station, Ont.

WANTED.—POSITION AS MANAGER OR Superintendent with a lumber firm. Have had twenty years' experience. Address, F. A. HALL, Kootenay Lumber Co., Comaplix, B.C.

HAVE YOU ANY STOCK WHICH YOU WISH to sell? If so, make the fact known to probable buyers by placing an advertisement in this department. Address, CANADA LUMBERMAN, Toronto.

FOR SALE—Sawmill—complete, in good order, with a capacity of 25,000 feet per day; also a quantity of Boom Chain. Would move the mill and take contract to cut lumber by the thousand. Box 233, Barrie.

WANTED.—LOWEST CASH PRICE PER M., f.o.b., in car lots, for best dry, second-growth Hickory, Rock Elm and White Ash; fit for hammer handles. State shipping point and R. R. Address, TAYLOR & LOUNT, Whiteva'e, Ont.

SITUATION WANTED.

AS SUPERINTENDENT, FILER, HAMmerer, Inspector, Mill-Wright or Sawyer; thoroughly competent—Lumber or Shingles. Engage now for next season. Box 800, CANADA LUMBERMAN.

WANTED.—FOR DELIVERY IN SUITABLE parcels during season, 25 to 50 standards Spruce Strips, to be 4 feet and up in length, sawn to 1 in. x 1 in. exact to steel gauge, and to be free from sap and rough knots; C.I.F. North Docks, Liverpool. Address, Box 40, CANADA LUMBERMAN.

FOR SALE.

55,000 feet	Rock or Soft Elm...	6/4-4/4"
40,000 "	Soft Maple..	6/4-4/4"
18,000 "	B. Ash.....	4/4"
13,000 "	White Ash.....	6/4-7/4"
4,000 "	White Oak.....	4/4" or thicker

STEELE & GIBSON,
Humberstone (20 miles west of Buffalo.

FOR SALE AT A BARGAIN.

ONE 32-INCH DIRECT STEAM DRIVEN Gang; one heavy circular Saw Frame; one heavy 4-block Carriage, coupled with track to cut 52 feet; fractional set; steam feed; Rhodes' Swage; Covel Gang Sharpener Above practically new, used only three years. Address, Box 76, CANADA LUMBERMAN.

SAW MILL MACHINERY FOR SALE.

THE COMPLETE MACHINERY OF A SAW Mill, consisting of a steam feed large carriage and frame, one rope feed ditto, double edger and trimmers, swing saws, automatic grinders, belts and saws in good order; all made by Waterous, Brantford. Will be sold cheap. Apply to J. K. WARD, Mona Mills, Montreal, Que.

SAW MILL FOR SALE.

THIRTY-FIVE HUNDRED DOLLARS BUYS Saw mill worth double this amount, if taken at once; 2 Boilers 120 h.p., Engine 100 h.p., Iron Saw Frame, Three Block Carriage, 2 good Saws, Double Edger and Trimmer good as new, Slash Chain, all in good running order, run this season; size of Mill, 30×100 ft.; good Boiler House, Blacksmith Shop, House, Barn, etc.; 400 acres of good Birch and Hemlock, also thousands of acres of timber near by. For particulars, address ALLEN CRESSMAN, Berlin, Ont.

GRAND OPENING

FOR A

CHAIR OR FURNITURE FACTORY

IN A FIRST-CLASS RAILWAY TOWN THAT will grant exemption from taxation and take up considerable of the stock. The promoters have suitable buildings, power, two saw mills, and a large quantity of standing hardwood timber, and more can be obtained. We invite the purchase of $15,000 to $20,000 of stock, by a practical man preferably. Address, Box 60, CANADA LUMBERMAN.

WE HAVE 200,000 TO 300,000 FEET OF VERY good Beach Logs which we wish to cut to order. Signed, JOHN HARRISON & SONS CO., Limited, Owen Sound, Ont.

CURRENT TRADE CONDITIONS.

ONTARIO.

The holiday season does not seem to have had the effect of checking the demand for lumber. Rail shipments to local points and the Eastern States are still quite active. The only branch which has shown any falling off in demand is the building trade, as the recent cold weather has to some extent caused a cessation of out-door work. Manufacturing establishments are operating to their full capacity, and consequently there is a steady call for hardwoods and such lumber as is adapted for manufacturing purposes. There is still a scarcity of lath and shingles, although enquiries for these have not been so numerous within the past week.

The weather has been favorable for work in the woods. From all accounts there will be a large production of logs. According to estimates received by the Commissioner of Crown Lands, there will be taken out this winter in the neighborhood of 800,000,000 feet of logs. Last winter the cut was only 570 million feet, which shows an increase of over 200 million feet this winter. This large production of logs will mean a considerable increase in the quantity of lumber placed on the market next season, but unless very unexpected conditions arise, the demand is likely to be equal to the supply.

QUEBEC AND NEW BRUNSWICK.

The tendency of lumber prices in the Quebec market is to advance, in sympathy with the small stocks carried over this winter. The stock of square and waney pine, red pine, oak, elm and ash timber wintering at the port of Quebec is less than one year ago. In square pine the difference is slight, but in waney pine the stock is nearly one and one-half million cubic feet less than in the winter of 1898. Birch is the only timber of which the quantity wintering shows an increase, but even this is represented only by 3,331 cubic feet. For the best quality of white pine the quotation is from 37 to 43 cents, while waney board, 19 to 22 inches average, is quoted at 43 to 47 cents. Pine deals are very firm and are quoted at $120 to $130 for first, $85 to $95 for second, and $45 to $55 for third quality. First quality spruce deals average about $43 per standard.

Figures to hand show that 128,000,000 feet of lumber were shipped last season from the Miramichi to trans-Atlantic ports, 27,000,000 feet from Dalhousie and 19,000,000 feet from Campbellton. From West Bay, in Nova Scotia, the trans-Atlantic shipments were 30,000,000 feet. As has been before remarked, lumber stocks in the Maritime provinces are well cleaned up, and a brisk demand for the spring cut will likely be experienced. More favorable weather for logging operations has been encountered during the past week, and every effort is being put forth by lumbermen to get a large supply of logs for next season's sawing.

MANITOBA AND BRITISH COLUMBIA.

There is still a liberal distribution of lumber throughout Western Canada. Manufacturers on the Lake of the Woods, as well as those in British Columbia, report that the past year was one of the most successful in the history of the trade, the sales representing an increase of fully 50 per cent. over those of the previous year. The recent advances on certain grades are being maintained, and we would not be surprised if still higher prices ruled during the coming year. The outlook for trade is very promising. There is likely to be a considerable amount of railway construction and general building.

UNITED STATES.

Notwithstanding that the lumber cut of the Upper Mississippi river district in the season of 1899 was 594,370,000 feet, as against 469,701,000 feet in the previous year, the stock of lumber on hand at the close of the year shows a decrease, as compared with 1898, of nearly 27,000,000 feet. The decrease in the stock of shingles is 21,000,000, and in that of lath 10,000,000. These figures reflect the situation at other producing points and are an indication of the satisfactory condition of the lumber trade of the United States throughout the year just closed. Although the demand at this season is not particularly active, prices are being well maintained, and it is said that in the east the conditions were never better for a continuance of high prices. Eastern retail yards are almost bare of stock, and a large amount of new building is in sight for the spring. The scarcity of box lumber becomes more acute as the weeks go by. At Tonawanda box lumber and No. 2 and No. 3 barn is held at a premium, and it is difficult to buy any 10-inch or 12-inch No. 3 barn at less than $22 per thousand. Very few dealers can fill an order representing any great quantity of stock. In inch fine common and shaky clear the situation is different, as many of the yards have quite a surplus and prices are slightly weaker. A Buffalo dealer is reported to be holding his stock of box lumber at $20.

The statement has been made in some quarters that hardwood prices are weakening, but this report is denied by the leading dealers in the Eastern States. It is admitted that the demand for hardwood lumber is not brisk, but the situation has caused no alarm. There is a great scarcity of the lower grades of maple, and basswood is much enquired for.

FOREIGN.

The advanced prices of wood goods in Great Britain have in no way checked the demand, as in every department of trade activity prevails. There seems to be a marked degree of confidence in financial circles, notwithstanding the war, and this confidence is nowhere more visible than in timber circles. At recent public sales prices have been realized such as have not been known for many years. Importers are contracting quite liberally, chiefly for early goods. A slight advance in the price of square timber is reported.

STOCKS AND PRICES.

W. E. Dryden, of Hillsboro, N.B., expects to cut 3,000,000 feet of lumber this winter.

The Alma Lumber Co., of Alma, N.B., are now shipping birch lumber from St. John, N.B., to Great Britain by winter steamers.

At Duluth, Minn., as high as $14 is being asked for No. 3 barn, but $13 is about the average quotation. Log run brings from $16 to $18.

The barque Freeman sailed from Tusket Wedge, N.S., last week for Buenos Ayres, with 872,000 feet of lumber shipped by Dickie & McGrath.

The South River Lumber Co., of South River, Ont., are this winter taking out a large quantity of pine logs, some hemlock, and 100,000 cubic feet of waney board pine.

The Newville Lumber Co., of Newville, N.S., expect to take out this winter 4,500,000 feet of logs. Nearly all their next season's production of lumber has been sold for shipment to Great Britain.

J. J. Wheelock, of Connors, N.B., expects to manufacture 30,000,000 shingles during the coming season, as well as a quantity of long lumber for the local trade. He has a mill at Connors, N.B., and another at St. Francis, Maine.

It is understood that the C. Beck Manufacturing Co., of Penetanguishene, have commenced logging operations on the two limits in the Nipissing district purchased at the government sale a fortnight ago.

The W. & A. McArthur Co., of Cheyboygan, who recently purchased the McKinnon & Welsh saw mill at Little Current, Ont., are putting in 30,000,000 feet of logs, and will likely operate the mill day and night next season.

One year ago dry white pine lath could be purchased in Chicago at about $2.15 per thousand, while they are now selling at $4.50 f.o.b. cars. In the local trade there white pine lath sold during December at from $5 to $5.50 per thousand. Of late there has been some easing off in quotations, although the shortage in the supply has not been relieved to any marked degree.

THE BOSTON MARKET.

[Correspondence of the CANADA LUMBERMAN.]

SPRUCE.—The spruce market is quiet, with little change. The financial flurry has had some effect on the situation, with builders cramped in one or two instances. Orders are still slow about being filled at the mills, with the water low and logs scarce. Reports from the spruce lumber regions mention a lack of snow for hauling, with one of the winter months gone and almost nothing done. A big cut has been yarded, but unless snow comes very soon and continues in good shape, the cut of logs cannot be hauled. The chances are that what was planned for a very large cut of spruce may turn out to be a small one. Of provincial lumber there were arrivals of six cargoes for the week, with 651,983 feet of lumber, 196,000 laths, and 980,000 shingles. Prices are unchanged :

Frames, 9 inch and under	$17.00
10 and 12 in. dimensions	19.00
10 and 12 in. random, 10 ft. and up long	18.50
2 x 3, 2 x 4, 2 x 5, 2 x 6, 2 x 7 and 3 x 4, 10 feet and up	15.00
All other random, 9 in. and under	16.50
Merchantable boards planed one side	15 00
Out boards planed one side	12.00
Furring, 1 x 2, 1 x 2½ and 1 x 3 planed one side	13.00 to $13.50

PINE.—Western white pine continues very firm with the manufacturers and shippers, and the market here is steady :

Uppers, 1 in	$58.00 to $60.00
1¼ to 2 in	60.00 " 62.00
3 and 4 in	70.00 " 72.00
Selects, 1 to 4 in	52.00 " 68.00
Fine common, 1 to 3 in	48.00 " 62.00
Sheathings	40.00 " 56.00
Barn boards	22.00 " 30.00
Coffin boards	20.00 " 25.00

CLAPBOARDS.—Clapboards are steady, with trade quiet :

Spruce, extra	$28.00 to $29.00
Spruce, clear	26.00 " 27 00
Spruce, 2nd clear	24.00 " 25.00
Pine, extra	34.00 to $36.00
Pine, clear	30.00 " 33.00
Pine, 2nd clear	28.00

Less than carloads, $1 to $1.50 more.

SHINGLES.—Cedar shingles are in quiet request :

Extra cedar, best brands	$3.10 to $3.15
Clear cedar	2.65 " 2.70
2nd clear cedar	2.10 " 2.25
Clear white	2.00
Extra No. 1	1.50

Oregon shingles range from $2.30 to $3.15, as to grade and quality.

LATH.—Laths are active, with prices firm : 1⅝ inch, $3 to $3.25 ; 1½ inch, $2.90 to $3.

BOSTON, Jan. 2nd, 1900.

BUFFALO AND TONAWANDA.

[Correspondence of the CANADA LUMBERMAN.]

Slow business is the rule in the lumber yards, especially with pine dealers, though there are plenty of indications that the demand will open early again and that the east, which has been hesitating for some time over the problem whether it will have to pay higher prices or not, will be in the market for lumber in quantity as soon as the winter inventory season is past. Dealers here say that they are not soliciting business now, as they seldom do during December and January, so that they will not be disappointed if there is a light movement for sometime yet. They see in general business every indication that the present asking price will be paid. Iron went up very high, but it is still in great demand and will continue to be so long as general business remains good. Why should other building material take a different course?

Still it is plainly the notion eastward that the price of lumber is higher than it should be, and that a good steady holding off will break the prices. This will never happen unless other business goes to pieces along with lumber, which is something that the east does not want to see any more than we do. There is not very much falling off in the price of hardwood lumber, for there is such a general scarcity of most kinds that to get a good supply is an acquisition, even if the cost is more than the consumer feels like paying.

Both Buffalo and Tonawanda brought in considerable more lumber by lake the past season than during 1898, and the increase by rail, though small in Tonawanda, is large in percentage, while in Buffalo it is supposed to be large, though there is no report on that point. Buffalo received 230,278,000 feet by lake during the past season and only 189,076,000 in 1898. The two Tonawanda ports received 495,947,000 feet the past season, which is about 40,000,000 feet more than 1898. Nearly all the shingles by lake come to Buffalo, the amount being 132,000,000, while the Tonawandas received but 14,500,000, against 78,000,000 in 1898, which does not appear to be accounted for by the trade, as Tonawanda used to be a big shingle port and manufactured them long after Buffalo gave the business up.

The end of December sees still some lumber afloat at docks that were crowding in late cargoes, such as the Montgomerys and the H. M. Loud's Sons' Co. Both of these firms have their docks as well as yards very full and will not be in full winter condition for some time yet, in spite of steady work as often as weather permitted. There has been considerable snow, quickly followed by rain, which has delayed work badly.

It is pleasant to note that the Holland & Emery Company is going ahead with vigor. Not satisfied with its already large holding of timber in Canada, the company bought nine square miles in the Nipissing district at the recent government auction, which ought to mean a considerable enlargement of operations in the next ten years. The big yard of the auxiliary firm of Holland, Manbert & George at lower Black Rock is running over with lumber again, giving the district all its old appearance of wild activity.

The two Montgomery firms have suffered a serious set-back from a fire that occurred on the night of the 26th December and destroyed a section of the big mill at the foot of Court street, Buffalo. The mill has four sections separated by fire walls, and the others suffered only from water. The fire occurred in the fourth story, occupied by the Deuther Manufacturing Company, picture frame makers, who will lose $20,000. The loss to the Montgomerys will exceed $100,000, most of it falling on the veneered door department. The box department could be run still if desired, but it will wait till after inventory. It was fortunate that the firm's large stock of lumber did not suffer, for it is box to a great extent, which is already scarce and will be all in the hands of box makers by spring.

A second wood-working concern in Buffalo that has been burned out during the month is the firm of E. & F. Glor, the largest cooperage establishment in the city. After suffering the loss of their stave and heading mill in September, their other mill and barrel factory went down on Dec. 12th, involving a loss of $40,000. A new mill is about finished, so that the business can now be concentrated there and no stoppage will occur.

The Plummer mill, which includes planing, heading and excelsior packing apparatus, situated in the Hertel avenue district, Buffalo, and which has been in bankruptcy for a year or more, has been bought by the firms of Holland, Manbert & George and C. M. Betts & Co., whose yards are near and who will utilize it in their business.

The Eastern Lumber Company at Tonawanda has an ambitious new neighbor in the shape of a steel company from Chicago, which has bought 20 acres of land and will erect a big plant as soon as possible. There is a great boom in that vicinity.

The scarcity of shingles here has been increased by the loss of the Canadian steamer Niagara, with all on board. This circumstance is well known, but it might not be so well known that the shingles were from Parry Sound to Haines & Co., Buffalo, and are now mostly scattered along the Canada shore of Lake Erie. The cargo has been sold to private parties, who will try to sell in Canada what is recovered, so that payment of duty may be avoided.

C. H. Stanton, Buffalo manager of the Loud Company's interests, has been made vicegerent snark by the Hoo-Hoo authorities and is preparing to stir up the boys after the holidays, probably taking in Toronto.

BUFFALO, Jan. 2, 1900. J. C.

Attention is directed to the advertisement on first page of our current weekly issue, announcing the sale by auction on the 9th inst. of valuable saw mill and other property at Young's Point, Ont.

THE BARBADOS MARKET.

The following reference to the Barbados lumber market is made by S. P. Musson, Son & Co. in their circular of December 22nd:

The Etta A. Simpson has arrived from St. John, N.B., with 103 M ft. white pine and 900 M shingles, for this market; and 111 M feet white pine for St. Lucias. Of her cargo for this island, sales have been made as follows: 26 M ft. at $17.12, 30 M ft. at $17.65, 20 M ft. at $16.77, and 26 M ft. sold but price not yet transpired. Spruce—We had a small lot of 25 M ft. ex L. B. Currie from West Dublin, and sold 9,500 feet from deck at $18.30, 16 M feet under deck at $18.61, and 13 M feet hemlock at $16.46. The sale of spruce cannot be considered a fair criterion for cargo lots, which we continue to value at $17 to $18. For the hemlock, it was only by chance that we were able to obtain the figure noted, it being very unsaleable in this market. The cargo per Maiden City to which we referred has been brought in here at a low price, and while sizes are unsuited to present requirements, yet it will have an unfavorable effect on the market for spruce.

SHINGLES.—The Etta A. Simpson cargo contained 792 M sawed cedar laying, 50 M shaved, and 66 M sawed spruce; sold sawed cedar laying at $2.40, shaved spruce at $2.35; and we had by L. B. Currie 170 M spruce laying, which we sold at $2.20. Nothing new to advise in long Gaspe.

NEW LUMBER COMPANY.

Incorporation has been granted to the Morgan Lumber Company, Limited, of Toronto, with a capital of $400,000. The incorporators are Frank Denton, of Toronto; S. O. Fisher and wife, of West Bay City; and J. S. and E. O. Galloway, of Hillsdale, Mich. It is understood that this company will operate the Morgan township timber limit recently purchased by S. O. Fisher.

CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily fos publication. The publisher will not hold himself responsible for opinionr of correspondents.

A WORD FOR BEECH LUMBER.

Editor CANADA LUMBERMAN:

DEAR SIR,—If you will allow me space in your valuable paper, I would like to make a few remarks on one feature of the hardwood trade which is no doubt felt by all lumbermen dealing in the undermentioned commodity, viz., the low price of beech lumber compared with other hardwoods. It must be acknowledged that for manufacturing purposes it is equally as good as birch or maple. Why, then, has the price not advanced with the other similar kinds of wood? Our firm has sold beech lumber this season at the same price for the same grade as ten years ago. There is certainly something wrong somewhere, and the man who produces the lumber is, in my opinion, the one who is most to blame. We must get beech up to its proper standard with other hardwoods and not have timber, which for some purposes is invaluable, cut almost entirely into firewood. If this matter was placed before the trade and discussed somewhat, there is no doubt but that it would result beneficially to all concerned.

Yours truly,

"HARDWOOD."

THE EUROPEAN DEMAND FOR HARDWOODS.

ALEXANDRIA, ONT., Dec. 20, 1899.

Editor CANADA LUMBERMAN:

DEAR SIR,—After some years of quietude I again take the liberty of imposing upon the readers of your excellent paper a few impressions regarding the lumber industry of Canada.

Some years ago I wrote your journal a number of letters pointing out the advantages of the European market for Canadians, and urging that some definite and practical action should be taken to improve our position with regard to new markets, but no concerted action was taken with regard to the hardwood trade. At that time I persistently dwelt upon that theme, and to such an extent that I felt I was liable to be considered a crank, and desisted from writing further on the matter and acted on my own ideas. Anything I then wrote I would to-day emphasize still more strongly, and will only say, for maple, basswood, birch, beech, soft elm and ash, there is a market in Europe which will absorb our output in large wide boards and planks, and also the smaller stock in partly manufactured or wholly manufactured articles. It remains for Canadians to fill the demands, either with the rough lumber or the finished goods.

I stated before, and have not changed my views, that the hardwood industry of Canada, if properly and well developed, would be found to benefit a larger number of our people—farmers, loggers, saw mill men and factories and their employees—than the much vaunted pine industry of Canada. While the pine interests are becoming yearly more concentrated in the hands of comparatively few large companies and firms, the hardwood trade is so diffused amongst small operators that it is not given the prominence the pine trade enjoys. The day of the hardwoods, however, is fast coming, and in a few years factories for turning out goods of all kinds from butchers' skewers to print rollers, and from spools to furniture, will develop just as fast as the energy and enterprise of Canadians will develop. Canadians have too long depended upon the will, the pleasure or the whim of the American buyer, manufacturer or market; and until the Hardy Government stiffened their backs and passed the manufacturing clause in the crown lands regulations, it looked as though politicans and lumbermen were liable to convene and talk—some sense and more nonsense—and waste their energies on agitating what each speaker would think for the moment would be his best interest in the matter.

When we leave the Americans to their own devices for raising the value of their raw material, whether the duty be one or four dollars per thousand feet on lumber and 10 or 40 per cent. on manufactures, and boldly and intelligently handle the resources of Canada in the best interests of Canada, both for the present and the future, we, as a people, will have turned our faces in the right direction.

The most righteous wars have left corpses upon the battle field, but the results have always been in the end beneficial.

When our legislatures over this country place such manufacturing clauses on their statute books as did the Ontario Government, both in regard to pine, spruce, pulpwood and hardwoods, it will be of greater benefit to Canada than many of us can appreciate to-day. Such laws will help our manufacturing, will be the best help to conserve and reproduce, where possible, our forests, and enhance to the fullest value the product of our forests, and employ the greatest amount of labor; but there may be some corpses.

The time has now arrived when the people of Canada may safely decide that they need not be hewers of wood and nothing more—so far as the lumber industry is concerned—as the European, United States and Canadian demands for wood products will leave something more than a bare existence to those engaged in that line of business, both in soft and hardwoods. It is well to say high prices used not to be expected in European markets, but a steady trade is open. It will take time to form connections and establish the trade, but the trade is to be had. The Canadian section of the Imperial Institute, under the charge of Mr. Harrison Watson, and the columns of your journal, are means to an end that may be profitably employed by Canadians.

Yours truly,

J. T. SCHELL.

OPERATION OF BAND SAWS.

By JAMES RYAN.

I AM a sawyer on band saws. We have here at Savanne one of the new Allis band mills, with latest improvements, all worked by steam. In sawing pine lumber I find the best method of getting the upper grades of lumber out of a log is to place the good side of the log to the saw first, as you can then saw until you get all the good lumber out; then you can turn the log and size it to any size you wish without wasting any timber or having any thin cuts such as you often see as a result of improper loading of logs on carriage.

As to the care of band mills: To do good, fast and true work, the saw must be in proper line with carriage track and kept clean. Take off the face plate on the bottom wheel every two weeks and rake out all the sawdust that has accumulated between wheel and hood, as this causes the wheels to get dirty and the saw will not travel in the same place; it will run all right for a time, but will very soon go back too far and you will have to keep tilting your wheel to keep it in place, which is a waste of time. Of course, it is necessary to employ a practical filer, otherwise the sawyer cannot do good work no matter how skilful he may be. Another necessity is that the sawyer and filer should work harmoniously together.

THE PROPER PILING OF CLEAR RED PINE.

By "PINEWOOD."

As every man engaged in the lumber trade knows, it has always been a problem to save clear red pine lumber from staining. I beg leave to offer the following method, which has had numerous trials at Ottawa, when the lumber was piled off high tramways, and when piled in the way suggested there has been but a very small percentage of it stained.

My method is as follows: We will take a pile of 1x8"x16' clear red pine for an illustration. To start, you make your pile bottom about 4" higher in the front than behind so as to give your pile a certain pitch all the way up; and as the pile goes up, should the pitch become flat, it should be raised again by an extra cross piece in the front. The first row of this pile is commenced with 17 pieces, thus leaving about 3" of space between each board; you then put on your cross-pieces, one in front and one behind, none in the centre. Right here I would like to say that I do not believe in three crosspieces in green lumber, as it breaks the air space and causes lumber to stain. This pile is carried on up to its finish with the same number of pieces in each row (i.e., 17), and each piece is placed directly over the other so that the air space between each row is not closed up. Now, when this pile is finished, it should be covered at once with good covering boards not less than 8½" wide—12" is better. The covering boards should be of uniform length, so that no water can run into the pile. In the case of this pile I would have all my cover 16' long.

To protect the rear end of the pile I would pull out, in the last row, the two outside boards and the centre board at least two feet. I would then take a 16' board and lay it on the edge of this 2' crosswise of the pile, and lay another one on top of it, lapping it about 3" or 4" and so on until I reached the pile, having the last board come over the pile about 6" or 8". Then raise the front crosspiece up, and commence to lay our cover on, and when finished I would use hooks to fasten cover in its place, thus making sure that the pile would stay covered. Now, should I open this pile when dry to ship, say 2,000 feet, when I was through I would cover it up again.

Not wishing to encroach on your valuable paper for more space, I will add in conclusion that I would like to see lumbermen go into this subject through the medium of your valuable paper.

THE CARE OF BAND SAWS.

By "PRACTICAL."

IN accordance with your request, I will write a short treatise on band saws, and will confine my remarks to one point which I notice has not been discussed in your paper. I would say, however, that I do not altogether approve of such articles, for the reason that there are a great many persons who have had some knowledge of the work, and by reading up treatises written by experts who have worried and worked their way up to a level with older and experienced men, they come to the conclusion that there is nothing in this business. They will accept the first position offered them, at perhaps two or three dollars a day less than the former man had been paid. They think they have a cinch till their work commences, when very shortly there is a complaint of bad lumber. Next the saws begin to break, for no plate will stand snaking through the cut. Very soon he is obliged to abandon his position, after destroying the company's saws and thousands of dollars' worth of lumber, disgusted with himself and the trade; he never goes back.

Through your columns I have read several articles written by Mr. Burton, which I can vouch for to be genuine; in fact, he has described very near as much about the saw as can be said in words, but there still remains a great deal to contend with outside of the filing room. One of these things is the cross line, and this is the only point to which I will refer this time in connection with the mill. In this case we are coming in contact with the patentees and the manufacturer, but that cuts no ice; they don't have to stay in the mill and take the blunt of the every day work to the end of the season. Common sense will teach that, when the pulleys of the band mill are set square with the track, the wheel is cross-lined to make the saw run in the desired place. There is a twist in the cutting part of the saw, which running in this position will cause the saw to twist all the way round, usually called a line twist, which is a very difficult thing to take out, as it cannot be discovered with a straight edge. I will venture to say that half the men in the mills cannot take it out even all the way round. Another thing, should the plate be leading a trifle one way, and it is necessary to throw the pulleys in the same direction, it will cause the saw to lead that much more. Some men argue on the ground that when the pulley is set to the proper pitch they should not be tilted, as it will either throw too much strain on the front or on the back of the saw, as the case may be. My experience is that if the saws are all put up alike and the wheels are kept clean, they will all run in the same place, and the tilt will never have to be moved to any extent only when an accident occurs. Of course, it is necessary to use it then to save the saw from coming off, but when another saw is put on the wheel will have to come to the same place as before.

I have, in my younger time, used the cross-line, and always had more or less trouble with cracked saws. Since I have abandoned it and used the tilt altogether I have not had cracked saws nor line twists, and none of this crown ridge on the back of saw. One thing is necessary, and that is good plates.

I cannot close without making one statement in reference to our saws. I have been employed by the Rat Portage Lumber Company for the last two years. Since I came here we have been supplied with saws from Shurly & Dietrich, of Galt, which have done good work on the Rainy River saw logs. Last spring we got six new saws; with those six and the few we had to commence with in the spring, we cut in the neighborhood of twenty-eight to thirty million feet of lumber, with two band mill machines and a gang, running part of the season night and day. In the manufacturing of this lumber we only had to cut those saws five times for cracks, and three of those cracks were in one saw, which I consider is a fairly good record for band saws.

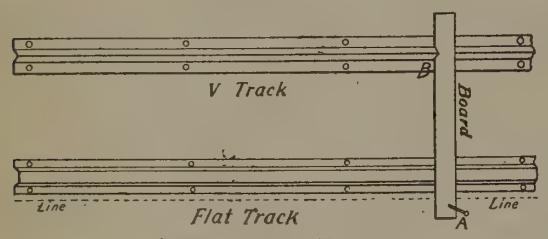
POOR MILL PLANS AND POOR MILLWRIGHTS.

By A. J. Burton.

Not long ago I took charge of a new mill, beginning a few weeks before it was completed, so I could set up the filing room machines, and have the saws in order when the mill started. The mill owners told me they had a full filing room outfit, a nice room, etc., but I didn't find it so, at least in my opinion. The filing room was only 30x18 feet, about the size of the dining room in an old-fashioned southern plantation dwelling. The owners couldn't see where more room was needed, and as a matter of course there was friction. There were not enough machines to do such work as they wanted done, so I made out a list of machines necessary besides those already there, as follows: One lap grinder, one blow forge, one 12x16 inch anvil, one retoother, long and cross shears, patch machine, band saw swage, one dozen emery wheels, and six ounces of silver solder. Experienced men will thus see how complete the outfit was when I begun. When the company saw I would not go to work without these machines, they were ordered.

With the arrival of the machines came trouble. The mill owners could plainly see then why more room was necessary; there wasn't enough room for the machines, to say nothing of room to work in. After twelve feet had been added to the length of the filing room, and the machines placed, we had as nice a room for fitting the saws of a one-band mill as one could wish.

The point I wish to make is that cheap millwrights are usually expensive in the end. The



Lining up the Track.

millwright who built this mill would have a better taster in a wholesale liquor house—he would have longer hours, with less pay, but more tastes. He had been "under the weather" most of the time while the mill was building, hence the work was not done well and the machines were not well placed. This, however, being none of my business, I said nothing.

About the time the mill was ready to start this millwright "loaded up" and was discharged. Next day the superintendent requested me to look over the band mill, carriage, live rolls, slasher, turner, etc. I found the driving pulley on the slasher had been put on wrong end to, so that the key could not be driven. Considerable time was spent in taking down the shaft and turning the pulley around. The live rolls were neither level nor in line; they had to be taken out and rebabbitted before they could be started. The carrier chains in the slasher table were too high and the table had to be rebuilt. There were no two pulleys in line, one with the other, in the entire mill. I lined up the band mill and tried to line up the head blocks on the carriage, but to my surprise, found the carriage had been set a half inch too near the saw. The blocks were hard back in their slots and I could not move them further. When the offset moved forward the rests struck the bed husk of the band mill.

I explained this to the mill owners, who thought I could make it work by chipping off the rests with a cold chisel, for by this time they were geting tired of making changes, and I didn't blame them. We finally got ready to start, but had a freight train load of trouble with the belts because the pulleys were so out of line. I had to build a new tightener frame, for the first one was so tight that the motion caused the tightener pulley to dance so much that it led the belt on the band mill pulley and would have spoiled the belt if used. We made a new tightener frame and could then adjust the belt properly.

After a lot of other minor changes we got the mill started, but only run two days, broken time at that, for, as stated, the carriage was too close to the saw and would not allow full throw in the offset, while the dogs in the offset would not release at the end of each throw, as they should do, and caused so much friction that half the time the trucks would not turn round and the offset would heat and stick fast.

The superintendent was an easy-going kind of a fellow, and had little knowledge of the successful operation of saw mill machinery. He came to the filing room and asked me to go out and try to fix the offset. I told him it would never work right until the V-track was moved a half inch away from the saw. This was Saturday night, and I went home to see my family. The superintendent told me he thought they would not run Monday, as they had some repairing to do, so I did not get back to the mill till Tuesday morning. They had decided to move the track over, and had it nearly done. They did not use a line at all, but used a rule, measuring over a half inch, marking it, moving the track over, and using drift bolts to hold the track down.

When I arrived the boys asked me what I thought of it. I asked them if they had set the track at right angles with the band wheel shaft. They said, "Why, no, but we have it just as it was, only over a half inch." I decided to put lines on and find out for myself whether they had it in line with the saw and straight, or not, knowing full well I could not make the saws make good lumber if the track was out of line. After placing the line on it, it was not necessary to do any talking to convince them they were not right, for it was out of line, and so crooked as to remind one of a narrow gauge railroad in the mountain regions of Pennsylvania. We had to take the track up again and put it down straight and in line, which took another day, before we got started.

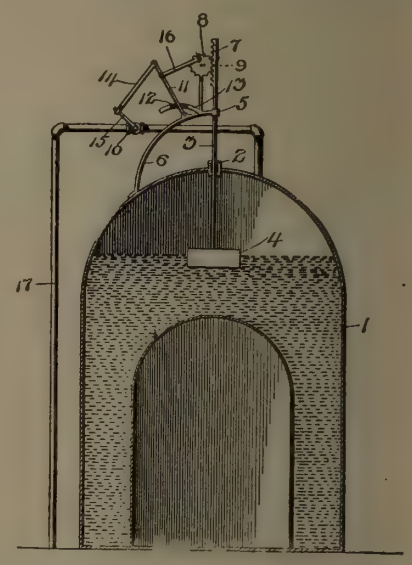
Let me try to explain how I line up a track. Reference to the sketch will show that it can be done quickly, easily and well. We will suppose the V-track is further from the saw. Get a piece of white pine board four inches wide by one inch thick, and long enough to reach from one track to the other. Lay it across both tracks and cut a v-shaped notch to fit the V-track exact, in one edge of the board, as at B. Place the board on its edge, letting the other end rest on the flat track. Now draw a line parallel with the saw, over flat track. In this way you will have no lines over the V-track to interfere with your work.

Place the V-shaped notch in board on the V-track and drive a nail in the board close to the the line over the flat track, as shown at A. This will be a tram or gauge to set the V-track by, and if you keep the nail close to the line the full length of the track, your track will be straight, provided you are careful to have the V-notch down tight on the V-track all the time. The dotted line shows the line to work by.

After the track was set over the offset worked without heating, and the carriage caused no trouble. The mill finally got to doing work, but not until it had been entirely overhauled and the machines reset. The mill, when I left, was cutting 50,000 to 65,000 feet per day of eleven hours, from small hemlock, red and white oak logs, running eight and nine logs to the thousand. This mill must have cost its owners nearly twice as much as it would had they had good mill plans and a competent millwright from the start; besides, they could have begun sawing one month earlier. I would advise mill owners to employ only reliable millwrights.—The Wood-Worker.

WATER FEED REGULATOR FOR BOILERS.

Mr. W. H. Tobey, of Tupperville, Ont., has been granted a patent in Canada for a water feed regulator for boilers, as shown in the accompanying illustration, for which he makes the following claim: The combination with a boiler, having a water inlet supply pipe and a valve located in said supply pipe to regulate the passage of



Water Feed Regulator for Boilers.

water into said boiler, of a float mounted to have a vertical movement within said boiler, a pinion mounted to have an operative connection with said float, whereby a vertical movement of said float will impart a rotary movement to said pinion, and connections operatively connected to said pinion and the handle of said valve, whereby the movement of said pinion will serve to impart an oscillatory movement to said handle, substantially as described.

CANADA'S COMMERCIAL AGENTS.

Following is the official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries:

J. S. Larke, Sydney, N.S.W., agent for Australasia.

G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.

Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.

D. M. Rennie, Buenos Ayres, Argentine Republic, agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders:

J. G. Colmer, 17 Victoria street, London, S.W., England.

Thomas Moffat, 16 Church street, Cape Town, South Africa.

G. H. Mitchell, 15 Water street, Liverpool, England.

H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.

Harrison Watson, Curator, Imperial Institute, London, England.

THE NEWS.

—John Hanna has opened a lumber yard at Crandella, Man.

—The R. W. Kinsman Co. have planted 1,000 trees at Blomindon, N.S.

—A saw mill has been started at Mud Lake, Ont., by McGhee & Graham.

—Walter & Humberstone are building a new saw mill at Edmonton, N.W.T.

—James Bros. are building a shingle mill about twenty miles from Harrison, B.C.

—A lumber yard will be opened at Carlingville, Man., by S. Jackson, of Hamiota.

—A. W. Skinner, of Gore, Ont., has purchased a saw mill in the vicinity of Weedon.

—Gillespie & Grier, of Parry Sound, Ont., are installing a new buzz planer in their mill.

—Robert Jones & Co., of Kars, N.S., are doing a considerable business in spruce lumber.

—F. H. Todd & Sons are placing a new shingle machine in their mill near St. Stephen, N.B.

—During the past season Wm. Peter's saw mill at Parry Sound, Ont., cut 17,000,000 feet of lumber.

—Parker & Howe, of Dixville, Que., are taking out a large quantity of hardwood logs this winter.

—It is the intention of E. J. Taylor, of Thurso, Que., to make improvements to his mill this winter.

—The Hanbury Manufacturing Co., of Brandon, Man., contemplate extending their plant next year.

—Pringle & McNeely have commenced the manufacture of butchers' skewers at Churchdale, Ont.

—Wm. Lees, of Falbrook, Ont., has set up a portable mill about two miles from Watson's Corners, Ont.

—James Hoyt & Sons, of Gespereau Station, N.B., are lumbering near South Branch Lake this winter.

—R. U. Irwin and Wm. Birge are preparing for a big cut of logs this winter. Their mill is at Horning's Mills, Ont.

—The Brunette Saw Mill Co., of New Westminster, B. C., are building a new planing mill, 70×150 feet, at Sapperton.

—The Little Sturgeon River Timber Slide Company has been granted an Ontario charter, with a capital of $50,000.

—Moore & Connell, of Hawkestone, Ont., have purchased Mr. Burton's saw mill at Rugby, Ont., and are refitting it.

—The North American Bent Chair Co., Owen Sound, Ont., recently received an order from Australia for 130,000 chairs.

—A. J. Stevens has purchased the saw mill of John McWhinney at Wilson Lake, and intends moving it to Loring, Ont.

—It is said that the Rathbun Company, of Deseronto, will erect saw mills at Baptiste and Wilberforce, Ont., for sawing cedar.

—W. & J. McKinlay, who have been engaged in taking out spool wood near Red Bank, N.B., have decided to cease business.

—Weiler & Son, of Formosa, Ont., are installing a new boiler in their saw mill. They also intend adding a hoop and stave machine.

—It is the intention of G. W. Ashley, of Colebrook, Ont., to add a shingle machine and box machinery to his saw mill equipment.

—Two American firms are reported to be negotiating for sites in the vicinity of Vancouver, B.C., on which to build large saw mills.

—The Ontario Bureau of Forestry has lately received some fine specimens of spruce timber from the Lake Temiscamingue district.

—Cimon & Co., of Murray Bay, Que., are getting out large quantities of spool wood, which will be shipped to Great Britain next spring.

—E. H. Heaps & Co., of Vancouver, B.C., are building another saw mill. The building will be 80×50 feet, and equipped with modern machinery.

—For the fiscal year ending June 30th, 1899, the United States exported unmanufactured wood to the value of $36,087,584, and manufactures of wood to the value of $5,593,416. The imports for the corresponding period were: Unmanufactured wood, $11,880,679; manufactured wood, $2,618,808.

—The saw mill at Burks Falls, Ont., operated for some time past by the Magnetawan Tanning Co., has been purchased by the Knight Bros. Co.

—W. Craddock, of London, Ont., has lately added an automatic carriage and other machines to his mill for the manufacture of broom handle stock.

—It is understood that Henry Aylmer, of Melbourne, Que., purposes building a sash and door factory and saw mill, to be operated by electric power.

—Timber Inspector Murray, of Vancouver, B.C., has secured a fine section of timber for the Paris Exposition. It will be 8½ feet in diameter and 4 feet long.

—H. J. Bartlett, representative of the Skillings, Whitney & Barnes Lumber Co., Boston, Mass., has opened an office in the Victoria Hall building, Orillia, Ont.

—The red mill at Little Current, Ont., has been purchased by McArthur Bros., who will put it in shape and operate it next season. This mill has been idle for several years.

—The Keewatin Lumber Co., of Keewatin, Ont., purpose carrying out extensive improvements to their mill this winter. They will put in a new band saw and deepen the flume.

—Wm. Young, who for many years operated a saw mill at Wiarton, Ont., has disposed of his business to Siemon Bros., furniture manufacturers, who will conduct it in future.

—The Pacific Coast Lumber Co., of New Westminster, B.C., have applied for foreshore rights at Vancouver. It is understood that the company have in view the erection of a saw mill.

—In Elgin county, N.B., W. J. McKenzie and E. P. Eastman have started a saw mill at Goshen. J. R. Collier is putting up one at Ferndale, and John Long has started one at New Ireland.

—The Orillia Export Lumber Co. are negotiating with the town council of Orillia, Ont., with a view to the erection of a factory for the manufacture of wooden specialties for the European market.

—J. L. McKay, manager of the Elk Park Ranch, is taking out this winter 4,000,000 feet of first-class larch and fir timber for his saw mill at Athalmer, B.C. The company intend adding a dry kiln.

—The saw mills of the Rat Portage Lumber Co. closed down last month, after cutting 50,000,000 feet of lumber. The sash and door factory of the company at Rat Portage will be kept in operation all winter.

—The Dickson Company's shingle mill at Peterboro', Ont., closed down for the season a fortnight ago, having cut about nine million shingles. P. Doris, of Peterboro', had the contract of sawing the shingles.

—The Midiand Box Shook & Planing Co., of Midland, Ont., have commenced the erection of a saw mill at Dollartown. The mill will have a capacity of 8,000,000 feet per annum, and will cost about $50,000.

—Sawyer's mill at Woodstock, N.B., closed down on November 4th, having cut 6,000,000 feet of long lumber and 7,500,000 laths. During the season about 50 men were employed, and the wages aggregated $110,000.

—A company, to be known as the Gash Point Milling Company, has been formed at Fort Francis, Ont., to take over the saw mill at Emo, on the Rainy river, and remove it to Gash Point. Daniel Mosher will be manager of the company.

—D. A. Huntley, of Parrsboro, N.S., is carrying on extensive lumbering operations at Bonny River, N.B. He intends building a saw mill this winter, and will get out a quantity of piling. During the past season his mill at Bonny River cut 8,000,000 feet.

—Steps are being taken in Ottawa to establish works for the manufacture of cotton duck transmission rope and smaller ropes and twine. It is said that six acres of land will be purchased for the buildings and yards, and that two hundred men will be employed.

—Thos. Hollis, of Damascus, Wellington county, has set up a large portable saw mill near that place. It is fitted with double edger, slab saw, live rollers and shingle machines, and is the largest portable mill in that section. The engine is 12×14, with a 50 h.p. boiler mounted on wheels. The machinery was built by the Waterous Company, of Brantford, Ont.

—The Wahnapitae & Metagamishing Lumber Co. is seeking incorporation, to carry on a general lumbering business and to construct a waterway to connect lakes Wahnapitae and Metagamishing, in the district of Nipissing. Bowlby & Clement, of Berlin, Ont., are solicitors for the company.

—A company is being formed to build a factory in Montreal to treat wood by a process controlled by the Electric Fire-Proofing Co., of New York. It is said that by means of this process the wood is rendered non-inflammable. Samples of the wood are on view at the offices of R. Wilson-Smith and Meldrum & Co., in Montreal.

CASUALTIES.

—Geo. Brown had his leg broken while working in his father's saw mill at Lennoxville, Que.

—Wm. Bradshaw, of Thurlow, Ont., was killed by a falling tree while working in the woods in that district.

—Walter Cavers, proprietor of planing mills at Dutton, Ont., had his cheek bone broken by being struck by a piece of board.

—In J. B. Atcheson's saw mill at Cornwall, Ont., Robert Atchison fell against a revolving saw. His right arm was cut off close to the shoulder.

—Nicholas Giebel, employed in Graham, Horne & Co.'s lumber camps near Fort William, was killed while decking logs by the hook striking him in the head.

—R. M. Ellis, driver for Milne & Pratt, lumber dealers, Stoney Creek, Ont., lost his life by a load of lumber falling upon him. The accident was caused by the breaking of an axle.

—M. T. Couvrette, a jobber in the employ of J. R. Booth, of Ottawa, was found dead in the woods in the Black River district. It is supposed that death was caused by an epileptic fit.

TRADE NOTES.

The Truro Foundry & Machine Co., of Truro, N.S., have shipped a rotary saw mill to Cameron Bros., of West River.

The Dodge Manufacturing Company purpose making an exhibit of their pulleys and other apparatus at the Paris Exposition.

W. A. Fleming & Co., of Montreal, have been awarded a large contract for belting by the Dominion Iron & Steel Co., of Sydney, C.B.

Lumber and shingle manufacturers will be interested in the announcement of the Independent Cordage Co., of Toronto, which appears for the first time in the advertisement pages of this number.

The McEachren Heating & Ventilating Co., of Galt, Ont., recently shipped a car load of hot blast heating apparatus to the British Canadian Timber & Manufacturing Co., at Kearney, Ont. They have also put in two large fans and refuse conveyors for the Gilmour Co., of Trenton.

Mr. Jas. S. Neill, of Fredericton, N. B., by means of his advertisement in this number, calls the attention of our readers to the patent lumberman's calk, of which he is the manufacturer. Lumbermen would do well to investigate the article, by writing Mr. Neill for descriptive circulars.

Mill operators should be interested in the announcement of the Syracuse Smelting Company, of Montreal, which appears for the first time in the advertisement pages of this number. The company direct attention to the excellent quality of their babbit metal, and invite readers of this journal to write them for further particulars.

Saw mill owners who may require new pulleys or shafting, self-oiling or plain bearings, hangers, friction clutch pulleys, friction couplings, paper frictions, tight and loose pulleys, belt tighteners, link chain belts, sprocket wheels, or anything in the power transmission line, should send for one of the Dodge Manufacturing Company's 270-page catalogues. The demand for Dodge pulleys among the saw mill people has very much increased during the last few years. Mill men have learned by experience that the factory-made split pulley is one of the most economical things in the mill. The Dodge pulley is manufactured only by the Dodge Manufacturing Co. of Toronto, Limited, Toronto.

AN OPEN POND FOR WINTER SAWING.

THE problem of keeping an open pond for logs, in order to permit of winter sawing, is one which is receiving some attention in the United States. The Mississippi Valley Lumberman publishes a description of the system used by the Yawkey Lumber Co., of Hazlehurst, Wis., which we reproduce, believing that it may offer some suggestions to Canadian lumbermen :

The mill of the Yawkey Lumber Co. was built in 1889, and has been operated every winter since that time. As Mr. C. C. Yawkey, the manager of the company, is one of the most enterprising and progressive lumber manufacturers of the north, it goes without saying that anything that has proven satisfactory to him must be about right, and an experience covering the sawing season of ten winters ought to make his system of sufficient value to recommend its adoption elsewhere.

As Mr. Yawkey says, each saw mill presents its own problems, and where a certain method employed would be all right for one plant, it might not meet the conditions of another. He says the first thing necessary to keeping a pond open all winter is to have a tight board fence around the pond and plenty of hot water running into it. It is also desirable to have the pond as large as possible so that the logs will lay for some time before passing into the mill, for in this way the frost is taken out of them more thoroughly.

The fence surrounding the pond at the Yawkey mill is built of 2×6 and 2×8 D. & M., which are driven into the bottom so as to make the fence perfectly tight. They have two methods of getting hot water, one by a condenser in which they condense the exhaust steam with cold water, and the other by passing cold water through their refuse burner, and thus heating it.

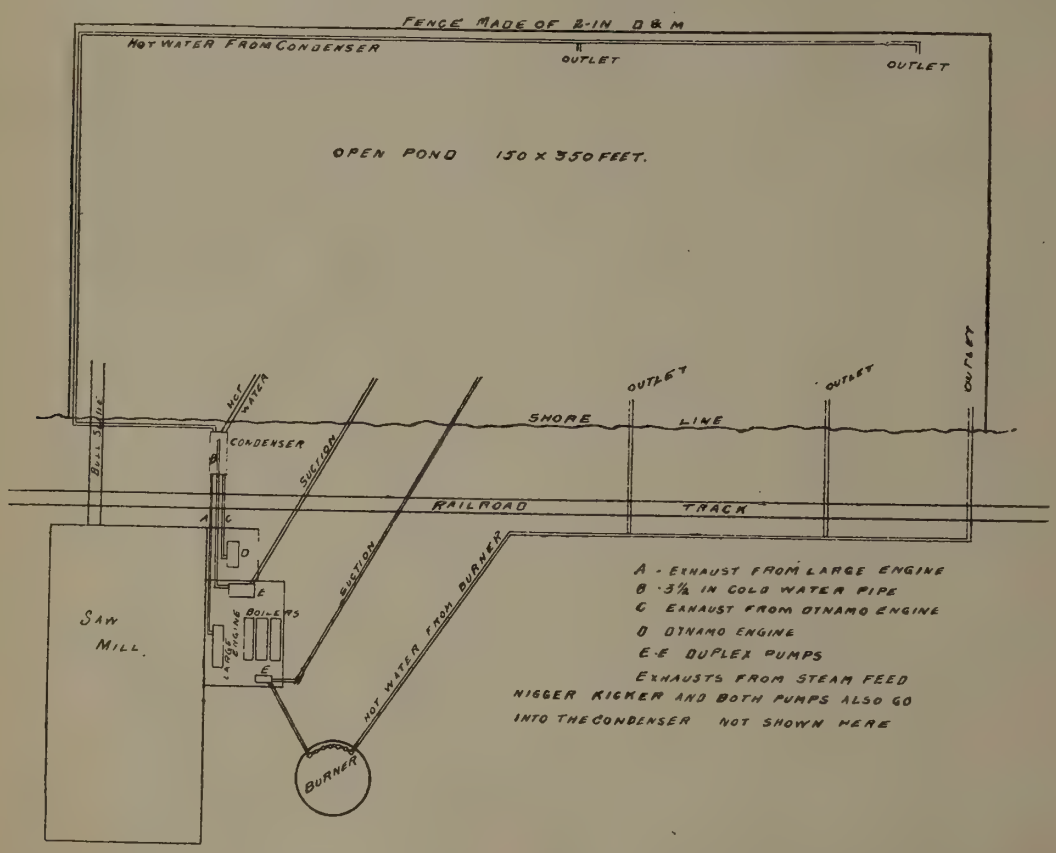
The condenser is made of an old two flue boiler, the tubes having been taken out and patches put on to make it tight. This condenser is placed on the bank of the lake, near the pond, and is set low enough so that the pipes connecting it can be brought through the ground under the railroad track. They have pipes carrying the exhaust steam from all the steam appliances into the end of this condenser. The exhaust pipes from both engines, steam feed, nigger, kicker and both pumps, all extend into the condenser, the idea being to utilize all of the exhaust steam about the mill. They have a large pump with a 3½ inch water pipe extending to the condenser, passing through the head nearly through to the end. Inside the condenser this pipe is perforated so that the water passing from it is delivered into the condenser in a spray. The water is heated by the exhaust steam entering the condenser, and with a sufficient supply of cold water they find that there is little or no back pressure.

The outlets from the condenser consist of two pipes. One of these is a large one entering the pond in front of the condenser, and the other a smaller one extending around the other side of pond, where it delivers water into the pond at two places.

They also have a small pump which pumps water through their refuse burner, where it is heated and delivered into the pond in three different places along the shore. Inside the burner the outfit consists of eight iron cylinders, 14 inches in diameter and about 20 feet long, placed upright, and connected alternately top and bottom with three inch fittings. These cylinders are made from old drums, or flues, and hold considerable water which is heated as it passes through.

The suction for the pumps should be taken from the inside of the pond, so as to circulate the water. They have found out, however, that the water for the boilers should be taken from outside the pond, as the water in the pond becomes saturated with pitch and other impurities, and it is impossible to use it in the boilers after it has been in use a few weeks. The ends of the pipes through which the hot water is delivered to the pond are horizontal and on a level with the water so as to shoot the hot water over the surface of the pond. The pipes are all placed underground with the exception of the one that delivers hot water to the opposite side of the pond. This is fastened to the fence after it leaves the bank.

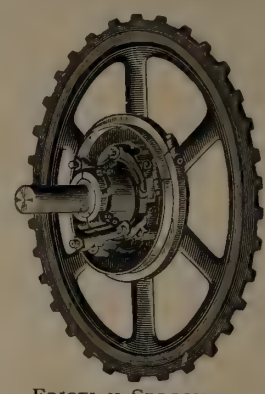
With this system the Yawkey company is able to keep its pond open at no running expense. The cost all came when the system was put in. The exhaust steam and the waste heat from the burner do all the work. They have been able to keep the pond open in the coldest weather, even at forty or fifty degrees below zero, the water being warm even when the weather is coldest.



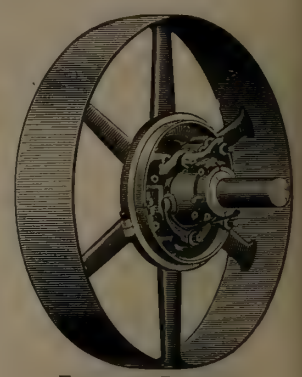
THE DODGE SPLIT FRICTION CLUTCH.

THE Dodge patent split friction clutch pulley and split clutch cut-off coupling is one of the most recent improvements in friction clutch pulleys. This clutch is admirably adapted for use with split pulleys which have become so popular during recent years. The Dodge clutch is particularly a compact and simple clutch in construction, with no trappy parts to get out of order. All parts are easily accessible, and not much space on shaft is required. The fact of the clutch being split, the manufacturers claim, makes it a ready seller, because the cost of a clutch or any shafting appliance does not cease until it is erected and ready to run. It is claimed that it will save many times its cost to the purchaser owing to its being split or in halves.

Each lever has two points of compression. This reduces the number of joints to a minimum and obviates the leading difficulty experienced in the use of clutches having loose, trappy parts and lever connections. An ordinary laborer, it is said, can easily erect and adjust the Dodge clutch. The extended sleeve is arranged so as to allow for its removal for repairs without disturbing the clutch or any of the line shaft equipments. In erecting or making subsequent repairs, it is contended that a split clutch may be handled at less than one-quarter the expense of a solid clutch. In many cases the expense so incurred is more than the first cost of the clutch.

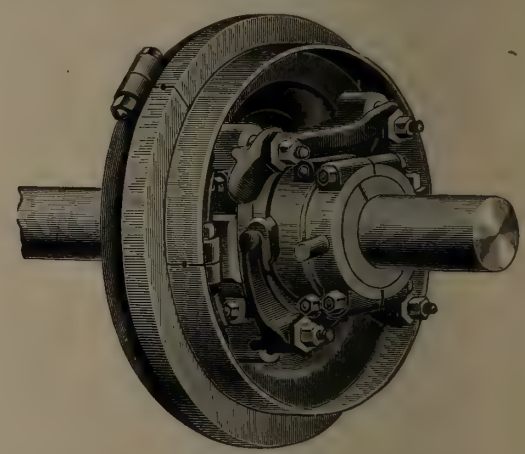


FRICTION SPROCKET.



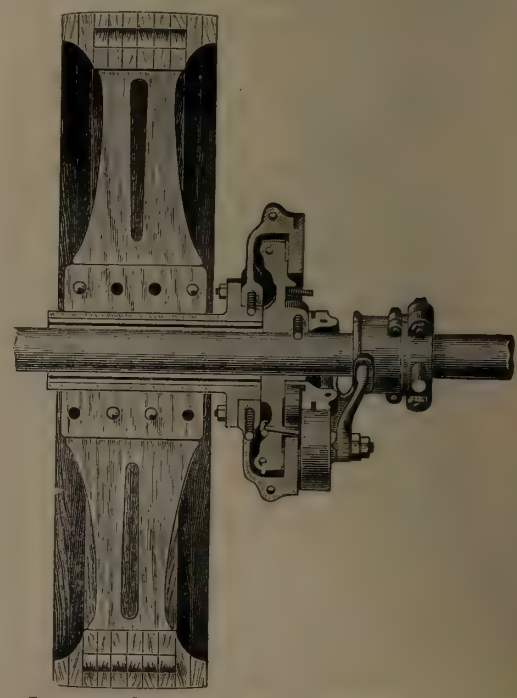
FRICTION PULLEY.

The frictional contact consists of two flat surfaces brought in contact by powerful levers with a heavy wood filled disc which presents two "end grain" surfaces for compressional contact. The large area for friction gives positive results without straining or over-wearing any of the parts, and wear in the friction rings is easily taken up by adjusting bolts. The toggle levers are not affected by centrifugal force, and the clutch will run successfully at any speed.



CLUTCH COUPLING.

The clutch coupling is of great advantage in cutting out portions of the shafting, and departments when not in use, or where it may be desired to shut down quickly. The Dodge Manufacturing Company of Toronto are manufacturing friction clutch pulleys and clutch couplings for all purposes, and, we understand, are meeting much success. The Dodge clutch is in successful operation in some of our largest electrical plants, handling as high as 600 h.p., also small clutches handling as little as one and two horse power are turned out.



SHOWING SPLIT CLUTCH IN SECTIONAL VIEW.

The Dodge Company issue a handsome 270 page catalogue covering their full line of power tansmission machinery, and mail same free on application.

IMPORT DUTIES OF JAMAICA ISLAND.

The Tariff Act of 1899 placed the duty on lumber imported into Jamaica, West Indies, as follows: Wood, per 1,000 feet of pitch pine, white pine lumber, or other lumber, in rough or sawed, by superficial measurement of 1 inch thick, 9d; wood per 1,000 feet of pitch pine, white pine, or other lumber planed, smoothed, grooved and tongued, ceiling and flooring boards, but not otherwise manufactured, by superficial measurement of 1 inch thick, 14s.; shingles, cypress, more than 12 inches in length, per 1,000, 6s.; shingles, wallaba, per 1,000, 6s.; shingles, Boston chips, and all shingles not otherwise enumerated or described, per 1,000, 4s.

NEW TARIFF IN BRAZIL.

A NEW tariff is in preparation in Brazil, in which lumbermen of Canada are interested, inasmuch as Brazil is a quite heavy importer of pine lumber. There are two rates of duty, one the general tariff applicable to imports from the world generally, and the other a minimum tariff applied to articles imported from countries which admit Brazil products, notably coffee and rubber, at low duties or none, of which the United States is one. The duties on lumber will be assessed by the cubic meter, which is approximately 35½ cubic feet, and the proposed duties are on oak $8.25 minimum and $11.55 general, and on pine $2.32 minimum and $3.37 general. The above values are an interpretation into American money of the Brazilian milreis.

PUBLICATIONS.

The World's Paper Trade Review, of London, Eng., has entered upon its twenty-first year. We are reminded of this by a special number just to hand, of which numerous illustrations form a most interesting feature.

Jack London writes in the Review of Reviews for January on "The Economics of the Klondike," forecasting, in a measure, the material progress of that wonderful region under natural conditions of development.

We are indebted to T. Sullivan & Co., of Buffalo, for one of the prettiest calendars which has reached our desk. This firm are wholesale dealers in hardwood lumber, with office and large yards at the corner of Niagara and Arthur streets.

Lumber Tool Catalogue A, 1899, has been received from Thos. Pink, manufacturer of lumber driving tools, boom chains, cant hooks, peavies, etc., Pembroke, Ont. Mr. Pink is represented in Quebec, New Brunswick and Nova Scotia by Bacon Bros., 377 St. Paul street, Montreal; in Toronto by Rice, Lewis & Son; in northern Ontario by Purvis Bros., North Bay, Sudbury and Webbwood; and in British Columbia by J. R. Hunter, Nelson.

The Merchants' Cotton Co. has placedan order for all the belting in its new extension, to contain 500 looms and 20,000 spindles, with D. K. McLaren, Montreal. The order includes 155 feet, 50 inch, 3 ply; 160 feet 14 inch, 3 ply; 500 feet 10 inch, 2 ply; 800 feet 6 inch, 2 ply.

The Board of Trustees of the National Wholesale Lumber Dealers' Association have decided to hold their next annual meeting in the city of Baltimore during the first week in March next. This point can be conveniently reached by a large number of the members, and it is hoped that the meeting will be the means of getting interested in the Association a large number of manufacturers and wholesale dealers. Mr. J. N. Scatcherd, of Buffalo, is president of the Association, and Mr. E. C. Grant, of Ottawa, is a member of the Board of Trustees.

WOOD PULP DEPARTMENT

FIRST PULP MILL IN CANADA.

MR. John Macfarlane, president of the Canada Paper Co., Montreal, in response to an inquiry from THE LUMBERMAN, writes that the first manufacturers of chemical pulp in Canada were the Canada Paper Co., at Windsor Mills, Que., in the year 1873, and that the first manufacturers of ground wood or mechanical pulp were Alex. Bunting & Co., at Valleyfied, Que., about the same year. Thus it is less than thirty years ago that the manufacture of pulp was commenced in Canada.

PINE AS PULP MATERIAL.

ATTENTION having lately been directed in Canada to the advantages of pine wood as a material for pulp manufacture, it may be of interest to give a few particulars of the pine pulp industry lately inaugurated in the district of the Sologne by M. Perinet, the founder of the Salbris paper mill (Loir-et-cher), where two 68-inch machines are employed. This gentleman has succeeded in manufacturing from the material in question a sort of paper board, of a brown color, and useful for a variety of purposes, particularly for the production of boxes for sugar confections. The pulp used contains 75 per cent. of local pine fibre and 25 per cent. of rag and waste paper. The price of 8s. 9d. per cwt. is easily realized. Pine billets of six centimetres (say 2½ inches) in diameter and from one up to three yards in length are used, and three or four tons of pulp are made daily, 14 steres (one of which equals 1.31 cubic yards) of wood being consumed in the process. An ultimate daily production of 14 tons is aimed at, in order to diminish the general expenses, and it is estimated that 16,800 steres of pine wood will be required annually to enable this quantity to be turned out. The present price of the timber is about 7s. per stere, delivered. The freight of the finished paper board (or of the pulp itself) from the mill to Paris is 1s. 4d. per cwt., but it is hoped that a lower rate will shortly be granted.—World's Paper Trade Review.

BRITISH OPINIONS.

SAYS the Paper Trade Review, of London, Eng.: British visitors to Canada appear unanimous in their verdict that that country has an excellent future before it in regard to the manufacture of wood pulp, and in the supply of the British and other markets. Mr. Becker, in speaking of the natural advantages enjoyed by Canadian manufacturers and the power to compete with the Scandinavians, simply endorses the opinions of Capt. Partington, Mr. A. E. Reed, and other prominent British papermakers, who are interested in Canadian undertakings. Mr. Becker thinks, however, that those Scandinavian mills turning out the highest quality of mechanical have nothing to fear from Canadian competition. The Canadians turn out a suitable pulp with a strong fibre for "news," and a better price is obtained compared with the common grades of Scandinavian mechanical. In the production of high-class mechanical the Canadians would have to engage additional labour, bestow more attention on wrapping, and with other expenses the cost of production would be greatly increased.

PAPER AND PULP MILLS IN CANADA.

WE have been favored with a copy of the twenty-fifth annual edition of Lockwood's Directory of the paper and stationary trades of 1899-1900. This work contains a complete list of the paper makers in the United States, Canada, Mexico, South America and Japan, paper and paper stock dealers, wholesale and retail stationers and wall paper printers in the United States, as well as a list of pulp mills in the United States and Canada, classified under different headings to show those in operation, in course of construction, and idle. According to this work there are ninety-three paper and pulp mills in the Dominion of Canada, owned or operated by forty-nine companies. Four of these are idle, one mill has been abandoned since last year, one was destroyed by fire but has been rebuilt, and two mills are now under construction.

There is a variety of contents in the book, and it is valuable for stationers, paper makers, paper dealers and manufacturers of pulp and paper machinery. The publishers are the Lockwood Trade Journal Co., 150 Nassau street, New York city; price, $2.00.

FREIGHT RATES ON PULP.

SOME weeks ago a conference was held between members of the city council of St. John, N.B., and certain pulp manufacturers, to inquire into freight rates charged on pulp by the Furness Line. Mr. M. F. Mooney, manager of the St. John Sulphite Pulp Co., stated that the Furness Line charged a higher rate from St. John than was charged from Boston, Montreal and Portland. He had been unable to secure space on a small quantity of pulp to go forward as a sample, on which depended a sale to one person of 2,000 tons.

Mr. Wagon, manager for the Dominion Pulp Co., Chatham, N.B., stated that he had to stop shipment through St. John by the Furness Line because of the extra freight charged over what was quoted on measurement. He had to drop the London market and seek one in Canada and the United States, which he had done. He could secure lower rates via Halifax, Montreal or Portland, at which points they accepted the pulp by weight of 2,240 pounds, while the Furness Line charged by the cubic foot. Were the rates right he could ship to London through St. John and make it pay. He claimed that pulp did not exceed 60 cubic feet to the long ton, while the company charged on 65, 67, and up to 70 cubic feet. He measured two of his bales, and the average

CHICAGO, ILLS., U.S.A.

was 56.32 feet. He advocated charging on ton weight.

Mr. S. Schofield, agent of the Furness Line, said that the figure he gave Mr. Mooney for a small shipment was 11s. He said that New Brunswick provided little good paying freight, while Nova Stotia provided much. This was the reason that a steamer intended to finish loading at St. John did not come further than Halifax. He said the steamers would load at St. John if the people would pay the freight rates. He pointed out that the bales differed greatly in thickness, the difference in a lot then at his warehouse being nine inches.

Mr. Mooney read a quotation of 7s. 6d. on pulp from Boston to London.

Mr. Schofield presented a table showing the value of deals and pulp as freight. This quotation of 7s. 6d. would mean, he said, 22s. 6d. per standard on deals, whereas from 45s. to 55s. could be obtained. Deals, he claimed, were also poor paying freight. He contended that pulp should pay a higher rate than deals because of its greater value and risk in handling. He had written to Montreal for rates on pulp and got the following: Dry pulp, Montreal to London, per 40 cubic feet, May 6th, 10s.; June 10th, 11s. 3d.; July 8th, 11s. 3d.; August, 12s. 6d.; September 9th, 15s.; October 3, 17s. 6d.; October 8th, 20s. This latter would be equal to 90s. on deals. Replying to a query, he said that he did not think the rate on pulp would ever be as low at St. John as at Montreal, owing to the larger shipping trade there.

The discussion which followed brought out the information that the pulp manufacturers would be able to supply 800 tons a fortnight to the steamers provided the rate were satisfactory.

CANADIAN PULP MACHINERY.

Messrs. Carrier, Laine & Co., of Levis, Que., writing to THE LUMBERMAN on the question of obtaining pulp machinery in Canada, say: "We are prepared to furnish any machinery in the line of pulp mills, from the grinder to the baling press, as follows: Pulp grinders (New England grinder), horizontal and vertical, making 4 to 6 tons per day of twenty-four hours, for the varying price of $600 to $900 each; pulp wet machines, from 48 to 72 inch width, for $800 to $1200; straining machine, with duplicate sieves, from $100 to $200; pulp screening machine, from $300 to $500; pulp stuff pumping machines, from $75 to $150; pulp wood barking machines (Holyoke), from $200 to $400; pulp wood splitter machines, from $200 to $300; pulp hydraulic press machines, from $400 to $600; pulp baling press machine, from $200 to $350.

PULP NOTES.

The Spanish River Pulp Co. have purchased Doran's water power, near Webbwood, Ont.

Mr. Geo. West, of Chatham, Ont., representing the American Pulp Co., states that his company may erect a pulp mill at Midland, Ont.

Parties have been looking over the property of S. P. Benjamin, of Wolfville, N.S., with a view to building a large pulp mill on the Gaspereau lakes.

In the state of Maine there are in operation thirty pulp mills, with a daily capacity of 735 tons of ground wood pulp, 330 tons of sulphite pulp, 110 tons of soda pulp and 60 tons of leather board.

Mr. T. G. McMullen, of Truro, N.S., has not yet abandoned the idea of erecting a pulp mill, notwithstanding that the dam he had constructed was completely destroyed by a freshet some months ago.

It is expected that the mill of the Cushing Sulphite Fibre Co., at St. John, N.B., will be completed early next spring. In this mill it is proposed to make use of slabs and mill refuse in addition to the ordinary pulp wood.

Engineers representing prominent American capitalists have just made a tour of inspection of the water powers in the Lake St. John district, province of Quebec. The object in view is the erection of large pulp mills.

Mr. E. C. Crawford, of Boston, who is understood to represent British capitalists, has acquired options on three water powers, one on the St. Maurice river in Quebec, one on a branch of the Ottawa river, and one at Grand Falls, N.B. It is possible that pulp mills will be built on each of these sites.

The St. John Sulphite Pulp Co., of Mispec, N.B., are said to have sold the bulk of their output for the next year. Their annual production is about 9,000 tons, of which 2,000 will go to Great Britain and 6,000 tons to the United States, leaving about 1,000 tons to be contracted for. The promoters of this enterprise are greatly encouraged at the prospects for successful trade.

The Sissiboo Pulp & Paper Co., of Weymouth Bridge, N.S., are now getting out timber for a dam and making plans for machinery for the proposed pulp mill. They are also arranging for the survey of the electric railway. It is not expected, however, that construction will be commenced before March 1st next. The mill now in operation is doing very successful work, and large quantities of pulp are being shipped to the United States.

Judgment has been given by the Court of Appeal in the case of John Livingstone vs. Frank Ross, reversing the decision of the former court. Suit was brought by the Dufferin Falls Pulp Co., including F. P. Currie, J. T. Shearer and John Livingstone, of Montreal, to compel Frank Ross to deliver to the plaintiffs certain property on the river Du Lievre, near Buckingham, Que., on which plaintiffs were given an option for the purpose of building a pulp mill. The final decision is in favor of the defendants.

The LUMBERMAN will come into your office as a weekly visitor, keeping you in touch with market conditions. Can you invest one dollar to better advantage?

SHERBROOKE, QUE.

THE KOOTENAY AND YALE LUMBER COMPANY.

It is reported from Rossland, B. C., that at a meeting held on December 1st, the Kootenay and Yale Lumber Company completed its organization by electing the following officers: President, Louis Blue; first vice-president, Peter Genelle; second vice-president, John Genelle; secretary, J. E. Poupore. The intention is to have offices in Rossland and Greenwood. The Rossland office will look after the business in the Trail Creek and Nelson sections, and the Greenwood office after the business of the company in the Boundary Creek country. The company which consitutes the combine is capitalized for $500,000 in $1 shares. Of the capital stock $250,000 goes to Louis Blue and A. Fisher, and the other $250,000 to P. Genelle & Co. In the property controlled by the combine are eight mills.

Regarding the combine Mr. Blue says: The mills include P. Genelle & Co.'s at Nakusp, capacity 150,000 feet every 24 hours; Genelle & Co.'s plant at Robson, capacity 150,000 feet; my plant at Rossland, capacity 70,000 feet, and my plant at Ymir of 35,000 feet. They will also include the four mills owned by myself and A. Fisher in the Boundary. Their location and capacity is: Phoenix 30,000 feet, Eholt 50,000 feet, Rock Creek 40,000 feet, and Long Lake 30,000 feet. In addition to these the company will erect four mills over the Boundary at points not yet settled. Our reserves are located all over the Arrow lakes and through the Boundary district. We have timber lands under Dominion and provincial grants, as well as by virtue of leases from claim owners and the railway companies. I should say that the amount of timber now standing on our territory is close to half a billion feet.

If there is a leak of steam around the piston rod of your engine, and the packing has been in use for several months, do not take off the gland and put in another ring or two of packing, but clean out all of the old and put in new throughout.

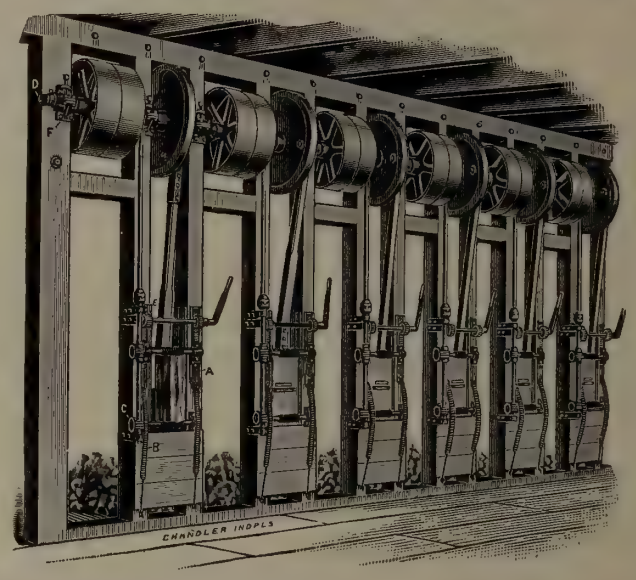
TIE SAWING MACHINE.

Messrs. Kittredge, Smith & Co., of Sherbrooke, Que., have invented a tie sawing machine, which was tested last spring by sawing 27,000 ties for the Q. C. Railway Company. The machine is said to be a complete success, and will make 4,000 eight-foot ties per day, at a cost not exceeding one-half cent per tie, taking the logs from the water and delivering them in a finished condition, with no other handling than passing them to the carrier in the water and two attendants to properly adjust them as the logs are passing through the centreing adjusters to the carrying belt, without loss of motion. Parties wanting such a machine may obtain particulars from the above firm, or the Jenckes Machine Co., of Sherbrooke.

"WANTED AND FOR SALE."

Persons having for sale or wishing to purchase a particular lot of lumber, a mill property, timber limits, second hand machinery, etc., in fact, anything pertaining to lumbering operations, will find a buyer or seller, as the case may be, by placing an advertisement in the "Wanted and For Sale Department" of the Canada Lumberman Weekly Edition. Testimonials to the value of this department by those who have given it a trial state that the results of advertisements were frequently better than anticipated. The cost is comparatively small. Mill owners might, with profit to themselves, make use of this method of advertising their stock to a still greater extent.

The Best Excelsior Machine in the World



When two or more knives are run with one belt, all must stop when the belt is stopped to set bits or from any other cause. Our Machine has a belt for each knife, hence but one knife stops at a time. This great advantage should not be overlooked by purchasers. Time is money. Our Machine cuts more excelsior in a given time than any other machine. Get our circulars and prices.

D. K. McLAREN, MONTREAL

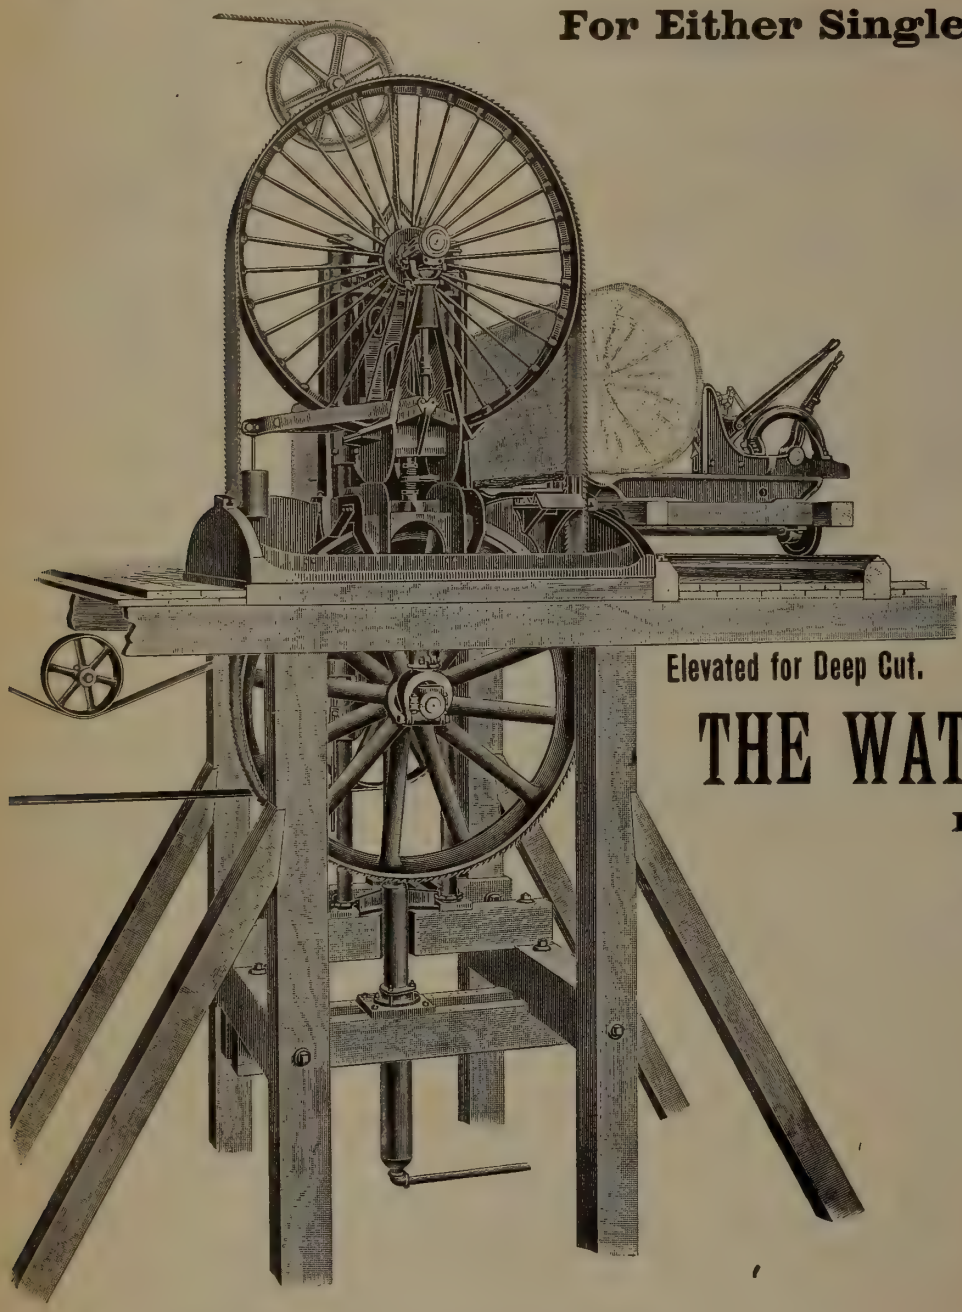
New Allis Telescopic Band Mill

For Either Single or Double Toothed Saws

Is built on correct mechanical principles.

This entire mill is moved vertically, so that the centre of the upper band wheel can be brought down close to the top of the smallest log, thereby having a saw shorter than a gang saw above the work on any sized log, thus doing away with upper guide.

The vertical movement keeps the surplus length of saw blade below instead of above the log. The upper wheel acting as the guide, insures the greatest possible rigidity of the saw, enabling the saw to stand more feed than on the ordinary band mill.



Elevated for Deep Cut.

Manufactured in Canada only by

THE WATEROUS ENGINE WORKS CO.

BRANTFORD, CANADA

Lowered for Narrow 12" Cut.

As a Double Cutting Mill

No Offset—carriage travels at uniform speed each way, saving rack and strain.

Safer—each side of saw cuts its own clearance.

Smoother lumber ; teeth not cutting almost plane the lumber in passing.

Saws—last longer, require less work to keep in order—strain being equal on both edges.

Increased Cut—30 to 50% with practically no additional cost.

Adjustment to depth of cut quicker than operating the old guide.

J. D. Shier, Bracebridge, Ont., has run this mill as a double cutter night and day all season, and verifies the above statements. He is more than pleased, says no one can afford to cut lumber with any other mill.

The Rat Portage Lumber Co., Norman, Ont., have run it as a single cutter all season, and are especially well pleased.

PLEASE NOTE.—Our capacity is limited—even with increased facilities and very much larger force—we have been and are running to our utmost capacity. Prices are advancing in sympathy with the large and steady increase in raw materials.

To obtain earliest delivery—probably then later than desired—orders should be placed at once. Some recognizing this have already ordered Telescopic Bands for next year's work.

1899

REVIEW OF THE LUMBER TRADE.

GENERAL SURVEY.

In many respects 1899 was a remarkable year for the lumber trade. A most active demand, fair prices and a reasonable profit to manufacturers were features of the season's business. If accurate returns were available, they would undoubtedly show an increased home trade and a considerable expansion in the volume of export business. From almost every province of the Dominion there was an increase in shipments to foreign countries, and particularly was there an improvement in the United States trade.

One of the most striking features of the year's business was the almost unprecedented demand for hardwoods and the lower grades of pine and spruce. So great was the demand for low grade stock that at the close of the year this quality of lumber was in more scant supply than the upper grades.

Lumber prices steadily improved from the early spring to about the month of September, when there was a particularly sharp advance, brought about partly by increased freight and insurance charges, and partly by the competition in buying stocks for fall and winter requirements. While the average prices for all grades of lumber were high, the profits of manufacturers were reduced to some extent by the increased cost of labor and supplies. The cost of producing lumber, calculating from the tree to the finished product, was about two dollars per thousand feet higher than in the previous year, so that reckoning on an advance on the finished product of two dollars per thousand feet, the manufacturer's profit would be increased only by about one dollar.

The expansion of the lumber trade during the year was very largely due to increased building operations and a revival in industrial lines. The wood-consuming industries of the country operated steadily throughout the year, many of them working night and day. The result was a large increase in the consumption of lumber. Mining development also created a demand for lumber. Excepting a slight expansion, there were no peculiar features of the export trade. Great Britain remains our best customer, and will, we believe, continue to provide a market for a greater quantity of Canadian lumber each year. Australia, South America, the West Indies, China and Japan are also promising markets for Canadian lumber. The trend of foreign trade seems to be in the direction of closer relations between the manufacturer and the consumer.

At time of writing there is much uncertainty regarding the business of the current year. Prospects are favorable to a large demand for lumber, and preparations were made by the lumbermen early in the winter to get out a large stock of logs. In this they seem likely to be prevented by unfavorable weather conditions. The result will probably be that the production of lumber will not meet the requirements of the markets, and that present prices will be maintained if they are not considerably advanced.

ONTARIO.

Lumber manufacturing was unusually active in the province of Ontario during 1899, and the general conditions surrounding the trade were such as to give encouragement to lumbermen. It was the first year in which the benefits of the manufacturing clause were realized. Although this legislation went into effect on April 30th, 1898, the lumbermen were permitted to export in the summer of that year the logs cut during the previous winter. The effect of the regulation, so far as the sawing of lumber is concerned, did not begin to be felt until the spring of last year. The result of the legislation was a largely increased production of lumber in western Canada in comparison with the previous year and the putting into operation of mills that had been idle for years. There was a marked revival in the industry, the cost of labor and supplies was higher, and the country generally became more prosperous as a result. The full benefit of the law, however, has only commenced to be realized, as from year to year a greater number of saw-mills and wood-working factories will be established. At the present time new mills are in course of construction, and others are being refitted for operations next season.

While the production of lumber in the Georgian Bay district was considerably heavier than in the previous year, the output of the Ottawa Valley mills shows a falling off. The total pine production of the province, nevertheless, was probably 100,000,000 feet greater than in the season of 1898.

Throughout the entire year there was an active demand for pine lumber. Many sharp advances in prices took place, particularly in the lower grades. Mill culls, for instance, at Georgian Bay points which sold in 1898 at $5.50 per thousand were readily taken last year at an advance of $3. Much of this class of stock was shipped to the United States, the cost to the purchaser being thus increased by the import duty of $2 per thousand. Before the close of the season all available box lumber had been picked up, and the higher grades were purchased to some extent for box-making. This resulted in an advance in the price of the better quality of pine lumber. There was probably an advance during the year averaging $2 per thousand feet on all grades. A quantity of deals cut by the Georgian Bay mills was shipped to Great Britain, but the Ottawa Valley continues to hold the bulk of this trade owing to its favorable location for shipping purposes. The Ottawa Valley manufacturers realized for their British stock slightly higher prices than in 1898, while on their shipments to the United States, which were considerable, they secured a substantial advance.

Cedar and hemlock lumber shared in the improvement, the advance in price being about $2 per thousand. Hemlock which sold at mills in Western Ontario at $6 in the spring brought as high as $8 toward the close of the year. There was a greater use of these classes of timber for building purposes.

The hardwood industry made a marked advancement. So great was the demand that buyers found it impossible to purchase to the full extent of their requirements, and towards the close of the year the question of price became a secondary consideration. Ash advanced during the year about $4, and elm about $3 per thousand. On hardwoods generally there was a gain of about $3 per thousand. The full extent of this advance, however, was not realized by some manufacturers, who had sold their output early in the season at lower prices than those which ruled later in the year. The cost of logs was likewise considerably higher. But, considering all the conditions, we believe that the margin of profit in the manufacture of hardwood lumber exceeded any year for the past decade.

Shingles and lath were in brisk demand during the year. The price of shingles did not advance in proportion to other stock, but the same cannot be said of lath. No. 1 lath, which sold early in the spring at $1.50 per thousand, readily found a purchaser before the close of the year at $3.75. This represents an advance of 250 per cent., which is almost unprecedented in lumber trade history.

Reverting to the lumber production, we give below the cut for two years of twenty-one mills in Western Ontario. The totals show an increase of production last year equal to about fifty per cent. The figures are given with a view of indicating the increase in the production, and represent but a small proportion of the total cut of the district :

CUT OF SOME WESTERN ONTARIO MILLS.

	1898—Feet.	1899—Feet
James Playfair, Midland	16,000,000	32,000,000

A. McPherson & Co., Longford Mills	5,000,000	6,000,000
Total	126,200,000	175,500,000

After careful investigation the lumber production of the Ottawa Valley in 1899 is placed at 532,000,000 feet. Below is given a statement of the separate and combined cuts of the mills for the past two seasons. It will be observed that, in comparison with the previous year, a decrease is shown of about 100,000,000 feet. The explanation of this is that the Bronson & Weston mill and Wm. Mason & Son's mill at Ottawa, and the mill of the Canada Lumber Co. at Carleton Place, were not operated during the year. The combined cut of these three mills in 1898 was 36,000,000 feet. R. & W. Conroy's mill at Deschenes, which cut 17,000,000 feet in 1898, was destroyed by fire in July last, when only 3,000,000 feet had been cut. Another circumstance was that

several of the mills were not operated steadily last season owing to a shortage in the supply of logs. The cut of the Hull Lumber Company, for instance, was less than half that of the previous season as a result of an insufficient stock of logs, while the Gillies Bros. Company, of Braeside, also suffered from this cause.

OTTAWA VALLEY PRODUCTION.

Total	633,000,000	532,000,000

QUEBEC.

The volume of lumber shipped to European countries from the province of Quebec during the year 1899 cannot fairly be taken as reflecting the condition of the lumber trade. These shipments, in comparison with the previous year, show a decrease, although it is admitted by manufacturers that the year was one of active demand and considerable prosperity. Heavy shipments of lumber, clapboards, shingles, lath, etc., were made to the United States, and the demand from that quarter induced much competition between buyers and reduced the quantity of lumber shipped to Great Britain. The cut of lumber was not an unusually heavy one, and consequently at the close of the year we find stocks greatly depleted and prices of lumber from two to three dollars per thousand feet higher than they were last spring. There was also witnessed an unusually active demand for Quebec hardwoods, but prices did not advance to the same extent as on pine and spruce lumber.

A factor which tended to decrease the lumber shipments from the St. Lawrence is the adverse discrimination of the insurance companies against the British North American trade. The Underwriters had suffered heavy losses on vessels from American ports, and for some reason placed the onus upon the St. Lawrence route. The result was the diversion of trade to the ports south of the St. Lawrence.

The shipments of spruce and pine deals, etc., from the port of Montreal to Europe in 1899 were 290,238,527 feet, made up as follows :

	Feet.
Dobell, Beckett & Co	54,852,900
W. & J. Sharples	52,166,308
Watson & Todd	52,132,000
Robt. Cox & Co	35,732,948
J. Burstall & Co	26,887,3[illegible]
McArthur Bros. Co., Ltd	24,360,952
Charlemange & Lac Ouareau Lumber Co	19,978,315
Railways	8,190,526
E. H. Lemay	5,934,000
McLaurin Bros	5,385,000
D. Cream	1,860,840
McLean, Kennedy & Co	961,838
Sundry Small Shippers	590,082
Frank Ross	396,000
Allan Line	330,358
The Robert Reford Co., Ltd	207,909
Elder-Dempster & Co	192,336
Furness, Withy & Co	108,900
Total	290,238,52

In the previous season the shipments were 323,435,266 feet, and in 1897 320,802,733 feet. It will thus be observed that the decrease last year as compared with the two previous years was about 30,000,000 feet. The trade with the River Platte was of little account, being only 1,201,266 feet, as against 11,444,776 feet in 1898. From the ports of Three Rivers and Batiscan the shipments to Great Britain and continental ports were slightly larger than in the previous years. The tables below show the quantity and value of lumber and timber exported from the ports named in the last two years :

SHIPMENTS FROM QUEBEC PORTS.

— 1898 —

Ports.	Articles.	Quantity.	Value.
Montreal	Pine Deals	78,365 Std. H	$3,622,910
	Spruce Deals	12,218 "	352,349

		Total Value	$68,231

Coming to the port of Quebec, we find a considerable increase in the export of square and waney timber. Mr. James Patton, supervisor of cullers, furnishes the following comparative statement for three years of the quantity of the chief classes of timber measured and culled at the port :

STATEMENT OF TIMBER MEASURED AND CULLED AT THE PORT OF QUEBEC.

	1897. Cubic Ft.	1898. Cubic Ft.	1899. Cubic Ft.
Waney White Pine	4,311,340	1,903,148	1,798,691
Square White Pine	832,589	1,062,157	592,088
" Red Pine	211,217	239,512	159,937
" Oak	1,448,960	1,072,588	699,524
" Elm	666,577	474,194	517,458
" Ash	132,435	35,164	67,871
" Birch	262,297	.....	403,333

The timber trade of Quebec is reviewed by J. Bell Forsyth's annual circular as follows :

WHITE PINE.—Without much change in the export as compared with last year, an unprecedently light stock remains to winter, especially in waney pine. The production will again be small, and probably quite inadequate to meet the demand and provide a wintering stock twelve months hence.

		Supply.	Export.	Stock
1899	Square	592,088	3,085,560	1,147,817 Square.
	Waney	1,793,281		1,014,344 Waney
1898	Square	1,062,157	3,015,320	1,353,799 Square.
	Waney	1,903,148		2,451,838 Waney.

RED PINE —An increased export and reduced stock is probably due to the marked advance in the value of pitch pine, not only in the United Kingdom but at the port of shipment.

	Supply.	Export.	Stock.
1899	159,977	234,240	142,078
1898	239,512	145,600	291,639

OAK.—Shipments show a decrease, though not a very large one, on the reduced export of last year. The stock is considerably diminished and manufacture will be curtailed, while demand promises to improve in view of insufficient rolling stock on Englsh railroads for present enormous traffic.

	Supply.	Export.	Stock.
1899	607,965	877,320	615,520
1898	1,072,588	949,095	942,905

ELM—Has advanced in value to extreme figures, at which demand continues good. Stock is light, and the scarcity of suitable standing timber of good size will limit production.

	Supply.	Export.	Stock.
1899	472,889	555,360	100,373
1899	474,194	459,920	138,059

ASH.—The stock is almost nominal, and even small average wood has become very scarce. The demand is good in the markets of the United Kingdom at full prices, but it seems impossible to obtain any large quantity for export.

	Supply.	Export.	Stock.
1899	58,212	58,360	2,950
1898	35,164	74,040	9,599

BIRCH.—The export has been large and little is left on hand, but as production promises to be considerable if this winter remains favorable, there should be a sufficient supply of new wood for early shipment, though probably not more than demand warrants.

	Supply.	Export.	Stock.
1899	253,039	328,440	3,331
1898	211,451	211,000	160

PINE DEALS.—A very great advance in the contracting prices for Ottawa mill cuttings has been established for next season. The United States demand and prices fully justify the figures already obtained, from a producer's point of view, but the point reached may seriously limit consumption in the United Kingdom, and makes the business dangerous and the possible profit inadequate for the risk involved.

	Supply.	Export.	Stock.
1899	396,000	353,000	66,003
1898	392,381	192,381	152,844

SPRUCE DEALS—Have improved in value on this side from United States demand, which promises a better return from boards than deals. At same time the advance in Baltic whitewood, and a good business in the United Kingdom, fully justify even a greater advance on last year's prices than mill cuttings have been placed at.

	Supply.	Export.	Stock.
1899	5,403,000	6,563,000	516,160
1898	3,881,670	3,592,782	1,132,005

It is evident that the deal exports for 1898 were wrong in last circular. All returns could not have been entered at custom house when circular was issued.

SAWN LUMBER.—Shipments have been light during the past season to the River Platte, at about the same prices as last year. The demand from the United States has practically cleared up all available stock, at very good prices.

FREIGHTS—Opened at about same figures as usual of late years for steam, and sixty-five shillings for timber, per Pg. Std. intake, with forty-two and sixpence for deals, was paid for Quebec loading, and forty shillings for Montreal liner space. Rates remained without much change till the usual fall advance, which was probably made more marked by withdrawal of some of the liners for transport service. Sail tonnage is rapidly becoming a thing of the past in the business of Quebec.

THE MARITIME PROVINCES.

"I have found the year just closed the best I have ever experienced in the lumber business." This is the terse way a New Brunswick manufacturer expresses his satisfaction with the business and profits of the year 1899. This sentiment, however, is not local in character, as we believe it reffects the opinion of the lumber trade of the provinces of New Brunswick and Nova Scotia. The cut of lumber in the two provinces during the year, as gauged from the reports of mill owners, was slightly heavier than in the season of 1898, and would have been still greater but for an insufficient supply of logs. Early in the year prices of timber products began to advance, but

as many of the manufacturers had already sold a considerable proportion, if not all, of their production in advance, they did not realize the full benefit of the advanced prices. Another feature which slightly reduced the profits of manufacturers and shippers was the high insurance rates and extreme freights, particularly as the bulk of shipments was made late in the season.

The principal markets for the lumber products of the Maritime provinces was South America, United States, the West Indies, and Great Britian. The average price during the year showed an advance, it is estimated, of about $2 per thousand feet over the quotations of the previous season. Although no statistics are available, it is known that the South American trade was particularly active, as high as $11.50 per thousand being paid for desirable specifications at favorable shipping points in Nova Scotia. This was as against from $9.50 to $10 in the previous season. There were quite heavy shipments to the West Indies, which market consumed a grade of lumber that could not be marketed in some of the other countries. It was, perhaps, in the United States trade that the most marked improvement took place during the year. There were shipped to that market very large quantities of spruce, cedar and hemlock lumber and shingles and lath. The price of lumber suitable for this market advanced during the year fully $2 per thousand, and shingle prices were about 40 cents per thousand higher than in 1898, while there was an advance of nearly 100 per cent. in the price of lath. It is safe to assume that each of the three markets above referred to consumed one-third more lumber than in the previous season.

The trans-Atlantic shipments from New Brunswick were, according to J. B. Snowball's wood trade circular, slightly larger than in the previous season, being 431,518,197 feet in 1899 and 412,299,280 feet in 1898. The trans-Atlantic shipments from Nova Scotia show a falling off of over 20,000,000 feet as compared with 1898, accounted for by the increased shipments to the United States, South America and the West Indies. The opening spring rates of freight ranged from 43s 9d to 47s 6d, according to size of vessel and port of destination. Fall freights were from 50s upwards.

A comparison of shipments for two years shows that fewer cargoes were sent to France and Australia. In 1898 there were shipped from the ports of St. John and the Miramichi to France 17,000,000 feet, as against 4,500,000 feet last year. To Australia there were shipped over 5,000,000 feet in 1898, as against about 2,000,000 feet last year.

The manufacturers of the provinces look forward to a profitable trade this year. One manufacturer writes: "The outlook for next season is the most promising for twenty years, and the time is now approaching (so long predicted) when forest products will command the cost of production and leave a liberal profit to the investor." The stocks of lumber held in the provinces are unusually small, in fact, most manufacturers report that they are completely sold out. On the Miramichi the stock of merchantable spruce and pine wintering is 31,684,000 superficial feet, against 40,000,000 feet last year. The production of lumber in the coming season by the large manufacturers will not likely be greatly increased, but a large number of portable mills are being put in operation which will no doubt considerably increase the quantity manufactured. An undesirable feature in connection with the operation of these portable mills is that the owners are frequently not conversant with market conditions, and therefore offer their stock at a figure below the average market quotations. There is no doubt but that all the lumber manufactured in the Maritime provinces in the year 1900 will be required, and manufacturers should endeavor to maintain the strength of the market by holding firmly to prices.

The following tables of shipments from New Brunswick and Nova Scotia are compiled from J. B. Snowball's annual Miramichi wood trade circular:

SHIPMENTS FROM MIRAMICHI FOR 10 YEARS, FROM 1890 TO 1899, INCLUSIVE.

1890–88,000,000.	1894– 96,000,000.	1898–113,000,000.
1891–72,000,000.	1895– 82,000,000.	1899–129,000,000.
1892–95,000,000.	1896–106,000,000.	
1893–83,000,000.	1897–102,000,000.

MANITOBA.

Manitoba is a lumber consuming rather than a lumber producing province. During the year there was a considerable expansion in the consumption in Manitoba and the Territories, perhaps one-third more lumber being consumed than in the year 1898. The Winnipeg Commercial is authority for the statement that 150,000,000 feet of lumber were sold during 1898, as against 125,000,000 feet in 1898, and 90,000,000 feet in 1897. These figures, although perhaps not accurate, are sufficiently near the mark to show the trend of the trade.

It is estimated that the mills in the Lake of the Woods district, located at Rat Portage, Keewatin, Fort William, Port Arthur and Savanne, shipped into Manitoba 78,000,000 feet, of which perhaps 50,000,000 feet were cut at the Rat Portage mills. The total cut of the Manitoba mills reached in the vicinity of 25,000,000 feet, an increase of 10,000,000 feet over the previous year. This would leave 47,000,000 feet to be made up by shipments from British Columbia and the United States, from which districts no estimates have been obtained. It is safe to assume, however, that 25,000,000 feet of lumber was shipped into Manitoba and the Territories during the year by British Columbia manufacturers, leaving 22,000,000 feet as representing the importations from the United States. In the year 1898 the quantity imported from the United States was 35,000,000 feet, but it is admitted that the Canadian manufacturers last year controlled the market to a greater extent than formerly.

Lumber prices in Manitoba, as in the other provinces, advanced steadily during the year, and notwithstanding high prices building operations were continued without cessation. The farmers throughout the province erected modern dwelling houses and farm buildings. Lumber manufacturers anticipate that the present demand for lumber will continue throughout 1900, and are preparing to supply the same by providing an increased supply of logs.

BRITISH COLUMBIA.

The lumber manufacturers of British Columbia will look back upon 1899 as a year of considerable progress. The activity in mining and building operations stimulated the home demand for lumber, and it was in this branch of the trade that the greatest expansion took place during the year. There were also increased shipments to Manitoba, the Territories and Eastern Canada. Early in the year prices showed signs of stiffening, and before the close they had advanced fully two dollars per thousand feet.

One feature of the trade of the coast province was the resumption of operations by several large mills which had been idle for some years. One of the largest of these was the mill of the North Pacific Lumber Company at Barnet, on Burrard Inlet. The capacity of other mills was increased, and taken altogether the production of lumber in British Columbia is believed to have exceeded the cut of any season for several years past. The Vancouver mill of the British Columbia Mills, Timber & Trading Company was destroyed by fire in the fall of 1898. This mill was rebuilt during the year and resumed operations about the first of September.

The volume of the export trade in lumber does not indicate any marked degree of progress, but this is attributable to an unprecedented scarcity of lumber carrying tonnage. Towards the close of the year there was a famine of ships, and the offering of the highest rates on record failed to secure the necessary vessels for the shipment of lumber. The Chemainus mill, for instance, is understood to have upwards of 4,000,000 feet of lumber awaiting delivery to foreign countries. The exports to foreign countries during the year were 49,720,000 feet, valued at $432,151, against 49,000,000 feet, valued at $406,001, in 1898. The following table shows the point of shipment, destination and value of the various cargoes :

Brunel	Callao	1,194,958	10,153
Alex. McNeil	Port Pirie	605,579	5,140
Fred J. Wood	Santa Rosalia	180,400	3,500
Northwest	Santa Rosalia	120,000	3,500

From the above we have compiled the following table showing the value of shipments to the different countries in comparison with the previous year :

SHIPMENTS BY COUNTRIES.

	1898	1899
Australia	$176,303	$152,329
China	75,303	113,348
Japan		24,284
South Africa	50,111	58,563
South America	43,406	52,621
United Kingdom	43,288	
United States	17,500	17,000
British India		29,306
Total	$406,001	$432,151

The entire absence of shipments to the United Kingdom is a striking feature of the above table, as in 1898 the shipments represented in value $43,288, and 1897 $154,684. This falling off, however, is more than offset by the increased shipments to the Orient, the value last year being $137,632, as against $75,303 in 1898. British India, it will be observed, is also opening up as a market for British Columbia forest products.

The outlook for 1900 is regarded by manufacturers as most promising. Unsold stocks at the mills are unusually light, and it is gratifying to learn that there is practically no stock of low grade lumber on hand. While the home consumption is likely to be quite as great as in 1899, it is believed that a much larger export trade will be done, particularly with the Orient.

The shingle manufacturers of British Columbia also experienced a good year in 1900. Shingles advanced from 10 to 20 cents per thousand, and were scarce and in good demand throughout the entire season. Many of the mills are now operating day and night, and have orders on hand which cannot be filled for several weeks to come. The shipments to Manitoba, the North-West and Ontario were about the same as during 1898.

A marked feature of the trade last year was the scarcity of a steady supply of timber to the mills at prices which the manufacturers could afford to pay. There is, of course, a supply of cedar timber in British Columbia for many years to come, suitable for making shingles, but the present price of shingles is altogether too low to bear the cost of delivering it from the stump to mills. The free import of Puget Sound shingles also remained a disturbing factor, they being sold at a number of the largest and best points in Manitoba. The British Columbia manufacturers entertain the hope, however, that the Government will relieve them from such an unfair condition by restoring the duty at the coming session of Parliament.

NEW MILL AT WIARTON.

Mr. Robert Watt, of Wiarton, Ont., has recently completed a new saw mill at that place. It is located on Colpoy's Bay, and is a modern establishment, being provided with a complete outfit of the latest improved machinery, including one large circular saw and the usual number of cut off saws ; also a fine shingle mnchine and other appliances, all operated by a 110 horse power engine and a 140 horse power boiler, equipped with a Dutch oven, which is fed by carriers. The premises are well lighted by an electric light plant on the premises, utilizing both arc and incandescent lights, and ample fire protection is provided both in mill and yards.

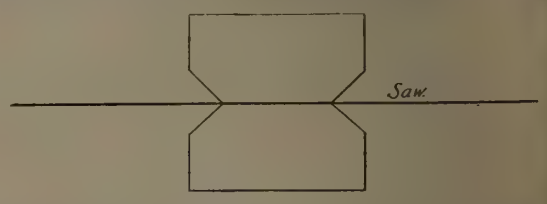
The daily capacity of this mill is from 20,000 to 25,000 feet of lumber and 25,coo to 30,000 shingles per day, cutting all kinds of hardwood, pine and hemlock lumber, pine and cedar shingles. Shipments are made in car and cargo lots to the wholesale and retail trade all over Ontario, as far east as Brockville, Kingston and Montreal, west as far as Sarnia, Windsor and Detroit, and to all points in the Niagara peninsula, with a large trade in Toronto, Hamilton and London.

Mr. Watt purchased the plant from Kidd Bros. two years ago, and after running the old mill one season rebuilt it at a large expense.

Mr. Watt has had a life long experience in the manufacture of lumber, and is widely known to the lumber trade in all parts of the province.

CRACKS IN NEW SAWS—BRAZING.

THE writer's recent experience may prove interesting to The Wood-Worker's readers. Two new band saws, 19 gauge, six inches wide, were received from the factory. They seemed to be in good condition when examined under tension level, but five cracks developed in each saw within a couple of hours after starting. They were cut and brazed at the cracks. Since then they have run steadily for 18 months, sawing 30,000 feet per day, with only two breaks in that time. I use



a brazing steel, not iron, 1 x ¼-inch, with corners cut so that the surface next to saw will be about ⅛-inch wider than lap, as shown in sketch, which should show as for ¼-inch braze. By having the brazing tool cover in width only a little more than the braze, less pressure is required and the braze cools quicker. Experience shows that by using a current of air from a blower or bellows, or even fanning with a shingle, brazes can be made which will last a long time and be perfectly satisfactory. But don't wait until your tools are too cold ; each second at this stage of the process must be taken into account. —E. L. Haskins, in Woodworker.

The Magnolia Metal Company, of New York, have recently opened a branch office at 421 Austell Buildings, Atlanta, Georgia, and propose also to open offices shortly in St. Louis, San Francisco and Philadelphia.

A LUMBERMAN HONORED.

It affords the Canada Lumberman much pleasure to present to its readers the accompanying portrait of Mr. J. G. Scott, manager of the Pacific Coast Lumber Company, who was recently honored by being elected Mayor of the city of New Westminster, B.C., for the year 1900. The electors paid a tribute to Mr. Scott's ability and energy by giving him the largest majority ever recorded in a Mayoralty contest in that city.

It is interesting to learn that Mr. Scott is an Ontario boy. He was born in the city of Stratford, Ont., on December 23rd, 1860. His first experience in the lumber business was with the Medonte Lumber Company, in Simcoe County. In partnership with his brother, Mr. A. A. Scott, now of the firm of Cooke & Scott, of McGregor, Ont., he purchased the business of the above-named company. Their timber supply becoming exhausted, the subject of our sketch, following the advice of Horace Greeley, went to British Columbia in 1891. After investigating the timber supply and market prospects, he became convinced that there was a bright future for the lumber trade of that province, and the result was the formation of the Pacific Coast Lumber Company, with Mr. W. J. Sheppard, of the Georgian Bay Lumber Company, Waubaushene, as president, and Mr. Scott as general manager. The history of the company since its formation has been one of continued success. The mills of the company are located on the Fraser river at New Westminster, and the product manufactured is red cedar lumber and shingles. Their business, confined at present to a car trade with Manitoba and Ontario, has been steadily developing, and it is understood to be their intention to erect an extensive plant at Vancouver.

Mr. J. G. Scott,
Manager Pacific Coast Lumber Company and Mayor of New Westminster, B. C.

Mr. Scott's debut into public life was due to somewhat peculiar circumstances. Our readers will remember that in the fall of 1898 a disastrous fire occurred in New Westminster, by which property to the value of over three million dollars was destroyed. The fire, as subsequent investigation proved, was largely the result of incompetent civic administration, and as an outcome of this, new men of a class not usually found in municipal harness were pressed by the citizens to become candidates for municipal honors. Some consented, among them being Mr. Scott. Confidence was thus restored in financial circles, and as a result New Westminster of to-day is a better and more prosperous city than ever before.

After one year's service as chairman of the Finance Committee, Mr. Scott, by a very substantial majority, was placed in the chief magistrate's chair. The citizens of New Westminster are to be congratulated that a man of marked business ability, and with large private interests to engage his intention, should decide to place his services at the disposal of the public.

THE LATE HON. GEO. BRYSON.

One by one the pioneer lumbermen of the Ottawa Valley are passing to the Great Beyond. Hon. Geo. Bryson, sen., died at his home at Fort Coulonge, Que., on January 14th, after a useful life of almost four score and ten years. He had been ill but a few days.

The late Mr. Bryson was born in Paisley, Scotland, on December 16th, 1813, and was therefore in his 88th year. He emigrated to Canada in 1821, and settled with his parents on a farm in the township of Ramsay, Lanark County. During the early part of his life he worked on the farm in summer to make a comfortable home for his parents, part of the winters being spent in cutting cordwood by the cord for a firm in Almonte. His education consisted of that which he received during an attendance of three months at school and what he learned from his father during the fall and winter evenings. He was one of the first to engage in lumbering in his district. At twenty-two years of age he became associated with his brother-in-law, the late Hiram Colton, of Litchfield, Pontiac County, Que., in lumbering operations on the Coulonge river above Ragged Chute. At that time red pine timber was in good demand, and they together took off some very large timber from Calumet Island. He then returned to Ramsay Township and in company with another party took a large raft to Quebec. This did not prove a profitable venture, as when the timber was sold they found that there was a considerable deficit to be made up. Mr. Bryson, however, was not easily discouraged. He next year operated on the Coulonge, and, aided by the late Mr. Colton, took out another raft. The sale of this raft netted a fair profit, which Mr. Bryson devoted to paying off the debt of the previous year. Subsequently he purchased the good will of a half-breed and cleared the farm on which he lived until he built a residence in Fort Coulonge in 1889.

The late Mr. Bryson was not what might be called an extensive lumberman, rarely making more than one large raft each year, but after 1864 he usually had one or two camps, besides jobbers, making saw-logs, which he sold generally to the late Capt. Young, of Ottawa. He furnished men to manufacture square timber and logs from 1864 to 1876, although retiring from active lumbering in 1873, when he disposed of most of his limits to his two sons, Mr. Geo. Bryson, jr., and the late John Bryson. Being shrewd, industrious, and frugal, he emassed considerable wealth.

Mr. Bryson lived a life of great usefulness. He was a promoter of the Pontiac & Pacific Junction Railway, a member of the Upper Ottawa Improvement Company for many years, and one of the founders and a director of the Bank of Ottawa. The town of Bryson, formerly known as Havelock, was re-named after the Bryson family. In politics he was a Liberal. His parliamentary career began in 1857, when he was elected to represent Pontiac county in the old Canadian Assembly. He was called to the Legislative Council at Quebec in 1867, and occupied a seat there for twenty years, when he retired in favor of his second son, Mr. Geo. Bryson, jr. He was for many years Mayor of Mansfield and was warden of Pontiac for four consecutive terms. He lived a christian life, being an elder of the Presbyterian church for over forty years. As a tribute to his worth his funeral was attended by nearly two thousand persons, including prominent business men and representatives from various banking and other institutions in which he was interested.

The Late Hon. Geo. Bryson.

John Munro has purchased Paul Bros.' planing mill at Midland, Ont., and will put in sash and door machinery.

THE OTTAWA VALLEY.

(Correspondence of the Canada Lumberman.)

A portable saw mill now situated at Mousseau lake, about twenty miles from Ottawa, is being operated all winter, work being rushed ahead night and day. The logs are drawn direct to the mill from the woods. The mill itself, which is run by electricity, has eighty horse power, and is fitted up for removal on short notice. Last season such a mill was erected on a large barge, which navigated the waters of the Ottawa and its tributaries. The mill was thus sailed from point to point, and when a contract was taken the logs were simply floated alongside. This is tne first of its kind, but others will probably be put in commission next season, as the present high prices ruling make them profitable as well as convenient for small dealers.

Mr. James W. Woods, Ottawa, manufacturer of lumbermen's supplies, states that his business has increased 50 per cent. in the last year, and shipments are now made to all points in Ontario and Quebec, as well as New Brunswick and British Columbia. This business has been conducted for five years by Mr. Woods, and the satisfaction given the customers may be understood when it is stated that not a single account has been lost. Next spring Mr. Woods will erect a new five storey warehouse in Ottawa, which with machinery will cost about $35,000. Quite a run is at present being made on the firm's hand-knit underwear.

Messrs. James and R. J. Davidson, of the firm of Davidson & Thackery, proprietors of Ottawa's leading planing mill, have again been re-elected to positions at the city council board. Messrs. W. D. and F. F. Morris, manager and city traveller respectively of the Ottawa branch of the Queen City Oil Company, have also been granted the same honor by the ratepayers. The two pairs of brothers are well known to the lumber trade, and their success in their business callings furnishes the keynote for their success at the polls.

Lieut. W. T. Lawless, of the Ottawa company of the first Canadian contingent, now on the scence of war, is in private life a very efficient and popular clerk in the office of the Upper Ottawa Improvement Company, the concern that rafts the logs for all the Ottawa mills. Lieut. Lawless' salary will be paid his relatives during his absence at the front, and on his return his desk will again be given him. His friends in the lumber business remembered "Billy" and presented him with several useful gifts. Several of these friends have had bright chatty letters from the soldier lumber clerk.

It appears there is a hitch in the negotiations now pending for the sale of the Gilmour & Hughson spruce limits above Ottawa. American capitalists were desirous of securing the land, as they intended to erect a large pulp mill near by, at Chelsea, Que. The Provincial Government has, however, advanced a claim to the valuable water powers which it was thought belonged, as did the limits, to Gilmour & Hughson. Documents, it is claimed, however, can be procured showing that the water power was included in a Crown grant made to Thomas Brigham years ago. He sold it to one Gardner Church in 1841, and the latter now holds the deed in which no reserve claims are set forth. Even should the Quebec Government establish a claim to the water power, it is thought likely that a reasonable rental can be arranged, and the erection of the large pulp mill proceeded with.

Ald. W. D. Morris, Manager of the Queen City Oil Co.'s Ottawa business, states that last year's business with the mills and lumbermen of the Ottawa Valley was the largest on record. This concern supplies all the Ottawa and Ottawa Valley mills with lubricant and lighting oils, etc., and the increase in business is due to the improvements in the lumber business. The present year promises to eclipse the past one for the same reason.

Mr. John Belford, cashier for W. C. Edwards & Co., of this city, is one of the members of the Ottawa battery now en route for South Africa. Jack was very popular and widely known in the lumber trade, and he carries with him the best wishes of all.

Ald. James Davidson, of the firm of Davidson & Thackeray, Ottawa, leaves for England this week on his annual business trip.

The recent mild spell has caused consternation amongst the Ottawa lumbermen, who state that the unfavorable weather has virtually destroyed what chances there were of securing a good supply of logs. Men and teams are both idle in the woods, where the lack of snow makes transportation difficult.

Ottawa mill men have received advices that British buyers are en route to this country to contract for their requirements. Prices remain high and there is already a brisk demand for next year's cut. Mill men are in some cases holding off, as the prospects of a still further advance in the English market are good. American buyers are also figuring on next season's wants.

The Rideau Lumber Company, during the past year, did a greatly increased business, but as the annual statement has not been prepared, the exact comparison cannot be made. Members of the firm state that American buyers came to the Ottawa market last season for the first time in the last eight years. During the previous year the local millmen had to go to the American buyers, but the demand was so great last year that the Americans were glad to allow the Canadian mill owners to dictate prices.

Ottawa, Jan. 15th, 1900.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE SAW-LOG PROBLEM.

FOR the past year we have heard but little of the Michigan lumberman lobbyist; he has rested quietly in the hope that the courts would compel the Ontario Government to permit the exportation of saw-logs from the province. This hope not having materialized, he has now turned up at Washington, with the avowed intention of coercing Great Britain into taking from the Ontario Government her right to make laws to regulate the manufacture of her raw material. The Michigan lumberman must be given credit for his perseverance, even though he may not succeed in his present undertaking.

At the time of writing such well-known mill owners as Col. A. F. Bliss, Walter S. Eddy and Selwin Eddy are at the United States capital, and have submitted to the Treasury Department several questions, including one as to whether there is any diplomatic reason why the retaliatory clause of the Dingley Bill should not be put into effect. This clause in the bill reads as follows:

"Provided that if any country or dependency shall impose an export duty on saw-logs, round unmanufactured timber, stave bolts, shingle bolts, or heading bolts, exported to the United States, or a discriminating charge on boom-sticks or chains used by American citizens in towing logs, the amount of such export duty, tax or other charge, as the case may be, shall be added as an additional duty to the duties imposed upon the articles mentioned in this paragraph, when imported from such countries or dependencies."

The Michigan lumbermen profess to be of the opinion that by a broad construction of the clause the Treasury Department may impose an additional duty on Canadian lumber imported into the United States. The difficulty is that the Canadian Government did not place an export duty on logs, but simply prevented their exportation entirely. Hence the necessity of this broad construction.

The Michigan lumbermen propose to accomplish their purpose by compelling the interference of Great Britain. They claim that the application of a prohibitive duty on Canadian lumber would bring about a commercial war ruinous to the trade between the two countries. This, they say, would be foreseen by Great Britain, who, in her present predicament, would endeavor to prevent unfriendly relations with the United States.

That Great Britain will interfere in this question is too remote a possibility for consideration. She will not divest Ontario of her provincial rights, even for the sake of the Michigan mill owner.

The placing of a prohibitive duty upon Canadian lumber is a step which, we venture to predict, will never be taken by the Government of the United States. Each year the consumers of the Eastern States are becoming more dependent upon Canada for their lumber supply. It is said that a bill will be introduced in the next Legislature prohibiting the cutting of spruce in the State of Maine for a term of years, for the purpose of giving the forest an opportunity to gain lost ground and to prevent the complete extermination of the spruce tree by paper-makers. In the face of such a condition, where would be the wisdom of a prohibitive duty?

Even if the United States Government were to remove entirely the duty on Canadian lumber, the Ontario Legislature would not recede from the position it has taken in relation to the exportation of saw-logs. This fact is evident by the passing within the past month of an Order-in-Council prohibiting the exportation of pulp wood from the Dominion after April 30th next.

Our advice to the Michigan mill owners is to follow the example of one or two of their confreres and establish mills on the Ontario side of Lake Huron. They need have little hope of ever again being permitted to raft their logs across the water.

FREIGHT RATES ON CEDAR.

THERE seeems to be much dissatisfaction among the lumber merchants of Ontario owing to what is claimed to be unjust discrimination against cedar timber products in the matter of freight rates. The railway companies, for some reason known only to themselves, charge a considerably higher rate on cedar products than on other classes of timber.

We are advised by Mr. E. Tiffin, general freight agent of the C. P. R., that on this road the rate on common lumber would cover shipments of cedar lumber, but that cedar ties, or timber, are carried only under special arrangements. The Grand Trunk Railway, it would seem, charge a higher rate on cedar lumber as well as on ties, posts and timber than that which is applied to other timber products. The publishers of this journal, desiring to give the Grand Trunk authorities an opportunity to explain their position, wrote the following communication:

TORONTO, January 18th, 1900.

General Freight Agent,
G.T.R., Toronto.

DEAR SIR,—Some of the lumbermen of Ontario have reported to us that your company apply a higher rate of freight on cedar products, such as lumber, ties, poles, etc., than is charged on other classes of timber products; also that no rate on such cedar products is quoted in your tariff circulars. Before making any comment on the subject, we would be pleased to have your views as to the correctness or otherwise of these reports, and if correct to learn on what ground such high freight rates are charged.

Yours respectfully,
THE C. H. MORTIMER PUBLISHING CO.

Below is the reply of the Grand Trunk Railway:

TORONTO, January 24th, 1900.

Gentlemen,—Replying to your favor of the 18th inst., it is correct that we do not carry cedar at the lumber rate. Our rates on lumber are as published in our lumber tariffs from time to time; our rates on cedar are our 10th class tariff rates.

Trusting that the above supplies you fully with the information you require, we remain,

Yours sincerely,
A. WHITE,
Divisional Freight Agent.

It will be observed how non-committal is Mr. White in his reply. He does not attempt to give an explanation of the discrimination against cedar, but confines his remarks practically to the statement that such discrimination exists. The point which the writer and the lumbermen generally would like to have explained is the basis of calculation which places a higher rate on cedar than on other timber products.

While the trade in cedar products is thus handicapped by exorbitant rates, it also suffers from the absence of any definite rate as furnished by the railroad tariffs. None of the lumber tariff circulars issued by the Grand Trunk Railway since November 1st last, so we are informed, have deigned to quote a rate on cedar products. The result of this is that a manufacturer or shipper must communicate with the district freight agent or some other high official and ask to be furnished with the rate for a certain haul. This usually requires several days, and the prospective customer is kept waiting in the meantime, when he may have secured his requirements elsewhere.

One or two instances might be given of the discrimination referred to. A rate was recently asked on cedar poles from the Owen Sound district to a point where the lumber rate is now 11 cents. The reply was that 14 cents was the best rate that could be given. From Wiarton to Toronto the rate on ordinary lumber is 7½ cents, while that quoted on cedar lumber, posts or timber is usually about 12 cents, and in the same proportion to other points on the road.

This policy of the railroad companies has the appearance of coercion, and is undoubtedly an injustice to the lumber trade which should be remedied if possible. It is likewise a hardship to the farmer, who, for instance, requires a car of cedar posts, to be compelled to pay such exceedingly high rates on this species of wood products. Now that the railway companies have advanced their rates generally in proportion to their views of the prosperity prevailing in the lumber trade, surely lumber manufacturers have reason to expect a just schedule on all timber products of common quality. It is significant that the railway companies are large consumers of cedar, but on this point we will defer an expression of opinion until the railroad companies are given an opportunity to explain their policy.

In the meantime, we invite correspondence on this subject from lumber manufacturers and shippers.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VI. TORONTO, ONT., JANUARY 31, 1900 No. 2.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

PINE TIMBER LIMITS.

THREE SMALL LIMITS FOR SALE IN THE Township of Gibson; all fronting on the Georgian Bay, and close to Midland and Penetanguishene. Apply to THE MUSKOKA MILL & LUMBER CO., Ltd., Toronto.

SAW MILL MACHINERY FOR SALE.

THE COMPLETE MACHINERY OF A SAW Mill, consisting of a steam feed large carriage and frame, one rope feed ditto, double edger and trimmers, swing saws, automatic grinders, belts and saws in good order; all made by Waterous, Brantford. Will be sold cheap. Apply to J. K. WARD, Mona Mills, Montreal, Que.

FOR SALE

THREE THOUSAND ACRES OF TIMBER LIMITS

ALSO SASH AND DOOR FACTORY, SAW, Shingle and Lath Mills, complete, with large Dry Kiln attached, Buildings, Stables, Shops, Dwelling Houses, etc., four miles from the limits, located in West Kootenay, British Columbia. Machinery all up to date and only run one season. Satisfactory reasons for selling. Apply for particulars to

Correspondence solicited. Fenelon Falls, Ont.

SALE OF Valuable Timber Limits

BY PUBLIC AUCTION

AT TORONTO

By C. J. Townsend & Co., 28 King Street West.

ON THURSDAY, APRIL 19th, 1900

At 2 o'clock P.M.

The following Timber Licenses:

ON LAKE NIPISSING.

No. 213, of season 1899-1900, being berth No. 5, in Township of Patterson. Area, 25½ square miles, more or less.

ON FRENCH RIVER.

No. 214, of season 1899-1900, being berth No. 16, Township of Falconer, sale of October 22nd, 1885, known as No. 11, as laid down upon the map of the north shore of Lake Huron, published by the Department of Crown Lands, dated July 10th, 1872. Area, 36 square miles, more or less.

ON VERMILLION RIVER, A BRANCH OF THE SPANISH.

No. 215, of season 1899-1900, being berth No. 22, Township of Dowling, sale of October 22nd, 1885, known as No. 87, as laid down upon the map of the north shore of Lake Huron, published by the Department of Crown Lands, dated July 10th, 1872.

Terms and conditions of sale will be made known on day of sale. Easy terms to purchasers who may be deemed responsible by the vendor and who may arrange therefore prior to sale.

The above timber berths are exceptionally easy of access. Supplies can be placed at very low cost on any of the berths, either during the winter or summer months.

The average haul is very short. The berths are well timbered with white and red pine.

On berth No. 5, Patterson, there is also a fine cut of many millions of large hemlock logs and railway ties.

Berth No. 16, Township of Falconer, has never been cut on.

Each berth will be sold separately.

Explorers can reach Townships of Patterson and Falconer in a few hours from either North Bay or Sturgeon Falls.

Township of Dowling can be reached from Larchwood or Onaping, on C. P. R., which traverses this berth.

For further particulars apply to ALEXANDER FRASER, the vendor, at 74 Nepean Street, Ottawa, Ont.

WE HAVE 300,000 FEET OF VERY GOOD Beech Logs which we wish to cut to order. Signed, JOHN HARRISON & SONS CO., Limited, Owen Sound, Ont.

WANTED—Second hand Shingle Machine and Jointer, Lath Machine, Double Edger without Trimmers, Endless Log Haul and 500 yards light Track Rail. Box "A," Desbarats, Algoma.

MASTS FOR SALE.

NEAR TORONTO, UP TO 90 FEET IN length. Apply to W. A. MILNE, Brown's Corners, Ont.

LUMBER FOR SALE.

ABOUT 20,000 FEET DRY 1½ INCH ROCK Elm; 40,000 feet dry 1½ inch Maple; 10,000 feet dry 1½ inch Beech. Address D. KNECHTEL, Hanover, Ont.

FOR SALE.

ONE SAW MILL CARRIAGE WITH THREE blocks, with saw frame and rope feed, suitable for cutting ties and medium sized logs. Apply Box 75, CANADA LUMBERMAN.

BLOCKS OF 1,000 ACRES AND UPWARDS of Hardwood Timber Lands wanted. Must positively be principally Maple of good size; state price and location, proportion of Maple and full particulars. Box 45, CANADA LUMBERMAN.

FOR SALE.

TIMBER LIMIT, 36 SQUARE MILES, IN Township of Drury, on north shore of Lake Huron, traversed by the C. P. R., Sault line and the Spanish River. Heavily timbered with Spruce and Tamarac; also about 5,000,000 feet of Pine. Good chance for man with Portable Mill. For further particulars apply Box 55, CANADA LUMBERMAN.

SAW MILL SITE

GOOD SAW MILL SITE ON SOUTH END of the Georgian Bay, near Midland; extensive Lumber Docks, Houses, Store Buildings, etc., water power. THE MUSKOKA MILL AND LUMBER CO., Ltd., Toronto, Ont.

SAW MILL FOR SALE.

THIRTY-FIVE HUNDRED DOLLARS BUYS Saw mill worth double this amount, if taken at once; 2 Boilers 120 h.p., Engine 100 h.p., Iron Saw Frame, Three Block Carriage, 2 good Saws, Double Edger and Trimmer good as new, Slash Chain, all in good running order, run this season; size of Mill, 30×100 ft.; good Boiler House, Blacksmith Shop, House, Barn, etc.; 400 acres of good Birch and Hemlock, also thousands of acres of timber near by. For particulars, address ALLEN CRESSMAN, Berlin, Ont.

Tug for Sale

TUG "HOME RULE," NOW in winter quarters at Amherstburg, Ontario. British register; length, over all, 80 feet; beam, 17 feet; hold, 12 feet; high pressure engine, 22 x 24; allowed 130 pounds of steam; with fuel draws 10 feet; can trim to 9 or 11 feet; built in 1890; hull sheathed with steel; classed A1½ in Lloyd's Canadian Register. Has been well kept up. For price and other particulars apply to

F. B. HACKETT, Owner,
Amherstburg, Ont.

WANTED—YELLOW AND RED PINE

LOWEST PRICES C.I.F. UNITED KINGDOM safe ports for following pine. Delivery usual early spring shipment, specifying terms and full particulars. Reliable houses only dealt with, and goods to be subject to inspection and approval before shipment.

FOR SALE.

BIRCH, 1 and 2, CHIEFLY INCH, 100 M. Address, THE KNIGHT BROTHERS CO, Burks Falls, Ont.

WANTED—Green Hard Maple Squares. 6½ in. x 6½ in., 12 feet and up. Cash on delivery at any station in Ontario or Quebec. Box 74, CANADA LUMBERMAN

FOR SALE.

BOX LUMBER, ALSO HEMLOCK. Those in need kindly apply to THE KNIGHT BROTHERS Co., Burks Falls, Ont.

FOR SALE.

CEDAR SAWED OR IN THE ROUND. REID BROS., Hepworth Station, Ont. Correspondence Solicited.

WANTED FOR CASH.

SOFT AND HARD ELM LUMBER AND Logs, Ash, Maple, Oak and Basswood and other Hardwood Lumber. Address "Merchant," care CANADA LUMBERMAN.

LOGS

WILL PAY CASH FOR LOGS OF PINE, Beech, Oak, Spruce, Tamarac, Ash, Hemlock, Elm, Maple, Cedar, Bass, Birch, Poplar. State lengths, diameter, kinds, when cut, where located and price per thousand loaded on cars. T. M. KIRKWOOD, 76 Madison Avenue, Toronto, Ontario.

CURRENT TRADE CONDITIONS.

ONTARIO.

A report comes from the Muskoka district that there has been a liberal fall of snow, as much as nine inches in some districts. Should this snow-fall prove to be have been general throughout the northern district of Ontario, it will cause lumbermen to take a more hopeful view of the outlook for logging operations. It is doubtful, however, whether the total quantity of logs reckoned on can now be banked. Elsewhere an estimate is given of the contemplated production of pine logs in the province this winter. Well-informed persons predict that this estimate will not be reached owing to the difficulty of hauling the logs in the woods. The future snow-fall will not only bear an important relation to logging operations, but will also determine to a large extent the course which prices for lumber will take. With an abundance of snow for the balance of the winter season, prices of pine and hardwood lumber will be likely to weaken towards the spring, but if the fall of snow should be light and insufficient for expeditious logging, we would not be surprised if still higher prices should rule. The present movement of lumber is of satisfactory volume. Wholesale prices at Toronto remain unchanged, but at Ottawa shipping cull strips have advanced about $1.50 per thousand, the price now being $12 to $13.50. Lath is also higher, No. 1 selling at from $3 to $3.25, and No. 2 at from $2.50 to $2.75.

QUEBEC AND NEW BRUNSWICK.

Reports to hand from the logging districts of Quebec and the Maritime provinces are more encouraging than they were last week. In some sections the continued scarcity of snow is still interfering with operations, but in other districts the situation is more favorable. On the Tobique, Nashwaak and Miramichi rivers, in New Brunswick, very good progress has been made in the woods, but in the southern portion of Quebec some of the large operators have not yet commenced to haul their logs. Where there is sufficient snow every effort is being put forth to get logs to the streams, but there is a scarcity of labor which may result in a reduced input. The market remains firm, enquiries for stock are numerous, and prices generally are tending upwards. Many of the mills are preparing to cut on specifications for the South American market, as the returns from stock shipped to that market last year was quite as good, if not better, than from trans-Atlantic shipments. There will also be a large quantity of lumber cut for the United States market. The shippers to Great Britain are showing much willingness to contract for stocks, particularly for early shipment. One shipper alone is said to have contracted for upwards of 100,000,000 feet in New Brunswick and Nova Scotia. The average price for deals at St. John is about $12 per thousand.

MANITOBA AND BRITISH COLUMBIA.

The demand for lumber in Manitoba and British Columbia during the past month has been such as to augur well for an active season. Building operations are opening up favorably, and architects report a large amount of prospective work. It is believed that lumber prices in the spring will be little if any lower than they are at the present time. The price lists issued show some important changes. No. 1 lath is now selling in Winnipeg at $4.50 per thousand retail, as against $2.75 one year ago. The best quality of shingles brings $3.25. The planing mills are so busy that an advance in the price of sashes and doors is looked for early in the spring.

UNITED STATES.

Owing to higher freight rates, pine prices have been advanced by Minneapolis wholesalers about 25 cents per thousand. This is about the only change which has taken place in the pine market, although in respect to hemlock a considerable advance has been made. At New York the base price of hemlock is now $20 and at Buffalo $16, with every prospect of a further rise before long. The report from wholesale markets is that eastern retailers and consumers have been holding off and demanding lower prices, but there is now evidence that the east is preparing to buy at such prices as it can obtain. The situation thus far this winter is opposed to any break in prices, while there is a possibility that they may go still higher. At Buffalo shop lumber is selling at $39.50, and at Boston pine uppers are worth $60 to $62 for one inch and $62 to $65 for 1¼, 1½ and 2 inch. Lath and shingles are in strong demand. No 1 white pine lath is selling in the Buffalo and Tonawanda markets at $3.75, and is very scarce at this figure. Extra white pine shingles bring $3 and second quality $2.25.

The hardwood demand is fully equal

o the visible supply, and prices are more likely to advance than weaken. Quartered oak has been marked higher at Boston, ash is scarce and moving steadily, and the supply of dry maple is almost completely exhausted. Elm moves more slowly than the other hardwoods, and there does not seem to be any prospect of an immediate revival of demand.

FOREIGN.

The British timber market remains firm, with a tendency towards higher prices. It is predicted that there will be an advance of 10 per cent. on the better qualities of pine deals, and 25 per cent. on the lower qualities. Quebec first pine now sells in the Liverpool market at £20 to £24 per standard, second quality at £15 10s. to £16 10s., and third quality at £9 5s. to £10. Quebec spruce brings about £7 15s., and New Brunswick spruce from £7 to £7 5s. The quotations for waney board pine are 2s. 6d. to 2s. 10d. per cubic foot for large average, and 1s. 8d. to 2s. 2d. for second-class wood. Square pine is quoted at 2s. 6d. to 2s. 8d. for first quality, and 1s. 8d. to 2s. for second-class. Birch timber is scarce and sells readily at 1s. 9d. to 2s. for 15 to 17 inch average, and 1s. 6d. to 1s. 8d. for 13 to 14 inch average. The demand for elm is also good at 2s. 10d. and 2s. 2d. respectively for first and second class timber.

THE ONTARIO LOG PRODUCTION.

From information gathered from various sources we are enabled to place before our readers a fairly accurate estimate of the contemplated production of logs in Ontario this winter. The reader will bear in mind, however, that the quantity of logs which will reach the mills may be considerably less than that cut owing to unfavorable logging conditions and the probability of low water in the streams. The figures would seem to indicate that the cut of pine on Crown lands in Ontario will be in the neighborhood of 800,000,000 feet, which is a considerable increase on last year's operations.

Taking, first, the north-western section of the province, we find that the cut of pine timber in the Rainy River district will probably reach 40,000,000 feet. There will also be taken out about 900,000 ties for the Canadian Pacific Railway and 500,000 ties for the Rainy River Railway, in addition to a considerable quantity of telegraph poles and cedar posts. It is learned that the demand for cedar is increasing in the west.

In the Thunder Bay district the cut in the woods will be in the vicinity of 25,000,000 feet, the chief operator in this district being Alger, Smith & Co., whose intention at the beginning of the season was to get out 15,000,000 feet; but it is understood that this quantity may be curtailed owing to a scarcity of labor.

In the western Algoma district the production of pine will be in the neighborhood of 80,000,000 feet, of hardwoods from 3,000,000 to 5,000,000 feet, of spruce pulp wood 50,000 cords, and of railroad ties probably 50,000. According to a correspondent of the Toronto Globe, the cut of pine logs in the eastern division of Algoma will be about 100,000,000 feet, compared with 30,000,000 feet last year, making a total of 180,000,000 feet for the Algoma district.

The most important district in Western Ontario is that of Parry Sound and Muskoka, in which the cut of pine timber will be approximately 200,000,000 feet. In this district the Holland & Emery Co., of Byng Inlet, the Parry Sound Lumber Co., Wm. Peter, of Parry Sound, the Arthur Hill Lumber Co., and the Bank of Toronto, working the Turner & Fisher limits, are the largest operators. The production of these five firms will probably reach 125,000,000 feet. The Parry Sound Lumber Co. are understood to be taking out a quantity of board pine.

The output in the Peterboro district is likely to be in the neighborhood of 100,000,000 feet. The Rathbun Co., of Deseronto, and Gilmour & Co., of Trenton, are the largest operators. Michle, Dyment & Son are reported to be taking out about 100,000 cubic feet of board timber.

Coming to the Ottawa valley, a reliable estimate would seem to place the output on the Ontario side at 175,000,000 feet of pine. Of this about 75,000,000 feet will be taken out in the district between the Petawawa and Mississippi rivers, and the balance in Nipissing and the district adjacent to the Mattawa river.

There will probably be taken out in districts not covered by the above review in the neighborhood of 75,000,000 feet, which brings the total pine production of the province up to 795,000,000 feet. This estimate, of course, only includes the timber cut on Crown lands.

Throughout the province the production of railway ties, cedar posts and telegraph poles is being increased, but there seems to be a diminution in the production of board timber.

The probable production of lumber in the Ottawa valley in the coming season is a matter of some interest. Should all the logs cut reach the mills, it is probable that the mill output will be about 20 per cent. larger than last season. Of this increase 10 per cent. will be attributable to an increased cut of logs and 10 per cent. to the fact that a quantity of last season's logs did not reach the mills, owing to low water in many of the smaller streams tributary to the Ottawa, and are now a reserve for the sawing season of 1900.

STOCKS AND PRICES.

A timber limit at Riverside, on Nine Mile River, N.S., has been purchased by James G. Kerr, of Guysboro.

The Southampton Lumber Co. are supplying the timber for the harbor improvements at Port Elgin, Ont.

The steamer Victorias is loading lumber at Chemainus, B.C., for the Fiji Islands. She will take 1,500,000 feet.

The Sheet Harbor Lumber Company, of Sheet Harbor, N.S., expects to cut about 6,000,000 feet of deals during the coming season.

The city of Hamilton desires tenders by Tuesday, February 6th, for the annual

mile berth on Magaguadavic River, and a two-mile berth on the southern side of the Restigouche River, went to the Estate of J. P. Mowatt.

Howard & Craig, of Sherbrooke, Que., are reported to have purchased from the Quebec Government some 6,000 acres of virgin timber limits of the Chaudiere river. This gives them about 20,000 acres of timber on that stream.

The Liscombe timber property of 7,000 acres and an interest in 25,000 acres more in Nova Scotia, owned by the heirs of the late James Miller, of St. John, have been sold to Louis F. Hill, of Dartmouth, N.S., for $21,000. The mill property of S. T. King & Sons, recently offered for sale, has not yet been sold.

The Wisconsin Hardwood Lumbermen's Association have adopted a new price list on hardwoods showing a considerable advance on late quotations. Both red and white oak are placed at $35 for firsts and seconds f. o. b. Wausau. Soft elm is quoted at $24 for inch firsts and seconds, $17 for log run, and $20 for common and better. Maple is listed at $14 for log run, $20 for 1 to 1½ inch firsts and seconds, $22 for two inch and $24 for 2½ inch and thicker. Inch basswood, 5 to 11 inches wide, is advanced to $23, 1x12 inch $27, 1x13 inch and wider $30, 1¼ and 1½ inch $25, and 2 inch $27.

OTTAWA VALLEY MARKET CONDITIONS.

[Correspondence of the CANADA LUMBERMAN.]

The lumber business in Ottawa is at present quiet, though somewhat brisker than for the corresponding month last year. Messrs. Elmitt & Hurdman report a good trade in hardwoods with the United States. Prices are also considerably higher in sympathy with the lumber business thoughout. Ash brings $18 per thousand, an advance of about 30 per cent. over last year's prices. Basswood and elm show an advance of about 20 per cent. Only the smaller mills are cutting the hardwoods, as the large mill owners do not find it in their best interests to make a bid for this branch of the business, the natural disadvantages in the acquirement of a supply of hardwood logs being considerable.

The statement of exports of forest products from the consular district of Ottawa is interesting as showing the extent of the increase in shipments. During the year there were exported to the United States timber products to the value of $2,898,134.82. For 1898 the figures were approximately $1,500,000 and for 1897 $2,500,000. Thus it will be seen that last year there was an increase in value of nearly $1,300,000 over the previous year and of almost $300,000 over 1897. It will be remembered, however, that there was a great rush of lumber shipments to the United States in the first half year of the year 1897, in order to escape the payment of the duty which went into effect in the summer of that year. The exports of last year, therefore, make a more favorable showing than appears at first glance. Following are the figures in detail for last year, divided into two sections :

EXPORTS FROM CONSULAR DISTRICT OF OTTAWA.

Articles.	Half Year Ending June 30.	Half Year Ending Dec. 31.
Basswood	$ 456.22	$ 699.19
Lumber	930,104.21	1,242,086.20
Lumber (in bond)	137,140.84	134,256.90
Lath	17,803.23	20,339.00
Match blocks	4,990.92	11,590.83
Pickets	17,775.62	9,852.33
Poles (cedar)	3,011.75	500.00
Posts	152.50	
Pulp wood		1,429.20
Railroad ties	1,697.13	15,424.83
Ship planking	1,992.95	989.11
Shingles	16,374.72	15,906.86
Sulphite pulp	542.19	9,754.30
Telegraph poles	993.80	613.45
White Pine deal ends	131.74	
Yellow wood boards	1,542.80	
Total	$1,134,912.62	$1,763,222.20

All the mills in the Ottawa valley will be operated, if possible, to full capacity this season. In the Gatineau valley and Black river districts the snow lies deep and logging operations are being rushed. The recent cold snap has aided the hauling operations in other districts, and all the men that can be put to work are hauling out logs.

A new and well equipped shingle mill has been erected at Whitney on the line of the Canada Atlantic Railway. The mill, which has been built by Buckham & Carter, has a daily capacity of 80,000 shingles.

Chitty & Co., of this city, sent a gang of 44 men to Metagama last week to work on the limits of the Georgian Bay Lumber Co. Smaller gangs were sent earlier in the month to this and nearby points.

The first car load of British Columbia fir arrived in Ottawa last week. It will be used in the construction of the two new government dredges, and was planed and cut in suitable sizes before being shipped.

Although the Ottawa Wholesale and Retail Lumbermen's Association has been formed but a short while, its beneficial effects are already being felt, there now being litte or no cutting of prices as in former seasons. Nevertheless, the dealers are wary and prices continue unsettled. There is little business being done in laths. Prices range from $3 to $3.25 per thousand wholesale. Pine s.c. strips have also advanced, the present prices being $11 to $13.50 per thousand. Though the building prospects are good, the retail dealers and jobbers are not buying in large quantities, the mill owners preferring to hold their stocks.

Speaking about the prospects for the sale of the coming summer's cut, a prominent mill owner stated recently that an all round advance of about 20 per cent. was noticeable in the offers being made for the cut of the various mills. Prices did not advance last season till many of the mill owners had closed their contracts. It is expected that the advance will be a still more favorable one and the mill owners are holding off.

OTTAWA, Jan. 29th, 1900.

LUMEER FREIGHT RATES.

CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway, are as follows: Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, 10½ cents per 100 lbs.; Ottawa, Rockland and Hawkesbury to Montreal, 5 cents per 100 lbs.; Quebec, 10 cents per 100 lbs.; Arnprior to Montreal, 7 cents per 100 lbs.; Quebec, 12 cts.; Pembroke to Montreal, 8 cents per 100 lbs.; Quebec, 13 cents per 100 lbs.; Ottawa to New York, 15 cents per 100 lbs; Arnprior to New York, 17 cents per 100 lbs.; Pembroke to New York, 18 cents per 100 lbs.; Ottawa to Buffalo, 12 cts. per 100 lbs.; Ottawa to Port Huron and Detroit, 14c. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c., exports 13c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents, export 15 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany, 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N.B., and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N.S., and common points, 21 cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs. Rates quoted above are in cents per 100 lbs., except when quoted per M ft.; minimum carloads 10 M ft., lumber not exceeding 3,000 lbs. per M ft. Ottawa rates apply on shipments from Rockland and Hawkesbury.

The cheese box factory of Samuel Bickell, at Peterboro', Ont., was destroyed by fire a few days ago. The loss was $3,000.

THE FORESTRY MOVEMENT.

AT the last session of the Dominion Parliament the Minister of the Interior made provisions for the appointment of a chief inspector of timber and forestry, the purpose being to inaugurate a system for the preservation of the Canadian forests, as well as to encourage tree culture. An inspector was duly appointed, in the person of Mr. E. Stewart.

The outcome of the above step is a movement in the direction of organizing a Canadian Forestry Association, on lines similar to the Association established in the United States. A preliminary meeting looking to the formation of such an association was held in the city of Ottawa a fortnight ago, at which a committee was appointed to formulate a working constitution. It is a source of congratulation that steps are now to be taken to disseminate knowledge concerning the perpetuation of our timber supply, even if no other object should be directly accomplished by the association.

It will be remembered that in August, 1882, a meeting was convened in the city of Montreal for a similar purpose. The result was a general awakening of interest in the subject throughout the Dominion, but for some reason the good work then commenced was continued for only a short time. Since that time the public have become thoroughly imbued with the necessity of adopting measures to provide an ample supply of timber for future generations. Thus it would seem that the association now about to be formed will come into existence under circumstances favorable to a career of great usefulness.

An example of forestry advancement is the establishment of the College of Foresty in New York State, which began work in the fall of 1898, under the direction of Prof. Fernow. The college forest is situated in the Adirondacks, and contains 30,000 acres of land, selected with a view to its adaptability for a demonstration of forestry management. The students in attendance during the first session numbered twenty-eight, but of these only four were regularly entered as students of forestry, the others being mainly from the department of political economy and the college of engineering and agriculture.

The hope may be expressed that the reforestation of pine may not absorb all the efforts which may be put forth in the direction of forest preservation, but that the continuance of the hardwood industry of this country will also be given proper consideration. It is admitted to be no difficult task to grow hardwood timber. In the past, however, practically all investigation and research have been confined to pine. This is largely owing to the fact that the Provincial Governments derive a large annual revenue from the cutting of pine timber. But the time has come when the perpetuation of our hardwood supply is an important question, and one which we hope will not be overlooked by the Canadian Forestry Association about to be formed.

EDITORIAL NOTES.

THE transportation problem is one which bears a close relation to the future trend of saw-milling operations. While in earlier days it was believed that the only mills which could manufacture lumber at a profit were those situated at favorable shipping points, there now seems to be a disposition to establish mills nearer the source of the timber supply. Some manufacturers contend that the cost and risk of getting logs from distant forests is greater than the saving in freight. It is believed that the winters of Canada are becoming less severe, and that the quantity of snow is each year decreasing. It is also pointed out that the cutting away of the forest has deprived the streams of a moisture cover, and the water which formerly came away in rivulets and streams leaves largely by evaporation. Granting that these claims are well founded, lumbermen may experience considerable difficulty in the future in floating their logs any considerable distance, and may find it profitable to place their mills adjacent to their limits.

THE architects of the Eastern States possess but little knowledge of the qualities and characteristics of Canadian woods. They are, however, desirous of adding to their knowledge in this direction. An instance recently came to our notice where a resident of the Eastern States was afforded the opportunity of examining some samples of Canadian birch wainscoting, and so great was his satisfaction with the material that he endeavored to induce his architect to substitute Canadian birch for North Caroline pine on a large building in course of construction. The arrhitect, of course, being unacquainted with Canadian wood, was somewhat reluctant to take the step. It is said that if the qualities of the Canadian woods were better known by the architects of the Eastern States, a much larger quantity would be used in the construction of buildings. There is no doubt as to the adaptability of birch for flooring purposes, and from our knowledge of the wood we believe it will compete successfully with North Carolina pine. It might be of advantage to the lumber trade of Canada to have printed for distribution a booklet setting forth the qualities and characteristics of the different species of the Canadian woods.

THE editor of the CANADA LUMBERMAN recently received a communication from a correspondent in a large city in the Eastern States asking for the names of some saw-mill owners in a position to supply pine slabs. It was his purpose to utilize these slabs for bundled kindling wood, he to set up a machine at the mill to cut up the slabs as required. We understand that this industry in the Eastern States is controlled by a trust having its plant in Western Pennsylvania and shipping to eastern points by rail. This trust, as is the case with monopolies generally, has been demanding exorbitant prices for kindling wood, a recent advance of 40 cents bringing the price up to $1.70 per hundred bundles. The outcome of this last advance is that retailers have turned their attention to the Canadian mills as a source of supply. They have to reckon, however, with an import duty of three-tenths of a cent. per bundle on all less than one-quarter cubic feet each in quantity. But even in the face of this duty it is believed that kindling wood can be imported from Canada and sold at a reasonable profit in competition with the trust prices. This industry is one which, if encouraged by the mill owners on this side, may result in the utilization at a profit of a considerable quantity of refuse material.

QUESTIONS AND ANSWERS.

A correspondent in Algoma writes: "Some 12 years ago there was a dam built at the mouth of a lake. It was repaired occasionally for years by different parties as they required it. Last year a party removed it so as to get all available water for driving lower down the water course. This fall, believing I was the only one who would require to use it next spring, I put on a new dam on the old site. I find now that another mill man is operating up the same waters. I will require all the water available to get my timber down. The stream out of the lake is not navigable. Can I collect any rate or dues on logs or pulpwood coming down; if so, how much and in what way? All timber coming down this way must pass through my mill pond, which is a basin on the waterway. What steps will I have to take to put on a sorting jack?"

ANSWER.—A person who constructs improvements on a public water course has, of course, no exclusive right to the use thereof. He may, however, collect from other persons using these improvements a certain toll, said toll to be fixed by the county judge and to be based upon the expenditure involved in the construction of improvements. We presume that a sorting-jack might be included in these improvements, and that it would be an element in the construction to be considered by the judge in fixing the tolls. The fact that a dam had previously been removed does not seem to affect the case, excepting that in removing it the party who did so took the law into his own hands unless he had previously obtained permission to do so from the proper source. The following sections of the Rivers and Streams Act of Ontario would seem to cover the points in question:

SECTION 11.—In case any person shall construct in or upon such river, creek or stream any apron, dam, slide, gate, lock, boom or other work necessary to facilitate the floating or transmission of saw logs or other timber, rafts or crafts down such river, creek or stream which was not navigable or floatable before the improvements were made, or shall blast rocks or remove shoals or other impediments, or otherwise improve the floatability of the river, creek or stream, such persons shall not have the exclusive right to the use of the river, creek or stream or the constructions and improvements, but all persons shall have, during the spring, summer and autumn freshets, the right to float and transmit saw logs and other timber, rafts and crafts down such rivers, creeks or streams and through and over the constructions and improvements, doing no unnecessary damage to the construction and improvements or to the banks of the said river, creeks and streams, subject to the payment of reasonable tolls to the person who has made the constructions and improvements.

SECTION 13.—The judge of the county court or the judge or stipendiary magistrate of the district, as the case may be, in which the constructions and improvements are situated, shall, upon the application of the owner thereof, or of any person who may desire to use the same, fix the amounts which any person entitled to tolls under this act shall be at liberty to charge, and may from time to time vary such amounts, except where the tolls are fixed by the charter of incorporation of the government of Canada or of the legislature of this province; and the judge or stipendiary magistrate, in fixing the tolls, shall have regard to and take in consideration the original cost of the constructions and improvements, the amount required to maintain the same and to cover interest upon the original cost, as well as such other matter as under the circumstances may seem just and equitable.

A resident of Memel, N.B., some years ago bought a small tract of wood land for $80. Some time afterwards he sold a part of it for $20, and the balance about one month ago for $1,000, and that after logging the land more or less each winter since it became in his possession.

WOOD PULP DEPARTMENT

ENCOURAGING THE CANADIAN PULP INDUSTRY.

THE governments of the provinces of Ontario and Quebec have, almost simultaneously, taken action to assist the development of the Canadian pulp industry and to build up an industry proportionate to the vastness of our resources and manufacturing facilities. In the past the United States has been permitted to import pulp wood from any of the provinces of Canada free of duty, while if the wood were manufactured into pulp and exported to the United States, a duty equal to about 20 per cent. of the value of the pulp was collected by the government of the latter country. This anomaly is now to be removed.

The Ontario government, by an order-in-council already issued, proposes to apply the manufacturing clause to spruce and other soft woods; that is to say, after April 30th, 1901, spruce timber as well as pine must be manufactured within the Dominion. The government was probably induced to take this step by the satisfactory working of the manufacturing clause as applied to pine saw logs.

The Quebec government proposes to accomplish practically the same result in another way. An order-in-council has been signed by the Lieutenant Governor increasing the stumpage dues on spruce timber from 40 cents per cord as at present to $1.90 per cord, a rebate of $1.50 per cord to be allowed on all pulp wood manufactured within the province. This rebate will, it is believed, more than offset the present duty on pulp exported to the United States. Consequently, the United States pulp manufacturer importing his raw material from the province of Quebec will be unable to compete with the Canadian manufacturer, and hence will be obliged to look elsewhere for his supply of raw material or remove his mill across the border into the province of Quebec.

These new regulations, of course, only affect the cutting of timber on Crown lands, but this is the most important factor, as a very small quantity of pulp wood is exported from lands on which the settlers hold the patent. Nearly all the pulp wood exported from Canada is from the provinces of Ontario and Quebec. For the fiscal year ended June 30, 1898, Canada exported pulp wood to the value of $912,041, of which $876,962 went to the United States. Of the total amount Ontario sent $286,987 and Quebec $624,475. Placing the value of a cord of pulp wood at three dollars, this would represent about 300,000 cords. If this quantity were manufactured in the country and sent out as wood pulp, there would be expended on each cord about $10, or a total of $3,000,000. It is no doubt a recognition of this fact that has influenced the governments of the two provinces in the adoption of their present policy. It is quite probable that for a time the governmental revenues from the cutting of pulp wood will show a decrease, but as new pulp mills are established this condition will be overcome.

The Premier of Quebec, speaking on the subject, stated that he was fully alive to the necessity of preserving, as far as possible, the wood of the province for the benefit of our own people. He pointed out that, owing to the depleted supply in the United States, the value of our spruce lands had risen enormously in the past few years. In 1892 spruce limits were sold for about $8 per mile, while last year the government sold similar limits for $150 per mile. He further stated that in the province of Quebec there were under license about thirty million acres of timber limits, while there were still unlicensed one hundred million acres in the old part of Quebec and seventy million acres in the new part recently added to the province.

PROVINCIAL DISCRIMINATION.

In the preceding article satisfaction has been expressed with the action of the Quebec Government in imposing differential stumpage dues on pulp wood. While in sympathy with the spirit of the legislation, we cannot entirely endorse the terms of the Order-in-Council which provides that a reduction of $1.50 per cord will only be allowed when the pulp wood is manufactured in the province of Quebec. If this provision is adhered to, it is likely to result to the serious disadvantage of persons owning timber limits in the province of Quebec adjacent to the borders of the other provinces. There are at least two instances where the interprovincial boundaries are large streams, namely, the Ottawa river forming the dividing line between Ontario and Quebec, and the Restigouche river dividing the provinces of New Brunswick and Quebec. These streams bear an important relation to the lumber industry of these provinces, and the regulations in the past have been such that timber could be cut on either side with almost equal advantage, irrespective of the point of manufacture. If a lumberman now operating a saw mill should decide to engage in the manufacture of pulp, the natural site for such an establishment would be adjacent to his present mill. If, however, this mill should

MONTREAL

be located on the Ontario side of the Ottawa river or the New Brunswick side of the Restigouche river, he would not be allowed the rebate of $1.50 per cord on pulp wood, but would be classed in the same category as a person exporting to the United States. This would simply mean that he could not compete with his competitor who had a mill in Quebec.

The Riordan Pulp Company recently built a mill at Hawkesbury, on the Ontario side of the Ottawa, but they are dependent to some extent on Quebec for their timber supply. Hence they will be seriously handicapped by the Order-in-Council.

Another disadvantage of the law would be the restriction of the number of pulp mill sites. It is not a difficult task to find a suitable site for a saw mill, but the number of first-class sites available for pulp mills is limited, and any legislation which would further restrict the number must hamper the industry without any compensating advantage.

The effect of this legislation may not be regarded as serious at the present time, but as the supply of pine becomes less plentiful more attention will be given to the manufacture of pulp. Then the disadvantages will be more fully realized. The Ontario Government established a precedent for the Quebec Legislature by placing no restriction on the manufacture of spruce and pine timber within the province, and permitting it to be manufactured anywhere in the Dominion. The latter government, however, places the provinces of Ontario and New Brunswick on exactly the same footing as the United States. It is improbable that this was the intention of the Quebec Government, and no doubt the wording of the Order-in-Council will be so changed at the present session as to give equal rights to all owners of Quebec timber whether manufactured in one province or another. It is stated in the British North America Act that there shall be no provincial discrimination affecting trade matters. This is purely a trade question, and as one which affects the development of an important Canadian industry, should receive liberal treatment.

LARGE PULP DIGESTORS.

The Polson Iron Works Company, of Toronto, are building three large pulp digestors for the new mill of the Riordan Pulp Company at Hawkesbury, Ont. These digestors are 38 feet high, 13 feet 6 inches in diameter, and are known as 11-ton digestors, being capable of making 11 tons of pulp each charge. They are made of 1⅛ inch steel plate, with 1¼ inch butt straps. A special press for forming the ends, which are elliptical in shape, was built by the Polson Company. It has a capacity of 100 tons, and is also used for flanging and pressing large marine boiler heads. The Polson Company are looking forward to a considerable business in the manufacture of pulp digestors.

JACK PINE FOR PULP.

A writer in the Paper Mill from Appleton, Wis., says: "Some of the mills on the Wisconsin river are experimenting with jack pine for making pulp. Considerable success has attended these experiments, and when more effective methods are perfected for eliminating the pitch in which the wood abounds, a great deal of it may be used, as it is abundant and cheap in the immediate vicinity of many of the mills. Basswood is also used to some extent by some of the mills, and so are hemlock and straight pine, though always in combination with spruce."

PULP NOTES.

The North River Lumber & Pulp Co., of Val Morin, Que., have applied for a charter.

It is reported that the Cushing pulp mill at St. John, N.B., may not be put in operation before next fall, owing to the difficulty of obtaining the machinery.

A syndicate, including Dr. Lynd, E. F. B. Johnson, Robert Davies, of Toronto, W. R. White, of Pembroke, and others, have applied to the Ontario government for a pulp wood concession in Temiscamingue district. They propose to erect a mill for the manufacture of pulp wood, and will spend about $100,000 on buildings and plant.

A report from Watertown, N. Y., states that Col. J. T. Outterson and associates have purchased a tract of 160,000 acres of spruce lands in Bonaventure county, Que., upon which they will erect extensive pulp mills. The property fringes the shores of Challeurs Bay and Restigouche harbor, in the Gulf of St. Lawrence, and is well watered. It is stated that the papers have already been signed, and that the company will be called the Bay Challeurs Sulphite Fibre Co.

The quality of the pulp wood growing in the Ottawa valley is as a rule better than that growing in the Georgian Bay district, according to a correspondent of the Paper Mill. The reason for this appears to be that in the Ottawa valley there is a deep, fertile soil, suitable for agriculture, while on the shores of the Georgian Bay the soil is thin, lying as a rocky tract. Thus there is not the same nourishment in the Georgian Bay soil as in that of the Ottawa valley. It has not been ascertained by any precise tests how far the two regions differ in the quality of the wood. In size the difference is marked, but how much in density, in length, or toughness of fibre is unknown. According to the common estimate a cord of spruce should yield 1,800 pounds, dry weight, of mechanical pulp, and 1,000 to 1,050 pounds dry weight of chemical pulp. Such will probably be found to be above the average from wood brought to the Welland Canal and Niagara mills. But in the Ottawa valley spruce has been found in some cases to run 2,000 pounds of ground pulp to the cord, or 1,150 pounds of chemical pulp.

CANADIAN FORESTRY ASSOCIATION.

A meeting was held in the office of Mr. E. Stewart, chief inspector of timber and forestry, Ottawa, on Monday, January 15th, when initial proceedings were taken to establish a Canadian Forestry Association. Amongst those present were Dr. Saunders and Prof. Wm. Macoun, of the Agricultural Farm, Ottawa; Sir Henry Joly de Lotbiniere; Wm. Peirce, Calgary; James A. Smart, Deputy Minister of the Interior; G. L. Chitty, inspector of timber for the Indian Department; Thomas Southworth, Chief Clerk of the Bureau of Forestry of Ontario; Otto G. Klotz; J. R. Booth; Wm. Little, Montreal; Thos. C. Keefer and Chas. H. Keefer, Ottawa; Prof. John Macoun, and Wm. Mackenzie, Duck Lake, N.W.T.

Mr. Wm. Little was appointed chairman of the meeting, and Mr. E. Stewart secretary.

Mr. Stewart, in addressing the gathering, stated that the object of the meeting was to take steps to consider the best means for the preservation of the Canadian forests, as well as to encourage tree culture in the Canadian North-West. He stated that it was the intention to form an association working along similar lines to those adopted by the American Forestry Association—an organization having the preservation and extension of the forest land of the United States in view. After several of those present had expressed their views on the subject, a motion was adopted, moved by Mr. J. A. Smart, and seconded by Prof. John Macoun, appointing a committee to draw up by-laws and constitution, these to be considered at a meeting to be held next month, during the parliamentary session in Ottawa. The members of this committee are Sir Henry Joly de Lotbiniere, J. R. Booth, Wm. Little, T. Southworth, Prof. E. Saunders and E. Stewart.

At the next meeting the formation of the Forestry Association will be proceeded with. It is expected that there will be quite a large attendance from all parts of the country. The committee will also arrange a suitable programme of subjects to be discussed at this meeting.

At the meeting on the 15th inst., Prof. Saunders gave quite an interesting talk on tree culture as conducted at the various Dominion experimental farms. At Brandon, Man., Indian Head, N.W.T., and Agassiz, B.C., seeds and trees had been distributed. On the experimental farms great success had attended the culture of trees.

Mr. J. R. Booth also spoke on the subject of the preservation of the forests. He referred to the yearly increasing loss caused by the destructive forest fires, against which the best protection was the appointment of forest rangers and guardians. He stated that on his limits the care of camp fires was left to one man, and thus no fire was left unguarded or permitted to burn when not required.

Mr. Thomas Southworth next addressed the meeting. He referred to the decrease of forest fires in Ontario since the appointment of rangers, as a plea for the extension of such protection. He also referred to the report of the Royal Commission appointed by the Ontario Government, in which it recommended the extension of forest ranging so as to include all the crown timber of the province, whether licensed or unlicensed, that is, to make it compulsory on all limit holders to join with the Government in the protection of their limits, the unlicensed territory being treated by the Government likewise. Sir Henri Joly de Lotbiniere, Vice-President of the American Forestry Association, gave an interesting account of the work of that institution, and the benefits derived therefrom.

Prof. John Macoun, Dominion Botanist, who has travelled extensively and who is very familiar with the North-West and British Columbia, was quite enthusiastic over the possibilties of tree culture on the western prairies, and in his speech advocated the aims of the association in the way of tree planting.

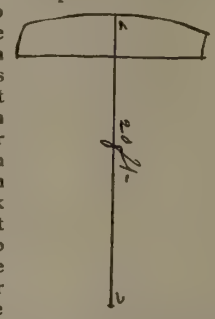
Mr. Mackenzie, of Duck Lake, N.W.T., stated to the meeting that he had been very successful in growing trees on his prairie farm, the most success attending the seed planting.

The meeting was a brief but enthusiastic one, and the prospects for the success of the Canadian Forestry Association are bright.

CARE OF CIRCULAR SAWS.

By T. W. HIGGINSON.

I find in hammering circular saws that the more evenly the tension is distributed throughout the plate the better the saw will run, and in order to do this thoroughly I use a convex gauge to adjust the tension, working from both sides of the plate until it drops away from a straight line so as to fit the convex edge of gauge. When the saw is hammered in this manner so that it will fit the gauge on both sides from collar to rim, it will run straight, stand up in slab or stock without dodging, and will not heat on rim. The amount of convex to gauge must be determined by the speed of the saw, class of timber and the power that is behind the saws. A saw hammered in this way will do better work in the hands of a poor fitter than a saw hammered in the usual way will do in the hands of a good fitter. I find for a saw 66 inches in diameter that 7 gauge, with 66 teeth, hammered as above, at a speed of 750 revolutions per minute, requires a gauge with a convex edge swept with a radius of 20 feet. (See sketch.)



PERSONAL.

Mr. F. W. Jones, manager of the Columbia River Lumber Co., Golden, B.C., was recently on a visit to Winnipeg.

Mr. W. J. Pulling, lumber merchant, of Windsor, Ont., has the sympathy of many friends in the death of his wife, which occurred in December last.

Nr. E. H. Newton, of Mississippi Station, Ont., has received the appointment of superintendent of Mr. Peter McLaren's mill at Blairmore, Alberta.

Mr. Louis Blue, mill owner, of Kamloops, B.C., is receiving congratulations of many friends upon his recent marriage to Miss Dias, of Bloomington, Illinois.

Mr. W. H. Winnett, lumber and coal merchant, has been returned as alderman for the city of London for the sixth term. He has been chosen to preside as Chairman of the Board of Works.

The LUMBERMAN was pleased to receive a visit from Mr. Chas. Tyrer, a member of the well-known firm of Smith & Tyrer, wood agents, Liverpool, Eng. Mr. Tyrer's visit to Ontario was of a two-fold character, combining business with pleasure.

About two years ago Mr. W. J. Willison, of Toronto, was appointed Crown timber agent for the Yukon district by the Dominion Government. It is learned that Mr. Willison has now tendered his resignation, and that it is his purpose to engage in mining adventures.

Mr. J. G. McLaren, eldest son of Mr. David McLaren, the well-known Ottawa Valley lumberman, was in Johannesburg when the South African war broke out. Mr. McLaren, who is only twenty-two years of age, instead of returning to Canada as intended, offered his services as a volunteer, and is now a member of the Mounted Infrantry.

A reconstruction has taken place in the Ontario Crown Lands Department. Mr. Thos. Gibson has been appointed secretary of Crown Lands and Mines, and the work relinquished by him will be performed by Mr. D. G. Boyd. The immigration work has been transferred from the Department of Agriculture to the Department of Crown Lands, and will be known in future as the colonization branch. Mr. Thos. Southworth, Clerk of Forestry, assumes the work of director of this department in addition to his present duties.

TRADE NOTES.

An unfortunate occurrence was the destruction by fire, on January 11th, of the foundry and machine shop of the Lloyd Manufacturing Co. at Kentville, N.S. The loss is estimated at $15,000, but there were about $8,000 worth of orders on hand at the time of the fire. It is understood that the works will be rebuilt as soon as possible.

The business of Stuart & Harper, dealers in machinery and machinery supplies, Winnipeg, has taken the form of a joint stock company. John Arbuthnot, lumber dealer, has been admitted as a partner, and the style will be The Stuart-Arbuthnot Machinery Company, Limited. A new warehouse adjoining the present premises will be erected.

Recent orders booked by Madison Williams, of Port Perry, Ont., include the following: 1 No. 2 Lane carriage with Green Mountain dogs, for Colin Reid, Bothwell, Ont.; two Champion water wheel governors for Parry Sound Lumber Co., Parry Sound; one 56 inch Leffel turbine, one Lane carraige, with shafting, etc., for W. D. Mace, Tamworth, Ont.; one 30½ inch Vulcan turbine for D. J. Galbraith, Newcastle, Ont.; one 52 inch Vulcan turbine for P. Kyle, Merrickville, Ont.; one 20 inch Leffel turbine for Bruce Stewart & Co., Charlottetown, P.E. I.; two complete Lane mills and carriages for A. R. Williams Machinery Co., Toronto; one complete Lane mill for Alfred Phillips, Monsell, Ont.; one 20 inch Vulcan turbine for McOuat & McRea, Lachute, Que.; one 30½ inch Vulcan turbine and complete Lane mill for J. H. Matte, St. Jerome, Que., and one 17½ inch Vulcan turbine for MacDonald Bros., Glendyer Mills, Glendyer, C.B.

CALENDARS RECEIVED.

Among those to whom we are indebted for calendars for 1900 are the following: Cope Bros., manufacturers of lumbermen's wooden specialties, Peerless tapered pike poles, etc., Cope's Falls, Ont.; John G. Hall & Co., commission merchants and dealers in eastern spruce and hemlock lumber, Boston, Mass.; West & Peacky, makers of alligator warping tugs, saw mill machinery, boilers, engines, shafting, hangers, etc., Simcoe, Ont.; E. A. LeBel, wholesale dealer in lumber, shingles and cedar posts, Sarnia, Ont.; and an unusually attractive calendar as the compliments of Rhodes, Curry & Co., manufacturers of dimension timber, dressed lumber, clapboards, doors, sashes and other building material, Amherst, N.S.

The twenty-first annual number of The Tradesman, of Chattanooga, Tenn., has been received. When we state that this issue consists of 236 pages, some conception may be formed of the attention and labor involved in its preparation. The publishers are to be congratulated upon this edition, which is replete with practical and valuable contributions by able writers on subjects of interest to the south. Among these we notice articles entitled "Forestry vs. Lumber," "Will Forestry Pay," "The Waste of Timber in Manufacture," "An Up-to-Date Woodware Plant," and "A Model Wood-Working Plant," all from the pen of well imformed writers.

THE NEWS.

—Swan & Son, of East Wentworth, N.S., are building a new saw mill.

—A new saw mill is being built at Moorefield, Ont., by McKay & Cassidy.

—Thos. Goiffin, saw mill, Cowal, Ont., has been succeeded by Joseph Atkinson.

—James McKernan, lumber dealer, Edmonton, N. W. T., has sold out to Fraser & Co.

—It is said that a large saw mill will be erected at Parrsboro, N.S., by D. Huntley.

—It is the intention of John Carew, of Lindsay, Ont., to build an addition to his saw mill.

—J. McDermott is rebuilding his saw mill at Old Fort, Ont., which was destroyed by fire recently.

—Joseph Bedard has rebuilt his saw mill at Richmond, Que., and sawing was resumed last month.

—The Sutherland, Innes Co., of Chatham, Ont., are ouilding a stave and heading mill at Forest.

—Negotiations are understood to be in progress for the erection of a large saw mill at Owen Sound, Ont.

—Merry & Logan, lumber dealers, Rossland, B.C., have dissolved partnership, E. Logan continuing.

—McLachlin Bros., of Arnprior, Ont., are building a large reserve boom for storing logs at Castleford.

—C. B. Hansen, of Bocabec, N.B., purposes building a new mill at the mouth of the Magaguadavic River.

—The C. Beck Manufacturing Co., of Penetanguishene, Ont., have put a new lath machine in one of their mills.

—The Goderich Lumber Co. are reported to have purchased Pickard & Rowan's saw mill at Owen Sound, Ont.

—A Doaktown, N.B., letter states that there is nothing doing in the spool wood trade, and that prices are very low.

—The ratepayers of Trenton, Ont., have granted a bonus to Gilmour & Co. to assist them in extending their works.

—The Canadian Ladder Manufacturing Co. has been organized at Leamington, Ont., to manufacture a patent ladder.

—The death is announced of John Mosher, senior member of the firm of John Mosher & Son, saw-millers, Minasville, N.S.

—W. J. Pearson, of Stanton, Ont., intends building an addittion to his sash and door factory and adding some new machinery.

—Gilmour & Co., of Trenton, Ont., have lately installed in their mills an electric light plant, furnished by the Royal Electric Co., of Montreal.

—Desbiens, Levesque & Co., of St. Jerome, Que., have asked for incorporation, to carry on a general lumber business, with capital of $3,000.

—The Bonny River Lumber Co. are about to connect their mills at Musquash and Bonny River with the city of St. John, N.B., by a telephone line.

—Covert Bros. & Co., of Campbellford, Ont., are filling a large contract for barrels for the Canadian Gold Field Company, to be used for the shipment of arsenic.

—Chas. Newton & Son have under consideration the erection of a new saw mill near Victoria Harbor, Ont., to have a capacity of 75,000 feet per day and to be fitted with modern machinery.

—The Harrison River Mills, Timber and Trading Co. are about to commence the erection of a saw mill at Harrison River, B.C. Particulars may be obtained from J. W. Mallory, 301 Hastings street, Vancouver.

—Slip-building seems to be quite active in Nova Scotia. D. A. Huntley, of Parrsboro, is getting out the frame for a three-masted schooner, and H. Elderkin & Co. are at present building two schooners at Port Greville.

—During the past month the Beckett sash and door factory, at Smith's Falls, Ont., was purchased by A. Patterson, who in turn sold it to Capt. Foster. It is understood that the building will be overhauld.

—The Scotstown Mills Co., a lumbering concern with head office at Sherbrooke, Que., and capital stock of $100,000, has been organized. H. R. Fraser, of Sherbrooke, R. H. Hope, M.P., of Cookshire, and G. R. Dewar, of Ottawa, are interested.

—At the annual meeting of the Montreal Lumber Co., held recently in Montreal, the following officers for the ensuing year were elected: President, John L. McKergow; vice-president, George J. Dewar; manager, W. J. Graffley; secretary-treasurer, H. Brown.

—An inspection has been made by McArthur Bros. of the mill at Little Current recently purchased by them. It is understood to be their intention to put in two new steam boilers, and to repair the old machinery temporarily, so that the mill will be ready for operation in the early spring.

—The Victoria Lumber & Manufacturing Co., of Chemanius, B.C., cut in their own camps in the year 1899 26,980,000 feet of logs, and at their mill 33,780,000 feet of lumber and 4,320,000 lath. The Brunette Saw Mill Co. cut 20,000,000 feet of lumber and 2,000,000 lath at Sapperton, B.C.

—J. O. Gilbert & Son, of Bishops Crossing, Que., have added another boiler to their saw-mill plant, and have also placed their order for another 80 h. p. Leonard engine. They are increasing the capacity of their mill by adding gang edgers and trimmers, which will nearly double their former capacity.

—Speaking of the lumber industry in Newfoundland in 1899, R. J. Reid stated that it had undergone a surprising degree of development, and that new mills are being erected wherever the locality appears to favor this branch of trade. The local demand for lumber had greatly increased, and large quantities were exported to Great Britain.

—The National Hardwood Lumber Association of the United States have decided to hold their next annual meeting in the city of Cincinnati on the first Tuesday in May. On behalf of the Cincinnati Lumbermen's Club, Mr. J. W. Graham, the president, extends to all members and friends of the Association a cordial invitation to attend the meeting.

—An extensive sale of timber limits, the property of the Cook Bros. Company, will be held in Toronto on April 30th next. The limits are situated on the Serpent River, in the Georgian Bay district, and are reported to contain half a billion feet of pine timber. The sale has been rendered advisable owing to the death, about one year ago, of Mr. John Cook.

—The last acquisition to the Canadian forestry exhibit for Paris is a complete series of the woods of Manitoba. Though it is not so extensive as regards the number of species or the size of the specimens as the exhibit from British Columbia, Mr. Macoun says that the Manitoba exhibit is the most complete he has yet received. It consists of large specimens of pine, elm, oak, ash, spruce, puplp wood, railway ties, etc.

CASUALTIES.

—A shantymrn named McDonald was found frozen to death near one of Alex. Barnett's shanties in the vicinty of Crooked Lake. It is surmised that he lost his way while going from one shanty to another.

—Some two months ago Pheenis Juneau, an employee of the Victoria Harbor Lumber Co., had one of his arms badly mutilated by a planing machine knife, the entire forearm being denuded of flesh to fully one-half its circumference and length. Recently his medical attendants resorted to skin grafting, by which it is believed his life will be saved.

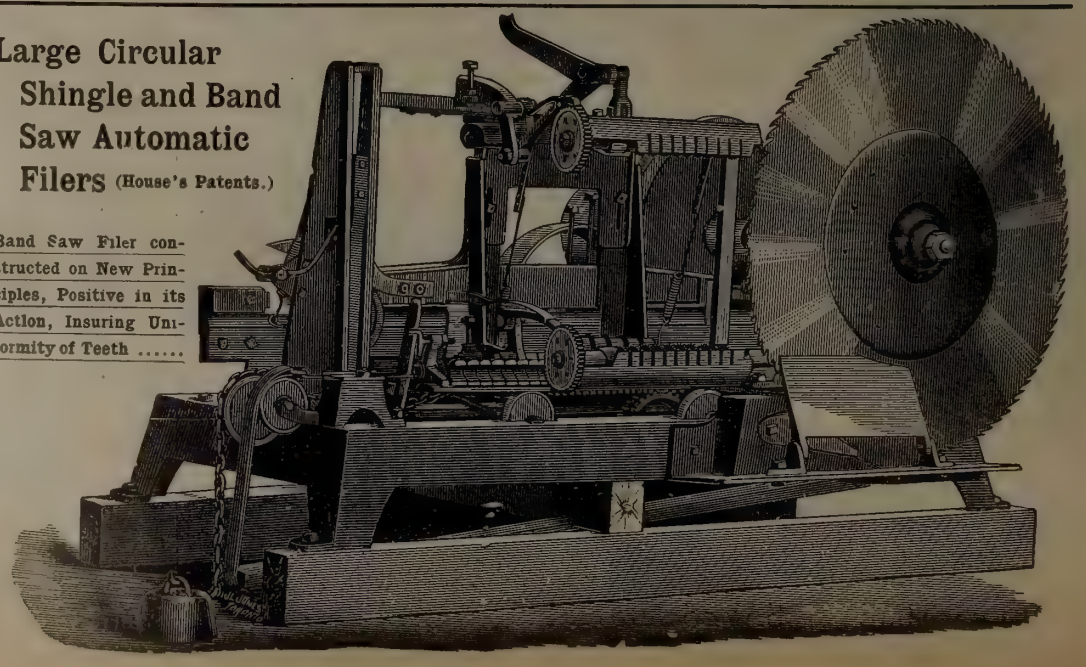
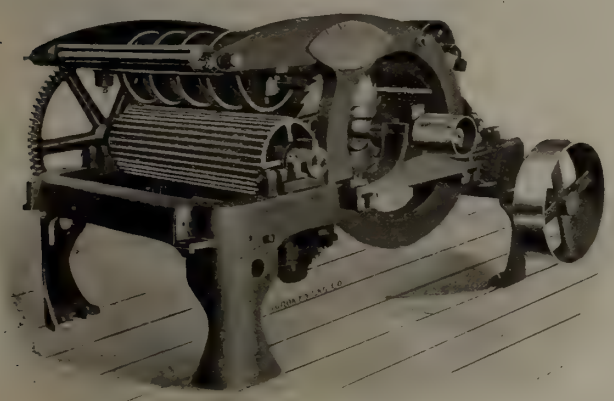
Band Saw Filer constructed on New Principles, Positive in its Action, Insuring Uniformity of Teeth .....



A SMALL DOUBLE EDGER

For Medium Mills

MADE RIGHT OR LEFT HAND—CUT SHOWS LEFT HAND EDGER.



The New Light Champion Edger has 2 7/16 Steel Mandrel supported on two long bearings.

No. 1 Light Champion HAS TWO SAWS, one moveable ; range between SAWS from 1¾ to 24 inches.
No. 2 Champion HAS THREE SAWS, two moveable ; range between stationary and first moveable Saw, 1¾ to 20 inches, and between moveable Saws, 4 inches.

All our Edgers are provided with front tables, when so ordered, with 4½″ iron rolls and guide, moveable with lever up to 4 inches outside of stationary saw.

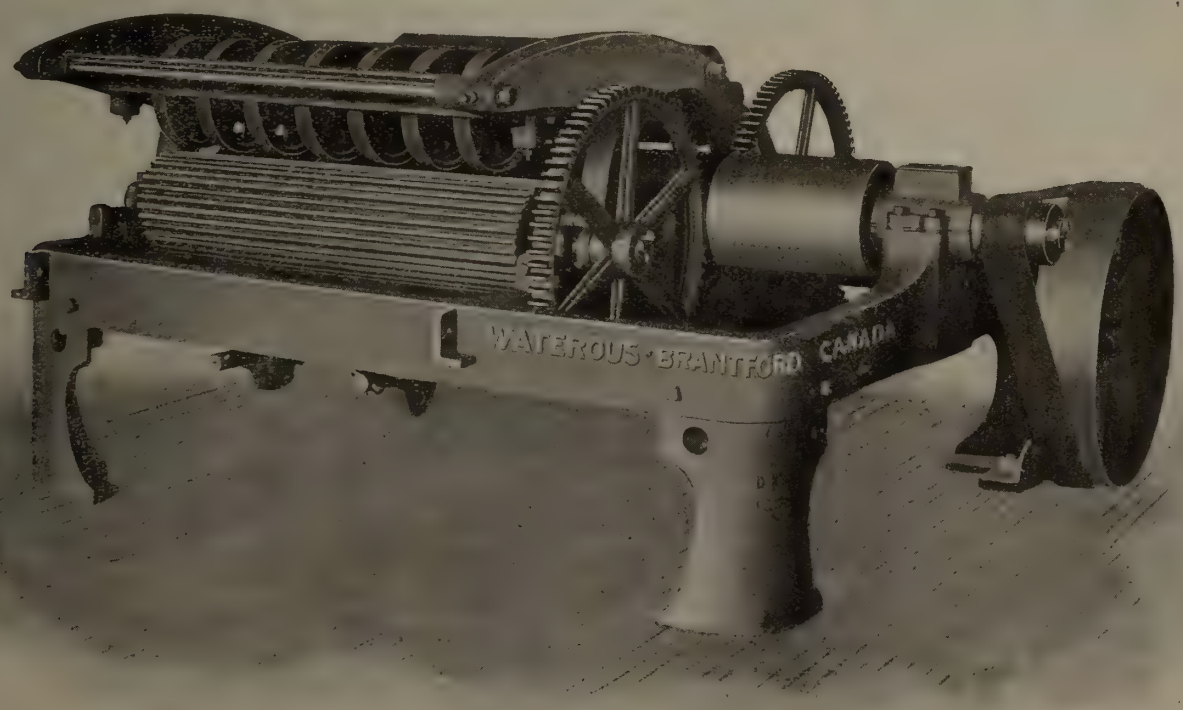
The Heavy Champion Edger has 2⅞ Steel Mandrel with three long bearings.

No. 3 Heavy Champion HAS THREE SAWS. two moveable ; range between stationary and moveable saws, 1¾ to 24¾, and third saw 4″ from second.
No. 4 Champion range is 1¾″ to 28¾″, and third saw 4″ from second.
No. 5 Champion range is 1¾″ to 36¾″, and third saw 4″ from second.
A fourth saw can be added, reducing extreme opening 4 inches.

We arrange Saws to be moved by levers when desired instead of hand-wheel and rack and pinion.

Shows Removable Bridge to Permit Saws to be Withdrawn from Mandrel. Feed Pulley is Readily Removed.

EDGERS BUILT RIGHT OR LEFT HAND



THIS CUT SHOWS A RIGHT-HAND EDGER

The Heavy Champion Edger—No. 3, 4 and 5. The frame in these sizes has two central legs omitted from cut.

This Improved Double Edger is made in three grades—Light, Heavy and Extra Heavy. PRESS and FEED ROLLS are of large diameter. Feed rolls fluted, bearings adjustable, front press rolls made in sections, both front and back hung in stiff open frames LIFTING WITH FEED, NOT AGAINST IT—a new and important feature—ADJUSTABLE BOTH WAYS FOR ALIGNMENT WITH MANDREL. Rolls sufficiently large to be used for return of stock over Edger, and still view of saws is not obstructed. All have bridgetree quickly removable to take off saws—Saws are moved by guides, and guides are removable to take off saws.

Trimmers, Slab Slashers, Lath Mills, Bolters, Bunchers and Trimmers, Shingle Machines, Drag Saws, Endless Chain Bull Wheels, Conveyors, Transfers, Refuse Carriers, all up to date in design. We carry tons of Link Belting in stock. Get our Quotations.

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simonds' Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, Decemer 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test ette r than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

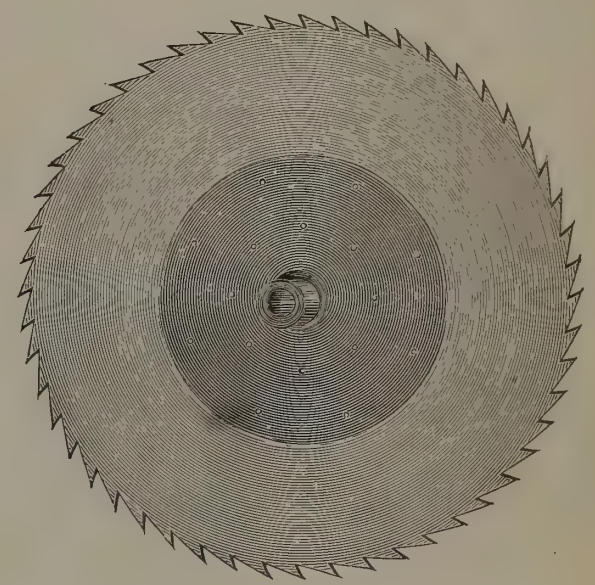
CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., LTD., St. Catharines, Ont.

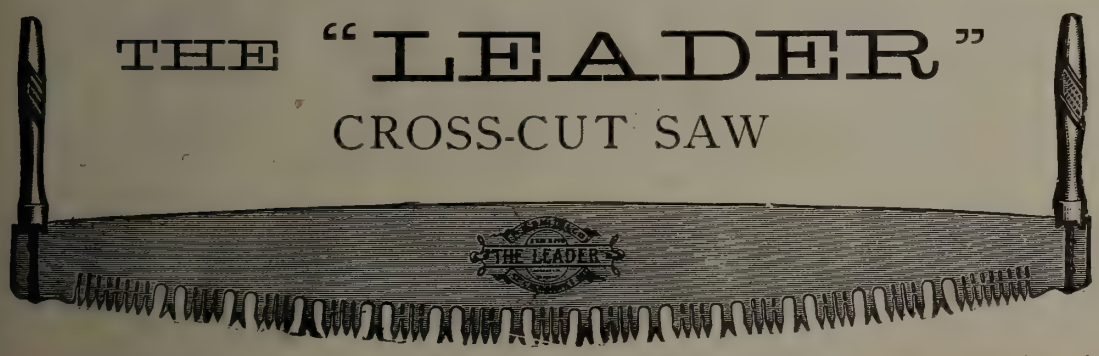
GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



THE "LEADER" CROSS-CUT SAW



These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

THE "LEADER" SAW SWAGE

Made in 3 Sizes—$2.00, $2.50, $3.00 Net.

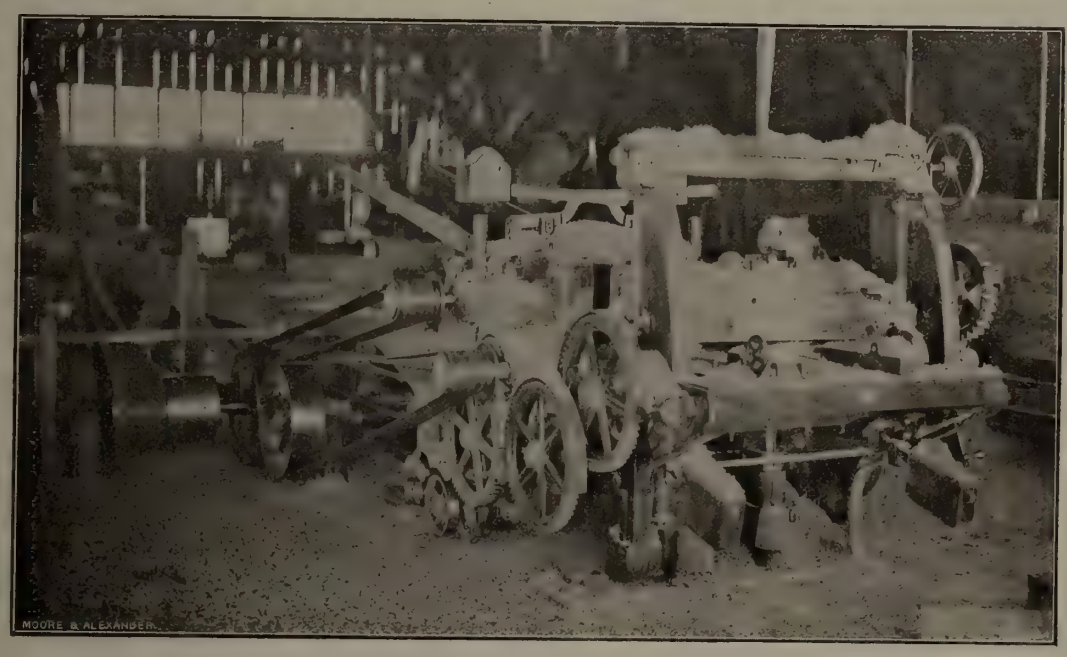
VOLUME XXI. NUMBER 3. | TORONTO, CANADA, MARCH, 1900 | TERMS, $1.00 PER YEAR. Single Copies, 10 Cents.

A GIANT PLANER.

THE accompanying illustration represents probably the largest wood planer ever put in operation in Canada. This machine was manufactured by the Eagan-Fay Company, of Cincinnati, and was purchased by the Canadian Pacific Railway Company for the purpose of preparing the material for the Howe truss bridges on the Crow's Nest Pass Railway. By means of this machine, the company were enabled to effect a saving of $1 per 1,000 feet in the material for these bridges. The saving in cost of operation effected was sufficient to pay for the cost of the machine in the period of two months. The machine was capable of planing on four sides at one operation a piece of timber 26 x 48, and of turning out 100,000 feet of such material per day. The largest sized timber which the Canadian Pacific Railway Company put through the machine was 7½ x 28 and 72 feet long. These timbers were used for the upper and lower chords of the bridges. The machine was first put in operation at McLeod and was afterwards removed to the Coal Creek saw mills.



A GIANT PLANER—USED IN CONSTRUCTION OF CROW'S NEST PASS RAILWAY.

NEW BRUNSWICK NEWS.

Milling and logging operations are being vigorously prosecuted throughout the province of New Brunswick this season, but the extremely mild weather and the absence of a sufficient quantity of snow will considerably limit the quantity of lumber anticipated earlier in the season, and for which provision was made by the different operators.

Throughout the counties of St. John, King's and Albert, a large number of portable saw mills secured cuts, and in some cases a considerable distance from shipping points, relying on a sufficient quantity of snow to give them good hauling. This failing, in some cases a large reduction of the estimated profits on the operations will result. In the counties of Westmoreland, Queen's and Northumberland, it has been an ideal lumbering winter, just enough snow to make good roads in the woods and to get scattered timbers with the least possible cost. Very little winter sawing is done in the two last named counties—the cut mostly has to be driven to the mills by water for spring sawing. Gloucester and Restigouche counties have about the usual depth of snow, and will make about the usuul showing in quantity of logs for the season's sawing, although the outbreak of smallpox in Restigouche will naturally somewhat restrict the output. On the St. John river the conditions are normal and from present indications the output will be up to the average.

One large firm operating in Charlotte county that planned to take fifty million feet of logs out, have been badly handicapped by the extremely open winter, and the probability is that their cut will fall considerably below their earlier expectations. This is regrettable, as they have incurred a large expense in refitting their saw mills in anticipation of a large stock of logs. From a general survey of the lumber situation in New Brunswick, it is safe, notwithstanding the strong market conditions prevailing abroad, to predict that only an average output will be secured.

Considerable attention is being paid to hemlock this season, owing to the advance in price for this class of timber in the United States markets. Owing to the demand incident to a general revival of business in the country, together with building operations in progress and in anticipation in Cape Breton in connection with the development of the iron industry, this class of timber is safe to stock up with, and at points on the gulf shore with short water communication with Prince Edward Island and Cape Breton, a considerable quantity of hemlock will be manufactured.

Portable mills operating in St. John county include the following: The O'Neill Lumber Co., St. Martins, have three along the line of the Central Railway, from which they expect to ship about three million feet; they also have a large steam and water power mill in St. Martins, and are stocking it with two million feet. G. R. McDonough, St. Martins, expects to saw during the winter and summer two million feet. Bentley & Fulmer, St. Martins, have their mill at Tynemouth creek. On December 15th they had one million feet of deal sawn, and expect to have another million feet sawn and hauled to shipping point before the snow is off the ground. Edgar Smith, Gardner's Creek, will saw about one million feet; he also runs a lath machine in connection with his mill. Joseph Campbell, Kirkpatrick's P. O., expects to saw about one million feet during the winter and spring. Flewelling & Townes, of Upham, are running a mill at McFees, and will saw in the neighborhood of a million feet. S. H. White & Co., of Sussex, have a number of portable mills sawing for them and expect to ship from six to eight million feet during the winter and early spring. This firm's portable mills are all in King's county. They also operate extensively under the name of the Alma Lumber Co., at Alma., and Pollett River Lumber Co., at Pollett River, in Albert county, having large and modern water power mills at both the above places, capacity of both about ten million feet per annum. C. M. Bostwick, Big Salmon River, will saw about five million feet in his water power saw mill. Joshua Prescott, of Sussex, will saw about two million at Goose creek—water power mill. C. T. White, Sussex, has mills at Point Wolfe, N. B., whose operation will be about five million feet. Mr. White also lumbers extensively at Apple River, N. S. Since his mill was burned two years ago he has had a couple of portable mills sawing there for him, cutting from three to five million feet per year. E. P. Eastman, Elgin, N.B., is putting out ¾ of a million feet. Humphrey & Trites, Petitcodiac, are running a lath mill in the woods this winter. They are getting out three million feet of logs to saw in their large mill at Petitcodiac. A. L. Wright & Co., Salisbury, are operating to the extent of three million feet. At present they are sawing lath for early spring shipment. John Fownes is sawing about a million and a half at his portable mill at Havelock. Harding Graves, Harvey Corner, Albert county, is taking out about three million feet to be sawn by portable mills in the spring. C. & J. Prescott, Albert county, are operating to the extent of three million feet. Their mill is a gang driven by water power. McLellan Bros., Albert county, have just put in a new portable mill, power furnished by Leonard & Sons, and the sawing machinery by the Oxford Foundry Co., Oxford, N. S. They will get about one million feet this season. Freeman Goodwin has a portable mill at New Ireland, and expects to ship one million feet from Albert.

The West River Manufacturing Co., West River, Albert county, of which George D. Prescott is manager, have gone into the manufacture of veneer box shooks. The stock log is revolved in a lathe against an adjustable knife, and the veneering made any thickness desired. The shooks are made of three thicknesses, the centre being ⅛ in. with 1-16 in. on each side, and glued across the grain of the centre, thus making a very strong shook board, and at the same time it is light. Hardwood—beech, birch and maple—is the wood used. The output goes to England and France. The possibilities for this class of business here are excellent, as a splendid quality, and an almost inexhaustible quantity, of suitable timber abounds. Mr. Prescott also has a large steam saw mill adjacent and is stocking about two and a half million feet of spruce for spring sawing.

McLellan & Turner, Riverside, are getting out about three quarters of a million feet for their stationary saw mill. J. W. Carnwath, Riverside, runs a portable saw mill and expects to saw one and a half million feet. At Hopewell Hill Charles Peck and James Wright each have a portable mill and will each cut in the neighborhood of a million feet. B. Tingley, Albert county, runs a portable mill during the winter and spring and will saw about one million feet. J. W. Floyd, Hopewell Cape, has put in a portable mill and expects to cut one million feet. W. H. Duffy, Hillsboro, with a portable mill, will cut one and a half million feet. LeB. D. Lockhart, Humphrey's Mills, is operating to the extent of about one and a half million. Mr. Lockhart saws largely on bill stuffs and orders, also hardwood flooring and sheathing, of which he makes a splendid article and has a large demand. Lockhart & Lawther, Cocaigne, Kent Co., have a large steam mill. Their output will be about two million feet, a considerable portion of which is hemlock of first-class quality. J. D. Irving, Buctouche, Kent county, has a large steam mill in which he will saw two and one-half milllon this season. He is sawing with a portable mill on hardwoods during the winter, near the I. C. R., shipping from Coal Branch station. A large portion of his stock will go to Newcastle and Chatham for export. J. & T. Jardine, Kingston, will get about four million feet for their band mill. They also buy the cut of several small mills in the vicinity for export.

Edward Walker, Bass River, Kent county, is taking out about two and a half million feet. He has a steam and water power gang mill, with shingle and lath mills, also carding and grist mills in connection. Mr. Walker finds a good market for his boards, scantling, laths, etc., in Prince Edward Island and Cape Breton. Besides lumbering and milling Mr. Walker carries on farming operations extensively and raises an immense quantity of hay, the land in this vicinity being particularly adapted for its growth.

At Newcastle, Nelson, Douglastown, Chatham, and Black Brook, the prospects are good for an average cut. The quantity of snow is just right for logging, and if present conditions hold until the usual time for breaking up, it will be an ideal spring for stream driving. Vaughan & Damery, Jacquet River, have purchased the Doyle property and are getting out three million feet of logs. John Culligan, Belledune, is taking out four million feet, about half of which is cedar. He is sawing shingles and white birch spool stock now.

Adams, Burns & Co., Sumner county, and O.F. Stacey & Co. are the principal operatars at Bathurst, each of whom will get their usual cut. The latter saws shingles only. Nat. McNair, Nash's Creek, saws about two million of spruce, besides shingles. Gray & Lawrence Bros. Co., shingle manufacturers, River Charlo, will operate to their full capacity.

At Campbellton preparations are being made for the usual output of lumber and shingles, and all the mills are being overhauled in anticipation of a good season's work. There has not been as much winter sawing of shingles as in former years in this section of the country, and in consequence the stocks on hand in the spring will be comparatively light. From present indications, taking everything into consideration, this promises to be the lumbermen's banner year.

Beef tallow and flake graphite mixed form a very good lubricant for a hot box on an engine or a line of shafting.

ANNUAL MEETING OF THE ONTARIO LUMBERMEN'S ASSOCIATION.

THE annual meeting of the Lumbermen's Association of Ontario was held in the council chamber of the Board of Trade building, Toronto, on Wednesday, February 21st, at which there was a fair attendance of members. The chair was occupied by the president, Mr. John Bertram, of Toronto. The minutes of the last annual meeting, as well as the financial report, were read by the secretary and, on motion of Mr. James Scott, confirmed.

MR. JOHN WALDIE,
President Lumbermen's Association of Ontario.

The next order of business was the reading of correspondence. The secretary read communications from the following: From Mr. A. E. Kemp, president of the Toronto Board of Trade, suggesting the formation of a Lumber Section; from the British Columbia Lumber and Shingle Manufacturers' Association, stating that they would be represented at the meeting of the Ontario Association by Mr. F. D. Gordon; from Sir Wilfred Laurier, advising the Association that no decision had as yet been reached regarding the imposition of an import duty on lumber coming into Canada; from Mr. C. Beck, enquiring what steps had been taken regarding uniform inspection and grading of lumber, and referring to the method adopted by some manufacturers of cutting their lumber fully one-eighth inch thicker than the size for which it was intended; from Mr. W. T. Toner, of Collingwood, who was appointed by the Board of Management to prepare rules for the grading and inspection of lumber, stating that after consulting with a number of leading lumbermen, he was of the opinion that it would be impossible to establish a uniform grade of pine lumber for the Canadian market, as the several mill men have their own special grades and their customers understood their grading of lumber.

Correspondence was also read relating to the scarcity of cars last fall, and stating that after enquiries had been made as to the extent to which various lumber manufacturers had suffered, and in view of the fact that the situation had become somewhat relieved, it had been deemed advisable to take no further action.

Discussion regarding an import duty brought out the statement that the government were not prepared to take any action in the matter. The president then read the following report of the Board of Management:

REPORT OF BOARD OF MANAGEMENT.

The reading of the minutes has fully informed you of what has engaged the attention of the Association since the last annual meeting, and little need be added by way of explanation. The deputation which you sent to Ottawa last spring to ask for a $2 duty on lumber was supported by a number of members of Parliament, and was heard by Sir Wilfrid Laurier and a number of his colleagues; no action, however, followed their representations, and it is not likely that anything will be done until the tariff generally comes up for consideration.

Delegates from the association waited upon the Grand Trunk and Canadian Pacific railways with a view to obtaining an equalization of rates on hardwood and pine lumber, but the action taken by the railways, while tending to equalization, was not favourable to the business generally, and rates on lumber have been raised during the year. The question of the shortage of cars at particular seasons of the year also engaged the attention of the Board of Management, who obtained a good deal of information from different sections of the country and let the matter stand over for further consideration.

While these minor questions may not appear to have been solved to our satisfaction, the real work of the Lumbermen's Association of Ontario and its value to the country generally, lies more in the influence it exerted in obtaining legislation whereby Ontario logs are now reserved for Canadian saw mills. And what makes this change of policy still more important is that it has been accompanied by a marked advance in the price of all kinds of lumber. The year 1899 will be remembered as

MR. JAMES SCOTT,
First Vice-President Lumbermen's Association of Ontario.

one of the most eventful in the history of the trade. Opening with low prices and a moderate demand, it closed with higher prices for common lumber than had ever been obtained either in Canada or the United States. Midsummer of 1893 was the culmination of a period of good demand and fair prices for lumber. At that time came the financial panic which wrecked so many banks and financial institutions in the United States, and although we in Canada escaped the catastrophe in which our neighbors suffered, by reason mainly of the strength and stability of Canadian banks, yet it had the effect of curtailing business, and slowly from 1893 to 1896 prices receded; in the latter year there was a sharper decline, and 1897 and 1898 found the business entirely unremunerative. Many concerns collapsed in the United States, and mills on the Georgian Bay which had been running steadily for many years shut down rather than cut their standing timber at a loss. What probably made the lumber business still worse in Ontario was the passing of the McKinley Bill at Washington imposing a duty of $2 per M feet on lumber entering the United States, and at the same time enacting a retaliatory clause, with the intention of providing logs for Michigan mills from Canadian forests, and at the same time preventing Canadian sawn lumber from entering into competition with the American sawn product. It was apparently a well devised plan, and its authors naturally plumed themselves on its success.

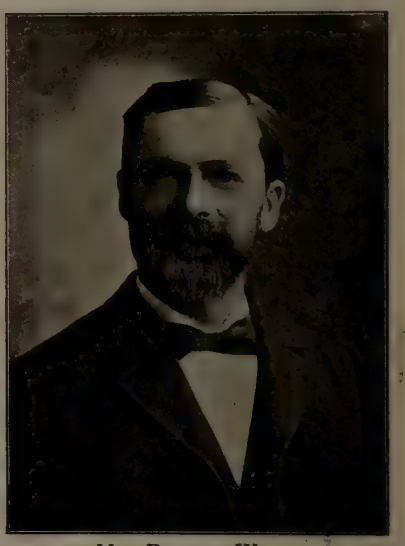
It looked for a short time as if the saw mill business in the Georgian Bay was doomed, there appeared no ray of hope; to reimpose the old export duty of $2 per M feet B. M. would only have increased the American duty to $4, making it prohibitive.

The members of this Association and some others met in Toronto to devise a remedy, and after full discussion determined to ask the Ontario Government to prevent the export of all saw logs cut on Crown lands, and a deputation was appointed to lay their views before the Government, and ask for legislation to that effect. Immmediate action was not taken on the question; the Government acted with caution and deliberation. They not only heard the Ontario side of the question, but gave a courteous and attentive hearing to Michigan owners of standing timber, who with some alarm hastened to place their views before the Government. The idea, however, of reserving Canadian logs for Canadian saw mills caught the public ear, and the Government passed the necessary orders in Council, backed up by legislation, and the manufacturing clause was inserted in all licenses after April 30th, 1898. It was claimed by Americans and others that the Act was virtually a confiscation of property, that it broke an agreement entered into with the province, and further, that it was ultra vires as being an interference with trade and commerce, which the B. N. A. Act places under the jurisdiction of the Dominion Government.

The question was brought before the Courts a short time ago, and Mr. Justice Street sustained the Act of the Ontario Legislature in his judgment, and vindicated the policy of this association, which can rightfully claim to have rendered a most signal service to the whole community, and if it had done nothing else, justifies its right to continue as an organization.

The effect of this new departure has been wide and far reaching; the large quantity of logs exported to Michigan from year to year dwindled to the few logs cut on Indian Reserves and private lands, and it is a question to be considered whether we should petition the Dominion Government to apply the same policy to the Indian lands over which they have jurisdiction as the Ontario Government has adopted over Crown lands.

The most noticable feature of the year is the great expansion of the saw-milling business in the Georgian Bay district; a number of new mills are under course of construction this winter, and every one of the old mills that have been silent for some years are being fitted up to manufacture the great crop of logs now being put in, and it is the opinion of many that even with the great increase of sawing capacity it will be impossible to turn all the logs into lumber this year. It would be needless to point out how this policy has benefitted all cognate industries, and all manufacturers of supplies so largely needed, and



MR. ROBERT WATT,
Second Vice-President Lumbermen's Association of Odtario.

it is satisfactory to think that in helping ourselves we have helped others also. As to what effect the Ontario policy had on the price of lumber it is difficult to estimate. No doubt the revival of trade which commenced on this continent in the fall of 1898, creating a demand for lumber for commercial and manufacturing purposes, was the main factor in raising prices, but there is little doubt that in the spring of 1899, when eastern buyers on looking up stock came to Michigan and found that two or three hundred million feet of logs that had hitherto came from Canada would not be available, it started them on such a determined quest for lumber that price became of second-

ary importance, and so commenced that remarkable advance that has doubled the price of mill culls within a year, and largely increased the price of every grade. The price is now so high as to be a temptation to everyone to increase the output, and one of the benefits to be derived from an association of this kind is an interchange of views and opinions on future policy—how far we ought to go in trying to keep the price of lumber at a moderate figure and at the same time go slow in converting standing timber into lumber.

Inflation and depression are the worst foes of the lumber business, and your attention is invited to the question of limiting production, so as to preserve the market from that plethora which will inevitably come if we all try to see how much we can cut in a limited time; everyone has it in his power in a greater or less degree to act as a balance wheel. Husband our resources, prolong the life of our saw mills, and enjoy a long lease of moderate prosperity rather than a short term of extreme inflation.

On motion of Mr. Scott, seconded by Mr. Robert Watt, of Wiarton, the report of the Board of Management was adopted.

Mr. N. Dyment, of Barrie, enquired why the question of car shortage was not further investigated and some action taken. He said that personally several thousand dollars would not recompense him for the loss thus sustained, and in his opinion the circumstances afforded an opportunity for the Association to prove its usefulness to the members.

The president replied that the Board of Management held a meeting and decided to send out circulars to lumber manufacturers with a view to learning the extent of the car shortage. During the time intervening between the meeting and the return of these circulars the situation had become greatly relieved, and some of the manufacturers reported a sufficient supply of cars. Just at that time freight rates were readjusted, following which the railway companies sent out a large number of cars. For these reasons no further action was considered advisable.

ELECTION OF OFFICERS.

The president announced that the next business was the election of officers. He thanked the members for the support he had received as president during the past two years, and stated that he would not again be a candidate for re-election.

Mr. Scott regretted that Mr. Bertram was about to retire, as much that had been accomplished by the Association was due to the active interest taken and valuable services rendered by Mr. Bertram. He nominated Mr. John Waldie, of the Victoria Harbor Lumber Company, for president, stating that Mr. Waldie had always taken a deep interest in Association affairs and had a thorough grasp of all questions likely to come before the Association. This was seconded by Mr. Watt and carried.

Mr. James Scott was re-elected vice-president by a unanimous vote, Mr. Robert Watt second vice-president, and Mr. W. B. Tindall, Toronto, secretary-treasurer, The Board of Management was also re-elected as follows: John Waldie, Toronto; N. Dyment, Barrie; W. A. Charlton, Lynedoch; T. Conlon, Thorold; J. B. Miller, Toronto; R. Cook, South River; C. Beck, Penetanguishene, together with the president and two vice-presidents.

A general discussion on the lumber business being next in order, Mr. Gordon, representing British Columbia interests, was called upon. He stated that at a meeting held in January the British Columbia Association decided to send a circular letter to all members of the Dominion Parliament pointing out the necessity of an import duty on lumber and shingles. This circular he read, as follows:

MEMORIAL AS TO IMPORT DUTY.

To the Right Honorable Sir Wilfrid Laurier, G. C. M. G., Premier, and Members of the Dominion Government:

Sirs,—In Jauuary, 1898, and March, 1899, we addressed you, asking that a duty be imposed on lumber and shingles imported into Canada similar to the duty imposed by the United States. When the deputation representing us called on your honorable body, the reason given for refusing our request was the fear of jeopardizing the success of the joint commission then pending between the United States and Canada; but as this objection does not now exist, we again address you on the subject, and strongly urge the government to give effect to the urgent necessity of placing the lumber and shingle industry of Canada on the same footing as all other Canadian industries.

The returns from the various collectors of customs show that large quantities of the product of the forests have been admitted free of duty into British Columbia, the Northwest Territories, Manitoba and Ontario, while our exports are restricted by unfriendly legislation.

We submit that the manufacture of lumber and shingles in our own country necessarily contributes much to the revenue, directly and indirectly, and also provides a means of support to population, and while if these articles are imported duty free, these benefits are entirely lost and the trade goes to build up a foreign nation.

We have in this country, as you will be aware, great areas of timber of well known and tested economic value. We have long cherished the idea of making this a large manufacturing centre, but have been unable to do so owing to unfair competition from the south. Summarized briefly, our conditions are:—The very same products that we manufacture are manufactured in those states lying to the south of us; their manufacturers have every facility for reaching our main Canadian markets that we have; they buy nothing from us; they are able to purchase machinery and all mill supplies from 20 per cent. to 33⅓ per cent. cheaper than we can; their general cost of living is about 25 per cent. cheaper than with us; consequently they are enabled to manufacture cheaper than we can, and while they do not cater to any regular and legitimate Canadian trade, they regularly disturb our conditions and prices by using our markets as a dumping ground in which to unload their overstock at prices lower than we can possibly produce a like article on account of the reasons set forth above. At the same time the benefit of cheaper goods is going largely, if not altogether, to the few dealers and not to the many consumers.

We would particularly draw your attention to the fact that, as the tariff now is, it would pay us to remove our plants to the State of Washington, as if we operated there we would not only enjoy the advantages as above outlined, but we would have within our reach the United States market in addition to the Canadian market. Already one of our firms has established itself in Washington, and others are considering the advisability of taking a similar step, if the tariff remains as it is. At the same time we are Canadians and wish to remain such.

We feel that the imposition of an import duty would be of general benefit, not only to the trade, but to the people, and that it would not inflict the least hardship on any one section.

May we again urge on the government through you, that the wishes of our trade, as voiced by the various provinces, receive your practical consideration during the coming session of parliament.

We have the honor to be, Sirs, your obedient servants,

JOHN HENDRY, President.
J. G. SCOTT, Vice-President.
WILLIAM T. STEIN, Secretary.

Mr. Gordon said it was the wish of the British Columbia Association to send another deputation to Ottawa, and asked the co-operation of the Ontario Association in this direction. Mr. D. C. Cameron, of Rat Portage, had offered to accompany the deputation.

Mr. Scott said that while the Ontario lumbermen did not now suffer as they did when the last representations were made to the government, the principle was the same, and the time would certainly come when they would suffer again. He thought something should be done to prevent the question being lost sight of by the government.

Mr. Conlon was in favor of including in the memorial a request that all wood shall be manufactured in Canada. He had always been in favor of this policy.

Referring to the suggestion made in the report of the Board of Management regarding the restriction of the export of logs cut on Indian lands, Mr. Dyment was not in favor of any action being taken. The day would come, he said, when there would be an over-supply of lumber in Canada and we would be glad to have the American market. This was also the view taken by Mr. Laidlaw.

The following resolution was then submitted by Mr. Bertram, and on motion of Mr. Dyment, seconded by Mr. R Cook, of South River, unanimously adopted:

"That the Lumbermen's association of Ontario express their satisfaction with the Provincial Government in putting the manufacturing clause in all licenses, and further, that this association reiterate the opinion expressed on former occasions, that in the absence of reciprocity in lumber between Canada and the United States, the Government of Canada be requested to impose an import duty on lumber corresponding with that imposed by the Government of the United States, and thereby remove any injustice which at present exists to Canadian lumbermen."

The questions referred to in Mr. Beck's letter were then taken up. The opinion of the meeting was that it would not be in the interest of the trade at the present time to adopt standard inspection rules. The suggestions as to the thickness which lumber should be cut resulted in considerable discussion. Mr. Beck stated that in earlier days it had been the custom to cut almost one and one-quarter inch for one inch, but as the price of timber advanced this policy was abandoned in some degree. Yet there were mills cutting one and oue-eighth for a one inch board. He favored cutting the thickness scant, stating that dealers now preferred this owing to the saving in freight rates.

Mr. Dyment said that he had been cutting his lumber one and one-sixteenth scant, and he found that this was what his customers preferred; they objected to having an inch board cut to one and one-eighth inch. Mr. Conlon said that this had also been his experience.

Mr. J. P. Newman, of Wiarton, pointed out that it was absolutely necessary to cut hardwood lumber considerably thicker than an inch in order that it should hold an inch when dry. It was explained that the previous speakers referred to pine lumber. The concensus of opinion seemed to be in favor of allowing about one thirty-second of an inch in cutting inch lumber.

After some further discussion regarding lumber prices for the coming season, the meeting adjourned.

Scholey Bros., Limited, of Toronto, have been incorporated, with capital of $30,000, to manufacture lumber and building materials.

The extension of the Victoria branch of the G. T. R. from Haliburton to Whitney, on the Parry Sound railway, will pass through about 30 miles of hardwood forests, containing maple, birch, beech, elm and ash, as well as some hemlock, cedar and spruce. It is probable that the completion of this road will be followed by the introduction of numerous portable saw mills in the district.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

SHALL HARDWOOD LUMBERMEN ORGANIZE?

The letter of Mr. Anderson which appears in another column is designed to again draw the attention of the hardwood lumbermen of Ontario to the wisdom, if not the absolute necessity, of organization. It has long been felt by some engaged in the hardwood trade that valuable service could be rendered by an association having for its object the protection of the interests of the hardwood manufacturers and dealers. That no action has been taken is, we think, due to a disinclination on the part of those interested to take the initial steps. We cherish the hope, however, that in the near future organization may become more general throughout the lumber trade of the Dominion, and that one of the most active associations will be that composed of the hardwood manufacturers and dealers of the province of Ontario. It is not admitted that the necessity for organization is greater in this province than in the other provinces of the Dominon, but when the banner province of Ontario shall set the example the others will likely follow.

That provincial associations are preferable to a Dominion association will not be disputed. Indeed, we doubt if a Dominion association would be workable, so different are the interests of the hardwood trade in the various provinces. For this same reason the Lumbermen's Association of Ontario will not, in our opinion, properly cherish and advance the hardwood interests of the province. Without reflecting in the slightest degree upon the admirable work accomplished by the Lumbermen's Association of Ontario, we cannot overlook the fact that as it exists at present it is essentially an association of pine manufacturers. But one illustration is necessary in support of this contention. It will be remembered that until a few months ago a discrimination existed in freight rates on hardwood lumber as compared with pine. At the earnest solicitation of one or two hardwood manufacturers who are members of the Ontario Lumbermen's Association, that association interceded with the railway authorities on behalf of the hardwood trade. The result, as is generally known, was that rates were equalized by advancing the rate on pine lumber to that charged on hardwoods, and it is a question if the pine manufacturers do not now regret their interference on behalf of the hardwood men. We do not contend that the railway authorities would not in any case have taken similar action, as they regarded the time as opportune for a general advance in freight rates, but the fact remains that their path was cleared by the representations made by the Lumbermen's Association.

It is almost superfluous to advance reasons why the hardwood lumbermen of Ontario should be organized. Almost every prominent industry of to-day has its association. But if reasons were necessary, we might point to the discrimination in hardwood freight rates which existed for years, to the exorbitant freight rates which are now charged on cedar lumber, and to the necessity of adopting uniform inspection rules on hardwood lumber. While cedar and hemlock lumber cannot rightly be classed in the category of hardwoods, yet the greater quantity of the hemlock and cedar manufactured in the province passes through the hands of the hardwood men, and for this reason we believe that these woods should be placed uuder the care of the hardwood association.

The adoption of uniform rules of inspection would be a great boon to the hardwood lumber industry of Ontario. There are some who contend that such action is not feasible, and while we must respect their views, we find much encouragement in what has been accomplished in this direction by the National Hardwood Lumber Association of the United States. This association came into existence about two years ago, when very few believed that a system of national inspection was a possibility, yet to-day it has been adopted by nearly four hundred of the leading lumber firms in various parts of the United States. The rules of the association have been printed for distribution to members, but being copyrighted, their publication in lumber journals is impossible. Persons in Canada interested may, however, obtain a copy of the rules at this office or by addressing the secretary, Mr. A. R. Vinnedge, of Chicago. The consideration of similar rules would be one of the most important questions to come before an association of the hardwood trade of Ontario, and whether adopted or otherwise, the interchange of ideas by practical men would in itself be of much benefit.

It is not expected that the hardwood lumbermen will unanimously endorse the sentiments here expressed; nevertheless, we court a free expression of opinion through the columns of the CANADA LUMBERMAN by those who feel an interest in the subject.

With a view to promoting the formatiom of an association, we have printed elsewhere a blank form. Hardwood manufacturers and dealers are asked to fill in this form and return it to this office, stating whether they are in favor of the formation of such an associatian and whether they would endeavor to attend a meeting for that purpose to be held in the city of Torhnto. It is our earnest desire that every person interested should respond to this invitation. Should a sufficent number announce their willingness to attend such a meeting, it is probable that further action will be taken.

THE SELLING OF TIMBER LIMITS.

Crown timber limits are virtually public property. When offered for purchase by private interests, no favoritism should be shown to prospective purchasers; it should be the object of the governments to so arrange the conditions as to prevent as far as possible any advantage being obtained by one buyer over another.

The policy of the different provincial governments in the past in respect to the sale of timber limits has been one with which little fault could be found, and we hope to see this policy continued. It is doubtful, however, whether the course adopted with respect to the sale of timber limits to be held shortly by the Quebec Government has been such as will give general satisfaction. The sale is announced to be held on March 28th, within one month from time of writing, and yet, so far as our knowledge goes, no official announcement of the proposed sale has been publicly made. The writer, with many others, might have remained in ignorance of the sale but for a question asked in the Quebec Legislature by Hon. Mr. Flynn as to the superficies of the timber limits to be offered. This brought forth the reply that about nine thousand square miles had been selected for sale.

The rights of prospective bidders would seem to demand that, in view of the extent of the limits, at least three months should elapse between the first public announcement of the sale and the time when it is to be held. This would give sufficent time in which we have the limits explored, an estimate of the timber made, and financial arrangements perfected. The lack of publicity may result, first, in giving one bidder an advantage over another, and, secondly, in curtailing the revenue which the people, through the Government, should receive from the sale of the limits.

LATH PRICES.

The lath market during last year was most peculiar, and afforded excellent opportunities for the speculator to exercise his characteristic shrewdness with large pecuniary benefit. In the spring it would have been possible to purchase, either in the Ottawa Valley or the Georgian Bay districts, millions of lath, on which the owners would have willingly to relinquished their claim for one dollar per thousand pieces. Buyers visited the yards in search of lumber, and actually walked over these piles of lath, little thinking that their purchase would be a gilt-edged investment. The Michigan lumbermen being deprived of their usual supply of logs, had neither lumber nor lath to offer, and the dealers there, as well as in the Eastern States, scoured Ontario in search of stock. The result was that there was a general advance in the price of timber products, but, for reasons which can scarcely be explained, there seemed almost no limit to the price of lath. At the close of the year these same lath which were offered eight months previously at one dollar per thousand were held at $3.25, and the owners were not at all anxious to part with then even at that figure. The advance was one of the most remarkable in the history of the lumber business,

WESTERN RETAIL LUMBERMEN'S ASSOCIATION.

PROCEEDINGS OF NINTH ANNUAL CONVENTION.

THE ninth annual meeting of the Western Retail Lumbermen's Association was held in Winnipeg on Tuesday, February 20th. There were present about 100 members, and the chair was occupied by the president, Mr. Henry Byrnes, of Winnipeg, who opened the proceedings by reading his annual address, as follows :

PRESIDENT'S ADDRESS.

Gentlemen, fellow members of the Western Retail Lumbermen's Association, I extend to you a hearty greeting.

It affords me much pleasure in meeting you here on this occasion in attendance at the ninth annual meeting of this association, and the pleasure is added to in the fact of my being able to say to you that our association has prospered very much during the year now closed. It is prosperous not only from a financial standpoint, but with increase of membership and much larger evidence of the sphere of usefulness it exercises, and which is more and more recognized. In fact, the year just closed may well be classed as the record breaker in the history of the association since its organization.

I am glad to inform you that generally speaking the year has been one of marked harmony among the association members. There have been a few exceptional cases of grievances and frictions, all of which I must confess were to my mind properly made. I think this is a matter with which the members should allow their good sense and consideration to be used in assisting in the advantages to be derived from fair and honorable methods carrying on the lumber trade along the lines of the constitution and by-laws of the association. The result of this would be to mimimize in a very great degree the number of grievances arising.

As I am about to be succeeded in the office you did me the honor of electing me to at the last annual meeting, I wish before retiring to acknowledge the courtesy extended to me on all hands, and I assure you that the duties devolving upon me as your president have been of a kind most congenial to me. Indeed, I have enjoyed throughout pleasant interest in the part I have taken, according to my humble judgment, in the promotion and concerns of the association in the various ways that I have been called upon to act in dealing with matters arising from time to time.

I have been fortunate in having associated with me a very capable board of directors, all being experienced business men and able to use their business experience to valuable account while deliberating upon matters brought before them for settlement.

In conclusion, I may state for your information that I have been a close observer of the working of the association during the year, and I am quite decided that its purposes are beneficial to both the wholesale and retail dealers. Of course, the successful working of the association rests largely upon the loyalty of its members in sustaining the secretary in his duties, and in the general up-building of its constitution and by-laws.

I now call upon the secretary to make the annual statement, and any further report he may have to submit to you.

(Signed) HY. BYRNES,
President.

The reading of the address was greeted with applause.

The secretary, Mr. Isaac Cockburn, submitted the financial statement, which showed receipts of $3,178, including balance of $729 carried over from the previous year, made up mainly of fees and dues of members. The disbursements for the year were $1,548, leaving a cash balance of $1,630.

SECRETARY'S REPORT.

The secretary also read his annual report, which contained much interesting information regarding the working of the Association. It showed the affairs of the Association to be in a properous condition, not only from a financial standpoint, but also as to membership. During the year there were admitted 54 active and 6 honorary members. Since May last 7 former members had been removed from membership. The total membership at the close of 1899 was 215—188 active and 27 honorary. It was stated that with few exceptions a ready response had been made to the call for annual dues. The secretary congratulated the members upon having experienced a profitable season's business last year. His report included the following remarks :

"I have made some enquiries as to why it is possible that at a time when business is good that good men will in the face of a considerable rise in the wholesale price of lumber, cut the retail prices, already low enough, if not too low.

"When making a call at a town a short time ago, I was first met by one dealer who complained very much of the other dealer having cut the price list, and in course of a little time I met the other dealer, who had an identical complaint to make against the first dealer I talked with. I found that the usual thing had happened ; some buyer telling the first dealer he could buy his lumber for less price from the other dealer. The first dealer did not allow the buyer to return to the other dealer, to get his lumber at less price, nor did he try to find out from the other dealer whether the buyer had been telling him the truth or not, but struck a bargain with the buyer on the spot by cutting the price ; very soon after the other dealer came to know of the transaction and started out on retaliation at first opportunity, and the consequence was that cutting and slashing continued through the season. No confidence existed between them and jealousy and unfriendly feeling arose against each other, being so extreme that any assurance of one to the other was no accepted, and the end of the year must necessarily have found their profits to be less than they should have been. Neither one has risen equal to the occasion to make a proposition to the other to sink differences, and discontinue their folly of doing injury to themselves and their business. With earnestness on the part of both dealers to remedy the misunderstandings that have arisen and a larger degree of amity exercised, there can be no doubt the difficulties will cease, and a proper business arrangement be maintained. At present the one is quite sure the other is wrong.

"I propose giving a good deal of attention to proper established price lists at the various points, and bespeak your kind assistance in carrying it on to success.

"In conclusion, I lean upon the assistance of all members in furthering the objects of the Association, and would ask all to keep well versed in the by-laws of the Association, and if acted up to the spirit of them much good will be the result."

Mr. D. Sprague, of Winnipeg, moved the adoption of the report, taking occasion at the same time to compliment the officers, directors and members on the satisfactory condition of the association. He pointed out that at the last annual meeting reports were made of severe competition in some districts on account of a cheap class of low grade lumber being brought into Manitoba from the United States. The members, however, agreed to stand by the association, and happily the difficulty had since been removed. He urged the advisability of the wholesalers fixing their price lists as early in the year as possible.

Mr. J. L. Campbell, of Melita, spoke at some length, confining his remarks largely to the benefits of co-operation. Combination, he said, was not always an evil. It had been said that competition was the life of trade, but it sometimes was the death of trade, and when carried to extremes reacted against the consumers by the inferior service rendered and the inferior goods offered. This frequently led to combination to correct these evil conditions. He pointed out that the Lumbermen's Association was not operated to injure the consumer, and that the public had not paid any higher margin on lumber by reason of the existence of the association.

ELECTION OF OFFICERS.

The three chief officers were re-elected by acclamation, as follows : President, Henry Byrnes, Winnipeg ; vice-president, R. H. O'Hara, Brandon ; secretary-treasurer, Isaac Cockburn, Winnipeg. Portraits of these officers have already appeared in the CANADA LUMBERMAN.

The following were elected as the board of directors : Thos. Turnbull, Manitou ; J. L. Campbell, Melita ; D. E. Sprague, Winnipeg ; Wm. Armstrong, Portage la Prairie; A. Stevens, Cypress River ; J. F. Boyd, Minnedosa. The auditors for last year were re-elected.

Mr. T. D. Robinson urged the wholesalers to fix the price of lumber for the entire season early in the year. Mr. D. C. Cameron contended that this was an impossibility. Conditions varied at different times, and they could not tell what it was going to cost to manufacture the lumber, owing to rates of wages and other factors in cost being liable to changes. He said that manufacturers in other lines would not guarantee prices, and the lumber manufacturers could not reasonably be expected to do so.

A lengthy discussion took place on credit business, discounts for cash, charging interest, cash business, etc. It was explained that the dealers had to pay spot cash for freight, which was a large item on a heavy commodity like lumber. The dealer was also obliged to pay interest after sixty days on his purchases from the manufacturer. This they did not complain of, but where the injustice came in was in selling to the farmer on long terms of credit, without interest. Farmers became hostile if asked to pay interest, though they would come to the dealer and get the lowest cash price on the understanding that they would pay in a short time, and then let the account stand for months. Some of the members said that they invariably charged interest, and when they insisted on it they found it not so difficult after all. Other members reported that they had two prices, one for cash and one for credit customers, their credit price being $1 per thousand higher than spot cash ; others had a credit price only and gave a discount for cash. It was the general feeling that the executive should take up this matter at once and see what could be done to place the business on a more uniform basis as to prices, interest, discounts, credit, etc.

The sum of $100 was voted to the National Patriotic Fund, which concluded the business of the convention.

MEMBERS IN ATTENDANCE AT THE NINTH ANNUAL CONVENTION OF THE WESTERN RETAIL LUMBERMEN'S ASSOCIATION.

CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

CANADIAN HARDWOOD LUMBER ASSOCIATION.

WOODSTOCK, ONT., February 10th, 1900.

Editor CANADA LUMBERMAN:

DEAR SIR,—Such an association as the above does not exist. The need of one was never more apparent than during the year 1899. The demand for hardwood lumber was such that anything that looked like lumber was put upon the market. There being no uniform system of inspection, more or less dissatisfaction took place between buyer and seller. An association composed of hadwood manufacturers and wholesale dealers could formulate and adopt such rules for inspection as would become general among all classes of dealers, and thereby obviate to a great extent any friction that might otherwise arise. In the United States they have an association called "The National Hardwood Lumber Association," which was organized April 8th, 1898, and in eighteen months had a membership of about four hundred of the prominent lumbermen from Boston, New York and Chicago, and some from all the East, West and Southern States, including four from Canada. At a meeting held in Memphis, Tennessee, last November, they adopted rules for inspection of hardwood lumber and the measurement of hardwood logs.

If Canadian lumbermen would organize and adopt similar rules for inspection, great good would certainly result to all parties concerned; just now, before the new cut of lumber is put upon the market, would be a most opportune time to take united action on these lines.

I would be pleased to see an expression of opinion upon this subject from some of your many readers.

Yours truly,

O. G. ANDERSON.

A NEWFOUNDLAND SAW MILL.

IMPRESSIONS OF THE BRITISH MARKET.

[BY A RECENT VISITOR.]

THE most important market for lumber in Great Britain is, of course, London, which not only supplies the trade in that city, but also the home counties and the south coast. There is a large scope for all kinds of Canadian logs and lumber, such as pine, spruce, oak, white ash, black ash, red birch, maple, etc. The principal business is in pine and spruce, but this trade appears to be a kind of monopoly, being in the hands of a small group who are fed by the middlemen exporters in Canada, the Quebec shippers, who buy and control the outputs of the saw mills in Canada.

I found a great many responsible firms in London who are anxious to get in direct communication with the saw mills in Canada. Frequently negotiations do not lead to business on account of the mutual want of confidence. The London buyers hesitate to buy lumber from unknown sources, and the small saw mills in Canada, not knowing the right people in Great Britain, show great distrust in direct dealings except for payments on the Canadian side against bills of lading. The Canadian middlemen, who understand the position on both sides, consequently step in and swallow up the bulk of the profits there are in the trade, and the Canadian saw mills simply work for the Canadian middlemen, at least in a great degree.

I found several highly respectable and responsible brokers in London and other large receiving ports, whose names I could give, and who can be trusted in every way. They are prepared to deal even as flat buyers, or sell at fixed prices to arrive, and even handle consignments, in which case they sell for the saw mills direct to consumers. In this way even the small saw mills are put in direct communication with the actual consumers and derive much of the benefit and a large proportion of the profits which are now taken by the numerous middlemen, through whom their lumber is now sent into the markets.

Consignments as a rule cannot be advocated, but on the other hand, if the right people handle consignments honestly, the result is obviously most favorable for the saw mills. In pine particularly I found that all grades except mill culls are saleable, but each grade ought to be honostly sorted and differently marked.

Regarding the measurement, I understand that the dock companies in Great Britain always measure, and their measurement accounts are undeniable evidence in the law-courts there, and sellers as well as buyers always accept their statements. Tke dock companies are perfectly impartial.

Regarding dimension stuff, when the Canadian saw mills can put themselves in direct communication with the right parties on the other side, they will find there is a market for this material, particularly in the hardwoods, but I certainly think that the Canadian manufacturers ought to have agents in London, Liverpool, Glasgow, etc., who would take proper care of their interests there. Such agents can be found who also guarantee the accounts in case the buyers should fail before the goods are paid for. To deal direct with the actual consumer is not advisable, as the saw mills ought to have somebody to guard their interests when disputes occur regarding quality, etc.

J. B. M.

BRITISH COLUMBIA LETTER.

(Correspondence of the CANADA LUMBERMAN.)

THE lumber and shingle manufacturers of this province met about one month ago and completed organization, under the name of the British Columbia Lumber and Shingle Manufacturers' Association. Mr. John Hendry, of the British Columbia Mills, Timber and Trading Co., was elected president; Mr. J. G. Scott, of the Pacific Coast Lumber Co., vice-president, and Mr. Wm. T. Stein, secretary-treasurer. The lumber and shingle mills in Vancouver and New Westminster have joined the association, and it is expected that in a very short time every large mill in the province will have followed suit. Under the proposed arrangements manufacturers expect that prices can be regulated as far as British Columbia is concerned so as to enable the mills to carry on business much more profitably than in the past, and to more equitably divide the business done. For instance, it has often happened that orders have had to be refused owing to a mill having charters to satisfy too far ahead. Owing to the friendly relations now established, it is claimed that the output will be regulated to some extent so that all the mills in the province will as far as practicable be made to share alike, according to their capacity, in all the business offered. Some time ago many of the lumber companies of British Columbia joined what is known as the North Pacific lumber combine, but this arrangement was found not to work satisfactorily. The combine was manipulated from Puget Sound, and it was very soon found that such an arrangement where American, as well as Canadian manufacturers, were concerned, was impossible, and the Canadians withdrew. Since then very low prices for lumber have prevailed.

The Victoria Lumber and Mannfacturing Co. have just completed doubling the capacity of their saw mill at Chemainus, making it the largest in the province. Your correspondent now learns that plans are being perfected for an even larger mill to be built at some point on the northern coast of the island. It is said that the mill will be a ten-band one and will have a capacity of 400,000 feet per day of ten hours. The company owns one of the best timber limits on the island, and do an extensive export trade, shipping to the Orient, South Africa, South America and Australia.

It is reported that the second mill owned by the Ross-McLaren Co., of Ottawa, and situated on the Fraser river about two miles above this city, will again be put in operation in the near future. The mill of the company at Barnet, which has been idle for several years, is being overhauled and will be in operation again in about two months.

Mr. Murray, forest ranger, has recently made several seizures of timber in order to enforce the payment of Government dues thereon. This timber has mostly been cut for cord-wood, shingle bolts and for making oars. The making of oars is an industry larger than might at first be thought. The oars are made by the thousands, and the trade is altogether in the hands of the Japanese, who usually take the best and largest trees, cutting great firs six feet in diameter. The straight and even parts are used, the heart and any portion with the least knot being rejected. The Government, however, requires that dues be paid on the entire log at the rate of 50 cents per thousand feet.

New Westminster, B. C., Feb. 19th, 1900.

DOMINION FORESTRY ASSOCIATION.

THE committee appointed at a preliminary meeting held in Ottawa recently to consider the formation of a Dominion Forestry Association have called a meeting for March 8th next, in the Railway Committee room of the House of Commons, to take final steps. All persons interested are invited. Following is a copy of the invitation issued by the secretary:

OTTAWA, 6th February, 1900.

DEAR SIR,—

I beg to inform you that at a meeting of several gentlemen interested in Canadian forestry, held at Ottawa on the 15th of January last, a resolution was passed appointing a committee, consisting of—

Hon. Sir H. G. Joly de Lotbiniere, of Quebec;

Wm. Little, Esq., of Montreal;

J. R. Booth, Esq., of Ottawa;

Dr. Wm. Saunders, Director of Experimental Farms, Ottawa;

Thos. Southworth, Esq., Chief of Ontario Forestry Bureau, Toronto; and

E. Stewart, Esq., Chief Inspector of Timber and Forestry, Department of the Interior, Ottawa,

to call a meeting of all persons interested, to be held in the city of Ottawa, for the purpose of considering the formation of an association to promote forestry in Canada.

The said committee to prepare for submission to the meeting a constitution and by-laws and also a programme consisting of addresses on appropriate subjects for discussion at the meeting.

In pursuance of the above resolution and in behalf of the committee, I beg to inform you that such a meeting will be held in the Railway Committee room of the House of Commons, on Thursday, the 8th day of March, 1900, at 10 o'clock a.m.

The committee is very desirous that a good representation from all parts of the Dominion should be present. They are of opinion that the time has arrived when the efforts being made by our various governments for the adoption of rational forestry methods should be assisted and guided by intelligent public opinion, and that this can best be done by the formation of such an association as they have in view.

The committee cordially invite you to be present at the meeting, and you are also requested to invite any other persons whom you think might be interested in this subject.

Yours respectfully,

E. STEWART,

Secretary of Committee.

It is hoped that there will be a large attendance of persons prepared to assist this important movement.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VI. TORONTO, ONT., FEBRUARY 28, 1900 No. 6.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

BAND SAW FILER OPEN FOR ENGAGEment. Best references. Box 333, CANADA LUMBERMAN.

SAFES FOR SALE OR TRADE

THE UNDERSIGNED HAS TWO LARGE Herring Safes; one is extra large, fitted with steel burglar proof vault. Will sell for cash or trade for Lumber, Shingles or Lath. Address, M. M. SMITH, North Tonawanda, N.Y.

FOR SALE.

1,400 ACRES MIXED TIMBER, INCLUDCedar and Elm, for sale, Township of Monmouth, near Tory Hill Station, on the Irondale, Bancroft & Ottawa Railway For price and further particulars apply to J. J. GARTSHORE, 83 Front Street West, Toronto.

MILL SITES

THE CANADA ATLANTIC RAILWAY INvites correspondence from anyone having in view the erection of a Wood-Working Mill. A number of excellent locations can be pointed out for Hardwood Mills where a very large supply of Birch, Elm, Ash, Maple, etc, is available, with a ready market reached quickly and cheaply. Address, W. P. HINTON, A. G. F. A., Ottawa.

SALE OF
Valuable Timber Limits

BY PUBLIC AUCTION

AT TORONTO

By C. J. Townsend & Co., 28 King Street West.

ON THURSDAY, APRIL 19th, 1900

At 2 o'clock P.M.

The following Timber Licenses:

ON LAKE NIPISSING.

No. 212, of season 1899-1900, being berth No. 5, in Township of Patterson. Area, 25½ square miles, more or less.

ON FRENCH RIVER.

No. 214, of season 1899-1900, being berth No. 16, Township of Falconer, sale of October 22nd, 1885, known as No. 11, as laid down upon the map of the north shore of Lake Huron, published by the Department of Crown Lands, dated July 10th, 1872. Area, 36 square miles, more or less.

ON VERMILLION RIVER, A BRANCH OF THE SPANISH.

No. 215, of season 1899-1900, being berth No. 22, Township of Dowling, sale of October 22nd, 1885, known as No. 87, as laid down upon the map of the north shore of Lake Huron, published by the Department of Crown Lands, dated July 10th, 1872.

Terms and conditions of sale will be made known on day of sale. Easy terms to purchasers who may be deemed responsible by the vendor and who may arrange therefore prior to sale.

The above timber berths are exceptionally easy of access. Supplies can be placed at very low cost on any of the berths, either during the winter or summer months.

The average haul is very short. The berths are well timbered with white and red pine.

On berth No. 5, Patterson, there is also a fine cut of many millions of large hemlock logs and railway ties.

Berth No. 16, Township of Falconer, has never been cut on.

Each berth will be sold separately.

Explorers can reach Townships of Patterson and Falconer in a few hours from either North Bay or Sturgeon Falls.

Township of Dowling can be reached from Larchwood or Onaping, on C. P. R., which traverses this berth.

For further particulars apply to ALEXANDER FRASER, the vendor, at 74 Nepean Street, Ottawa, Ont.

WANTED IN CAR LOTS, NORWAY PINE, 5/4, dry, first and second quality; quote price. Address THE CANADA LADDER CO., LIMITED, Leamington, Ont.

SAWYER WANTED

AT ONCE. ONE ACCUSTOMED TO CUTting hardwood lumber and staves and heading. Apply to J. E. MURPHY, Hepworth Station, Ont.

SAW MILL SITE

GOOD SAW MILL SITE ON SOUTH END of the Georgian Bay, near Midland; extensive Lumber Docks, Houses, Store Buildings, etc., water power. THE MUSKOKA MILL AND LUMBER CO., Ltd., Toronto, Ont.

SAW MILL FOR SALE.

THIRTY-FIVE HUNDRED DOLLARS BUYS Saw mill worth double this amount, if taken at once; 2 Boilers 120 h.p., Engine 100 h.p., Iron Saw Frame, Three Block Carriage, 2 good Saws, Double Edger and Trimmer good as new, Slash Chain, all in good running order, run this season; size of Mill, 30×100 ft.; good Boiler House, Blacksmith Shop, House, Barn, etc.; 400 acres of good Birch and Hemlock, also thousands of acres of timber near by. For particulars, address ALLEN CRESSMAN, Berlin, Ont.

Valuable Timber Berth

BY AUCTION

TOWNSHIP 139, NORTH SHORE OF LAKE HURON

The undersigned has received instructions to offer for sale by auction, at the Rotunda of the Board of Trade, Toronto, on THURSDAY, MAY 3RD, 1900, immediately after the sale of Cook and Brothers' limits,

Timber Berth 139 north shore of Lake Huron (being 36 square miles, more or less).

For terms and conditions of sale, and for all particulars, apply to Geo. H. Perley, Ottawa.

PETER RYAN,
Toronto.

AUCTION SALE
OF
Timber Berths

Nos. 124, 125 and 132 (36 square miles each), North Shore of Lake Huron, Province of Ontario.

I have been instructed to offer for sale by auction the above Timber Berths, in single berths, at the Rotunda of the Board of Trade, Toronto, on

Wednesday, April 18th

at 2.30 p.m.

Terms:—Half cash at the time of sale, and the balance in six months, with interest at six per cent.

Berths 125 and 132 are excellent Pine Limits, and are also heavily timbered with other valuable woods.

Berth 124 has been cut over, but has considerable Pine and a large quantity of other standing timber.

PETER RYAN,
Toronto.

WANTED—Green Hard Maple Squares 6½ in. x 6½ in., 12 feet and up. Cash on delivery at any station in Ontario or Quebec. Box 24, CANADA LUMBERMAN

WANTED—25 M FEET B M; CLEAR STOCK, maple squares, 1" x 1" x 42"; must be free from knots, rot, heart, black marks, shake or check put up in bundles of 25 tied with lath yarn. Quote f.o.b shipping point. N. B. WILKES, Brantford, Canada.

WANTED.

AN ENGLISH FIRM ENQUIRES IF ANY shippers could supply fir or spruce props for mining purposes in large quantities c.i.f. Tyne, Hartlepool or Hull, by steamers or sailers. Further particulars as to sizes, etc., by addressing "TIMBER MERCHANT," care of this paper.

VALUABLE
TIMBER LIMIT

By Public Auction

At the Rotunda of the Board of Trade, Toronto, on

TUESDAY, APRIL 10,

at 2 p. m.

The undersigned has been instructed to offer for sale, at the above time and place, subject to the conditions which will be announced at the time of sale,

Timber Berth

TOWNSHIP OF MACKENZIE

Being about 80 Square Miles.

This township is one of the best timbered berths in the province, is well watered, and easily operated. For further particulars, apply to the DELTA LUMBER COMPANY, Detroit, or to

PETER RYAN, Toronto.

AUCTION SALE

Important and Extensive Sale by Auction of

VALUABLE

Timber Berths, Etc.

On the Ottawa River and its tributaries in the Provinces of Quebec and Ontario; at the Rotunda of the Board of Trade, Toronto, at 2 p.m., TUESDAY, APRIL 10TH, 1900.

R. H. Klock & Co., of Klock, Ont., will offer for sale by public auction, at the above time and place, subject to the terms and conditions which will be announced at the time of sale, the following timber berths under license from the Crown; said licenses include the right to cut all timber on the berths subject to the regulations of the Crown Lands Department of the respective Provinces, namely:—

QUEBEC.

Kippewa Berth, 226½ miles, and composed of berths Nos. 176, 177, 444, 445, 446, 447. Block A—Quinze Berth, 61½ miles; No. 5 Range 1. Block A, Quinze Berth, 150 miles, composed of berths Nos. 5, 6, 7, range 3. All the above limits are in the Province of Quebec, as shown on the official map of that Province. North Temiscamingue, Indian Reserve, Province of Quebec. Area about 60 square miles, as shown on official map of the Province of Quebec and held under license from Dominion Government and subject to timber regulations of Department of Interior.

ONTARIO.

Deep River, 101½ miles, held under license 178, 1899-1900. Chalk River, 19 miles, held under license 177, 1899-1900. Rocky Farm, Ottawa River, 100 square miles, held under license 176, 1899-1900.

For further particulars apply to R. H. KLOCK & CO., Klock, Ont., and JOHN GRAY, Room 100, Canada Life Building, Toronto, Canada.

WE HAVE 300,000 FEET OF VERY GOOD Beech Logs which we wish to cut to order. Signed, JOHN HARRISON & SONS CO., Limited, Owen Sound, Ont.

PIANOS OF THE BEST MAKES FOR SALE CHEAP

CAN MAKE SHIPMENTS DIRECT FROM factories Will sell for cash or trade for equal value in any kind of Lumber, Lath or Shingles. Address, FRANK D. ROSS, 738 Trumbull Ave., Detroit Mich.

To Limit Holders

THE TOWN OF MANITOWANING, ON THE inside channel of Grand Manitoulin Island, in direct and easy water communication with the timber limits of Algoma, offers superior inducements to lumber companies intending to establish works in this part of Canada. The best natural advantages obtainable anywhere. Further information upon application to W. J. TUCKER, Secretary Citizens' Committee, Manitowaning, Ont.

CURRENT TRADE CONDITIONS.

ONTARIO.

That white pine lumber prices will remain at the present basis well into the summer months is the view generally advanced by the lumber trade of the Georgian Bay district. Manufacturers in attendance at the annual meeting of the Lumbermen's Association last week were almost unanimous on two points, first, that prices have now reached their height, and, secondly, that there will be no general reduction in prices for at least three months to come. After that time no one would predict what course the trade might take. Price lists of the new cut have been compiled, and compare very closely with the prices now asked for dry stock. It has been learned that in Algoma the weather has been less favorable for logging operations than in other parts of Western Ontario. The report from the Ottawa Valley is that very good work is being done in the woods. Prices in that district are unchanged excepting mill cull stock, which has advanced about one dollar per thousand.

Exception has been taken to the prices given in last issue at which certain grades of pine were being sold in the Toronto market. It should be explained that these figures were intended as the maximum prices, which could only be obtained for the grades of some of the large t Georgian Bay mills. Mill cull sidings, for instance, were said to be selling at $14.50, and inch mill cull stocks at $15.50. The average quotation for these grades, however, is perhaps fiully one dollar less than these figures. It is impossible to give quotations which will represent the price at which all manufacturers sell certain grades, as, owing to the absence of uniform inspection the grade of one manufacturer may be much higher than that of another, and consequently a higher price will be paid for his stock. Since last issue we cannot learn of any weakening in prices of pine or hardwood lumber, shingles or laths.

QUEBEC AND NEW BRUNSWICK.

The purchase by a Montreal shipper of the entire cut of white pine of a well-known manufacturer is the most important event of the past week. Although the actual figures have not been made

public, it is generally admitted that the price is a further substantiation of the strength of the market. Manufacturers in Quebec and the Maritime provinces report enquiries for stock from the Eastern States, and liberal offers are being made. Clapboards, which have long been lifeless, are showing some improvement, extra spruce bringing $29 to $30 and clear spruce $27 to $28 on Boston rate of freight. A correspondent, in the monthly edition, gives interesting information regarding the production of lumber in New Brunswick. It it shown that the cut by portable mills will be considerable, but that manufacturers generally are looking for higher prices.

MANITOBA AND BRITISH COLUMBIA.

The annual meeting of the Western Retail Lumbermen's Association being held in Winnipeg last week, most of the dealers put business aside for the time being. Reports go to show, however, that there is a considerable demand for lumber at good prices. Snow has fallen in the Lake of the Woods district and throughout Western Manitoba. This has facilitated work in the woods and stimulated trade generally. The British Columbia mills are pressed with orders. It is said that fifteen vessels have been chartered to load lumber at the Chemainus mills for foreign destinations. The higher prices put into effect recently are being freely paid.

UNITED STATES.

Retail dealers and consumers in the Eastern States have not yet commenced to buy for their spring requirements, but it is admitted that ere long they will be compelled to yield. It is not believed that there will be any decline in lumber prices for several months to come. The eastern wholesale dealers are apparently reconciled to this view, as quite heavy purchases have been made by them at upper lake producing points. In the upper Mississippi district the log crop is likely to be 25 per cent. less than was anticipated at the beginning of the season. Of the prospective lumber production in the Duluth district, there has been sold over 100,000,000 feet, or about 25 per cent. of the total production. The bulk of the sales made consists of low grade stock, and much of it is for shipment to eastern distributing markets. Prices have ruled about as follows: No. 4 boards, $12; No. 3, $14; No. 2, $16; No. 1, $18; D stock and better, $30 to $31; No. 1 stock and better, $33 to $35. Buffalo and Tonawanda dealers held a joint meeting on the 17th inst., but it was decided to take no decisive step on the price question as yet. It seems to be generally understood, however, that there will soon be an advance in the price of low grade pine.

Hardwood prices remain at about the same basis. In Michigan the hardwood production for the present winter will be about 75 per cent. of what it was one year ago, divided as follows: Ash, 40 per cent.; elm, 70; basswood, 60; birch, 75; maple, 75; red oak, 60; and beech, 125 per cent. On the other hand, it is estimated that in Wisconsin the cut will equal if not exceed that of one year ago.

Lath prices keep firm. In Chicago No. 1 dry white pine lath sells at $4.50, and at Buffalo and Tonawanda from $4.50 to $5. In the New England States spruce lath is quoted at $3. Although the demand for shingles is not active, prices are steady. The stock of shingles in Michigan at the present time is not believed to exceed 25 per cent. of that of one year ago, this being true of both 16 and 18 inch pine and cedars.

FOREIGN.

Prices of wood goods in the British market have shown no important changes within the past week. The stock of deals and battens at the leading importing centers is steadily becoming reduced, but there is some fear that the present high prices may result in a falling off of consumption. At recent auction sales prices have been well maintained. Consumers are each day becoming more convinced that the present prices are likely to rule for some time to come, and as a result are showing a greater disposition to contract for their requirements.

Lumber is in good demand in the West Indies. At Barbados white pine is selling at $22.50 per thousand for first quality, and $17 for second quality. Spruce of first quality brings $19.50, and spruce scantling $14. Gaspe cedar shingles are quoted at $3.50, cedar laying at $2.40, and spruce laying at $2.27.

NEW BRUNSWICK CEDAR SHINGLES.

The New Brunswick shingle market remains unchanged. There are a few sales being recorded at standard values. There is some little inquiry awakening in the country districts, mostly for the lower grades. The city dealers are still quite lethargic. There is no doubt as to the firmness of the market. The fact that the manufacturers have gone through two such quiet months as the last without any price cutting shows very clearly that they are absolutely determined to maintain present prices, and it is also a strengthening element of the situation. Spring trade is apparently going to be slow in starting this year, for the reason that the majority of the dealers bought quite largely last autumn, and have as a consequence fair stocks on hand. The early demand, therefore, will likely be for clears and 2nd clears for the country trade. As the Pacific coast shingles are firm at $3.20 on Boston rates New Brunswick cedars are sure to have the call when business opens. Quotations are as follows, delivered at Boston: Extras, $3.10 to $3.15; clears, $2.65 to $2.75; 2nd clears, $2.15 to $2.25; saps, $2.10 to $2.20, in mixed cars. Straight cars of extras are being sold at $3.00, but we hear of absolutely nothing lower.

THE OTTAWA VALLEY.

[Correspondence of the CANADA LUMBERMAN.]

There is a lull in the lumber business in this center at present, but the lumbermen are confident that they are approaching a season of great activity. No further large sales are reported, and it is understood that the mill owners are holding off for even higher prices, beleiving that the cut of some of the mills will be short, as the winter operations are restricted by the recent unsatisfactory weather. Should this be the case, foreign buyers will be compelled to raise their figures, and the mill owners now holding out will profit by the position they have taken.

Although the winter on the whole has been a rather poor one for lumbering operations, reports from various limits would indicate that the work of getting out the logs is progressing favorably. Many of the mills last season cut all the logs in stock, so that they must necessarily depend on the supply now being taken off the limits. A reliable authority places the probable increase of the coming summer's cut over last season's at 20 per cent., or about 1,000,000 feet. J. R. Booth, Gilmour & Hughson and other extensive manufacturers worked their mills to their utmost capacity last year, and cannot increase their cut this year, hence the increase will not be as great as present indications might seem to show.

One proof of the extent of the present bush operations is seen in the fact that the Hull Axe Company is unable to keep up with orders. The output of this factory is 12 dozen axes per day, but this does not more than partially satisfy the extra demand made by the Ottawa firms. Ottawa dealers in lumbermen's supplies, clothing, provisions, etc., also report a greatly increased trade with the camps.

Mr. A. E. Dyment, M. P., of Thessalon, Ont., has arrived in the Capital for the session. Mr. Dyment, who represents Algoma, states that the lumbering operations in the Georgian Bay district are unusually active. From another reliable source it is learned that the increase is even greater than it is in the Ottawa valley, amounting to fully 40 per cent.

The output of square timber by Ottawa firms for the English market this coming season will, according to official figures, be only 400,000 cubic feet. In 1889 the amount sent over was 5,000,000 feet, showing in eleven years the surprising decrease of 92 per cent. Ottawa lumbermen now find it much more profitable to manufacture the square timber in their own mills into board lengths and sizes. The English trade in these has increased in proportion to the decrease in the demand for square timber. Gilmour & Hughson, a firm that formerly cut a large quantity of deals for the English market, will this year cut none, confining themselves to cutting thinner stock. In manufacturing the timber into board sizes themselves, the Ottawa mill men find there is little or no waste, while the English market can be supplied with even more satisfaction.

McKee & Co., of Ottawa, dealers in mill men's supplies, report that inquiries based on the coming senson's operations are numerous, indicating the probability of increased activity.

Mr. E. C. Grant, of the Ottawa Lumber Company, has just returned from a prolonged visit in the British Isles. Mr. Grant reports that the prospects for an increased trade with the British market were never better.

As yet few American or English buyers have put in an appearance in Ottawa, but it is expected they will shortly arrive.

Hurdman & Elmitt, the Rideau Lumber Co., and other firms interested in the wholesale lumber business, report that the market remains firm, with no marked demand for any special lines. Pine box culls have advanced from $13 to $14 per thousand for best stock, and pine mill culls have advanced from $11 to $12 for best grade. Lath, sidings and strips show no advaace, the same applying to hardwood.

J. O. D. Latour & Co., a firm operating a line of towing and passenger boats on the Kippewa, are endeavoring to sell out the business, which is a flourishing one.

OTTAWA, February 26th, 1900.

LARGE LUMBER PURCHASE.

Mr. E. H. Lemay, wholesale lumber merchant, of Montreal, has just closed a contract with McLachlin Bros., of Arnprior, Ont., for the purchase of their entire production of white pine to be cut during the ensuing season. It is understood that this will be about 65,000,000 feet, and the transaction represents a consideration of about $1,000,000. The lumber manufactured by McLachlin Bros. is second to none in Canada or the United States, and is noted for its fine appearance, smooth sawing, and the splendid way in which it is butted. These considerations have made for it name in the British market. The above firm have also gained a reputation for the careful manner in which they handle their lumber and protect it from the weather. The bulk of the pine purchased will be exported to Great Britain and the United States.

As previously announced, Mr. Lemay has secured the pine deal contract for the road department of the city of Montreal. The deals required for this work are all 11 inches wide, and will probably reach in quantity about 2,000,000 feet.

THE LIVERPOOL MARKET.

The arrivals from British North America during the past month, says Farnworth & Jardine, of Liverpool, have been 5,070 tons register, against 3,320 tons register during the corresponding month last year, and the aggregate tonnage to this date from all places during the years 1898, 1899 and 1900 has been 21,739, 15,487, and 15,752 tons respectively. The business of the past month has been steady, with little fluctuation in values to report. The arrivals have been fairly moderate, the deliveries generally satisfactory, and stocks all round are comparatively light. Owing to the strong advance in values demanded for Canadian woods little progress up to the present has been made in contracting for next season.

PINE TIMBER.—Of WANEY the deliveries have been fairly satisfactory, and the stock is now very light. Values are firm, and for next season much higher prices are quoted. SQUARE continues in limited request, and the stock is sufficient. RED PINE: There is little enquiry; the stock is small. OAK: There has been rather more enquiry, and values are firmer; the deliveries have been fair, but stocks, though not heavy, are sufficient for present requirements. ELM is in a strong position, prices high, and the stocks light. ASH is in limited demand and there is very little in stock. PINE DEALS have moved off more freely, there has been more enquiry, and considerable sales have been made from yarded stocks at improved values. The stock, however, is still large, but consists chiefly of oddments. RED PINE DEALS continue in good request at firm prices.

NEW BRUNSWICK AND NOVA SCOTIA SPRUCE AND PINE DEALS.—The import amounts to 1,800 standards, about the same as corresponding month last year. The deliveries have been fairly large, and stocks being further reduced, are now in a moderate compass. There is no change in value to report. As shippers' ideas are very firm, contracting in this market has been slow, though a few contracts have been negotiated. PINE DEALS have improved in value; stocks are fair.

BIRCH.—From St. John, N.B., by steamer, has been imported freely; there has been a good consumption at steady values, but the stock has increased, and is now sufficient. PLANKS: There has been a large import, but coming on practically a bare market, has met ready sale at fair prices. Stocks are not large, but further supplies are about due.

The sales during the past month have been as follows: BIRCH TIMBER.—ST. JOHN 14⅜ inches average, at 18¾d. per cubic foot; 1 1/4 inches average, at 18 1/2d. per cubic foot. PLANKS at about £8 12/6 per standard c. i. f.

QUEBEC PINE DEALS.—3rd quality Oddments at £8 14/- per standard.

SPRUCE DEALS.—ST. JOHN, £7 15/- to £8 per standard c.i.f.

ENQUIRIES FOR WOOD PRODUCTS.

The following were among the enquiries relating to Canadian trade received at the office of the High Commissioner for Canada in London, Eng., during two weeks ending 10th February:

13. Enquiry is made for names of firms in Canada manufacturing furniture for export; also for firms who manufacture tallow and grease for export.

14. An important London house doing a large commission business in Canadian products are desirous of corresponding with exporters of wood pulp, evaporated apples, tinned salmon, etc.

Canadian manufacturers may open up correspondence with any of the firms making the above enquiries by addressing a letter to the publishers of the CANADA LUMBERMAN. When writing refer to the number of the enquiry.

THE GEORGIAN BAY CUT.

The American Lumberman, estimating the 1900 cut of white pine in the Georgian Bay district, states that while only three or four mills will be in commission in the Georgian Bay district this season, old ones have been rebuilt and preparations made to run many of the mills day and night. This authority gives the following summary of the probable output of the Georgian Bay mills for the season of 1900 :

Our contemporary also remarks that in active seasons of the past as high as 300,000,000 feet of logs have been exported to feed Michigan mills, while this season barely 50,000,000 will thus be directed. While the Georgian Bay production may possibly reach the figures given, 473,000,000 feet, when we consider that this quantity represents the cut in past seasons of Georgian Bay mills as well as the mills in Eastern Michigan, it cannot be regarded as an excessive production, and likely to seriously affect the market. Allowing 250,000,000 feet as the quantity which would, under former conditions, be manufactured in Michigan, but 223,000,000 feet remain as representing the Georgian Bay production.

FOREIGN MARKETS.

BROOM HANDLES.

The Department of Trade and Commerce at Ottawa has recently received a communication from Mr. Harrison Watson, Curator Canadian Section Imperial Institute, London, England, in reply to inquiries from Canadian correspondents as to the possibility of opening up a trade in broom handles with broom manufacturers of the United Kingdom. The attention of producers of broom handles in Canada is directed to the following extracts from broom manufacturers in Great Britain, touching the requirements of the trade as regards sizes, quality and quantity, together with price :—

1. Broom handles.—The standard size is 50 inches long by 1⅛ inches in diameter, and any good, clear wood will do. We have chiefly handled basswood, but we presume that spruce will be the most likely article. The handles must be well finished and sand-papered, and the tops smoothly turned. Wasters arising will be taken, but they must be packed separately. It is customary to put them up in gross bundles covered in sacking or in cases of one gross. For good handles at the moment we could realize $2.56 to $2.68 per gross delivered to buyers' stores less 2½ per cent. The cost of delivering same to buyers' stores is about 9 cents per gross.

2. Broom handles are wanted 52 inches long, simply turned (round), 1⅛ inches diameter, with one end simply rounded. You will thus see they are very easy things to manufacture. They should be made of clear spruce or other white-looking wood. We are prepared to buy them in large quantities, say, from 100 to 300 gross per month, and we can pay cost, freight and insurance to suitable docks, London. First quality quite free from knots and other defects at $2.43 per gross. Second quality, a few pine knots allowed, $2.19 per gross. Third quality, a few small knots allowed, $1.83 per gross. They must be all perfectly and smoothly finished so that in using the hand over them no splinters are at all likely to enter the fingers. They must be packed in rough canvas bags of one gross each, with the quality of the contents clearly marked outside.

3. Broom handles.—To give you a proper idea as to what is required we are sending you a sample handle. These handles must be clear, smooth and round, and packed up or tied up in half gross bundles. The sizes required and present prices are given below. It is essential that the handles have turned tops. Only a few are sold with plain tops, and these fetch six-pence per gross less.

Diameter.	Value.
1 inch.....	$2.32 per gross, delivered free.
1 1/8 inch.....	2.68 " "
1 1/8 "	2.92 " "
1 1/4 "	3.10 " "

4. Broom handles.—The following figures give the dimensions, etc., of the broom handles for which we have an outlet :

Length.	Diameter.	Value. per gross.	
50 inches....	1 inch....	$1.87	carriage to Birmingham.
50 "	1 1/8 inch..	2.13	" "
50 "	1 1/8 " ..	2.31	" "
50 "	1 1/4 " ..	2.68	" "

Plain handles in basswood must be clear and sound ; faulty pieces are only paid for at a reduced price. We have an immediate outlet for orders of 200 gross and upwards.

TIMBER REQUIREMENTS OF AUSTRALIA.

Writing to the Department of Trade and Commerce, Mr. J. S. Larke, Canadian Commissioner for Australia, says of the timber requirements of that colony :

I anticipate a growing trade in timber. Queensland has considerable quantities of pine on her coastal ranges and has supplied nearly all its reqnirements out of its own resources. These supplies are by no means exhausted, but as the cutting goes on it is becoming increasingly more difficult and expensive to get the logs out. A heavy duty has kept out any quantities of foreign timber, but last year there was an importation of about a million feet of pine and half a million feet of staves, mainly from New Zealand, for box and cask making for the meat works. There is an advantage in getting supplies from New Zealand, as they are brought in cargo lots small enough to be taken by one company.

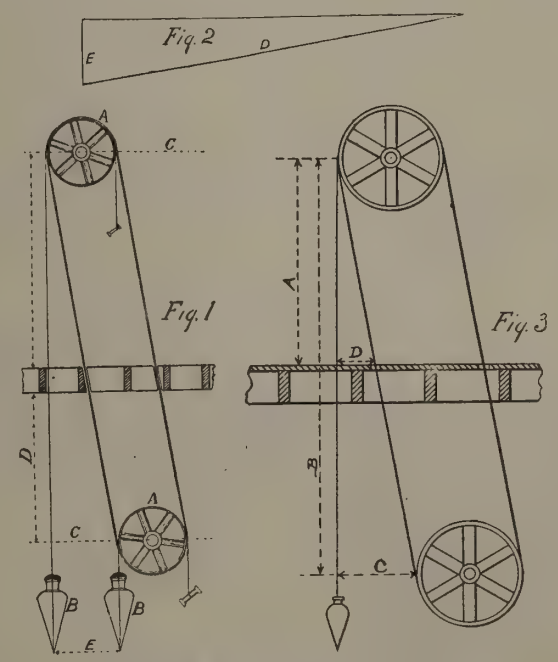
There was a home production of 37,562,327 feet of pine last year, which was nearly one and a half millions less than that of the previous year. There was a cut of nearly the same quantity of cedar and hardwood. Some of the latter was used where a cheaper imported pine would have done as well, and a market abroad could have been found for the higher priced wood. The average price of pine at the mills last year is given at 8s. 11d. and of hardwood at 10s per hundred feet. This is eight per cent. above the price of the previous year. In northern Queensland it is clained that the price and demand now justify the importation of cargo lots of Oregon from Canada. A gentleman on his way to Canada promised to call on the export lumber firms and discuss the matter with them. In New South Wales, Oregon staves are used in making tallow casks, but I found objections to the use of this timber for this purpose in Queensland. There will be no large importation of timber for some little time under the present duty, but the demand is sure to come from the cities and towns along the coasts, and there appears to be an opening in the north for some cargo lots even now. Since my return I have interested one of the largest importing firms in the matter, and inquiries are being made preparatory to entering into the trade if the circumstances warrant it.

One of the problems confronting the trade with northern Queensland is shipping facilities. British Columbia mills suffer in this respect now in comparison with the Puget Sound mills. When there is a scarcity of ships, as there is now, the United States mills owning their own lumber carriers are at a decided advantage and can take orders when the Canadian mills cannot.

With the large trade that exists in timber and fish it is surprising that a Canadian fleet of sailing ships has not been built for it. From the information at hand the Queensland trade could be best done by a steam cargo boat, which would load with timber and merchandise, striking Queensland at Townsville and delivering its cargo of timber, flour and merchandise at the principal ports along the coast. It would get a return freight of sugar and other produce. This cannot be done at present as a suitable vessel cannot be obtained. A shipping company proposed to try the experiment, but owing to the loss of a couple of steamers it had no ship left it could spare for the work.

HOW TO CUT A BELT HOLE.

Correspondents to the American Miller have been telliug how to find out just where to cut a belt hole in a floor. Fig. 1 shows one method, the advocate of which says for it : A A represent the two pulleys. We will draw the line, with plumb-bob B attached, over the top pulley, allowing it to dot the floor, where we will bore a hole for the string to go through. We then allow the plumb-bob to swing clear of this hole and below



CUTTING FLOOR HOLES FOR BELTS.

the lower pulley. Then for accuracy we place a line over the face of the lower pulley, with a plumb-bob attached to it also. Now, to find the degree the two pulleys represent, we measure the distance between the points of the two plumb-bobs, on the line marked E. We then measure between lines C C representing the center of each shaft. By reducing these two measurements to quarters of an inch we find the degree of the bevel D, which is shown in Fig. 2. Set the bevel to this degree, place it on the floor where the hole is to be cut, and rest it on a level ; place a straightedge on the face of the pulley, allowing one end of it to rest on the floor ; bring it to the same pitch as your bevel and you have the center of the hole.

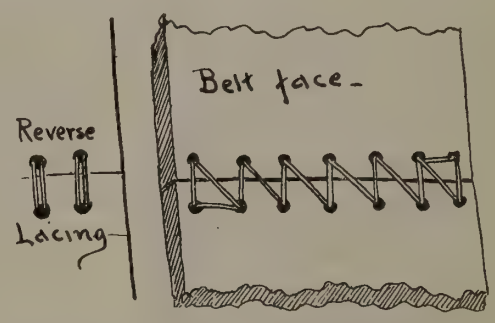
The one contributing the plan shown in Fig. 3 says : All we want is a man with a small auger, a plumb-bob and line, a saw, pencil and measuring tape. Let him plumb down from the face of the upper pulley, dot the floor, bore a hole and pass the plumb line through so it will swing clear from the upper pulley. Measure the distance from center of top pulley to floor, which is shown in the sketch as line A. Then measure from center of top pulley to line C, running through center of bottom pulley. Finally, measure the distance from plumb line to face of lower pulley, which measurement forms the C. Multiply A by C and divide the product by B, which will give the length of D. For example, distance A is 8 feet, distance B 12 feet, and distance C 20 inches. Then 8 times 20 equals 160, divided by 12 equals 13⅓ inches, which is the distance from plumb line to edge of belt hole. Allowance must be made for belt and lacing. If the two pulleys are of the same size the second belt hole will go through the floor at a distance from the first belt hole equal to the diameter of the pulley. If the pulleys are of different sizes, the distance will be about equal to the sum of the diameters divided by 2. Bore small holes and stretch the plumb line over pulley faces to see if measurements are correct, and then saw in whichever direction the holes must go to give the belt plenty of room.

AN IDEA IN BELT LACING.

THE yard man who runs a planing mill in connection with his yard is subject to some delays and loss of temper occasionally by the breaking of a belt at just the wrong time.

It takes a little time that is valuable if one has to stop and lace a belt when a rush job is on a machine, and for men who are liable to such inconveniences we give an idea that comes from a subscriber in Wisconsin :

He says : " We enclose you a piece of belt laced with No. 20 annealed iron wire. We have used this lacing for two years, and it is the best thing we have ever bumped up against in lacing. It is almost impossible to break the belt at the joint and it is practically an endless belt going



over the pulley smooth. It has saved us, we estimate, in our factory, $75 a year in time and belting. We have belts that have been running six months, going over a four-inch pulley at 5,000 revolutions a minute, and the lacing shows no wear yet.

We give the result to your paper and it is the first paper to get it; if you want to use it do so. No. 20 annealed iron wire can be purchased in almost any hardware store and for 25 cents enough wire can be purchased to lace 100 belts four inches wide. We can vouch for the economy and good work of this style of lacing."

Some of the readers of this paper may have been looking for this scheme for several years.—American Lumberman.

The inventor of a patented lubricating compound states that in the course of his experiments he found that castor oil or glycerine, when combined with sulphur, has the property of cooling as well as lubricating hot journals, and the other oils commonly used as lubricants are not suitable for this purpose. Castor oil and glycerine are regarded as equivalents in his compound, and either may be mixed with sulphur in the proportion of about 13 of the former, by weight, to 1 of the latter. The ingredients are placed in a suitable vessel and heated to the boiling point over a slow fire and boiled for thirty minutes, more or less, until froth forms on the surface. The compound is then allowed to cool, when it is ready for use.

WOOD PULP DEPARTMENT

THF PULP WOOD SITUATION IN QUEBEC.

The Quebec Legislature have not as yet taken any action to change the Order-in-Council affecting the dues on pulp wood so as to remove the discrimination contained therein against other provinces of the Dominion.

Hon. Mr. Marchand recently submitted to the House a copy of all correspondence on the subject of the regulations of the manufacture of pulp wood and the imposition or reduction of dues therein. The first document was by Mr. P. W. Nagle, forest ranger at Sherbrooke, reporting that 40 cents per thousand feet is a fair charge for pulp wood. In 1897 Mr. Lacerte, forest agent, reported that all timber under nine inches should come under the heading of pulp wood. In the same year Mr. Tache, Deputy Commissioner of Crown Lands, suggested the reduction of the duty on pulp wood other than spruce to 40 cents per 1,000 feet. This was a reduction of 10 cents, but spruce was to remain at the original figure. A cord of wood is put approximately at 600 feet. These suggestions were acted upon by Hon. Mr. Flynn. In 1894 Mr. John McFarlane, of Montreal, suggested that the dues on pulp wood for export be doubled. Later in the same year Hon. Mr. Flynn recommended that the stumpage on pulp wood be fixed at 40 cents per cord of 128 cubic feet, but that a rebate of 15 cents be allowed for pulp wood manufactured in the province. H. M. Price & Co. and the late Hon. W. B. Ives protested against such action. The Chicoutimi Pulp Co. subsequently urged the Government to so arrange matters that the American importers of pulp wood would have to pay at least as much more than Canadian consumers as Canadian exporters of pulp had to pay in duty. Mr. James Gillies, M.L.A., Mr. T. H. Taylor, of Hawkesbury, and the Muskoka Mill & Lumber Co., of Toronto, wrote in January last protesting against the recent Order-in-Council on the ground that it discriminated against the adjoining provinces of Ontario and New Brunswick.

In reply to a question asked in the legislature as to the intention of the Government to impose the duty of $1.90 per cord on pulp wood cut on Crown lands by bona fide settlers, which wood is to be sold in the course of the winter under contracts existing on 19th January, 1900, Hon. Mr. Parent stated that the matter was under consideration.

BRITISH IMPORTS OF WOOD PULP.

Statistics to hand show that during the year 1899 Great Britain imported 415,106 tons of wood pulp, against 404,842 tons in 1898, the increase for last year thus being 10,264 tons. The value of the importations of last year was $9,948,530, or an average of about $24 per ton. Of the total quantity imported, 196,926 was chemical pulp valued at $7,209,045, or almost $36 per ton, and 218,180 tons mechanical wood pulp, valued at $2,739,485, or about $12.50 per ton.

The countries from which the supplies of mechanical pulp were drawn during the last two years, and the value thereof, are given below :

	— 1898 —		— 1899 —	
	Tons.	Value.	Tons.	Value.
Norway	1,141,455	$1,748,235	162,894	$1,969.605
Canada	36,569	166 530	32,660	453 590
Sweden	24,043	472,060	17,427	234,985
United States	13,475	209 580	724	17,440
Other countries	9,775	295,105	4,475	63,875

The imports of chemical pulp from the various countries, and value thereof, were as follows :

	— 1898 —		— 1899 —	
	Tons.	Value.	Tons.	Value.
Norway	91,165	$2,932,720	85,362	$2,838,210
Sweden	63,332	2,299,230	82,879	3,289,745
Canada	10,116	290,410	5,754	201,150
United States	3,804	131,365	9,801	297,180
Other countries	11,108	476,740	13,130	582,785

It will be observed that the total imports from Canada last year were considerably less than in 1898. This is accounted for, no doubt, by the activity of the United States and Canadian paper trade, which consumed the bulk of the production of pulp. Owing also to the lack of water for operation of the mills in Norway, Sweden and Germany, a great scarcity of pulp was experienced. As much as $30 per ton was demanded towards the close of the year for dry pulp for prompt delivery. Regarding the year 1900, it is said that contracts have been placed at $30 for dry and $16 for moist. It is not expected, however, that these prices will continue throughout the year.

THE UNITED STATES PULP IMPORT.

Notwithstanding the arguments advanced as to the possession by the United States of an abundant supply of spruce for pulp making purposes, we find that last year there were imported into that country 51,192 tons of wood pulp. Of this quantity 41,458 tons, of a value of $849,641, were imported from Canada, and on each ton there was paid a duty of 10 per cent. ad valorem.

The imports of the United States for the years 1898 and 1899 are given below.

	— 1898 —		— 1899 —	
	Tons.	Values.	Tons.	Values.
Germany	1,396	$ 58,172	2,218	$104,379
Other Europe	4,437	185,915	7,516	289,244
British North America	28,646	$439,971	41,458	$849,641
Totals	34,479	$684,058	51,192	$1,243,264

The striking feature of the above table is the great increase in the quantity imported last year in comparison with the previous year. The dependence of the United States for an ample supply of pulp is well illustrated by a recent shipment from Norway to that country. The steamer Stalheim was loaded by A. Wertheim & Co., of Hamburg, with several thousand tons exclusively of sulphite and soda pulp for shipment to New York. We learn further from Scandinavia that large orders have been taken for sulphite pulp for delivery at United States ports during the present year.

QUESTIONS AND ANSWERS.

In the paper Trade Journal Mr. James F. Hobert, M.E., gives the following answers to questions asked concerning the manufacture of pulp :

QUESTION.—In making sulphite and ground wood from pine how should the wood be handled to avoid pitch from showing up in the sheet and making spots in the wire? Is there any practical way of handling it?

ANSWER.—This matter has always given paper makers a good deal of trouble when spruce is used, but some kinds of pine, with the greater amount of pitch therein, will prove much more troublesome. Spots are very hard to get rid of, in that they often arise from improper cooking. The wood should be dried and the acid or liquor made with exactly the correct proportions of sulphur and lime. Dry wood, strong

liquor and long, slow cooking will effect a cure if anything will.

Question.—Can spruce and hemlock chips be cooked together with good results?

Answer.—Yes; but it is preferable to cook them separately. The concerns using both woods usually cook one wood a while, then change to to the other.

Question.—Can sulphite pulp be made of basswood, and has any attempt been made in that direction? Can you also tell me if woods like maple or birch have ever been successfully used in the digestor?

Answer.—Basswood will not make good sulphite, although it is most excellent for soda pulp. The results of recent experiments show that the heart and sap of basswood cook in very different ways, and while the sap may make fair sulphite the heart remains stiff and "woody," and appears as short chunks mixed with the pulp. It has been found impossible to sell such pulp, and its manufacture has been abandoned. For soda pulp making, basswood works very well, as does maple, birch, beech, willow and even cherry. In fact, there is hardly any wood except chestnut which cannot be made into pulp by the soda process. Chestnut does not amount to much. It can be made into pulp all right, however, but there the trouble commences. First, chestnut pulp does not bleach well. Then it is such short fibred stuff, and so fine, that it cannot be used in the ordinary manner of paper making. As one paper maker put the matter, one-half of the stuff runs out of the drainers and is lost, while the other half runs right through the wire! So much for chestnut soda fibre. In an attempt to make sulphite, a mill foreman tells me that he tried a digestor full of chestnut, and got—ink! And it took several cooks afterwards to get all the color out of the digestor.

PULP NOTES.

The Lancaster Pulp & Paper Co., of Musquash, N.B., is applying for incorporation.

One year ago $10 per ton was an average price in the New York market for ground wood pulp. To-day $25 is being paid.

Castle & Gottheil, 41 Park Road, New York, are United States agents for the St. John Sulphite Pulp Co., of Mispec, N.B.

S. W. Butterfield, of Three Rivers, Que., has been granted a patent in the United States for feed attachments for wood pulp chippers.

It is expected that the mill of the Cushing Sulphite Fibre Company, at St. John, N.B., will be completed by the first of June. Some of the machinery is now being placed in position.

The Sissiboo Pulp & Paper Company are now placing contracts for machinery for the new mill to be built on the Sissiboo river, near Weymouth, N.S. The plans for the mill and dam are in the hands of a New York engineer. Mr. Chas. Burrill, of Weymouth, N.S., is the promoter of this enterprise.

The Grand Trunk Railway has taken a step which will encourage the manufacture of pulp and paper in Canada, by withdrawing its special rates on pulp wood from Canada to points in the United States. These rates have in the past proved a great benefit to American paper makers situated on the frontier.

J. G. Guay, J. E. A. Dubuc, Joseph Gagnon, F. X. Gosselin and O. A. Porritt, of Chicoutimi, and others, have been incorporated as the Chicoutimi Pulp Company, with a capital of $1,000,000. Their charter is a broad one, giving them authority to manufacture lumber, pulp, paper and pulp-wood, to build and operate electric light and power systems, and to construct wharves, steam boats, docks, waterworks systems and telephone lines.

Mr. Wm. S. Hale writes to the Paper Trade Journal, disputing the statement made by Mr. John MacFarlane, of Montreal, that chemical fibre was first made in Canada in 1873 and mechanical pulp about the same time. He states that in 1867 he was employed by Angus, Logan & Co., of Windsor, Que., who were then making chemical pulp, basswood being used. In 1869 he went to Valleyfield, where mechanical pulp was being used. In 1869 he went to Valleyfield, where mechanical pulp was being made, but the pulp was not run up into sheets as now.

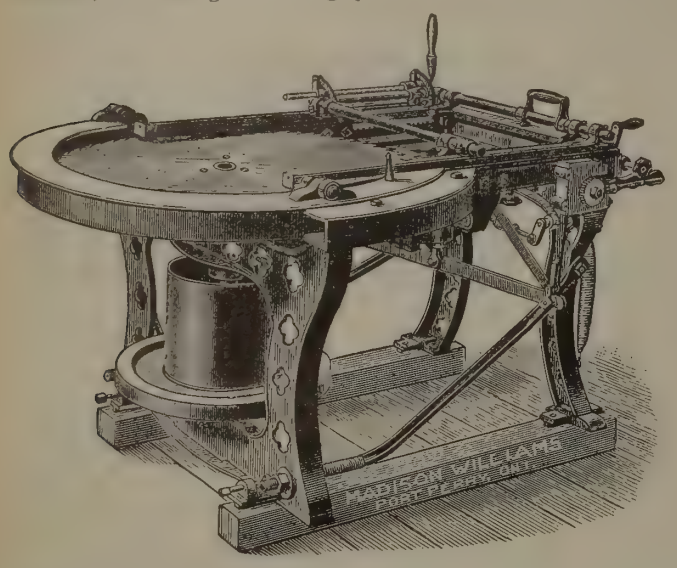
CANADA FAVORITE SHINGLE MACHINE.

Good shingle machines are the rule where the timber supply is sufficient to justify large operations. In many sections, however, a mill is indispensable, although the timber may be scarce and costly, and in just such places the best machine should be used, for the very obvious reason that its adoption may transform an otherwise losing enterprise into a profitable one.

The machine here illustrated, which is manufactured by Madison Williams, successor to Paxton, Tate & Co., Port Perry, Ont., is claimed by the manufacturer to rank with the best machines ever built. The following particulars regarding its construction, furnished by Mr. Williams, are among the strong points which, in his judgment, have made the Canada Favorite what its name implies.



WHAT IT IS AND WILL DO.

The Canada Favorite is a machine weighing about 1,000 pounds, occupying a floor space about 3½ ft. by 5 ft., using a 38 inch saw, and adapted for cutting shingles, heading or box boards, from 14 to 18 inches in length, up to 16 inches in width, and either parallel or tapering. With necessary power and skilful operators it has turned out 50,000 shingles in a day's run.

HOW IT IS CONSTRUCTED.

The arbor if of the best steel. The journals are long, ground in emery to a true circumference, and run on phosphor-bronze step. Boxes are lined with superior anti-friction metal. Upper and lower boxes being solid in the front or main supporting leg, and the lower box surrounded with large bridge pot for oil or tallow, the friction of the arbor is carried so as never to heat. Both boxes may be oiled through pipes that run from outside the machine. The carriage being constructed entirely of wrought iron tubes, brass and forged steel, combines at once the greatest durability and strength with least weight. The carriage bearings are brass, and are dovetailed to fit the track, which it cannot jump. The result is the perfection of uniformity in the thickness of shingles.

The tilt works are heavy, unspringable, and can be set to a hair's breadth by any sawyer after ten minutes' experience with the machine. The saw flange centres the saw to a nicety, is in absolute balance and remains that way. The drop lever regulates the thickness of the shingle without disturbing the taper adjustment. Any one of six screws performs the function that in less complete machines required from four to six. The machine in its entirety presents an appearance of compactness, ease of control, and of possessing the elements of speed and accuracy, which are the essentials of shingle manufacturing on a paying basis.

Readers of the LUMBERMAN who have not had the satisfaction of making shingles with the highest class of machines, and who would like to improve the volume and quality of their output, will do well to communicate with Mr. Williams.

LUMBERING METHODS IN PORTO RICO.

SUCH native lumber as is procured in Porto Rico is obtained as follows: A desirable tree being discovered the natives proceed to cut it with axes and whip-saws. It is felled and squared with the ax. A large circular groove is cut around one end of the log, making a notch, in which ropes can be secured for hauling. The squared log is sometimes lifted upon temporary trestles and sawn into thick slabs (tablos). These planks are not completely severed, however, but are left attached by a foot or two of unsawn wood at the notched end of the log; the log is then dragged by ropes or pried along on rollers through the jungle, often many miles, until a beaten trail is reached. It is pulled by hand down these trails until they lead into the ox-cart roads. Oxen are now attached to the logs and they are dragged to their destination. There is not a saw mill in Porto Rico for lumbering purposes, nor is there any inducement for the establishment of such a mill, because sufficient logs could not be obtained in any one locality to supply a mill, and the topographic obstacles forbid hauling over great distances. The logs, after being cut and dragged to their destination, are worked up, upon the sugar plantations or in the cities, into the objects for which they were hewn.

TRADE NOTES.

The attention of our readers is directed to the first appearance, on front cover page of this number, of the advertisement of the American Machinery & Trading Co.

The Globe File Co., of Port Hope, Ont., have purchased the file plant of the Ottawa Saw Works. The plant will be removed to Port Hope and operated in connection with the Globe File Works.

THE NEWS.

—Thos. Hodgins is building a saw mill in Middlefield, near North Bay, Ont.

—The Rat Portage Lumber Company are overhauling No. 4 saw mill at Norman.

—Esau & Dyck, retail lumber dealers, Winkler, Man., have dissolved partnership.

—Robert Gilholm, of Galt, Ont., has disposed of his saw mill to P. W. Gardiner.

—Barber & Elliott, saw and planing mill, Shawville, Que., have dissolved partnership.

—The planing mill of K. A. McLeod, at Edmonton, N. W.T., has been purchased by W. H. Cushing.

—A sash and door factory will likely be established at Fenwick, Ont., to be operated by steam power.

The saw mill of the Trout Creek Lumber Co., of Trout Creek, Ont., has been purchased by Mr. Burk.

—An addition to the planing mill of Eleezer Robichau at Meteghan River, N.S., has been decided upon.

—Wm. O'Neil, of St. Martins, N.B., is operating two rotary mills, one at Upham and the other at Henry Lake.

—It is the intention of McLachlin Bros., of Arnprior, Ont., to enlarge their plant and make improvements to dam.

—The Symon Peters Co., general contractors and lumber merchants, Quebec city, has been incorporated, with capital of $100,000.

—The Dominion government will be asked to vote $500,000 towards the proposed Montreal, Ottawa and Georgian Bay ship canal.

—The Rat Portage Lumber Co. recently donated $250 to the National Patriotic Fund and $500 to the general fund of the hospital of that town.

—Preliminary steps have been taken by Geo. Dalglish, of Ottawa, to establish a match factory at Hull, Que. He has asked for exemption from taxation.

—The New Richmond Lumber Company, of New Richmond, Que., will again operate their mill this season, after having it closed down for two years.

—An advance of 15 per cent. has been established on all lines of leather belting, due chiefly to the fact that raw hides have gone up fully 40 per cent. within the past year.

—The old Todd mill, on the New Brunswick side of the St. Croix river, has resumed operations, after having been shut down for two years. It is being operated by Eaton & Son.

—The following officers of the Bronsons & Weston Co., of Ottawa, have been elected: President, Hon. E. H. Bronson; vice-president, F. P. Bronson; secretary-treasurer, Levi Crannell.

—The town of Brandon, Man., will probably grant exemption from taxation to the Hanbury Manufacturing Co., which concern purposes adding to their saw mill plant a

factory for the manufacture of doors, sashes and other woodwork. Mr. John Hanbury is manager of the company.

—Basswood lath is being manufactured in Minnesota to take the place of pine lath, owing to the high price of the latter. They sell at about two-thirds the price of pine lath and are said to give good satisfaction.

—The route has been surveyed for a line of railway from Bristol to Foreston, N. B., a distance of 15 miles. The project is being promoted by the lumbermen, in order to provide a means of transport for their lumber.

—Ker & Harcourt, of Parry Sound, Ont., are installing an exhaust fan in their spool and bobbin factory. It was manufactured by the Sturtevant Company, of Boston, and supplied by the A. R. Williams Machinery Company, of Toronto.

—The steamer Guernsey recently sailed from Vancouver, B.C., for Shanghai and Valdivistock, carrying 3,000,000 feet of lumber supplied by the Hastings and Moodyville mills. This is the largest cargo ever taken from a British Columbia port.

—The Turner Lumber Co., Limited, of Midland, Ont., has been incorporated, with capital of $10,000. The members are: Jos. Turner, of Bay City; D. J. Turner, of Detroit; A. B. Turner, of New York, and C. A. Turner, of Midland, Ont.

—The Rat Portage Lumber Co., at the annual meeting held last month, re-elected its officers and directors, with the exception that J. M. Savage is replaced on the Board of Directors by M. Brown. The business of the past year was shown to be satisfactory.

—Playfair & White, of Midland, Ont., have given a contract to Toner & Gregory, of Collingwood, to cut 10,000,oco feet of lumber during the ensuing season. The latter firm has decided to make extensive improvements to their mills, including the replacing of the lath mill with modern machines.

—The Canadian & British Columbia Patent Fuel Co. has been organized and will establish an industry at New Westminster, B.C., to manufacture a patent fuel, the ingredients of which are saw dust, coal dust and tar, pressed into the shape of a brick. The capital is $100,000, subscribed by Toronto and Ottawa gentlemen.

—A subscriber in Ottawa writes to the CANADA LUMBERMAN that he is meeting with difficulty in getting his supplies into keep-overs on the Upper Coulonge, the roads in some places having completely given away owing to mild weather. Unless there is considerable cold weather and snow, it will be almost impossible to get the supplies in for next year's operations.

—Edmund Hall, of Detroit, has purchased the Miner Lumber Company's mill at Alpena, Mich., and is removing it to the Spanish river district, on the Georgian Bay. Northrop & McEwen, of Bay City, have bought the historical Moiles Bros. mill on John's island, Algoma district, and will put it in operation in the spring, while, as previously announced, W. & A. McArthur & Company, of Cheboygan, have taken over the red mill at Little Current. They will install in this mill two new boilers, an electric light plant and new edgers, trimmers, etc., and expect to have the mill running by the first of May. There are fully one dozen large Michigan firms that will saw their logs in Ontario this year.

—Writing to the CANADA LUMBERMAN from Rat Portage, Ont., Mr. Wm. Margach, crown timber agent for that district, states that the demand for timber is increasing rapidly in the west, also that the construction of the Rainy River railway is almost certain to result in a large demand for spruce. He says that for eighty miles along the valley of the rainy river there are large quantities of spruce and poplar timber, while smaller quantities are found along other rivers. Mr. Margach expects that the construction of the Rainy River railway will be a great benefit to that district.

CASUALTIES.

—While working for the Longford Lumber Co., near Longford Mills, Ont., Patrick Lawrence had the misfortune to break his leg.

—James Green, of Bonfield, Ont., was killed while working in J. R. Booth's lumber camps near Sturgeon Falls, by a log rolling upon him.

PERSONAL.

We regret to learn of the death, on February 14th, of Mr. Geo. W. Bascom, accountant for Shurly & Dietrich, saw manufacturers, Galt, Ont.

Mr. James Playfair, of Midland, Ont., accompanied by Mrs. Playfair, recently sailed from New York by the Lucania for a three months trip through Europe.

—Isaac Porter, of Brookville, N.B., was found dead in the woods near that place last month. He was a well-known lumber operator, and left home for the purpose of cruising a tract of timber land nearby.

Capt. James Wood died at Peterboro last month. Deceased had been for many years manager at Rockland for the W. C. Edwards Lumber Co., and was widely known.

Mr. Thomas Moffat, of the firm of Moffat & Hutchins, Canadian commercial representative in South Africa, and who has frequently contributed to the columns of the LUMBERMAN, is now on a visit to Canada, his native land.

Mr. John Harrison, president of the John Harrison & Sons Co., of Owen Sound, Ont., has been elected president of the Board of Trade of that town, with the commercial development of which he has been closely identified for many years.

The liberals of Glengarry county have unanimously nominated Mr. J. T. Schell, of the well-known lumber firm of Macpherson & Schell, Alexandria, Ont., to contest that riding at the next Dominion election. We have not learned of Mr. Schell's decision in the matter, but should he become a candidate we bespeak for him success.

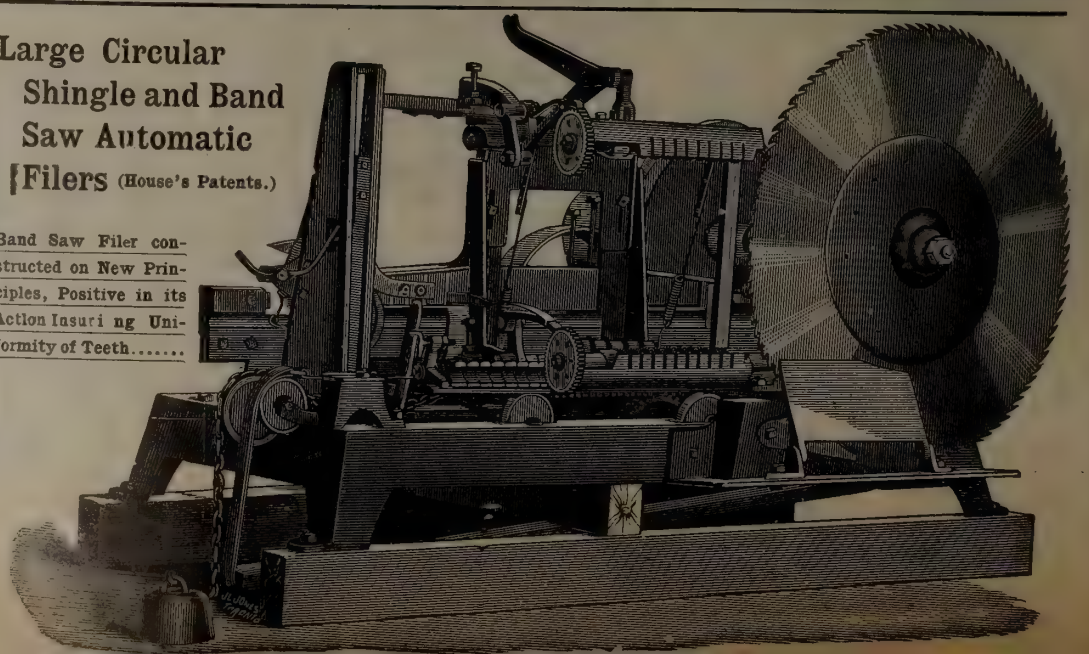
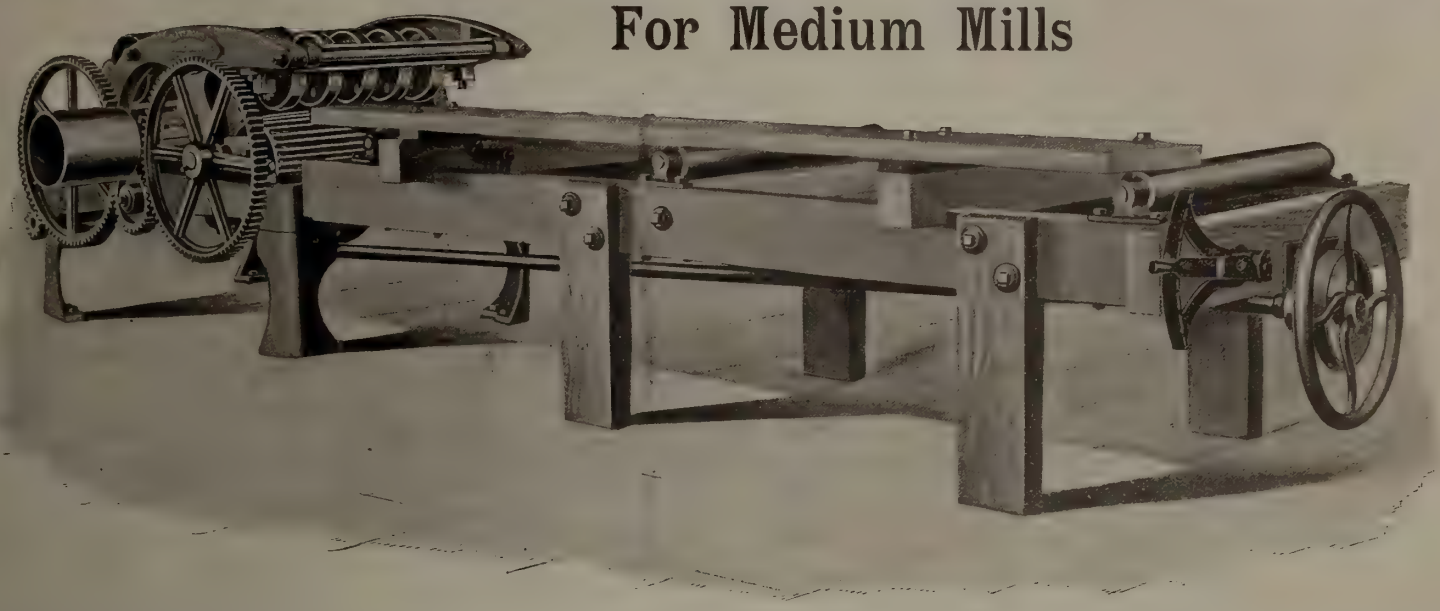
Band Saw Filer constructed on New Principles, Positive in its Action Insuring Uniformity of Teeth.....

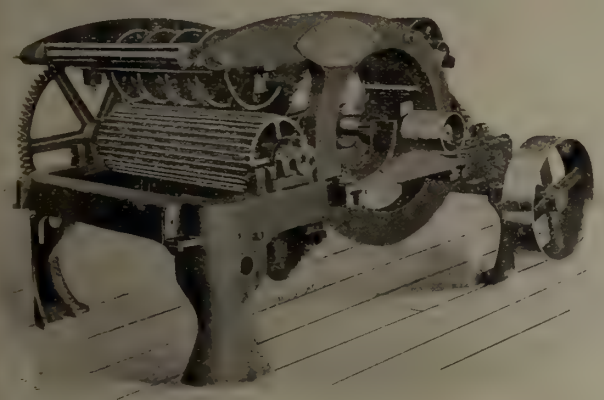


A SMALL DOUBLE EDGER

For Medium Mills



MADE RIGHT OR LEFT HAND—CUT SHOWS LEFT HAND EDGER.



The New Light Champion Edger has 2 7/16 Steel Mandrel supported on two long bearings.

No. 1 Light Champion HAS TWO SAWS, one moveable ; range between SAWS from 1¾ to 24 inches.
No. 2 Champion HAS THREE SAWS, two moveable ; range between stationary and first moveable Saw, 1¾ to 20 inches, and between moveable Saws, 4 inches.

All our Edgers are provided with front tables, when so ordered, with 4½" iron rolls and guide, moveable with lever up to 4 inches outside of stationary saw.

The Heavy Champion Edger has 2⅞ Steel Mandrel with three long bearings.

No. 3 Heavy Champion HAS THREE SAWS, two moveable ; range between stationary and moveable saws, 1¾ to 24¾, and third saw 4" from second.
No. 4 Champion range is 1¾" to 28¾", and third saw 4" from second.
No. 5 Champion range is 1¾" to 36¾", and third saw 4" from second.
A fourth saw can be added, reducing extreme opening 4 inches.

We arrange Saws to be moved by levers when desired instead of hand-wheel and rack and pinion.

Shows Removable Bridge to Permit Saws to be Withdrawn from Mandrel. Feed Pulley is Readily Removed.

EDGERS BUILT RIGHT OR LEFT HAND

THIS CUT SHOWS A RIGHT-HAND EDGER

The Heavy Champion Edger—No. 3, 4 and 5. The frame in these sizes has two central legs omitted from cut.

This Improved Double Edger is made in three grades—Light, Heavy and Extra Heavy. PRESS and FEED ROLLS are of large diameter. Feed rolls fluted, bearings adjustable, front press rolls made in sections, both front and back hung in stiff open frames LIFTING WITH FEED, NOT AGAINST IT—a new and important feature—ADJUSTABLE BOTH WAYS FOR ALIGNMENT WITH MANDREL. Rolls sufficiently large to be used for return of stock over Edger, and still view of saws is not obstructed. All have bridgetree quickly removable to take off saws—Saws are moved by guides, and guides are removable to take off saws.

Trimmers, Slab Slashers, Lath Mills, Bolters, Bunchers and Trimmers, Shingle Machines, Drag Saws, Endless Chain Bull Wheels, Conveyors, Transfers, Refuse Carriers, all up to date in design. We carry tons of Link Belting in stock. Get our Quotations.

To Be Published About Midsummer

EXPORT NUMBER

OF

The Canada Lumberman

THE publishers of the CANADA LUMBERMAN have now in course of preparation an Export Number, to be published in July next. This will be the first Special Number of THE LUMBERMAN to be devoted exclusively to assisting the development of the export trade in Canadian timber products. The contents will include illustrations and descriptions pertaining to the Canadian lumbering and pulp industries, and information regarding the requirements of foreign markets. **Two Thousand Copies** of this issue will be placed in the hands of the leading Importers and Consumers of timber, British Consuls and other interested persons in foreign countries, including

Great Britain, Germany, China, Japan, France, Spain, Australia, South America, South Africa and the West Indies

This issue will be a valuable advertising medium for Canadian Manufacturers and Exporters of timber products, and will afford them an excellent opportunity of bringing their goods to the attention of probable buyers in foreign markets. Every lumber merchant catering to the export trade should be represented in this number.

CANADIAN FORESTRY ASSOCIATION

SUCCESSFUL ORGANIZATION MEETING IN OTTAWA.—OFFICERS ELECTED.—DISCUSSION OF FORESTRY PROBLEM.

CANADA is rich in natural resources, and her wealth of timber area is unquestionably an important asset. Hence it is that those in power have seen fit to take steps to preserve and in places increase this asset, which is destined to become all the more essential and important as the various provinces increase in population. A Canadian Forestry Association has accordingly been formed, the promoters of which fully realize the absolute necessity of protecting standing timber and reforesting the sections of the Dominion not enjoying the benefits, even blessings, of well distributed sturdy forest growths.

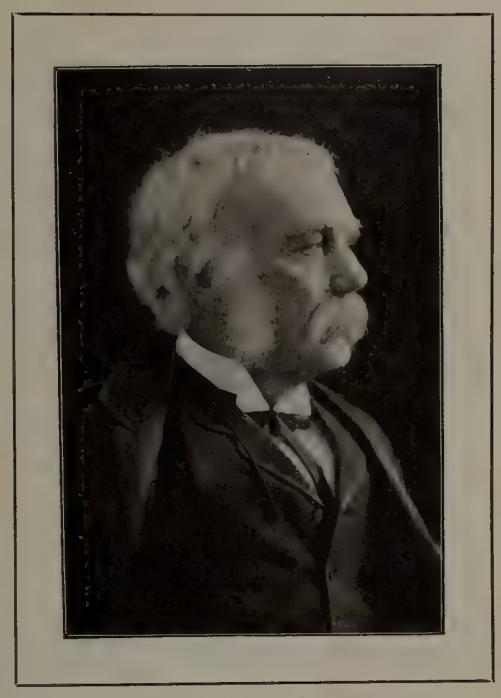
At the inaugural meeting, held in the Railway Committee room of the House of Commons, Ottawa, on Thursday, March 8th, Sir Henry Joly de Lotbiniere, Minister of Inland Revenue, presided. In the assembly were representatives from nearly all the provinces and territories, and the proceedings were conducted and the papers discussed in a manner that bespeak success for the Association. In his introductory remarks the chairman stated that those who were most interested in and intimate with matters affecting our timber resources, encouraged by the success attending the efforts of the promoters and members of the American Forestry Association, had decided that the present was an opportune time to establish a Canadian association working along similar lines. The primary object would be to advocate and encourage judicious methods in dealing with our forest wealth. Canadians connected with the American Association knew the great success it had attained in this direction, but even greater success should be attained in Canada, where the forests still remain to a great part under the control of the Crown. Another object was to awaken public interest to the true dangers resulting from undue destruction of the timber along the waterways and sources thereof. The chairman also considered that the public domain should be thoroughly explored and the proper resources and the best uses of the different portions properly ascertained. With this object still in view, a portion of the unappropriated land, he considered, should be permanently reserved for the growth of timber. He thought it a mistake to permit settlers to go upon land which is utterly unfitted for agriculture and which must be vacated only after the valuable timber thereon is destroyed. In conclusion, Sir Henry drew attention to the necessity of educating Canadians, through schools and otherwise, on the forestry problem, with respect both to the prairie and wooded districts, and to show them the necessity of encouraging forest tree planting, from a climatic and economic, as well as an artistic standpoint.

It was unanimously decided to organize the Canadian Forestry Association.

A constitution was adopted, which provides that the objects of the association shall be as follows :

(1) To advocate and encourage judicious methods in dealing with our forests and woodlands.

(2) To awaken public interest to the results attending



SIR HENRY JOLY DE LOTBINIERE,
President of the Canadian Forestry Association.

the wholesale destruction of forests as shown by the experience of older countries in the deterioration of climate, diminution of fertility, destruction of rivers and streams, &c.

(3) To consider and recommend the exploration as far as practicable of our public domain and its division into agricultural, timber and mineral lands, with a view of directing immigration and the pursuits of our pioneers into channels best suited to advance their interests and the public welfare. With this accomplished a portion of the unappropriated lands of the country would be permanently reserved for the growth of timber.

(4) To encourage afforestation wherever advisable.

(5) To promote forest tree planting upon farm lands where the production of wood is too low, especially in the treeless areas of our North-Western prairies, upon highways and in the parks of our villages, towns and cities.

(6) To collect and disseminate for the benefit of the public reports and information bearing on the forestry problem in general, and especially with respect both to the wooded and prairie districts of Canada, and to encourage the study of forestry by the rising generation.

The following were elected as officers of the association : Honorary president, Lord Minto ; president, Sir Henry Joly de Lotbiniere ; vice-president, Mr. William Little ; secretary, Mr. E. Stewart, Inspector of Forestry, Department of the Interior, Ottawa ; assistant secretary and treasurer, Mr. R.H. Campbell ; directors, Messrs. Hiram Robinson, E. W. Rathbun, C. Jackson Booth, Thos. Southworth, Hon. G. W. Allen, Dr. Saunders and Professor Macoun.

At a subsequent meeting of the Executive Committee the following vice-presidents for the different provinces were appointed : Assiniboia, Hon. W. D. Perley ; Alberta, Mr. Wm. Pearce ; Ontario, Mr. J. B. McWilliams ; British Columbia, Mr. H. Bostock, M. P. ; New Brunswick, Hon. D. C. King ; Quebec, Hon. S. N. Parent ; Manitoba, Mr. Stewart Mulvey ; Saskatchewan, Mr. Thomas McKay ; Prince Edward Island, Hon. Donald Ferguson ; Nova Scotia, Dr. A.H. McKay ; Keewatin, Lieutenaut-Governor of Manitoba ; Athabasca, Mr. Wilson ; Yukon, Mr. William Ogilvie.

The membership fee was placed at $1, life membership being secured by the payment of $10. The following parties interested and who were present at the meeting forthwith joined the association : Sir Henry Joly de Lotbiniere, Prof. Wm. Saunders, Ottawa ; W. D. Perley, Wolseley, N.W.T. ; William Little, Westmount ; G.W. Allen, Toronto ; Jas. Honidag, Qucbee ; Finlay Young, Killarney, Man. ; R.H. Campbell, Ottawa ; M.J. Butler, Deseronto ; D. James, Thornhill, Ont. ; J.B. McWilliams, Peterborough ; E. Stewart, Ottawa ; Frederick Todd, Montreal ; Alex. MacLaurin, Charlemagne, Que. ; Robt. Bell, Ottawa ; Robt. Hamilton, Grenville, P. Q. ; John F. McKay, Montreal ; Hon. E. J. Davis, Toronto ; F. W. Gibson, Crown Lands Department, Toronto ; Aubrey White, Crown Lands Department, Toronto ; Thos. Southworth, Crown Lands Department, Toronto ; J. M. Macoun, Ottawa ; W. T. Macoun, Ottawa ; Hiram Robinson, Ottawa ; Gerald Spring Rice, Pinse, N. W. T. ; B. Spring Rice, Pinse, N. W. T. ; R. F. Stupart, Toronto ; J. R. Duff, School of Science, Tornto ; C. E. C. Usher, Montreal ; Sir Wm. Hickson, Montreal.

The annual meeting will hereafter be held in Ottawa on the first Thursday in March, and special meetings shall be held at such times and places as the executive may decide.

AFTERNOON SESSION.

At the afternoon session interesting and instructive papers were read. The first was by Dr. Bell, L.L.D., M.D., F.R.S., of the Geological Survey of Canada, and is printed below :

CANADA'S NORTHERN FORESTS.

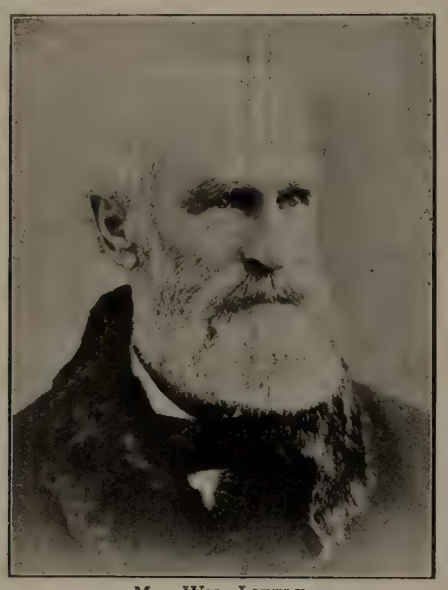
By ROBERT BELL.

The subject of the distribution of the forest trees in Canada has come particularly under my attention, as I have had the opportunity of travelling for forty years in the north country as geologist for the northern region. The forests of North America exhibit a variety and

grandeur greater than those of any other country or continent in the world. The reason is supposed to be connected with the condition of the earth before the glacial period. It is supposed that the polar regions had a climate fitted for most of our northern trees. After the disappearance of the glacier the trees have been working their way northward again. Some of the limits already reached are the extreme possible limits, others are not. The trees whose seeds are scattered by the wind, such as the poplar and coniferous trees, will spread more quickly, while others, such as those that have their seeds in the form of nuts, will travel more slowly, the seeds being few in number and being more slowly distributed. A single poplar might distribute seed over a whole country in a single year.

The verge of the forest is at present moving southward, both in America and on the continent of Europe, but still a number of trees have not yet had time to reach their northern limit. An example of this is the black walnut, which is abundant in western Ontario, but only occurs in isolated cases at Ottawa and Quebec. This is one of the trees with which our chairman, Sir Henry Joly, has been making experiments in Quebec.

The number of species of trees in North America is larger than in any similar area. There are 340 species between our northern limit and the Gulf of Mexico. The British islands have only fourteen species, and over the whole continent of Europe there are only twenty-five to



MR. WM. LITTLE,
Vice-President Canadian Forestry Association.

thirty species. In Canada there are about 120 species, 95 being east of the Rocky Mountains and 25 west of that line. As the continent diminishes rapidly to the south we must necessarily have a large number of species in the south, so in the north we have large forests with a small number of species and in the south small forests with a large number of species.

The chief factors in causing a flourishing growth of trees are the climate and a sufficiency of moisture. The variations of the climate in North America admit of a great variety of growth from the conifers in the north to the tropical trees of the Gulf of Mexico in the south.

The northern forests of Canada stretch from Labrador to Alaska, some four thousand miles, and have a breadth of fully 600 miles.

Western Canada is not wooded in the plain and prairie country. In the eastern, or prairie country, there are clumps and bluffs of poplar, but on the plains only a few trees in the deep valleys of the rivers. This region is triangular in shape, being about 600 miles in width and 600 miles on each side. It is wooded principally with poplar, birch, etc., and in the north there are considerable areas of coniferous trees.

In the area of our northern forests we have about thirty times the area of England. The area of England is about 59,000 square miles. From Ottawa to James Bay is about 600 miles, and it is about 600 miles farther to the northern limit of forests. In Labrador we have an area 1,000 miles wide by 1000 miles from north to south, equal to the whole of Europe, and covered by timber on the east side of Hudson's Bay to latitude 57 north. On the west side of Hudson's Bay the range is to latitude 59 north, and continuing west in the Mackenzie basin it reaches latithde 68 north, beyond the Artic circle.

This sketch of our great forest weath will show the necessity of some steps being taken to protect and preserve the forests, as well as to ensure the deriving of a proper revenue from them, and shows the necessity for the organization of an association such as the one formed here to-day.

As a result of the climatic conditions the timber lines run in almost parallel lines, although not in all cases. The mean temperature of the year does not cover the extremes of heat and cold, proximity to the sea or the prairie region, former geological conditions, etc., all of which affect the distribution of the trees.

The white cedar is one of the most peculiar in regard to its limits. The reason why it does not extend further west than the eastern part of Manitoba is probably due to the dryness of the climate. There is, however, a patch on the west side of Lake Winnipeg, near Grand Rapids, which was probably started from seed carried by the Indians. They are fond of decorating their canoes with branches of cedar, and the seed may have been carried on branches taken in this way from the eastern side of the lake. Isolated colonies of other species are probably due to the fact that these specimens are in advance of the main body. The white cedar is at its perfection in Gaspe and New Brunswick, occurs but little in Nova Scotia, while there is none in Cape Breton or Newfoundland. There is no trace of it on the outside of the Labrador coast, owing to the biting sea air. In the north the direction of its line of growth is due to the coldness and dryness. There is not much barren land, except in Labrador and west of Hudson's Bay, practically all of the Dominion being well wooded.

In Ontario and Quebec the limits of the trees are a pretty good indication of climate, but in the west other factors, such as soil and moisture, affect the problem, because the same species does not always grow under the same conditions. For example, in the south some species will seek the coolest situations, and in the north the warmest. The white cedar, balsam, pine, tamarack, white spruce and white birch choose the coolest places in the southern parts of Ontario, while farther north they seek the warmest.

The white pine is comparatively southerly in its distribution, being found only in Ontario and Quebec about to the divide between James Bay and the southern slope. North of Lake Superior it has been destroyed by fire and has not had time to reproduce itself. It occurs in Newfoundland, but not in very extensive forests.

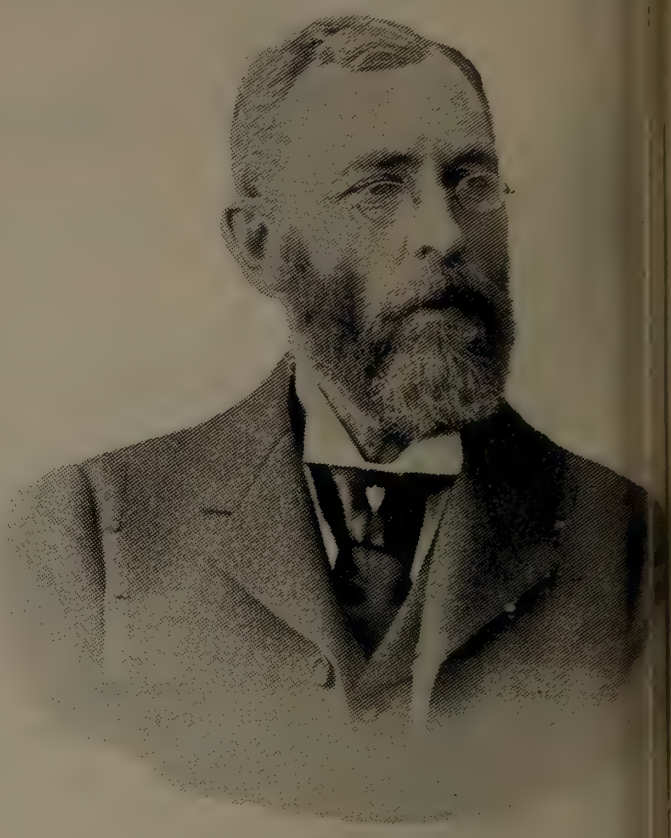
A bird's eye view of the country in which the spruce grows would show a patchy appearance, due to the fact that different areas have been burnt over at different times. The spruce forest attains its full growth in 150 years, and there will be patches of this tree of all sizes and ages up to 100 years.

The origin of forest fires in accessible parts is usually due to travellers, explorers, miners or settlers handling fire carelessly. Vast amounts of valuable timber have been destroyed in the past in this way, and a great deal is still destroyed by Indians and others leaving fire. But I think that the greatest cause of forest fires in the north is lightning, though there may be other causes. One of the most curious of which I have heard is told of in a tradition of the Indians in regard to a fire in the Lake Temagami district. They ascribe it to a shooting star, quite a possible reason. Other causes may be the spontaneous combustion of pyrites, etc. One of the principal causes in the accessible parts of the country is the facility of getting matches. Eddy's matches are probably responsible for a great number of the fires. If people had to employ flint and steel the fires would probably not be so numerous.

I have calculated that about one-third of the country may be considered as brule, that is, under second growth up to about ten years of age; one-third as intermediate, including trees between ten years of age and upwards; and one-third including trees assuming the character of trees up to those of one hundred years of age. These make up an area thirty times as great as that of England. Any of the one-thirtieth parts will produce wood enough to supply the ordinary demands of the ordinary population of Canada, that is, five million people could get what is required for mining, fuel, etc., by taking the timber from a space the size of England, and would be able to allow the twenty-nine other parts to grow up to be ready later on.

Spruce trees grow much more rapidly from eight to thirty years than they do afterwards. Very little addition is made between thirty and one hundred years.

If any proof is wanting of forest fires having occurred in remote time, it is supplied by the post-tertiary deposits, where we find the charred remains of trees. In the Scarboro heights near Toronto trees have been found two or three hundred feet below the surface, and they



MR. E. STEWART,
Secretary Canadian Forestry Association.

have also been found elsewhere. We have another proof in the habits of trees, such as the Banksian pine, which requires fire to faciliate, if not to continue its reproduction. The cones are exceedingly numerous. They curve inward and adhere to the branch closely. They grow in bunches of three or four and will remain on the tree till it falls away with old age. Though it may be true that this is not the only way, the seeds escape from the cones by the aid of fire. The cones open with

MR. R. H. CAMPBELL,
Assistant Secretary and Treasurer Canadian Forestry Association.

the heat and the wind blows the seeds everywhere. This habit may have been developed like other habits supposed to be accounted for by the Darwinian hypothesis.

Since I have published this statement other observers have noticed that cones were opened without forest fires, but I think it was due to the sickly condition of the trees and especially to the trees being young and with immature cones opened by some untoward condition. Cones on large thrifty trees are closed until scorched by fire. Any tree which has its limits north extends very far south except the Banksian pine, which is almost entirely

nfined to the Dominion of Canada. The trees are at their reatest perfection at the centre of their distribution.

DISCUSSION.

By request of Dr. Saunders, Dr. Bell indicated n the map the line of northern distribution of e silver-leafed maple (Acer dasycarpum), which as shown to be generally a little south of the anadian Pacific Railway line north of Lake uperior. Dr. Saunders stated that he had found cer dasycarpum as far north as Portage la rairie.

Sir Henry Joly: My investigations indicate at the white spruce does not grow as fast as r. Bell's experience seems to suggest. I have sted thousands of white spruce logs in the ighborhood of Quebec and have never found average more favorable than one inch in five six years, so that thirty years would only give e or six inches.

Sir Henry Joly exhibited two specimens of hite spruce as an illustration of his remarks. these there had been an increase of one inch diameter in seven years.

Dr. Saunders: In the Maritime Provinces we ve found that the white spruce will reach from to twelve inches of timber one foot from the ound in ten years. We have many specimens the Experimental Farm there, of which easurements have been taken from time to time, t the climate there is much more moist than in uebec. The rate of growth of white spruce is very important point, as it is required for pulp, d it is important to know in what time we uld produce a pulpwood crop in Quebec.

Mr. William Little: The question in connec- n with spruce is an important one, as it is quired for pulpwood. It must be borne in nd, however, that the timber grown in the oods is the important matter, not a single tree owing in the garden. We have spruce trees of ormous growth in our garden, but they are all anches. It would be impossible to get a thir- n or fourteen foot log out of them.

Hon. W. D. Perley: I can remember a field in New Brunswick which was a pasture when I s a boy living there, but it is now all grown u and covered with spruce bush.

Sir William Hingston: The fact should not b lost sight of that the spruce has no definite gree of growth, that the growth depends upon th conditions. I have been planting for years thee, four, sometimes five hundred spruce, and within a certain area can tell what trees will grow fast and what trees will grow slowly. Those that are well protected will grow the most quickly. Some trees grow as much in three years as others in twelve years. I would like to ask Dr. Bell whether he thinks that low elevation has much to do with the growth of trees. Is it more a question of high or low elevation than one of latitude? If a high level plain occurs is there any abrupt change? Also whether there is any change in the umbrageous character of the leaf due to elevation?

Dr. Bell: I consider that elevation has a great deal to do with the growth of trees. When a sudden change in the elevation occurs there is a equally sudden cutting off of trees. As we go north the line of perpetual snow moves lower down. In passing from Lake Superior to Hudson Bay we lose sight of certain trees in crossing the height of land, and after descending on the other side the same trees appear again.

Dr. Saunders: Does increase in elevation help the growth of certain trees.

Dr. Bell: Some grow better on high land, for instance the hard maple.

Dr. Saunders: The reason I asked that question is because I have found on the Riding Mountain, at an elevation of 1,800 to 1,900 feet, Populus tremuloides growing to a great height, while on the lower ground it was not nearly the same size.

Mr. W. T. Macoun: Has the white pine been found growing upon swamp land?

Dr. Bell: It grows on swamp land in some places in Western Ontario.

Dr. Saunders: How far north does one go before the tamarack changes its character as to choice of ground? I have seen tamarack in wet ground as far north as the Swan river.

Dr. Bell: The change takes place about the height of land. The absence of trees in Manitoba must be due to some inherent difference in climate. The trees do not stop abruptly on reaching Manitoba, but begin to curve southward east of that line.

Dr. Saunders: Why is it that on the southern banks of the rivers in the west the trees are of considerable size, while on the northern bank they are smaller? Is not this due to fire?

Dr. Bell: I have noticed the east and west banks show the same difference, the east slopes having a better growth than the west. I think it is due to the fact that in the spring, being exposed to the sun on the south-facing bank, the sap is forced up early and the first severe frost bursts the bark and destroys the tree.

Dr. Saunders: We have had apple trees killed at the Experimental Farm before they were large enough to run sap.

Mr. Stewart: I was at the meeting of the Manitoba Horticultural Society lately, and Mr. Stephenson there showed specimens of wealthy and hibernal apples grown at his place in Manitoba. The apples were well-formed and matured.

Dr. Saunders: I know Mr. Stephenson's place well and the trees are growing at an elevation of less than 700 feet. There is heavy wood to the north and west, while the orchard is so surrounded by evergreens that it is difficult to find it.

HISTORY OF ECONOMIC FORESTRY IN ONTARIO.

Mr. Thomas Southworth, Chief of Forestry for the Province of Ontario, read a paper on the "History of Economic Forestry in Ontario," in which he outlined the steps which had been taken by the early government of Canada for the reservation of timber, and also the policy now being followed in regard to the setting aside of timber reserves such as that at Lake Temagami, the forests on which would be dealt with in as scientific a manner as possible. At one time, Mr. Southworth stated, the forest was considered by the settlers to be an enemy to be removed. As a result, in some of the older counties of Ontario, the present wooded area was less than 5 per cent. of the whole. The land burned over is still unsettled and unsuited for tillage, and should be placed in forest reserves. Fire ranging, Mr. Southworth said, served both to protect and establish the timber areas. He considered it was fortunate that the crown kept control of the timber instead of disposing of it to lumbermen, as had been done in the United States. During the French occupation the home government made no provision to protect any but the oak timber, but happily this condition of affairs had been improved on. Amongst the measures adopted for the protection and reproduction of the forests were the remission of taxes on forest lands and the establishment of Government nurseries similar to those supported in New Zealand. The high lands, he maintained, should be kept well timbered, as the rivers have their sources there. The fact was mentioned that farmers are now planting trees as wind-breaks to ensure better crops. Mr. Southworth referred to the fact that the fire rangers had saved many million feet of timber, and Mr. J. R. Booth remarked that there was not one fire now where ten occurred years ago. This happy improvement was due to the efforts of the lumbermen themselves as well as the rangers.

Prof. John Macoun, F.L.S., F.R.S.C., Assistant Director and Botanist of the Geological Survey of Canada, then read the following paper:

THE DEFORESTION AND REFORESTATION OF THE WESTERN PRAIRIES.

By Prof. John Macoun.

I wish to make some statements with which some of you gentlemen may not agree, but I know of what I am speaking and am prepared to support my views, and I hope those who may be of a contrary opinion will put forward their view of any questions that may be discussed.

There is a diversity of causes for prairie fires. The time was when a large part of Manitoba was covered with forest, and also immense tracts of Eastern Assiniboia. In fact, south of Indian Head less than forty years ago there was a considerable growth. In places where now there are no trees and where settlers say that trees will not grow, forty years ago they were covered with forests.

I want to corroborate a statement of Dr. Bell's. I saw two prairie fires in 1894 at Crane Lake caused by lightning. If prairie fires are caused by lightning, Dr. Bell is probably right in saying that forest fires to the north of the prairies are so caused. I have seen three or four thunderstorms succeed one another on the prairie without any rain. I was on the prairie before the settlers. I had the privilege of exploring in the year 1879 for 2,500 measured miles on the prairie travelling, in carts, and in 1880 between eighteen and nineteen hundred miles. At that time the prairie was covered with grass in places, and in other places there were many tracts of burnt forest, especially on the edge of what is the prairie now. Beyond Last Mountain, before you reach Long Lake, we came to the edge of the prairie and we got no more wood for two weeks. But I want to call your attention to one thing we noticed. South of where Humboldt is now, we saw a small willow bush with a pond in front. And what did this mean? When the prairie fire went round the pond it would leave a small triangular piece unburned.

Twenty years ago I went to Captain Deville and said, "The Touchwood Hills have no existence." What did I mean? They were wooded, while the rest of the country was bare, so that they had an appearance of height which really did not exist. And why was this so? Because in front of the hills a continuous series of ponds of water was found. When the fires came to the ponds they ceased to exist. The whole country was wooded and we called it "hills."

At Moose Mountain I found a whole series of ponds on the north side of the mountain that it was impossible to fire. The mountain was a tract of land covered by wood. In later years these ponds have dried up and the fires have gone in.

In the country south of Battleford all the fires came from the south or south-west. I found that, as the fire came up on the ridges, the south or west slope was burnt off, but the north face was heavily wooded. If cold was the cause why should this be the case? The real explanation is that the fires burnt to where it was moist and then stopped. Next year it pushed farther and farther on until from lattitude 51 to lattitude 54 the land is burnt out. It is burned in the same way north of the Saskatchewan, and so with the woods in the Peace River Valley, which I examined in 1872 and 1875.

But there are tracts that never produced wood. Wherever alkali is found in the soil the trees do not grow. This alkali is not potash, derived from the ashes of fires, but is derived from gypsiferous rock.

The saline lands are not suited for timber. When I was travelling in autumn the Half-Breeds would go to a pond and try the water by tasting it. But I would send them directly to one which I knew contained fresh water. How did I know? I found that in the spring of the year, when the ponds were filled, nearly all, except the salt lakes, were fresh. The pond has an impervious bottom and in the fall of the year it begins to be salt. In the latter part of August and September the sedges, which remain fresh in the fresh water ponds, lose vigor and change color where the water is saline. Men who have thought much will make trivial things mean much for them.

Ho do we get humidity? What is the benefit of a forest? What is the difference between a country covered with grass and a country covered with forest?

A tree turns out thousands of leaves and has great roots far down in the ground, and the sun is pumping water out of the tree all day long. It is pumping water out of the depths of the soil, and that water for hundreds of square miles is passing into the atmosphere. The cutting off of the forests means that the rainfall will be carried off the soil too quickly. The atmospheric currents are not interfered with, but are only prevented from taking the humidity out of the air. Thus you have the climate suited to the growing of cereals. The humidity in the air compensates for the want of it in the climate.

In the sub-arctic forest the trees are spruce, white and black; one pine, the Banksian; one balsam. Abies balsamea; two poplars, tremuloides and the balsam poplar; and tamarack. The north country produces these and no others. Of the elm tree, which does not grow on the prairie, there is a magnificent specimen occurring fourteen miles north of Regina in the valley of Qu'Appelle. The elm is a river bottom tree. The oak extends from the Maritime Provinces up on the prairie to Fort Ellice. The red ash occurs to half way across Assiniboia at the Dirt Hills, four hundred miles west of Winnipeg.

In 1879 the country up to Moosejaw had a sufficient rainfall for the growth of cereals. In all that country there should be no difficulty in re-covering the whole with forest, with poplar and white spruce. I eliminate the cold and the chinooks altogether.

Let us consider, now, the main prairie, including the country four hundred miles from Moosejaw to Calgary. Mr. Pearce has solved the problem of tree growing at Calgary and will tell you what he has done. I saw Mr. Pearce's place before he planted trees and can tell how successful he has been.

My report of 1880 showed that this district was not a desert. Where there is a sward there is no desert. How are the trees to be got on? Precisely in the way that they were taken off. I say that cold has nothing to do with the want of success in growing trees, it is the want of water and water only. Two years ago, when I was in the west, a gentleman now deceased, but then Mayor of Calgary, said to me, "The chinooks prevent the growth of trees." I called his attention to a large tree in the valley of Bow River. I asked why one was killed while another was left. The reason was that one had water and the other had not. When the trees are planted on the prairie and given plenty of water, as has been demonstrated by the success of the efforts of the Canadian Pacific Railway Company at Moosomin and Medicine Hat, they will grow and thrive. If it can be done in one place it can be done in another.

When at Indian Head in 1891 I saw a dam built over a creek, and, when asked to speak at a gathering in the evening, I told the people that I would like to see them raise a statue to the man who built that dam. There is a dam also at the Experimental Farm and the trees growing there are proof of the success of a water supply.

In the prairie region west of Moosejaw there should be dams put across the creeks and some spruce and some poplar put in the beds and valleys, and you can then extend indefinitely. These are the conditions that exist wherever there are trees. The trees grow in all the hollows. There must be a snow-catcher and the trees will grow. The trees must be grown from seed. You take up a tree and cut the tap root and set it down in another place and the drought gets below to the root. The almost inevitable result is that the tree withers and dies.

In 1880 we reached Stinking Lake, and north towards the Saskatchewan in some sand hills we discovered twenty-three big poplar trees, none less than one foot in diameter, and not a shrub around them. The conclusion I reached in regard to them was that the sand hills received the water from the air and the trees stayed where the water was, and the fire could not get at them. That satisfied me that neither chinooks or cold had to do with the matter.

An important point where a dam might be built is at Cypress Lake, in order to make use of the water out of the Cypress Hills.

A paper on "Tree Planting in the West" was read by Mr. William Pearce, Superintendent of Mines for the Department of the Interior at Calgary. He stated that no great skill or effort is required to reforest the great treeless plains of the west. It could not be done economically, however, he claimed, if water had to be artificially supplied. Irrigation is a necessity for forestation, he said.

Mr. Archibald Mitchell, formerly forester for Lord Dunraven and the Earl of Roseberry in England, submitted the following contribution relating to forestry in the North-West:

FORESTRY IN THE NORTH-WEST.

By Archibald Mitchell.

I do not think it will be at all necessary for me at this time to touch upon the principles upon which the future forest system of Canada ought to be based. In the face of such a committee, formed for such a purpose, I feel that anything I could say in that connection would be unnecessary and altogether uncalled for.

Upon the existing forests of Canada then, I will say little beyond expressing the hope that a thoroughly sound system of forest economy will very shortly be established. It seems to me that the people ot Canada are suffering from a lack of information on this subject. If it only could be placed before them, laying due emphasis upon the necessity for such a system, together with the general principles upon which it will be based, I believe we should very soon have it in full working order. Canadians are a business people, and a system founded upon a solid business basis could not but appeal to them and win their approbation.

This Association, I have no doubt, will speedily accomplish the object for which it has been constituted, and Canada will in a very little while be in possesion of a forest system which will be a splendid monument to posterity of Canadian intelligence and business enterprise.

With regard to the needs of the West, however, perhaps I may be allowed to say a few words, more particularly with regard to the grazing regions of Southern Alberta and Assiniboia. These regions, it is superfluous to mention, form a magnificent stock-feeding area, and the prairies in summer are covered with thousands of cattle and horses. I say summer advisedly, because in winter or at least whenever rough or cold weather is experienced the stock seek the shelter of the river-bottoms. They get among the willows there and congregate in great numbers. Food, naturally, soon gets very scarce, and the animals become quite poor in condition, and in prolonged cold weather many of the weakly ones die. There is abundance of food out on the prairie, but the rigor of the climate prevents its being used. When a chinook wind occurs and the snow is swept off the grass, the cattle will very often refuse to leave the brush because of the cold north wind; or, when they do leave it, they do not get far into the good grass before another storm compels them once more to return to shelter.

Now, if there were groups of trees, say about 30 to 40 acres in extent, planted all over the prairie a few miles apart, all this would be avoided. The cattle would have shelter close beside their feeding grounds, they would never lose in condition, and much pecuniary loss to their owners would be avoided.

Every rancher in this country well knows how much such plantations would add to the value of his stock, but the scheme is one which is too large for private enterprise to undertake. Very few ranchers, indeed, have succeeded in raising even a shelter belt around their houses. As a rule they do not know how to set about raising a plantation, and they have little time to experiment. Their business is stock raising, and they attend to that.

It is a scheme for the government to undertake, and as a branch of creative forestry, is well worthy the attention of this Association. Perhaps the already organized machinery ot the experimedtal farms would be best able to cope with it, and at any rate their experience would be of the greatest value in furnishing data upon which to select plants, etc.

And now a few words with regard to the practical side of the question. The trees planted would consist of pines (chiefly black Austrian), spruces and the hardwoods suitable for the North-west. They would be planted in groups of each sort, say an area of not less than 100 yards diameter to each group, or perhaps the whole of a plantation could consist of one kind of tree. The plants would be from two to three feet apart, certainly not more than three feet. Conifers would be planted when they were three years old, two years in the seed-bed and one year transplanted. Hardwoods could be planted as seedlings, but would be better one year seedling and one year transplanted. The smaller the plants the greater the proportion of roots and the easier they are handled. There is less risk of their being injured in the lifting. They are less easily blown out of the ground, as their tops are close to the surface and besides are much more flexible, and there is always, at least on the flat, a stratum of air about one foot from the ground which is calmer in a storm than the air above it. The seedling plants would be raised in a situation convenient for such a purpose and central to at least 10 or 12 of the proposed plantations.

All areas to be planted would be ploughed and cropped with oats or other grain. These crops would serve to ameliorate and loosen the surface soil for the later operations, and besides provide somewhat to help cover the expenses. After the lifting of the crop and during the fall the plantation grounds would require to be trenched ploughed about 18 inches deep and left rough over winter. This would loosen the soil for the plants and help to catch and retain moisture for the growing season This is a most important consideration in South Alberta for the frequent chinooks melt the snow, which simply runs off the surface and by and by finds its way to the rivers and lakes because the frozen ground will not allow it to penetrate into the soil. The rough, broken land just left by the plough would help to collect this water and hold it till spring, when it could soak into the ground.

In the meantime the plants for each area would have been transplanted into lines in the area they were to ultimately occupy. Another crop of grain would be taken off the trenched land and the plants slipped in on the stubble in the spring following. The plants being already on the ground much danger from drought during the planting would be avoided. The ground being comparatively level and held by the stubble there would be less risk of the plants being buried in dust a condition of affairs which must be reckoned with in this country. There would be little danger of the cattle damaging the plants, as insummer they would not touch them and in winter when the grass was covered with snow, the trees, at first at any rate, would be under the snow also. By and by, when they got above the snow they would be of size enough to recover any little damage that might be incurred.

Once established, growth would be most rapid. In about 15 years the plantations would be as many feet high The drifting snow would be caught by the trees and remain there to gradually melt with the heat of spring The ground being then soft a plentiful supply of moisture would sink into the soil for the use of the trees. The falling needles, too, and forest mosses would soon absorb and retain large quantities of water. The surplus would run off to the outside of the wood and help to vivify the grass on the prairie all round the plantation. In fact, it would just be on a great scale what is to be seen in every coulee and scrubby patch in the country, the snow would be retained till the ground was soft enough to absorb it. This, indeed, seems to be the trouble with the so-called semi-arid regions of S. Alberta and Assiniboia. Plenty of moisture falls in the form of snow but the chinooks melt it while the ground is frozen. It cannot enter the soil and so finds its way at last into the rivers or lies in shallow pools on the surface to be dried up by the first few days of real warm weather.

And another effect the afforestation would also probably bring about. Forests, as is well known, collect moisture from the air, and many additional springs would probably be formed around the woods, a matter of considerable importance when perhaps for miles no water is available for the cattle except, may be, a small alkali impregnated lake.

And yet another benign influence might result. The retention and subsequent gradual evaporation of increased quantities of water in the district would cause an increase of moisture in the atmosphere and possibly also a increased rainfall as a result of that; and who can estimate the value of such a blessing to the sun-baked plains of the west. Even this alone would warrant the adoption of this or some such measure as I have here indicated. The experiment, if conducted on a sufficiently comprehensive scale, would be a magnificent one, and its execution would be well worthy of the intelligence and enterprise of the people of Canada.

It is not, of course, intended that this paper should indicate in any arbitrary fashion the course to be pursued in this matter. It is simply intended to draw attention to what is felt to be a real need in the country and to point out briefly the general lines in which it may be met. Some such scheme will be of infinite benefit, and in the coming forest department of Canada the partial afforestation of this section of the North-West in something akin to the manner indicated will deserve a most worthy place.

A MAMMOTH LEATHER BELT.

The illustration on this page represents the largest leather belt ever made in Canada. It was manufactured by Messrs. Sadler & Haworth, of Montreal and Toronto, for the Ogilvie Milling Company, of Winnipeg, Man. Its dimensions are: Width, 72 inches; length, 115 inches; thickness, 3 ply; while its total weight is 2,270 lbs. The same firm recently furnished two 48 inch 3 ply belts for the Standard Electric Company of Montreal, a 38 inch belt for the London Electric Light Company, and several wide 3 ply belts for saw mills.

THE CIRCULAR SAW.

By E. H. Newton.

As requested, I will contribute a few lines to your valuable paper, and trust that some of your many readers may be benefitted thereby. I will confine my thoughts for the present to the circular saw, and I am sure there can be no subject on which enlightenment is more needed an up-to-date shingle maker. The latter said he considered his experience was worth more money than the mill owner offered him, but the mill owner politely informed him that experience or knowledge was of no account in his mill, as his men must do as he told them. It is needless for me to say that the mill owner was not a practical man himself. Again, I have asked sawyers and filers why they did not try to acquire more knowledge and be more up-to-date, and they say it don't pay, as mill men are content with things as they are and refuse to employ a man who asks pay for his knowledge. Well, we find that these men, who do not wish to become informed because their employers would discharge them if they did, are not often found in the best mills, and not always in the smaller mills, yet here is where we find them too often; and to come back closer to my subject, I find that these are the mills where nearly all the bad saws are to be found.

The writer has been called upon many times where saws had refused to work and has sometimes found five or six condemned saws hanging up in the mill. I have actually found sawyers running their favorite saws when they would split the board off before they got within six inches of the end, and the saw would spring away from wrong, and even the twentieth time I do not believe, if all the facts were known, that any blame could be attached to the manufacturers. I have had years of experience with these so called "balky saws," and have never found but one instance where I could really blame the manufacturers, and that was in the tempering.

Then, in the matter of hammering saws; the day is now at hand when any sawyer and filer, if he would excel in his profession, must acquire a knowledge of saw hammering, and this is work that should not be taken out of the mill. The old practice of sending saws to the shops or, as is often done, to their respective makers to be hammered is a practice to be discouraged. We want educated men right in the mills to do this work, and men thus qualified need not be compelled to work on the rear, but can find plenty of work at good wages with men who lead in the business. The writer knows of seven vacancies at the present time for competent men. One very wealthy old gentleman whose acquaintance I am very happy to have made, asked me if I knew of any one I could recommend to him to superintend a small mill, a good practical man. I was unable to even suggest one.

It seems to me that if mill men would demand and be willing to pay for a better class of labor, men would begin to educate themselves in this as well as in any other calling, and it would not be long before we would find a more efficient class of men. The employer, instead of losing money, would just begin to make it, because what he now loses through waste and bad manufacturing, loss of time and various losses through neglect and incompetence, would more than pay the difference in wages, to say nothing about him holding a reputation in the market, which is always worth considerable.

I am sure circular saw manufacturers would welcome this change, for then they would receive less of the ignorant man's blame.

The Largest Leather Belt Ever Made in Canada.—From the Factory of Sadler & Haworth.

the present day. Of course, in these lines you will understand that I am speaking more particularly to those engaged in the trade who seem to be content with bringing up the rear. Their motto is "others may lead, but will follow."

In this age of keen competition, no man need expect to succeed without economy. By economy I do not mean that labor need be cut down or precedence given, to inexperience. My idea of true economy, in view of our limited forest reserves, is to employ the best labor, manufacture the best lumber and command the best prices. It is a deplorable fact that in many of our fourth rate mills, where inexperience is the prime factor, the annoying delays, with their incidental expenses, the refuse burner or dump, and the cull lumber pile where all poorly manufactured lumber is consigned, carries away the entire profit and too often more than the profit. Yet these mill men are satisfied to stay in the old rut and see others in the same trade pass them by and leave them to wrestle with their difficulties. The majority of these men are responsible for their own trouble. They place no value on experience or knowledge, and therefore discourage any man with higher aspirations than their own.

The writer once heard a mill owner trying to engage an up-to-date shingle maker. The latter said he considered his experience was worth more money than the mill owner offered him, but the mill owner politely informed him that experience or knowledge was of no account in his mill, as his men must do as he told them. It is needless for me to say that the mill owner was not a practical man himself. Again, I have asked sawyers and filers why they did not try to acquire more knowledge and be more up-to-date, and they say it don't pay, as mill men are content with things as they are and refuse to employ a man who asks pay for his knowledge. Well, we find that these men, who do not wish to become informed because their employers would discharge them if they did, are not often found in the best mills, and not always in the smaller mills, yet here is where we find them too often; and to come back closer to my subject, I find that these are the mills where nearly all the bad saws are to be found.

The writer has been called upon many times where saws had refused to work and has sometimes found five or six condemned saws hanging up in the mill. I have actually found sawyers running their favorite saws when they would split the board off before they got within six inches of the end, and the saw would spring away from the log an inch at the top. I have found these saws lined three inches into the carriage sixteen feet from saw. I have found these saws with a 2½ inch hole on a 2 inch arbor, without any bushing or ring in them, and consequently from ½ to ¾ of an inch out of round. I have found men sawing frozen timber with these saws and breaking the teeth out because the saw was not round, and the long teeth were doing all the work. I have found sawyers who paid no attention to lining up the carriage and track. I have seen sawyers running saws with ¼ of an inch end play in their arbor. I have seen men try to lead their saw first in, then out, then in again with the file, and file away all their swaged point in three filings. I have seen an inserted toothed saw condemned and taken off, could not be run; I examined the saw and found it hot in the centre and frost in the rest of the blade, examined arbor and found the box next the saw had not been oiled and was burning hot. I ordered it to be cooled off and oiled and the frost taken out of it, then put back on. This was done, and the saw worked as well as it had ever done. I have occasionally found all these troubles in one mill, and I almost invariably find the saw manufacturer blamed for it, and right here I must say that nineteen times out of twenty this is

It is reported that the saw mill plant of Eddy Bros. & Company, at Saginaw, Mich., will be removed to the Georgian Bay district after the close of the forthcoming sawing season.

In the Review of Reviews for April the new phases of the situation in South Africa are editorally discussed, while the department of "Leading Articles of the Month" summarize various points of view relative to the war and its probable outcome.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company
of Toronto, Limited
CONFEDERATION LIFE BUILDING, TORONTO
BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the tr Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

REMOVAL NOTICE.

On May 1st next the Montreal office of The CANADA LUMBERMAN will be removed from the New York Life Building to the Imperial Building, corner St. James Street and Place d'Armes Hill.

AN ONTARIO FOREST RESERVE.

THE Ontario Government has set apart a forest reserve of two million acres, or three thousand square miles, in the territory surrounding lakes Temagaming and Lady Evelyn, north of Lake Nipissing. The district chosen comprises one of the finest lots of timber in the province, consisting of a virgin forest of white and red pine, which will be permanently withdrawn from agricultural settlement. Additional fire rangers will be appointed to secure protection from fire, which might otherwise be a source of considerable danger, as it is expected that the reserve will become a sportsmen's paradise. When the timber is of sufficient size, licenses for cutting will be granted, but only under conditions which will provide for the natural reproduction of the pine.

It has also come to our knowledge that a reserve of forty-five thousand acres has been set apart by the Government in the township of Sibley, about forty miles east of Port Arthur, on Lake Superior. This land was burnt over about thirty years ago and is now producing a good crop of pine and spruce.

The broad policy of preserving and perpetuating our forest wealth which has been adopted by the Ontario Government will be a great blessing to future generations. This principle of conservation has been adopted sufficiently early to at least ensure a moderate timber supply for all time to come, and with continued careful husbanding there need be little fear of the entire destruction of our pine timber. May the same policy be adopted in respect to our hardwood supply.

THE SQUARE TIMBER TRADE.

IT is not a cause of regret that the square timber trade of Canada is gradually passing into history. While in 1864 the exports of square timber were twenty million cubic feet, last year four million feet represented the total quantity exported. This is as it should be. The aim of every Canadian should be to build up the manufacturing industries of this country, and it is only by manufacturing the raw material as far as is expedient that this can be done.

Looking at the question from all sides, we cannot conceive of any loss, either financial or industrial, that has resulted from the lessened exports of square timber. The logs which heretofore would have been made into square timber are now furnishing the raw material for our saw mills, and through them all other woodworking industries. It may be that the farmer, from whom many of our hardwood mills obtain their supply of logs, will view with some alarm these changed conditions, but a little consideration will show that his fears are based upon erroreous ideas. Indeed, the farmer is almost certain to realize more for his logs by selling them to be manufactured into lumber than he would if sold for timber, to say nothing of the benefits that accrue to the country at large by the building up of manufacturing industries.

In the past the farmer has been misled to some extent by the seemingly fancy prices offered by square timber jobbers. Not being familiar with timber measurements, the farmer is prone to accept, without investigation, the prices which would seem to offer him the greatest returns. In many instances these prices have been an hullucination. The square timber jobber selects only the largest and best logs; these are hewn down until square, with a consequent loss of timber, for which the farmer is not paid. The mill owner, on the other hand, takes but one slab off the log and pays for the remainder. The next board on each side of the log will, of course, be a rough edge board, and a portion of each log, probably equal to two boards, will be converted into sawdust by the action of the saw, but there will still remain a gain of about two boards over the quantity which the square timber jobber will take. Another advantage in selling to the mill owner is that he will purchase logs even as small as six inches in diameter. The square timber operator rarely accepts a log less than 14 inches in diameter. The mill owner is then asked to come to the relief of the farmer and purchase the small logs, notwithstanding that, as is generally admitted, the wide lumber is to a large extent the manufacturer's chief source of profit. Is this fair?

Let us take for example a log 30 feet in length and 20 inches in diameter. Such a log would make 38 cubic feet of square timber, equal to 456 superficial feet board measure. This same log, according to Doyle's rule, would give 480 superficial feet, showing a gain in favor of the latter of 24 feet board measure. Experience has shown that the board measurement of large logs is about thirteen times greater than the actual cubical contents of the square timber; hence, to give the farmer an equal revenue, the square timber operator should pay thirteen times as much for one thousand cubic feet of timber as the mill owner pays for one thousand superficial feet board measure. At the present time elm logs are being purchased by mill owners at eleven dollars per thousand feet B. M., the corresponding quotation for one thousand cubic feet thus being one hundred and forty-three dollars. This price, in our opinion, is rarely paid by square timber operators.

Further, consideration is due the lumber manufacturers of this country, on the ground that they are large employers of labor, with capital invested, and striving to promote the interests of the community in which they live. If not accorded due consideration, the natural result will be the purchase of timber limits outright, which action will in many instances carry with it the removal of saw milling establishments to other localities.

The foregoing remarks are intended to show that, viewing the question from a national standpoint, the decadence of the square timber trade is after all but a boon to the country. It means better returns to the owners of timber, an increase in our manufacturing industries, and employment for the working man.

THE TRANSPORTATION QUESTION.

THE lumbermen of Western Canada are watching with much interest the steps that are being taken to improve the facilities for shipping their products to the eastern seaboard. It is indeed gratifying that a fourteen foot waterway has now practically been completed on the St. Lawrence to Montreal and Quebec. Vessels carrying one million feet of lumber, and over, may now load at upper lake ports and go direct via the St. Lawrence to Montreal and Quebec. It is probable that in the near future much commerce which now goes via New York to Europe will hereafter go by way of Montreal.

Another essential requirement in the interests of Canadian shipping is that the present insurance discrimination against the St. Lawrence route should be removed. The rates charged by the underwriters are most unfair, the discrimination virtually giving a monopoly of the shipping trade to the ports of the Eastern States. We note with pleasure the efforts that are being made by Hon. R.R. Dobell to have such steps taken by the Dominion Government as will restore the character that the Dominion of Canada possesed years ago in reference to the care exercised in loading ships. He hopes to have a bill introduced in Parliament dealing chiefly with deck loads from the St. Lawrence and Lower Provinces, and providing that all deck loads be surveyed. The impression seems to prevail that the discriminatory action taken by the Lloyds in respect to insurance is due in a great measure to losses on deck loads. On the other hand, a statement has been published showing that the deck load losses on vessels from St. John have been almost nil for two or three years past. The information is also given that Messrs. Thompson & Company, steamship owners, report that out of 6,500 standards shipped on deck in two years, the only loss encountered was 48 standards.

The opinion of the shipping interests seem to be in favor of allowing deck loads in the winter

the height of six feet, instead of three feet as at present. It is claimed that this would add to the safety of the steamers and benefit the shipping trade generally, and that if compulsory surveying of deck loads should be adopted, the advantages would more than compensate for the cost of surveying.

It is hoped that the Dominion Government will pass such legislation as will aid as far as possible the shipping trade of Canada, otherwise the large amounts that are being expended in improving our canals will be of little avail.

ORGANIZATION IN FAVOR.

In some respects the publishers of the Canada Lumberman feel encouraged at the reception which has been given the movement to bring about the formation of an association to protect the interests of the hardwood lumbermen of Ontario. Within the past month thirty-six manufacturers or dealers have returned the blank forms printed in our March issue and signified their sympathy with the movement, and with one or two exceptions expressed their willingness to attend a meeting for organization purposes. This number is quite as great as could reasonably be expected. The correspondence received bearing upon the subject indicates that the feeling in favor of an association is quite general, and that the benefits to be derived therefrom are recognized by the trade. Likewise it demonstrates that, while admitting the advantages of an association, some of the most active and energetic members of the trade hesitate to take the initiatory steps lest they should not receive that support necessary to effect successful organization. Assured of due support from the trade generally, we believe that such action would be taken as would result in the formation of a strong and useful association.

The opinions of hardwood manufacturers and dealers which we publish on this page will, it is hoped, tend to remove any lack of confidence that may exist as to the final outcome of an associated movement, and at the same time furnish suggestions as to the direction in which an organization should labor. Perhaps the first thought which will occur to the reader is the strongly expressed desire for uniform inspection rules. This is a necessity which is admitted by both dealers and manufacturers. The dealer no doubt suffers equally with the manufacturer, and particularly in times of brisk demand and shortage of stock. The movement for a standard system of inspection is steadily growing, and must eventually be adopted in Canada as well as elsewhere.

To obtain the best results for an association, it should be strictly provincial in character and know no local boundaries or dividing lines. The hardwood interests of Eastern Ontario and the Ottawa Valley should be proportionately as well represented as those of Western Ontario, where, of course, the manufacture of hardwood lumber is more extensive.

We have in our possession a copy of the constitution and by-laws of the North-Western Ontario Lumbermen's and Sawmillers' Association, an organization composed of persons engaged in the manufacture of hardwood lumber, chair stock, etc., which existed in the year 1889. This association is not now in existence, but the fact that it did exist is in itself evidence that there is ample work to be done by an association framed on lines similar but more comprehensive in character.

It is our earnest hope that an organization meeting shall be convened without delay.

UNITED STATES IMPORTS OF LUMBER.

Official figures issued by the Treasury Department show that the United States imported in 1899 boards, planks, etc., to the value of $7,005,101. The importations from Canada were 673,622,000 feet, valued at $6,990,175, against 348,876,000 feet, valued at $3,464,718, in 1898, and 674,851,000 feet, valued at $6,759,376, in 1897. It will thus be seen that the importations of lumber by the United States last year were almost as great in feet and considerably greater in value than in 1897, during more than half of which year lumber was on the free list and there were heavy importations in anticipation of the imposition of the duty. The shingles imported by the United States last year were 545,484,000, valued at $999,862, against a valuation of $830,298 in 1898 and $414,222 in 1897.

OPINIONS REGARDING A HARDWOOD ASSOCIATION.

T. A. Pickard, Owen Sound : I have always felt that the interest of the major part of the Ontario Lumbermen's Association and those of the hardwood manufacturers were not in common in so far as association work is concerned.

Mohr & Ryan, Killaloe Station : We think anything that brings together people whose interests are identical must be of benefit to the parities interested. Such an association would enable us to fix a selling price and also guard against overproduction. We would suggest that if a meeting is called in Toronto, an effort be made to obtain cheaper railway fares for those wishing to attend, as travelling expenses would be quite an item for persons living in the eastern part of the province.

S. H. Jacobs, Huntsville : In unity there is strength is my consideration.

J. P. Newman, Wiarton : I am in favor of an association of this kind and would join it.

J. T. Schell, Alexandria : I would join the association. Would suggest for new grading rules the following : Ten inches and up long, five inches and over wide, clear, for first quality ; clear one side, sound other side, for second quality ; common, third quality ; culls, fourth quality. Do away with firsts and seconds.

R. F. Houston, Tweed : We are in favor of an association.

O. Fisher & Son, Paisley : Very important to adopt standard rules for measuring lumber and logs.

J. W. Collins, Toronto : Would suggest that the association take steps to force the railways in Canada to lower their freight rates. There are a number of rules that the railways have, including the weighing of cars, which are detrimental to shippers of lumber.

Jas. McKenzie, Morrisburg : Get full information in regard to sizes, ruling prices, best manner of manufacturing, etc., for the British trade, for presentation at the meeting.

Carl Zeidler, Toronto: It will be a good thing all round, as the buyer and the millman will get justice if a mode of inspection is agreed upon, and all will be treated alike.

J. D. Shier, Bracebridge : Suggest that the association meet in Orillia, as most of the manufacturers of hardwood lumber lie north, and Orillia would be very central.

J. M. Bird, Bracebridge : Meeting should be called before 15th of April, as mills will be starting about that time, which is the busiest time of the year.

E. Sykes, Lady Bank : It will be better both for middlemen and manufacturers to have standard inspection rules to go by, and there should also be adopted rules for scaling hardwood logs.

John Nichol, Queensboro : The adoption of uniform rules of inspection and the securing of better freight rates are the two essential things we should strive for. I believe that to form an association is the best way to bring about these ends.

R. McLeod, manager London Lumber Co., London: I am in favor of a uniform inspection for hardwood lumber, same inspection to govern when selling.

J. K. Goetz, Dashwood: I am of the opinion that uniform rules of inspection should be adopted for hardwood lumber as well as for anything else, and the sooner the better.

The Knight Bros. Co., Burks Falls : Uniform specifications for grading are much needed.

Chas. E. Paget, Trout Creek : I would very much like to see an association of this kind formed, and that too before long, so that we may give it a good trial this season.

Walter French, Waterford : I am of the opinion that a majority of the manufacturers are not laregly enough engaged in that line to warrant them in incurring the necessary expense and loss of time to make the association a success.

R.B. Wilkes, Brantford : A good idea ; would be worth many times the fee in the mutual benefit and information which would ensue.

Steele & Gibson, Humberstone : We are of the opinion that the forming of an association of hardwood manufacurers would be a great benefit, as well as the establishing of rules of inspection similiar to the American Hardwood Association.

W. C. Quickfall, Glen Allen : I am also engaged in the cooperage business, and would suggest that cooperage manufacturers be included.

George F. Webster, Creemore : This movement has not started in time to obtain results for this season's trade.

William Burke, Trout Creek : Would very much like to see uniform system of grading adopted by all the mill men.

J.H. Lavallee, manager Orillia Export Lumber Co.: Meeting should be called early, before the spring work comes on.

R. G. Canning, Lucille : I think an association would be very beneficial to the trade.

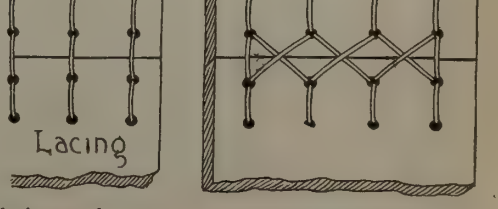
W. H. Johnston, Pefferlaw : It would be well to hold a meeting for organization as soon as possible, in order to have the association of service for this season's cut. I think it is now time when manufacturers of hardwoods formed an association of some kind, at the meetings of which questions of common interest, such as inspection rules and railway rates, would be discussed.

In addition to the above the following persons have intimated their willingness to assist in the formation of an association ; J. E. Murphy, Hepworth Station ; W. W. Keighley, Patent Clothboard Co., Parry Sound ; O. G. Anderson, Anderson Furniture Co., Woodstock ; McKee Machinery & Lumber Co., Ottawa ; W. P. Widdifield, Siloam ; S. I. Wilson Lumber Co., Toronto ; Keenan Bros., Owen Sound ; Geo. Thomson, Goderich.

SUGGESTION FOR BELT LACING.

Editor Canada Lumberman :

Dear Sir,—In your monthly for March I notice an idea in belt lacing. I tried it a few years ago, but found that when a belt required to be shortened it caused a lot of lost time getting the wire unlaced or cut, so I "bumped" up against the double lath tie and found it much better, laced as follows :—



The lacing can be made any length in a few minutes, and with one cut of a sharp knife it is easily removed. For heavy belts I use double and sometimes treble tie. By placing the ends together, sharpening them with a knife, and sewing them with one strand of the lath tie, makes the end very stiff. I can vouch for its cheapness and lasting power.

Yours truly,

"Excelsior."

CULTIVATION OF FORESTRY.

THE annual report of the Clerk of Forestry of Ontario for 1899 diffuses much information bearing upon the important subject of tree culture. The preliminary remarks relate to the application of forestry methods by farmers. This is followed by an outline of the circumstances which led to the adoption by the Ontario Government of the Foresty Reserves Act. The immediate aim of the Commissioner of Crown Lands in proposing this Act was the reclamation of waste areas of Crown lands that had been burnt over after lumbering and were unsuited for settlement. The Crown lands agent at Plevna, in the township of Clarendon, having reported the presence of a large tract of burned over, unsettled land on which a fine crop of young trees was growing, Mr. Thomas Southworth, the Clerk of Forestry, was instructed to make a special report upon the territory.

Mr. Southworth visited the townships of Abinger, Miller, Barrie and Clarendon. The early operations in these townships were confined to taking out only the choicest and largest pine for square timber. This left a large quantity of debris in the woods, which almost invariably caused a forest fire. Now, years after the fires, the forest of dead pine stands so thick as to convey the idea of a great hop yard, and this effect is enhanced by the young green forest which conceals the bottom of the dead pines. The lumber industry in the district is now a thing of the past, but throughout the whole four townships where it is not ploughed, Mr. Southworth found a very vigorous growth of young timber. In the younger stages of this forest, poplar and birch, white and yellow, predominates ; but where it is of larger growth, say twenty years, the white pine disputes with these trees for first place and in many instances is the most numerous. As pines and spruces grow only from seed deciduous trees get a start of the conifers. This fact, together with the more general distribution of the seed of poplars and birches, causes the young forest for the first few years to be largely composed of deciduous trees. The latter, however, are eventually killed out to a large extent by the more hardy pines, which grow more vigorously after this is accomplished. This will be seen by reference to the accompanying illustrations of a young forest in which pine has killed out the hardwoods.

YOUNG FOREST IN WHICH PINE HAS KILLED OUT THE HARDWOODS, AND IN WHICH NATURAL PRUNING, CAUSED BY SHADE, IS TAKING PLACE.

Mr. Southworth found that the stand of young pine was heavy, 600 trees to the acre being not unusual, and 400 pines to the acre being a fair average. On two sample acres in the townships of Clarendon and Abinger careful calculation showed the stand of young timber to be as follows :

Lot No. 1.		Lot No. 2	
White Pine	432	White Pine	440
Poplar	408	Poplar	832
Birch	208	Birch	216
White Cedar	160	Hard Maple	40
Spruce	32	Willow	40
Tamarac	16	Spruce	24
Red Pine	8	Tamarac	16
		Balsam fir	24
Total	1,264	Total	1,632

The pines throughout the district, he states, are making rapid growth. Four young trees gave the following measurements:

No.	Height.	Diameter.	Annual Rings.
1	22 feet	4½ inches	13
2	30 "	6½ "	16
3	22 "	3¾ "	10
4	25 "	5 "	14

These trees were only average ones for their particular locality, but are above the average in rapidity of growth for the whole area. They are increasing in diameter at the rate of an inch in 2.68 years, whereas the estimate of the Forestry Commission for the whole province was an inch in five years.

Mr. Southworth states that fifty years from now, under present conditions, it is fair to assume that only 200 of the 400 to 600 pines per acre now standing will still be growing, and it is not guess work to estimate that if fires can be kept out for fifty years longer much of this land will carry a crop of pine that will yield 50,000 feet board measure to the acre. This is not an extravagant estimate when it is considered that it is peculiarly a pine district, also that two years ago there was cut on the Rathbun Company's limit in this same section of the province 100,000 feet of pine to the acre, over a tract of land 10 acres in extent through which a tornada had swept.

The value of this land for timber purposes is next considered. The value of the standing timber fifty years from

YOUNG FOREST OF RED AND WHITE GROWN UP PINES AFTER FIRE HAD DESTROYED THE ORIGINAL GROWTH.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VI. TORONTO, ONT., MARCH 28, 1900 No. 10.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE—A quantity of 1, 2 and 3 inch Birch. GEO. EDGINGTON, Edgington, Ont.

A GENERAL STOCK OF SEASONED HARDwood for sale, will sell to consumers only. Apply to THOS. BOLAND, Markdale, Ont.

BOOKKEEPER WANTED.

FIRST CLASS BOOKKEEPER FOR FIRM IN Ottawa. Must understand and have experience in lumber business and can furnish references. None other need apply. Write "OTTAWA," CANADA LUMBERMAN office.

FOR SALE.

I HAVE A FEW THOUSAND FEET OF BASSwood Heading for sale yet, 17⅞ No. 2 last season's make, which I will dispose of at reasonable figures to make room for this season's cut. Apply to GEO. M. EVEREST, Arkona Heading & Basket Factory.

FOR SALE.

200 ACRES HARDWOOD BUSH, EXCEPtionally heavy timbered. Close to lake. If not sold, would give job of sawing to practical mill man, with good portable mill. Apply, Box 876, Owen Sound, Ont.

SALE OF Valuable Timber Limits

BY PUBLIC AUCTION

AT TORONTO

By C. J. Townsend & Co., 28 King Street West.

ON THURSDAY, APRIL 19th, 1900

At 2 o'clock P.M.

The following Timber Licenses:

ON LAKE NIPISSING.

No. 212, of season 1899-1900, being berth No. 5, in Township of Patterson. Area, 25½ square miles, more or less.

ON FRENCH RIVER.

No. 214, of season 1899-1900, being berth No. 16, Township of Falconer, sale of October 22nd, 1885, known as No. 11, as laid down upon the map of the north shore of Lake Huron, published by the Department of Crown Lands, dated July 10th, 1872. Area, 36 square miles, more or less.

ON VERMILLION RIVER, A BRANCH OF THE SPANISH.

No. 215, of season 1899-1900, being berth No. 22, Township of Dowling, sale of October 22nd, 1885, known as No. 87, as laid down upon the map of the north shore of Lake Huron, published by the Department of Crown Lands, dated July 10th, 1872.

Terms and conditions of sale will be made known on day of sale. Easy terms to purchasers who may be deemed responsible by the vendor and who may arrange therefore prior to sale.

The above timber berths are exceptionally easy of access. Supplies can be placed at very low cost on any of the berths, either during the winter or summer months.

The average haul is very short. The berths are well timbered with white and red pine.

On berth No. 5, Patterson, there is also a fine cut of many millions of large hemlock logs and railway ties.

Berth No. 16, Township of Falconer, has never been cut on.

Each berth will be sold separately.

Explorers can reach Townships of Patterson and Falconer in a few hours from either North Bay or Sturgeon Falls.

Township of Dowling can be reached from Larchwood or Onaping, on C. P. R., which traverses this berth.

For further particulars apply to ALEXANDER FRASER, the vendor, at 74 Nepean Street, Ottawa, Ont.

JOHN HARRISON & SONS CO., LTD., OWEN Sound, Ont., offer the following specials: 5 cars No. 1 White Pine Lath and 6,000 Cedar Posts, 8, 9 and 12 feet long.

WANTED—Green Hard Maple Squares, 6½ in. x 6½ in., 12 feet and up. Cash on delivery at any station in Ontario and Quebec. Box 24, CANADA LUMBERMAN.

SAW MILL SITE

GOOD SAW MILL SITE ON SOUTH END of the Georgian Bay, near Midland, extensive Lumber Docks, Houses, Store Buildings, etc.; water power. THE MUSKOKA MILL AND LUMBER CO., Ltd., Toronto, Ont.

AUCTION SALE OF Timber Berths

Nos. 124, 125 and 132 (36 square miles each), North Shore of Lake Huron, Province of Ontario.

I have been instructed to offer for sale by auction the above Timber Berths, in single berths, at the Rotunda of the Board of Trade, Toronto, on

Wednesday, April 18th

at 2.30 p.m.

Terms:—Half cash at the time of sale, and the balance in six months, with interest at six per cent.

Berths 125 and 132 are excellent Pine Limits, and are also heavily timbered with other valuable woods.

Berth 124 has been cut over, but has considerable Pine and a large quantity of other standing timber.

PETER RYAN, Toronto.

AUCTION SALE

Important and Extensive Sale by Auction of

VALUABLE

Timber Berths, Etc.

On the Ottawa River and its tributaries in the Provinces of Quebec and Ontario; at the Rotunda of the Board of Trade, Toronto, at 2 p.m., TUESDAY, APRIL 10TH, 1900.

R. H. Klock & Co., of Klock, Ont., will offer for sale by public auction, at the above time and place, subject to the terms and conditions which will be announced at the time of sale, the following timber berths under license from the Crown; said licenses include the right to cut all timber on the berths subject to the regulations of the Crown Lands Department of the respective Provinces, namely:—

QUEBEC.

Kippewa Berth, 226½ miles, and composed of berths Nos. 176, 177, 444, 445, 446, 447. Block A—Quinze Berth, 61½ miles; No. 5 Range 1. Block A, Quinze Berth, 150 miles, composed of berths Nos. 5, 6, 7, range 3. All the above limits are in the Province of Quebec, as shown on the official map of that Province. North Temiscamingue, Indian Reserve, Province of Quebec. Area about 60 square miles, as shown on official map of the Province of Quebec and held under license from Dominion Government and subject to timber regulations of Department of Interior.

ONTARIO.

Deep River, 101½ miles, held under license 178, 1899-1900. Chalk River, 19 miles, held under license 177, 1899-1900. Rocky Farm, Ottawa River, 100 square miles, held under license 176, 1899-1900.

For further particulars apply to R. H. KLOCK & CO., Klock, Ont., and JOHN GRAY, Room 100, Canada Life Building, Toronto, Canada.

HAVE YOU ANY STOCK WHICH YOU WISH to sell? If so, make the fact known to probable buyers by placing an advertisement in this department. Address, CANADA LUMBERMAN, Toronto.

Valuable Timber Berth

BY AUCTION

TOWNSHIP 139, NORTH SHORE OF LAKE HURON

The undersigned has received instructions to offer for sale by auction, at the Rotunda of the Board of Trade, Toronto, on THURSDAY, MAY 3RD, 1900, immediately after the sale of Cook and Brothers' limits,

Timber Berth 139, north shore of Lake Huron (being 36 square miles, more or less).

For terms and conditions of sale, and for all particulars, apply to Geo. H. Perley, Ottawa.

PETER RYAN, Toronto.

VALUABLE TIMBER LIMIT

By Public Auction

At the Rotunda of the Board of Trade, Toronto, on

TUESDAY, APRIL 10,

at 2 p. m.

The undersigned has been instructed to offer for sale, at the above time and place, subject to the conditions which will be announced at the time of sale,

Timber Berth

TOWNSHIP OF MACKENZIE.

Being about 80 Square Miles.

This township is one of the best timbered berths in the province, is well watered, and easily operated. For further particulars, apply to the DELTA LUMBER COMPANY, Detroit, or to

PETER RYAN, Toronto.

ENQUIRIES FOR WOOD PRODUCTS.

The following were among the enquiries relating to Canadian trade recently received at the office of the High Commissioner for Canada in London, Eng.:

22. Broom handles, hoe handles, and shovel handles are required, basswood, and white pine. Canadian shippers are requested to quote prices per car-load.

23. Enquiry has been again made respecting the demand for hop poles from the Maritime Provinces of Canada.

Canadian manufacturers may open up correspondence with any of the firms making the above enquiries by addressing a letter to the publishers of the CANADA LUMBERMAN. When writing refer to the number of the enquiry.

It is understood that John McConnell, of Marysville, N.B., has purchased the King saw mill property at Kingsville for $14,000, and that the mill will be operated this season.

CURRENT TRADE CONDITIONS.

ONTARIO.

The weather of the month of March has been greatly in favor of the lumbermen, logging operations having been continued almost incessantly. This has somewhat augmented the prospective log crop, and it is probable that the logs left in the woods will after all represent but a small proportion of the total production. Everything points to an unusually active sawing season in the Georgian Bay district and an average season in the Ottawa Valley. The present outlook is that lumber prices will remain at the current basis until the rush of spring trade shall cease; after that lower prices may reasonably be expected. One feature which will tend to maintain the strength of the market is the almost certainty of an unprecedented firmness in vessel rates. Charters are now being made on the basis of $3 per thousand feet from Duluth to Buffalo. There is understood to be a decided shortage in lumber tonnage. A result of this may be that buyers in the Eastern States will endeavor to increase their purchases of lumber in Canada, and particularly at points where they may secure favorable rail rates.

The spring trade is opening up slowly, but a week or two of good weather would stimulate buying, as there are a number of enquiries in the market. It seems probable that the consumption of lumber in building operations will be less than last year, but this may be offset by an increased demand for lumber for manufacturing purposes. The quotations on pine lumber remain unchanged. In our hardwood price list black ash, thick basswood and oak have been advanced by about one dollar per thousand.

QUEBEC AND NEW BRUNSWICK.

There has been a considerable movement of lumber in Montreal during the past week, and the outlook for spring trade is regarded as favorable. The proposed harbor improvements and grain elevators will require a large quantity of timber. The contract for piles and lumber for the elevator to be built by the Conners Syndicate will shortly be awarded, and local dealers are looking forward to the result with some interest. Architects report a fair amount of building in sight in Montreal and Quebec.

The event of the past week in respect to the market has been the formation of an association of shingle manufacturers of the provinces of Quebec and New Brunswick and the State of Maine. This association

decided that in future the commission to be allowed wholesale commission dealers shall be five per cent. of the net amount of sales, instead of on the gross amount as in the past. It has also been decided to advance the price of shingles to the following figures: Extras, $3.25; Clears, $2.85; Second Clears, $2.35; Clear Whites, $2.25; Extra No. 1, $2.85. These prices are to take effect on April 1st, and are based on Boston rate of freights.

UNITED STATES.

The lumber market of the United States has developed a slight weakness during the past week. From nearly all the markets comes the report that prices of piece stuff are being shaded a little, while at Duluth No. 3 boards are somewhat easier. It is also stated that in the Chicago market long wide joists are not bringing as high prices as one month ago. The lack of yard demand is responsible for this easing off in prices. Retail dealers, fearing that the high prices may retard building operations, are stocking up very cautiously. While yard trade is quiet, the demand from manufacturing sources is quite heavy, and promises to be a strong factor in the situation throughout the season. Orders for box lumber continue to be refused on account of a shortage in the supply. At Saginaw there is a scarcity of Norway pine, which is held at from $14 to $14.50, and log run pine is quoted at from $18 upwards. Buffalo dealers report numerous enquiries for stock from the east, but these enquiries are rarely followed by orders. This seems to indicate that the eastern buyers are still expecting a drop in prices. Owing to the high price of pine there has been a considerable sale of spruce at Buffalo at from $20 to $22. Hardwood lumber is selling moderately. In New York ash ranges from $42 to $45. There is likely to be a large production of maple in Michigan this season, and some predict considerably lower prices for this class of lumber. Lath prices are holding up well for this season of the year. At Saginaw the quotation is $4 to $4.50 on cars. White pine shingles are moving rather slowly, but dealers anticipate a short supply, as, owing the high price of box and mill culls, it is said that some manufacturers will not operate their shingle mills this season.

FOREIGN.

A slight feeling of uneasiness exists in Great Britain in regard to the timber market. It is now admitted that the enhanced cost of building materials will restrict building operations to some extent, with a consequent falling off in the demand for lumber. The present high prices ruling for new goods are the main support of the spot market. In Canadian pine there seems to have been some improvement of late. Buyers have become convinced of the shortage of the wintering stock on this side, and also of the fact that several important mill cuts which have for some years past been marketed in Great Britain will this season go to the United States. The outlook for third and fourth quality pine is said to be better than for the higher qualities, as the prices for the latter have been affected by competition from American whitewood. Firmness characterizes the spruce market. Contracts have been made for 3x9 spruce in second and third qualities for delivery at London about midsummer at £8 15s and £8 7s 6d, while shippers are said to have sold nearly all their 3x11 stock. The spruce deals per winter liners from St. John and Halifax have been sold at £7 15s to £7 17s 6d. In square timber the greatest activity pretains to elm and birch. First class elm timber is selling at from 2s 10d to 3s per cubic foot, and small average in second class wood at 2s 3d. Birch timber is quoted at from 1s 7d to 2s 1d per cubic foot.

NEW BRUNSWICK CEDAR SHINGLES.

The past week has witnessed a marked increase in the number of inquiries for cedar shingles made by the retail dealers, and has also seen a decided stiffening among the manufacturers. All shingles are in scant supply, and with a reasonable demand prices must be forced higher. Probably the following quotations will represent about the average figure being asked to-day: Extras, $3.15; clears, $2.75; 2nd clears and whites, $2.15 to $2.25, all delivered Boston freight rates. Manufacturers are now allowing the commission trade five per cent. on the net instead of the gross value of shipments.

STOCKS AND PRICES.

The city of Quebec is taking tenders for the annual supply of deals, lumber, etc.

The city of Kingston has accepted the tender of the Rathbun Co. for the supply of lumber, at $16.85 per thousand.

Pitts & Co., of Bay City, have purchased 8,000,000 feet of Canadian logs from Booth & Co. They were cut on Indian reserve lands and will be rafted to Bay City or Saginaw.

J.W. Munro & Son are reported to have sold to W. & J. Sharples, of Quebec, all their waney and square timber made this season in the townships of Widdifield, Nairn and McKinnon.

It is reported that Dickie & McGrath, of Tusket, N. S., have cut 12,000,000 feet of lumber during the past winter. They have fourteen vessels chartered for the summer, two of which will carry lumber to South America. They are said to have an order from Bordeaux parties for 5,000,000 feet.

At Saginaw cedar telegraph and telephone poles have advanced 20 per cent. in the last ten days: 25-foot poles, 5 inches at top, are quoted at 85 cents on car, and six inches at top at $1.10; 30-foot poles, six inches at the top, are worth $1.25. Oak ties are quoted at 45 cents and cedar at 38 cents. Four X cedar shingles are quoted at $3 and clear butts at $2.

It is learned that in the Eastern Crown Timber Agency of Algoma the sawlog output will be about 90,000,000 feet. In addition, there will be taken out about 170,000 cubic feet of square timber and from six to eight thousand cords of spruce pulp wood. Of the above amounts 38,000,000 feet of logs and the square timber will be rafted from the north shore of the Georgian Bay, between Beaverstone on the east and Lacloche village on the west, and 52,000,000 feet, together with the pulp wood, will be assorted and rafted from the Spanish boom at the mouth of the Spanish River. There will be assorted at this latter point probably between one hundred and one hundred and twenty-five million feet.

CANADIAN SPRUCE AND PINE.

The following remarks, bearing upon the market for spruce and pine deals, are reprinted from the Timber Trades Journal, of London, Eng.:

SPRUCE.—The spruce market is particularly firm; we learn that shippers have sold all their 3x11 for the season at £2 per standard advance, and we believe under surrounding conditions and the great demand for 11 in., that shippers could have got even more. All other sizes have likewise been going well, and from the latest reports the sales have been effected right up to the end of the season; in fact, from what we understand, nobody could contract for spruce to-day unless it was for the whole of the season's shipment, which, to our mind, is a strong insurance of a solid market for the whole of the year. The government demand is one reason for this, and even should the South African war terminate earlier than expected, it will make no difference to the demand, which will continue on the same extensive scale, as stores, ammunition, etc., must be shipped to the Cape and Natal for months to come.

PINE.—Pine is gradually moving up; it has taken time to convince the buyers here of the shortage of the wintering stock on the other sides, and now as it is an assured fact that the whole of Gilmour's new cut has been sold to the United States, it makes the market stronger than ever. As to first pine regulars, we think the prices that the shippers are asking are really dangerous, considering that American whitewood is now a strong competitor with Canadian pine, and can be bought at very much less prices. Second quality pine regulars are undoubtedly very scarce, but at the prices we hear that they have been sold to arrive there will be a great difficulty experienced in getting a profit for the same reason, viz., the competition with American whitewood. Coming to third and fourth quality pine of the orthodox dimensions, the question is a different one altogether; the prices obtained for wintering stock, which are from £2 to £2 10s per standard more than last year, the market can afford to pay, as although American whitewood may be in competition with first and second pine, it cannot compete with the lower qualities, which even at the advance stated are much the cheaper, these commoner qualities being largely in use for cabinet purposes, where anything of a sound nature will do, knots not being taken into account. We consider, therefore, that the prices of third and fourth quality pine regulars will keep up, at any rate throughout the present year.

THE BOSTON MARKET.

(Correspondence of the CANADA LUMBERMAN.)

The spruce lumber market is fairly steady, though it is in the midst of the quiet season. Something is doing in the way of house frame orders, but not much yet. The mills are generally pretty firm. One of the principal manufacturers of spruce lumber on the Kennebec writes his agents here that he has all the business he can attend to and at full prices, and will not book any business ahead except at full prices. Still the general belief here is that there will be lumber enough as soon as the mills get started. Spruce is steady at agreement prices:

Frames, 9 inch and under	$17.00
10 and 12 in. dimensions	19.00
10 and 12 in. random, 10 ft. and up long	18.50
2 x 3, 2 x 4, 2 x 5, 2 x 6, 2 x 7 and 3 x 4, 10 feet and up	15.00
All other random, 9 in. and under	16.50
Merchantable boards planed one side	17 00
Out boards planed one side	14.00
Furring, 1 x 2, 1 x 2½ and 1 x 3 planed one side	13.50 to $15.00
Spruce flooring	20.00 to 23.00

Western pine is in steady request for the season, with prices firm:

Uppers, 1 in	$58.00 to $60.00
1¼ to 2 in	60.00 " 62.00
3 and 4 in	70.00 " 72.00
Selects, 1 to 4 in	53.00 " 68.00
Fine common, 1 to 3 in	48.00 " 62.00
Sheathings	40.00 " 56.00
Barn boards	28.00 " 32.00
Coffin boards	26.00 " 28.00

Clapboards continue very quiet. Reports from manufacturers state that clapboards have not advanced along with other lumber, and declare that they shall hold for stronger prices:

Spruce, extra	$29.00 to $30.00
Spruce, clear	27.00 " 28 00
Spruce, 2nd clear	23.00 " 25.00
Pine, extra	40.00 to $45.00
Pine, clear	35.00 " 40 00
Pine, 2nd clear	30.00 " 32.00
California redwood, clear	42 50 " 45.00
Second grade	40.00 " 42.00

Shingles are in fair request, but it is suggested that the market may be shaded a little:

Extra cedar, best brands	$ $3.15
Clear cedar	2.65 to 2.70
2nd clear cedar	2.10 " 2.25
Clear white	2.00
Extra No. 1	1.50
Oregon	2.50 " 3.50

Hemlock lumber continues scarce, with the market high and firm. Still trade is dull:

Matched hemlock boards	$20.00 to $22.00
Pennsylvania dimension	16.00 " 17.00
Eastern	15.00 " 16 00
with the usual advance for over 16 ft.

POSTPONEMENT OF GOVERNMENT SALE.

The sale of timber limits advertised by the Quebec Government to take place on March 28th has been postponed to Wednesday, the 30th of May next. This step was considered advisable in order to enable intending purchasers to explore the limits.

SHIPPING MATTERS.

The Montreal Trade Bulletin reports that freight engagements for deals have been made by the regular steamship lines at 45s. to 47s. 6d. from Montreal to Liverpool and Glasgow, and 45s. to 50s. to London. Tramp steamers are not to be had at any price, as high as 60s being offered and refused.

The Timber Trades Journal reports the following charters: Boat, 1,450 standards, Halifax, N.S., to Liverpool, 51s. 3d.; steamer, 850 tons register, Dalhousie, N.B., to Gibralter, 50s; 520 tons register, St. John, N.B., to Galway, 57s. 5d.; 1,200 tons register, east coast of Nova Scotia to west coast of England, 50s.; steamer, Halifax to west coast of England, 51s. 3d.; 450 tons register, Shediac or Tormentine, N.B., to west coast of England, 57s. 6d.

The following charters are reported: Steamer Ardova, Halifax to Liverpool, deals, 51s. 6d.; bark Wildwood, Boston to Buenos Aryes, lumber, $9.50.; steamer Heldaswell, deals, from Montreal to United Kingdom, 51s., two trips.; a British steamer, Montreal to United Kingdom, deals, 50s., three trips.; barks Olive Mount and Merinda, Dalhousie to Barcelona, deals, 60s.; Francesco R, St. John to Cork, deals, 55s.; steamer Matinea, St. John to Limerick, deals, 53 9d.; a steamer, August loading at St. John, for w.c.E., deals, 49s.

S. M. Breed & Co., lumber dealers, Lynn, Mass., are reported to have gone into bankruptcy. The liabilities are given as $426,000.

BUDGETT BROS. - 70 and 71 Bishopsgate Street Within, LONDON, E.C.

now, it is estimated, will not be less than $5 per thousand feet board measure, and at 50,000 feet to the acre this would represent $250 as the value of the standing timber per acre at that time. The sum required to produce this amount in fifty years, compounded at 3 per cent., is $57.03, which represents the present value of the otherwise worthless land. Applying this to a territory of, say 80,000 acres, twould show, provided it was all equally well imbered, a cash value fifty years from now of 20,000,000. The territory is not all equally well wooded, but the greater part of it is fully up to the above standard, and it would be reasonable to assume the cash value of such a tract at at least $10,000,000 fifty years from now. It is pointed out that the government of Saxony realizes a net income from the state forests of $4.30 an acre yearly, and this with a very elaborate and costly forest administration. The cost of the management of such a tract to the government of Ontario would be comparatively small.

The territory set apart in accordance with the recommendation of Mr. Southworth includes the following: 24,500 acres in Abinger township; 27,500 acres in Miller township; 16,000 acres in Barrie township; and 11,000 acres in Clarendon township; making a block of 80,000 acres in all.

The forestry report under review contains a most complete history of the crown timber regulations from the date of the French regime to the present time. The preparation of this must have entailed a vast amount of labor and research, and it should prove valuable as a work of reference. In next issue we may refer at greater length to this portion of the report.

NOTES FROM THE EASTERN PROVINCES.

(Correspondence of the Canada Lumberman.)

Price Bros. & Company, of Quebec, are the largest lumber operators in the province of Quebec, having saw mills in all the principal lumbering districts. At Amqui they have a water power gang and circular saw mill, with a capacity of seven million feet in the season, and in connection have a number of shingle machines for sawing cedar shingles. The spruce from this mill is principally shipped from Dalhousie, N.B., and the higher grades of shingles go to the American markets via Intercolonial Railway and connections. They do not expect to have a full stock of spruce for this mill this season. At St. Octave they have a very fine steam power saw mill, circular, gang and resawing machines. Their estimated cut for this mill this season is one hundred and fifty thousand logs. The sawn lumber is loaded direct into vessels laying off in the St. Lawrence about half a mile, lighters being used for the purpose. At Matane, about forty miles further down the St. Lawrence, they have another large saw mill with about the same capacity as the St. Octave mill. The firm are building a large saw mill at Rimouski.

King Bros. have a very fine steam power saw and shingle mill at Cedar Hall, Que., circular saw, with other necessary machinery and four Dunbar shingle machines. Their intention is to get about one hundred and fifty thousand logs for this season's cut.

Wm. Wallace is putting a circular saw mill in his shingle mill at Cedar Hall, and expects to saw about one million feet of deals.

A. Lauzier and Coutere Bros. each have have circular saw mills, with shingle machines attached, at Cedar Hall.

Herman Cayouette & Co. have a shingle mill at Amqui. John Fenderson & Co., Sayabec, Que., have a large saw and shingle mill and expect to saw about five milllon feet of spruce deals, etc. They will run ten shingle machines in connection. The firm also have two winter shingle mills which have been ruuning all winter. N. Boulay and N. Cayouette & Company each have small mills in this vicinity. F. R. Morneault & Company, Sayabec, have a saw and shingle mill which they run in the summer and a shingle mill which they run in the winter.

The Rimouski Lumber Company, of Rimouski, Que., have a water power saw and shingle mill, circular saw and seven shingle machines. They expect to stock from forty to fifty thousand spruce logs, besides enough cedar to keep their shingle machines fully employed during the season.

Compagnie Bic, Bic, Que., Joseph Lavoie, manager, have a circular and gang saw mill and will get about fifty thousand logs for their season's cut. Thomas Label, St. Luce, has a shingle mill sawing winter and summer. George St. Pierre & Co., River Du Loup, has four mills, the one at St. Honore being a circular saw with some shingle machines; the others being shingle mills only. Jas. Hayes & Co. run a shingle mill at Notre Dame Du Lac, and are extending their operations.

Donald Fraser & Sons have the largest mill in northern New Brunswick, at Cabano, erected during the past year. They expect to saw their cut of logs from the Touladi river, which amounts to about twenty-two million feet of spruce and pine and six million feet of cedar. The mill is equipped with all the latest appliances for handling lumber economically, and is conveniently situated alongside the Temiscouata Lake. The sawn lumber and shingles can be loaded on the cars of the Temiscouata Railway without touching ground, if needed. During the building of the mill the railroad company laid their tracks through the mill and ran the cars, loaded with the heavy machinery, so that the heavy engine, boilers, gangs, etc., could be placed on their foundations at the least possible cost of time and labor. It is impossible for a person with his eyesight—even if his digestion is not up to the standard—to pass through this section of country without being wonderfully impressed with the beautiful natural scenery, especially during the months from May to September. The lake is about twenty miles long, with an average width of about two and a half miles. Cabano, or, as the railway station there is called, Fort Ingalls, is about midway the length of the lake. From there north the lake is nearly due north and south, and from Cabano down is about south-east, thus making rather an abrupt bend, giving one the idea of a large river. The land rises very abruptly, in some places to mountains. Several streams enter the lake, down which large quantities of logs have been driven for many years past. At St. Rose, the lower end of the lake, the Madawaska river connects with the St. John River at Edmundston, about twenty-five miles distant. A fish, called the Touladi, is caught in the lake. They weigh from ten to twenty pounds and are prized very much for the sport they give and also for their fine flavor.

The Temiscouata Railway, running from River du Loup to Connors, on the St. John river, is opening up this section of country, and is well patronized by summer tourists who want to get away for a few weeks in the hot season and have a change of scenery and some sport—fishing, etc. Moose and deer are plentiful, and after the 15th of September there is a great rush of the knowing ones to this section.

James Murchie & Sons carry on an extensive lumber and shingle business at Edmundston. They will saw about four million feet of spruce and run seven shingle machines during the summer. They also have a shingle mill at Cabano. Felix Hebert, Edmundston, runs the Hotel Hebert, popularly known as the "Sportsman's Paradise." The genial Felix will explain to the amateur sportsman just where he can get a bear, a moose, or a deer, if he carries a gun; or, if a rod, where the best fishing can be had, and besides will tell him some good stories of his own prowess.

At Clair Station the Kennedy Island Lumber Co. operate a large shingle and saw mill, their principal business being shingles. They will saw about a million feet of spruce and run five shingle machines this season. Mr. Thos. Crockett is the manager, and he is also manager of the Temiscouata Railway, his headquarters being at River Du Loup. Mr. Crockett does an immense business in cedar railway sleepers, supplying the Grand Trunk Railway, Portland-Montreal Division, besides exporting largely to the United States. J. J. Wheelock bought the mill property of the late Robert Connors at Connors' Station, and operates five machines there and also does an extensive business across the river in the State of Maine. The late Robert Connors built a very fine hotel at Connors' Station, furnished to suit the most fastidious, and being at the time, and is yet, much in advance of what one expects to find so far away from what is generally termed civilization. All the big game hunters generally make this hotel their headquarters for a few weeks during the open season, enjoying as much their comfortable surroundings, possibly, as their quest for game. Mr. J. W. McBrearty, the proprietor, is a thorough sportsman as well as a perfect host, and the assurance is hereby given that only death or poverty will keep one from repeating the trip. There are also several smaller mills along the line of the Temiscouata Railway, the cut of which is shipped to the United States market by this road via River Du Loup & I. C. R. and connecting roads. James Burgess & Sons, Grand Falls, have a saw and shingle mill on Little river, a few rods from the Grand Falls, on the St. John river. They will saw about a million feet of spruce and run two shingle machines.

The Stevens Lumber Co. have a larger saw and shingle mill at Salmon river, ten miles below Grand Falls. They saw about two million feet of spruce, and run eight shingle machines. They also have a large mill on the Aroostook river, in the state of Maine.

F. H. Hale, M. P., is building a large mill at Plaster Rock, on the Tobique river. He will put in twelve shingle machines at first and other machinery will be added.

C. R. Lockhart & Son, Bristol, have a water power saw mill. They will saw about three quarters of a million feet of spruce, hemlock and hardwood. A. H. Sawyer, Hartland, will saw about four million feet of spruce, principally for the American market. Robt. McElroy, Grafton, will saw during the winter and spring about a half million feet, mostly custom lumber. R. A. Estey, Fredericton, will saw about four million feet of spruce and run four shingle machines this year. Hale & Murchie, Fredericton, will saw from seven to eight million feet at the Victoria mills this season. George W. Upham, Fredericton, expects to saw three million feet. C. F. McKendrick is fitting up the old Robinson mill, five miles below Fredericton, on the opposite side of the river, and will saw from three to four million feet. John A. Morrison, Fredericton, has the largest shingle mill in the Maritime provinces, if not in Canada. He operates sixteen machines exclusively, sawing high grade cedar shingles. Hilyard Bros., of St. John, built a steam saw mill at Rusagornis and intend doing a large business. Donald Fraser & Sons have a large steam-power saw and shingle mill at Fredericton—gang, circular and shingle machines. They also have box-making machinery and do a large business in this line. They will saw about eight million feet of spruce, besides a large qantity of shingles, clapboards and lath. The Alexander Gibson Manufacturing Co. will manufacture about their usual quantity of lumber and shingles this season. They also have a large mill at Blackville, on the Miramichi river.

W. J. P.

CANADA'S COMMERCIAL AGENTS.

Following is the official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries:

J. S. Larke, Sydney, N.S.W., agent for Australasia.

G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.

Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.

D. M. Rennie, Buenos Ayres, Argentine Republic agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders:

J. G. Colmer, 17 Victoria street, London, S.W., England.

Thomas Moffat, 16 Church street, Cape Town, South Africa.

G. H. Mitchell, 15 Water street, Liverpool, England.

H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.

Harrison Watson, Curator, Imperial Institute, London, England.

Firstbrook Bros., box manufacturers of Toronto, are looking for a new factory site. They may locate at Penetanguishene, where they have been offered a free site and exemption from taxation.

THE LATE CAPTAIN WOOD.

Captain James Wood, who died at Peterborough, Ont., last month, was born near Montreal in the year 1836, and as a youth learned the trade of a machinist, in which employment he was engaged for a few years in the early part of his life. About the year 1857 he joined his cousins, James and Robert Allen, forwarders of the city of Montreal, in the forwarding business, having the superintendence of their steamers and forwarding work. In the year 1867 he severed his connection with this business and entered into co-partnership with John A. Cameron, John C. Edwards and Wm. C. Edwards, then of Thurso, under the name of James Wood & Co., and built steamers and barges, and for many years carried on a forwarding business on the Ottawa river.

In the year 1868 the business of W. C. Edwards & Co., lumber manufacturers, was established at Rockland, Ont., the partners being Wm. C. Edwards and James Wood. In the year 1871 this firm bought out the business of Cameron & Edwards at Thurso, and John A. Cameron, of Thurso, and John C. Edwards, of the same place, became partners in the W. C. Edwards & Co. business. The lumbering operations of this business have always been managed solely by Wm. C. Edwards, but during the period of the operations of James Wood & Co., forwarders, the subject of this sketch was the sole manager of the forwarding business. Eight or ten years ago James Wood & Co. sold out their entire interest in the forwarding business, at which time James Wood became the manager of the saw mills of the firm of W. C. Edwards &

THE LATE CAPTAIN WOOD.

Co. at Ottawa. Some two or three years ago he retired from the management of these mills and resided privately at Peterborough, Ont.

While Captain Wood never had much to do directly in the management of the lumbering operations, he, at the same time, was very much associated with these operations, as the forwarding business is closely connected with that of lumbering. As a consequence, he had a very large and extended acquaintance with the lumbering trade, with which trade he was most favorably known. For while a very quiet and unobtrusive man, he was at the same time a man of sterling worth, and his word was as good as his bond. Well known, however, as he was to the lumber trade, he was still better known to the forwarding and steamboat interests. During the long period in which he was engaged in business on the Ottawa river it is safe to say that he never had an enemy, but had a very large circle of friends who esteemed and respected him most highly.

For a few years previous to his death Captain Wood was not in the robust health that he had generally enjoyed, but this was supposed by himself as well as by his friends simply to be the result of a busy life, which was more or less telling upon him as he advanced in years. His death, however, which came about rather suddenly at Peterborough, culminating in paralysis, proved, as represented by the doctor who attended him, that he had been a sufferer for more or less time from Bright's disease. He leaves behind him his wife and two sons, who with a large circle of friends will long regret the loss of so estimable and worthy a man.

THE NEWS.

—A planing mill and sash and door factory are being started at Stratford, Ont., by Rutson Bros.

—It is reported that B. Ladouceur has sold his lumber yard at Otterburne, Man., to D. Prefontaine.

—The Parry Sound Lumber Company have increased the capacity of their shingle mill at Parry Sound.

—The Hamilton saw mill, on the Strait shore in New Brunswick, has been sold to C. H. Miller, of St. John.

—Milne & Piott, of Burks Falls, Ont., intend erecting a mill and factory for the manufacture of fruit baskets, etc.

—Tretheway Bros. have completed their new saw mill at Harrison River, B.C. It will have a daily capacity of 40,000 feet.

—Spencers, Turner & Logan, Truro, N.S., are building an addition to their woodworking factory and will put in new machinery.

—The Keewatin Lumber Company are thoroughly overhauling their mills and expect to cut 20,000,000 feet of lumber this season.

—Barrat & Duncan, sash and door manufacturers, Arnprior, Ont., have dissolved partnership, Mr. Duncan retiring from business.

—At Little Current, Ont., there will be in operation this season three large saw mills, two lath mills, two shingle mills and a sash and door factory.

—The Hall Lumber Company, of Detroit, have purchased property at Sarnia, Ont., and intend establishing a wood-working plant and lumber yard there.

—It is the intention of Davidson & Thackray, of Ottawa, to erect a large saw mill this year near Fort Coulonge, where they have large timber limits.

—The Rat Portage Lumber Company are putting in a new 100 h.p. boiler at their No. 1 mill. They expect to increase the capacity of the mill by 15 per cent.

—A large pine log was taken to J. R. Booth's mill in Ottawa last month. It was from the Madawaska district, and was 60 feet long and 57 inches in diameter.

—The Haliburton Lumber Co., recently formed, are understood to have purchased the McNab mill near Ingoldsby, Ont., and limits in Dudley township.

—The Canada Wood Specialty Company, of Orillia, Ont., are fitting up their factory and expect to commence manufacturing in about one month. They will install a steam plant.

—The saw mill of the Minor Lumber Company at Alpena, Mich., has been purchased by Edmund Hall, of Detroit, and is now being removed to a site in the Georgian Bay district.

—The Carling Lumber Co., of Parry Sound, Ont., is thoroughly overhauling the old Huff mill and are putting in a new band saw. They expect to cut 8,000,000 feet of lumber this summer.

—J. G. Picher, architectural sculptor, of St Henri, Que., has just finished a beautiful chair for the Speaker of the House of Commons. It is of solid oak, and in bold relief stands the Coat of Arms.

—The Rathbun Company are installing a new engine in their mill at Lindsay, Ont. They have also made other improvements and expect to make a record cut this year. Mr. G.H.M. Baker is local manager.

—Publicity has been given to the statement that R. G. Reid has made arrangements with Lewis Miller, of Creiff, Scotland, to transfer the latter's lumbering establishment from Sweden to Newfoundland.

—It is understood that the Robertson Log Raft Company, of San Francisco, will move to British Columbia in case Congress forbids log rafting on the Pacific coast. It is believed they will attempt to take rafts to China and Japan.

—The Yale Columbia Lumber Co. have commenced the re-building of the Blue saw mill at Rossland, B.C., which was destroyed by fire recently. The engines and boilers were not damaged, but the balance of the machinery was a total loss.

—The Longford Lumber Company are about to commence the manufacture of wood alcohol at Longford Mills, Ont. This product is used largely in France and Germany in the making of perfumes. It is said that in the state of Pennsylvania there are seventy such plants, while in Canada there are but two.

—The Thunder Bay, Nipegon and St. Joe Railway, when built to Fort Severn, will open up thirty-two million acres of land, on which there is said to be twenty-four varieties of wood. Two million acres are covered with ash, elm, birch, tamarack, pine and spruce.

—Edward Gold, of Vancouver, B. C., has been granted a patent in Canada for a wood preserving compound, consisting of crude petroleum, lime, ashphaltum, cement, brimstone, crude creosote and asbestos mixed together and heated in a vessel and applied to the wrapper which is wound on the timber and then treated to a covering of sand.

—The Fort Daniel Lumber Co. have completed their new mill at Fort Daniel, East Quebec, and expect a busy season in the manufacture of lumber and shingles. They are now running three small machines day and night and will shortly put in service another machine and a rotary mill. They have a one-hundred horse power engine and boiler, and ship their stock by water to Boston, Prince Edward Island and Cape Breton.

—It is the intention of R. G. Reid & Sons, of Montreal, to build extensive pulp and paper mills near the outlet of Grand Lake, in Newfoundland. The plans are being prepared by A. C. Rice, hydraulic engineer of Worcester, Mass. There will be a 100-ton bleached sulphite mill, a ground wood pulp mill with 28 grinders, and a large paper mill. The buildings will be built of concrete and steel, and will include a boiler house 52 x 160 feet.

—At the annual meeting of the Massachusetts Wholesale Lumber Association held at Boston on February 27th, the following officers were elected: President, William Bacon; vice-president, H.M. Bickford; secretary and treasurer, F. A. Kimball. Executive committee: A. Hall, G.H. Davenport, H. B. Shepard, W.R. Chester, E.B. Abbott, H.B.Clark, T. Badger, C. C. Batchelder, H. D. Wiggin, W.E.Litchfield, and Alfred Kimball.

—The Eastern Door, Sash and Blind Manufacturers' Association, at their annual meeting held at Syracuse, N.Y., passed a resolution that the tariff of $2 per thousand on lumber was inimical to the interests of manufacturers and consumers of lumber in general, and that a committee be appointed to memorialize congress to repeal the said tariff act provided that the Canadian government will remove the embargo on logs.

—The item in last issue regarding the purchase by Mr. Burke of the saw mill of the Trout Creek Lumber Co., was somewhat misleading. We are informed that the Trout Creek Lumber Co., composed of Messrs. Burke, Buckel and Baechler, was dissolved by mutual consent on the 10th of January last, the two latter parties retiring therefrom. Mr. Burke's son has been admitted as a partner, and the business is now carried on under the firm name of Burke, Son & Co. They manufacture lumber, sash, doors and mouldings.

—Hon. Mr. Davis, Commissioner of Ontario Crown Lands, has introduced a bill to amend the act to preserve forests from destruction by fire. Hitherto the practice in regard to the appointment of fire rangers has been for the lumbermen to nominate men for the office, the cost of the wages being divided equally between the lumbermen and the government. The present measure gives the force of law to the practice already in vogue. It further provides that where Crown lands are not under license the Commissioner of Crown Lands may appoint such fire rangers as he thinks fit; and where Crown lands are under timber license the commissioner may appoint the necessary fire rangers, the expenses to be borne equally by the license holder and the government.

The American Machinery and Trading Co. have established a main office in the Bowling Green Building, New York City, with branch offices in the largest cities in the United States, also in all foreign countries, with a large corps of travelling salesmen and correspondents, buyers of machinery, hardware, etc., throughout the world. They solicit exclusive agencies and special prices from manufacturers of all kinds of machinery in this country, with a view to handling the same to the best advantage on account of the unequal facilities that they have for placing orders. Mill owners, contractors and purchasing agents of power and electric light plants, and anyone requiring machinery of any character whatever, are respectfully solicited to correspond with this company, on account of the trade arrangements, by which they are in a position to quote the lowest market prices on the highest grade of machinery manufactured.

THE SAW MILL MAN'S DREAM.

A saw mill man had a a dream one night,
Several years ago,
When every saw mill man in the land
Was weighted down with woe.
And it was a very pleasant dream
Of things as they ought to be
And the saw mill man came in one day
And told the dream to me.

He dreamt that night of his debts, he said,
As he'd often dreamed before,
Only that night they'd all been paid
And bothered him no more.
And he could buy logs so very cheap
It made him smile to see—
"The very best logs that I ever saw
Or ever will saw," said he.

They'd let him make the grade, they said;
They'd pay for the lumber green,
Bnt he dreamt he treated them coldly;
He dreamt that they acted mean.
When he thought of the years that had
gone before,
When he nearly starved to death,
He raised his prices every day,
While the buyers held their breath.

Then he dreamt that in a sneering way
He took their proffered gold
And gave them a little mill run stock,
None of it ten days old.
But all of it went for ones and twos,
All went shipping dry—
And he dreamt that when he was hungry
A nigger brought him pie.

He sent his boys to the colleges;
His girls to a boarding school,
He bought a grand piano
And a grand piano stool;
He dreamed he lived on the best there was
And smoked them three-for-a-half.
It tickled him so, that you must know
He woke up with a laugh.

But as he told that splendid dream
He wept in sheer despair.
I did what I could to cheer him up
And lighten his load of care—
I let him smoke my pipe that day,
'Twas all that I could do.
"I'll give you an ad. some day," said he,
"If ever that dream comes true."

This winter that man came in again
Dressed in the height of style.
A diamond glittered in his shirt;
He wore a brand new tile.
But he shook my hand in the same old way
And said: "Strode, howdy do!
I just dropped in to give you that ad.
Because that dream's come true."

—The Chicago Hardwood Record.

BUSINESS CHANGE.

On account of the liquidation of the Canadian Locomotive & Engine Company, of Kingston, Mr. F. J. Drake has severed his connection with the company and returned to Belleville, where he has made arrangements to continue the manufacture of a full line of stationary and portable saw mills, shingle mills, lath mills, etc. Persons in want of saw mill machinery should correspond with Mr. Drake. His patterns are of modern design, and his machinery enjoys a high reputation among mill men generally. His announcement will be found on another page.

HOW TO USE EMERY WHEELS.

An emery wheel manufacturing company gives this adivce to users of such wheels: Too great a variety of work should not be expected from one grade of wheel. If the amount of grinding will warrant it, several grades can be profitably employed, each carefully selected for its particular purpose. Wheels should be kept perfectly true and in balance. In order that they may not become in the least out of true an emery wheel dresser should be used to dress up the wheels a little each day, or as often as they require it.

In mounting emery wheels never crowd them upon the arbor. Use flanges at least one-third the diameter of the wheel. Flanges should always be concaved and fitted with rubber washers between flange and wheel. Have wheels slip easily on the arbor and screw flanges only tight enough to prevent wheels from slipping. Stands on which wheels are mounted should be heavy and strong, and solidly bolted to a firm foundation. Keep machine well oiled so that arbor will not become heated, otherwise there is danger of wheels breaking from expansion of arbor.

Users of wheels are particularly cautioned not to run wheels on shaky machines or on machines in which the arbors have become loose in the boxes from wear. See that rests are properly adjusted in relation to the wheel, otherwise accidents may occur owing to work being drawn between the wheel and the rest. Never run wheels at a higher speed than the maker recommends. Don't try to grind malleable iron with a wheel that was made for brass, as no one wheel can be made which will be just right for all kinds of metals.

To obtain the best results, emery and corrundum wheels should be run at a surface speed of 5,500 feet per minute. Wheels if run too fast will heat the work and glaze, and if run too slowly will wear away rapidly and do but little work. The same speed should be maintained as the wheel wears down, and the speed of the spindle should be increased correspondingly as the diameter of the wheel is decreased. Where there is a sufficient amount of grinding to warrant the use of more than one machine, this can be accomplished by transferring from the first or larger grinder to smaller ones as the wheels wear down, otherwise by means of cone pulleys.

WOOD PULP DEPARTMENT

INCREASED PULP WOOD DUES.

An order-in-council has been passed by the Lieutenant-Governor of Ontario increasing the dues on pulp wood from 20 cents to 40 cents per cord. The new law will take effect on May 1st next and will make the dues the same as is charged in Quebec and New Brunswick. It is expected that pulp wood will be an increasing source of revenue to the Ontario government, as last year 29,848 cords were cut on Crown lands, as against 16,448, in 1898.

SEARCHING FOR NEW FIBRE.

The United States paper makers apparently view with some alarm the prospect of their supply of spruce for pulp making becoming exhausted. No greater evidence of this can be found than the efforts that are being put forth to find a substitute for spruce. The Times-Democrat, of New Orleans, in order to encourage the discovery of a new fibre for use in the making of paper, offers to subscribe $500 to a fund for this purpose. Naturally many suggestions have already been received, by which cottonwood has been brought forward prominently. Captain McIntyre, of Portland, Oregon, who is engaged in transporting cottonwood from Lower Columbia points to a paper mill in Oregon City, states that by the time the wood reaches the paper mill it costs about the same as firewood, $3.50 a cord. He has no fear of the supply of cottonwood giving out soon, as it grows very quickly. Under favorable conditions it becomes a sturdy tree 20 inches at the butt within 25 years.

The requirements of the new fibre are that it be cheap, abundant in supply, located so that it can be gotten to the manufacturing point without excessive freight charges, and that it must be capable of being used in the pulp and paper mills as advantageously as wood.

A new design of wood pulp grinder is now being manufactured by McOuat & McRae, of Lachute, Que.

BLEACHING WOOD PULP.

A CORRESPONDENT asks the following question: "What is the best practice in American mills for bleaching wood pulp from the bale? Is it put into the bleaching engine in sheets, or previously steamed, broken up in a rotary boiler, or passed through a willow or devil, or handled in any other way which will enable the greatest output of bleached stuff in the least time?"

Mr. J. F. Hobart answers the question in the Paper Trades Journal as follows: "There is no universal practice, as I have found it, in American mills as to bleaching wood pulp, but the beating engine seems to be used for that purpose more than anything else, although stuff-chests are used for bleaching to a considerable extent. When pulp makers sell bleached pulp they do not, of course, bleach from the bale, but take it as it comes from the wet machine, or even from the digestor blow-off, or from the grinder screen. But in mills where wood pulp, both mechanical and chemical, is taken from the bale there is great diversity of practice. I believe that in the majority of American mills the pulp is furnished dry into the beating engine, the sheets being opened out and sometimes torn into pieces of one to three square feet in area. The roll is, of course, raised during the furnishing operation, and the pulp is allowed to run in the engine until it has become reduced to small bits of fibre. Then the bleach is introduced. Steam is sometimes introduced, and the contents of the engine heated up to 120 or 140 degrees Fahr. to facilitate operations both of disintegrating the bunches of fibre and of bleaching. Some mills use stuff-chests, either vertical or horizontal, and the wood pulp, after having been torn in pieces in a beating engine, is let down into the stuff-chests for bleaching. Some mills, instead of using the conventional stuff-chest with agitator, make use of conical vertical chests in which circulation is maintained by means of a powerful fan (centrifugal) pump into which the small conical neck of the chest is connected. In only one mill which I have visited did I find a machine for tearing up sheets of wood pulp ready for the bleaching operation. This machine was an ordinary picker, such as is used in textile mills for preparing some kinds of fibre, notably flax, cotton, etc. This machine had a large flat travelling slat table upon which the pulp sheets were spread. A power feed and a pressure roller secured a uniform feed and insured the sheets being torn into small and equal pieces. I am not aware that any mills use rotary boilers for breaking up wood pulp preparatory to bleaching, still such may be the case in some mills which I have never had opportunity to visit. But never having seen or even heard of this being done, I believe it is seldom if ever practised in American mills."

THE WOOD PULP MARKET.

Our contemporary, Paper and Pulp, says of the wood pulp market of Great Britain:

The scarcity of mechanical pulp for early delivery is now becoming more apparent, and will be very keenly felt during the next two months. Reports from Norway state that the scarcity of water is now daily becoming more decided. It is difficult to see how prices can fall later on, as some buyers in this market anticipate, as it will take a long time to fill up the gap made by the shortage, coupled with the extra demand. An impression seems to prevail in this country that there will be a serious fall in prices after the spring, but present indications do not warrant this assumption. For prompt delivery moist pine has been sold at 75s c.i.f., while £7 5s c.i.f. is asked for dry pine. Sales have also been made for delivery from July onwards at 60s c.i.f. for moist. Although the majority of makers are now asking 65s for moist and £7 for dry, 70s has been offered for deliveries of moist from March to the end of the year, but refused, as the pulp could not be obtained.

Sulphite for prompt delivery is exceedingly scarce, and the market is absorbing everything that comes on to it, prices being at present very high. As far as we can ascertain the supply has in no way been curtailed; on the contrary, it has considerably increased from Scandinavia, though, of course, shipments from America have fallen off. There is every indication that prices will advance still further, as the quantity of sulphite still available for this country is now known to be limited.

Address correspondence to

GEO. T. HOUSTON & CO.
CHICAGO, ILL.

The few mills which have sulphite to offer are now asking from £9 10s to £10 f.o.b.

There is practically no soda pulp to be had, and only nominal prices can therefore be given; £10 c.i.f. is the average price quoted, although we have heard that one mill, which has a small lot of first class quality to offer, is asking £11 c.i.f.

PULP NOTES.

There is understood to be a good prospect of the erection of a pulp mill at Broadlands, Que.

Olin Scott, of Bennington, Vermont, will have the expert superintendence of the new pulp mill to be built at Weymouth, N.S., by the Sissiboo Falls Pulp and Paper Co.

An enquiry has been made by J. Herrebonat, a Belgian financier, as to the price of wood pulp on board ship, ready for export, at either Gaspe or Paspebiac, Que. The enquiry came on behalf of a Brussels paper mill, and was received by Mr. J. Lebouthilier, of the Canada Fire Insurance Company, of Montreal.

The North River Lumber & Pulp Co. is seeking a Dominion charter, the chief place of business to be Valmorin, Terrebonne county, Que. Charles R. Burleigh, of Whitehall, N.Y., and Hugh Mackay, of Montreal, are interested.

The Cushing Sulphite Fibre Co., of St. John, N.B., have elected officers as follows: Edward Partington, president; Joseph Allison, vice-president; George S. Cushing, managing director; and James S. Gregory, secretary-treasurer.

The Lancaster Pulp Co. is seeking incorporation. H. R. McLellan, of St. John is the promoter, and it is proposed to build a pulp mill at Musquash, a few miles down the shore from St. John. There is a good water power and an abundance of spruce timber.

The Chicoutimi Pulp Co., of Chicoutimi, Que., purpose greatly enlarging their plant, for which purpose bonds are now offered for sale. It is said that the output of the company for this year is sold, and that two offers have been received for the output of 1901.

In all probability E. B. Eddy & Co., of Hull, will this season increase the power and capacity of their large chemical pulp mills. Plans are now being discussed for the introduction of new machinery, including larger digestors, for which new buildings will have to be erected.

The British American Pulp and Paper Co. have in contemplation an extensive project, namely, the building of pulp and paper mills in the Lake St. John district, also an electric railway from Ha Ha Bay, on the Saguenay river, to Great Falls on the Grande Perribonca river, thence to Lower Falls, and eventually to Montreal.

In reply to a question asked in the Ontario Legislature the Commissioner of Crown Lands stated that 31,116 cords of pulp wood were taken from Crown lands in 1894-5, 35,037 cords in 1895-6, 46,387 cords in 1896-7, 16,447 cords in 1897-8, and 29,839 cords in 1898-99. For the same periods the dues were respectively $6,423.96, $6,898.06, $8,238.12, $3,538.90, and $4,828.46.

PULP NEWS.

—The Sissiboo Falls Pulp & Paper Co., of Weymouth Bridge, N.S., are reported to have sold their output for the months of April, May and June at a price which will net them $17.50 at the mills.

—The Royal Paper Mills Co., of East Angus, Que., are reported to have purchased from the British American Land Co. an extensive tract of timber land in the township of Lingwick, Que., said to contain about 20,000, acres. The consideration is given as $65,000.

—The importation of wood pulp into France last year was about the same in quantity as the year before, viz., 132,502 tons; but whereas in 1898 the division was mechanical 92,579 tons, and chemical 40,479 tons, in 1899 it was mechanical 86,078 tons, and chemical 46,424 tons. The tendency at present, therefore, seems to be to use the cheaper sorts in preference to the other. The quantity exported was only 464 tons.

—The National Paper Mills Co., incorporated under the laws of Quebec, is being organized. The prospectus states that the company propose to take over the plant of the National Paper Co., situated at Indian Lorette, eight miles from Quebec city. It is proposed to erect a wood pulp plant of 25 tons capacity daily and a paper mill of 20 tons capacity. James Reid, of Quebec, and Geo. S. Wilson, of Montreal, are interested.

—The project to erect extensive pulp mills at Chelsea, near Ottawa, has suffered a set-back. The Quebec government's claim to the valuable water power has been confirmed by the Attorney General, and now the firm of Gilmour & Hughson is securing legal assistance to establish its title to the aforesaid water power. The firm had almost closed the bargain by which the English capitalists were to secure the limits and water power. There was also a project on foot to erect a large saw mill.

PERSONAL.

Mr. J. B. Klock, M. P., presented a flag to the Strathcona Horse on behalf of the citizens of Sudbury, Ont.

Mr. C. Allen, of Kingston, has succeeded Mr. S. J. Reid as manager of the Peterborough agency of the Rathbun Company.

Mr. E. T. Carrington, of the Spanish River Lumber Co., Spanish River, Ont., is at present on a trip to Cuba and Porto Rico. He expects to return about the end of May.

Mr. John Charlton, M.P., who has represented the constituency of North Norfolk in the Dominion House for twenty-eight years, has again been unanimously nominated by the Liberals of that riding.

Mr. John Harcourt, of the firm of Ker & Harcourt, spool and bobbin manufacturers, Parry Sound, Ont., recently sailed from Mew York on the steamer Oceanic for England. Mr. Harcourt is in search of business and expects to return with large orders.

Mr. Thomas Moffat, of the firm of Moffat, Hutchins & Co., Cape Town, South Africa, and Dominion commercial agent for Cape Colony, is at present visiting friends in Ontario. Manufacturers and exporters of lumber may obtain from Mr. Moffat information regarding the prospects of doing business in South Africa.

Mr. J. T. Schell, of Alexandria, Ont., has accepted the nomination as candidate for the House of Commons tendered to him by the Liberal Association of Glengarry. Mr. Schell is a member of the lumber firm of Macpherson & Schell and is well known throughout the county. We understand that thus far his candidature has met with gratifying assurances of success.

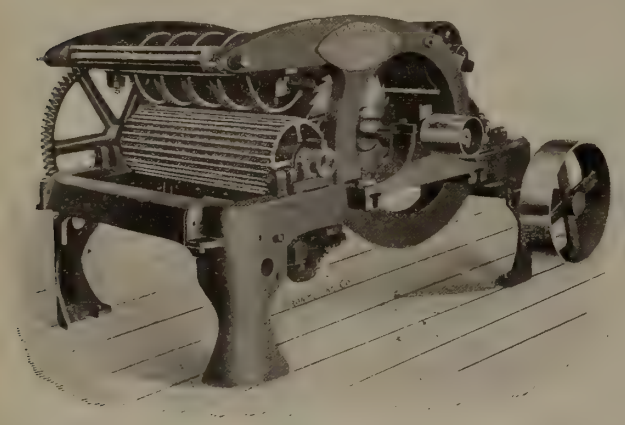
A SMALL DOUBLE EDGER

For Medium Mills

MADE RIGHT OR LEFT HAND—CUT SHOWS LEFT HAND EDGER.



Shows Removable Bridge to Permit Saws to be Withdrawn from Mandrel Feed Pulley Readily Removed.

The New Light Champion Edger has 2 7/16 Steel Mandrel supported on two long bearings.

No. 1 Light Champion HAS TWO SAWS, one moveable ; range between SAWS from 1¾ to 24 inches.
No. 2 Champion HAS THREE SAWS, two moveable ; range between stationary and first moveable Saw, 1¾ to 20 inches, and between moveable Saws, 4 inches.

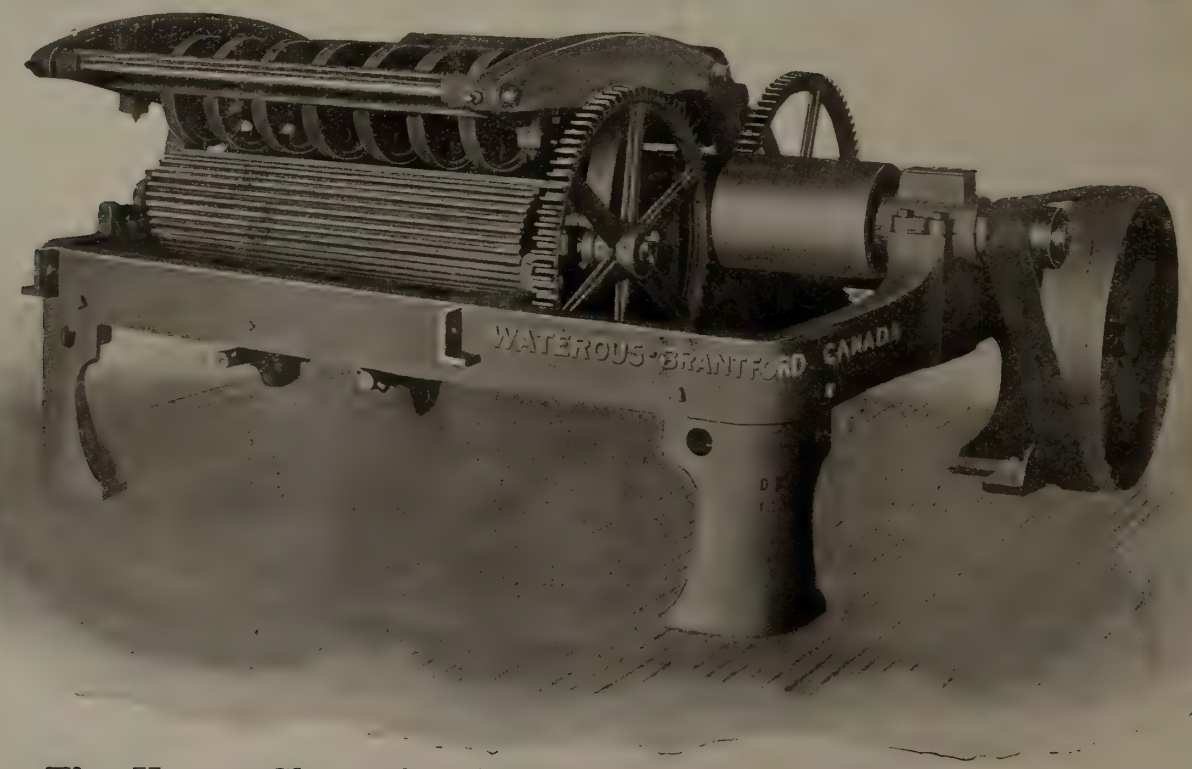
All our Edgers are provided with front tables, when so ordered, with 4½″ iron rolls and guide, moveable with lever up to 4 inches outside of stationary saw.

The Heavy Champion Edger has 2⅞ Steel Mandrel with three long bearings.

No. 3 Heavy Champion HAS THREE SAWS, two moveable ; range between stationary and mveable saws, 1¾ to 24¾, and third saw 4″ from second.
No. 4 Champion range is 1¾″ to 28¾″, and third saw 4″ from second.
No. 5 Champion range is 1¾″ to 36¾″, and third saw 4″ from second.
A fourth saw can be added, reducing extreme opening 4 inches.

We arrange Saws to be moved by levers when desired instead of hand-wheel and rack and pinion.

EDGERS BUILT RIGHT OR LEFT HAND



THIS CUT SHOWS A RIGHT-HAND EDGER

The Heavy Champion Edger—No. 3, 4 and 5. The frame in these sizes has two central legs omitted from cut.

This Improved Double Edger is made in three grades—Light, Heavy and Extra Heavy. PRESS and FEED ROLLS are of large diameter. Feed rolls fluted, bearings adjustable, front press rolls made in sections, both front and back hung in stiff open frames LIFTING WITH FEED, NOT AGAINST IT—a new and important feature—ADJUSTABLE BOTH WAYS FOR ALIGNMENT WITH MANDREL. Rolls sufficiently large to be used for return of stock over Edger, and still view of saws is not obstructed. All have bridgetree quickly removable to take off saws—Saws are moved by guides, and guides are removable to take off saws.

Trimmers, Slab Slashers, Lath Mills, Bolters, Bunchers and Trimmers, Shingle Machines, Drag Saws, Endless Chain Bull Wheels, Conveyors, Transfers, Refuse Carriers, all up to date in design. We carry tons of Link Belting in stock. Get our Quotations.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

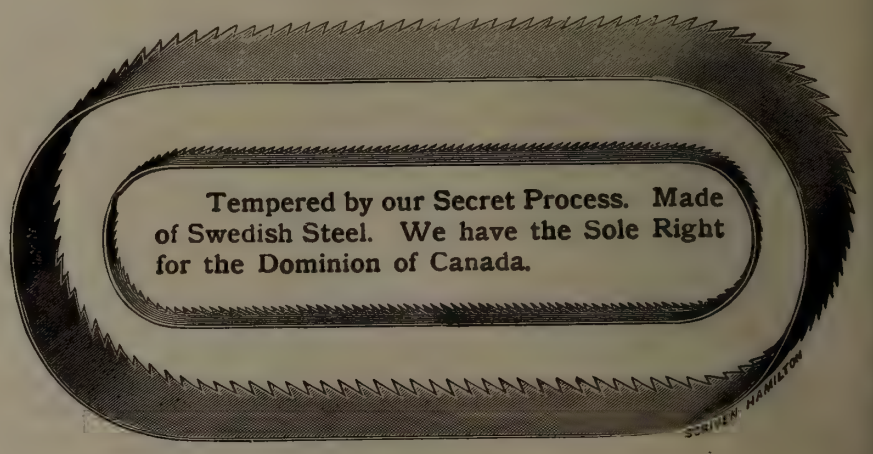
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

EXPORT NUMBER

OF

The Canada Lumberman

THE publishers of the CANADA LUMBERMAN have now in course of preparation an Export Number, to be published in July next. This will be the first Special Number of THE LUMBERMAN to be devoted exclusively to assisting the development of the export trade in Canadian timber products. The contents will include illustrations and descriptions pertaining to the Canadian lumbering and pulp industries, and information regarding the requirements of foreign markets. **Two Thousand Copies** of this issue will be placed in the hands of the leading Importers and Consumers of timber, British Consuls and other interested persons in foreign countries, including

Great Britain, Germany, China, Japan, France, Spain, Australia, South America, South Africa and the West Indies

This issue will be a valuable advertising medium for Canadian Manufacturers and Exporters of timber products, and will afford them an excellent opportunity of bringing their goods to the attention of probable buyers in foreign markets. Every lumber merchant catering to the export trade should be represented in this number.

TEAK LOGGING IN INDIA.

THROUGH the kindness of Messrs. Edmiston & Mitchells, of Glasgow, Scotland, we are enabled to furnish our readers with some illustrations showing how Teak logs are handled at the saw mills of Messrs. MacGregor & Co., of Ragoon, British Burmah, for whom they act as agents. Teak trees felled in the forests of Burmah are launched into the streams by the aid of elephants, and floated down the rivers, where they are again drawn out of the river by the elephants and dragged to the saw mills, to be prepared for the Indian, European and other markets.

In the work of piling Teak, the elephant displays an amount of intelligence which is most surprising, more especially when one remembers that an elephant direct from the plain dragging ground of the jungle—the rudimental part of the work as it were—may be seen within a week, or as soon as he gets used to the noise of the machinery, walking along harnessed to a log, or carefully piling the slabs preparatory to their being converted.

In some saw mills the elephant is in use in almost every department. One will, when harnessed to a round log, drag it out of the water to the rack bench, and there with its tusks place it on the table, while at the other end his mate is waiting, and when the log has been squared he takes it in tow and marches off to the piling ground with it, where he in turn hands it over to the piling elephants, who slowly and sedately place it in its resting place.

The most difficult, or perhaps we should say intellectual, work is the piling. Say a square has been brought to the piling ground by the dragging elephant, one of the piles would then begin by putting the squares in position alongside the pile, the end of the squares being about six feet past the butt of the pile. He then lifts the end of it on to the top of the pile, and with his tusks holds it in a position, while his mate slowly raises the butt and with his tusks pushes it into the pile. When the pile is low, that is up to six feet, the front of the tusks are used in pushing the square into position, but in the case of the pile being higher, the forehead is used. If, however, the square should be above the level of his forehead, the elephant throws his head well back, and with the points of the tusks high in the air, will push the square safely home, his mate all the time keeping a watchful eye on it to see that it goes straight, and gently guiding it with his tusks when necessary.

When the squares are wanted for shipment, again the elephant comes to the fore and gently one by one takes them from the pile and lays them out ready for butting, after which he pushes them down to the riverside and into the water, and if necessary will follow them into the water and hold them jammed together while the raftsmen are busy binding them.

When the day's work is over the animals revel

TEAK LOGGING IN INDIA—MACGREGOR & CO.'S ELEPHANT PILING TEAK SQUARES.

TEAK LOGGING IN INDIA—MACGREGOR & CO.'S ELEPHANT PILING TEAK SQUARES.

in a bath in a river, and often nothing but the tips of their trunks are visible above the water, while their mahouts (native drivers) are doing balancing feats on their backs as the huge bodies loll about under the water. When the bath is over each is loaded with his evening's allowance of grass, and slowly wends his way homewards, doubtless well pleased that his labor is over for the day, and thinking of the grass on his back.

An elephant is always accompanied by a mahout, either walking by his side or mounted on his back. When working, the driver is always on his back. Curious as it may appear, elephants are very liable to sun stroke, and those employed at outside work, such as piling, where they are for a long time exposed to the heat of the sun, only work up to ten o'clock in the morning and after three in the afternoon. The others, who are

TEAK LOGGING IN INDIA--MACGREGOR & CO.'S ELEPHANT PILING TEAK SQUARES.

more or less under cover and work all day, wear sun protectors while the sun is at its height.

An elephant starts work at twenty-five to thirty years of age and is supposed to be in his prime forty years later, but upon the age that elephants live there is considerable difference of opinion. As regards strength, a good tusker can easily lift half a ton on his tusks and drag a square of three tons weight, but to see an elephant really putting forth his strength one has to see him at work in the jungle and creeks, where both log and elephant are sunk in the soft mud. It is here one realizes his enormous strength, when with a deafening roar he squares his shoulders and gives a tremendous tug which will move the log a foot or two, and he will again flounder forward and repeat the operation till he eventually lands his charge onto hard ground or into the water, as the case may be.

In the matter of hard work, a mill elephant lives an easy life compared to his brother of the jungle. One might be compared with a man

Teak Logging in India—MacGregor & Co.'s Elephants Pushing and Dragging Teak Squares.

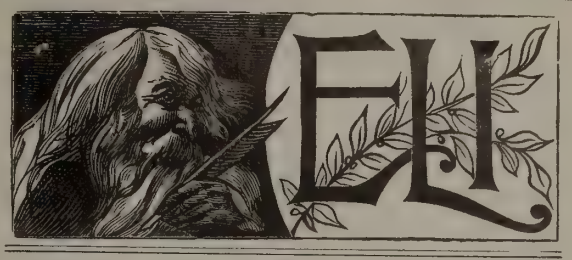
whose calling is of an intellectual nature and the other the manual laborer. Elephants employed in a mill are fed chiefly on paddy (rice) and jungle grass, and occasionally sugar cane when it is in season. Those of the jungle, on the other hand, feed themselves on their natural food. As soon as their work is over they are hobbled together and let loose to wander at their own sweet will, till their driver goes out for them to resume their labors.

One would hardly imagine that such huge animals could be stolen, but it is not an unfrequent occurrence for a forest elephant to disappear, no one knows where, and never be heard of again.

Have you sent in your advertisement for the export number of this journal? If not, you should do so immediately. Rates from the publishers.

Mr. Singleton Brown, of Bracebridge, Ont., was recently found dead in a mill yard at Severn Bridge, supposed to have been stricken down with heart failure. Mr. Brown was interested in lumbering.

Mr. W. H. Stubbs, lumber buyer for the Bell Organ and Piano Company, of Guelph, Ont., returned a short time ago from the Muskoka district, whither he went to inspect some timber limits with a view to purchase.



I read with some relish what are claimed to be the remarks to a reporter of a Montreal daily of Mr. F. W. Allsop, said to be an extensive builder and importer of building materials of London, England. Mr. Allsop deals rather harshly with the Quebec timber broker. While I agree in a measure with the sentiments expressed, I think his criticism is rather severe, as, after all, the business of the Quebec broker is and has been perfectly legitimate. I am in accord with his remarks that the Canadian lumber manufacturers have neglected to place themselves on a direct footing with the British importer, and have allowed commission men at Quebec to make sales practically to suit their individual purposes. The Quebec middlemen thereby secure almost the entire Canadian export business, and as they deduct a liberal commission on sales from the exporter's liquidated bills of lading, the manufacturer consequently suffers and finds a discouraging influence at work against the development of Canada's export lumber business. Mr. Allsop says that for years the English buyer and Canadian exporter have known no mutual confidence, and until the middleman presented bills of lading, settlement advances in the ordinary course of business were discountenanced. With a healthier commercial confidence, he believes direct buying will ensue, and that the Canadian lumber manufacturers will reap a great benefit therefrom.

* * *

Perhaps never before in the history of Canada has a fire left in its trail more sadness, to say nothing of the destruction of property, than the disastrous occurrence which a couple of days ago practically wiped out the city of Hull and a portion of the Capital of the Dominion. Hundreds, yes thousands, of persons saw not only their entire possessions reduced to ashes, but, as the large saw-milling establishments became enveloped in flames, their means of livelihood cut off also. It is estimated that 5,000 persons are thereby thrown out of employment, and it will be impossible to provide immediate work. The appeal for assistance for the needy is certain to strike a responsive chord in the heart of every true Canadian, and I feel certain of liberal subscriptions. The Chaudiere has been the scene of many a fire, but in comparison with this one they were but a spark. Think of the burning of the great sawmills and huge piles or lumber. Various estimates of the quantity of lumber burned have been given, late reports placing the amount at 160,000,000 feet, valued at $3,000,000. Of this J. R. Booth lost about 100,000,000 feet, and the Export Lumber Company 45,000,000 feet. Other losers include the Hull Lumber Co., mills and yards; Gilmour & Hughson, lumber yards; Bronson & Weston Co., lumber yards; and Parr's planing mill. Mr. Booth suffered the greatest loss, although his large mill was saved, due, I am told, to the excellent system of fire protection installed in the mill and the fact that it was largely of fireproof construction. The E. B. Eddy Co. lost their entire works excepting the sulphite mill, and their loss will probably reach a million dollars.

* * *

The management of the lumber business of Vigars & Co., of Port Arthur, is vested in Mr. Richard Vigars, with whom a recent chat brought out many interesting points concerning the lumber trade of the west. Mr. Vigars was in exceptionally good spirits, and in his countenance one could see a reflection of the prosperous condition of the lumber trade. Mr. Vigars told me that this spring he had refused three times as many orders for lumber as he filled in the spring of 1899, and that prices were very much higher. He had been obliged to turn down orders for as much as 3,000,000 feet. He related a peculiar coincidence which shows the great scarcity of lumber in the west. A customer in Manitoba sent to the Vigars firm last winter an order for certain stock, and a reply was sent that it would be impossible to fill the order for some time to come. In due course the customer responded requesting them to place the order on their books and ship the stock as soon as it was possible to do so in the spring. Speaking along the same line, Mr. Vigars said that whereas a few years ago dealers and consumers would be implored by salesmen to buy lumber, the situation was now entirely reversed, and it was not at all difficult to make sales. This was attributable, not altogether to the improved demand, but in part to the Western Retail Lumbermen's Association, of which the manufacturers are honorary members. Every buyer is furnished with a copy of the price list, which does away with any dickering over prices, as Mr. Vigars states that the list is pretty closely adhered to. In his opinion the great question for the farmers of Manitoba and the Territories to solve is where they will secure their supply of lumber in a few years to come. Reference to the prosperity of the western farmer proved that Mr. Vigars was a firm believer in the future of the North-West. The farmers, he thinks, have not yet learned to use lumber, and in the near future he looks for the erection of many large barns. It is not an unusual thing, he states, to see about a dozen binders and many other agricultural implements standing in the fields all winter unsheltered. Eventually the farmer will become educated to the necessity of taking proper care of his implements and will erect barns for this purpose. I learned from him that the outlook for building operations at Port Arthur was very promising, a boom being anticipated as a result of the construction of the Ontario and Rainy River Railway, of which Port Arthur is a terminus.

SCALING SMALL LOGS.

A little point of log scale practice is called to the attention of the American Lumbermen, and through it to the attention of its readers, by the Lufkin Rule Company, of Saginaw, Mich. It involves an agreement on the extension of the Scribner log scale below the minimum diameter of 12-inches in the original scale. In regard to this matter the Lufkin Rule Company says:

"The decimal scale is based on Scribner's. It drops the units and takes the nearest tens. Thus, Scribner's scale gives a log 12 inches in diameter, 16 feet long, equal to 79 feet. Decimal scale makes it 80 feet and is expressed with the figure 8 only.

"There never were any authentic computations for Scribner's scale below 12 inches in diameter, Mr. Scribner at the time considering a log smaller than 12 inches unworthy of cutting.

"Therefore for logs below 12 inches a number of independent computations have been made applying to decimal rules, and great trouble has arisen from this fact, we being at a loss to know what figures we should use. We have recently carefully noted from our customers' orders these differences, and find that about three different computations are being used in different sections. We have therefore named them decimal A, decimal B, and decimal C, and shall hereafter mark our rules in this way. Below we give the figures. The difference being only for logs below 12 inches, we do not consider it necessary to tabulate the whole rule.

DECIMAL A.						DECIMAL B.						DECIMAL C.					
Inches.	6	7	8	9	10	11	Inches.	6	7	8	9	10	11	Inches.	6	7	8	9	10	11
12 ft.	1	1	2	3	4	5	12 ft.	1	2	2	3	4	4	12 ft	1	2	2	3	3	4
14 "	1	1	2	3	4	6	14 "	1	2	3	3	4	6	14 "	1	2	2	3	4	5
16 "	1	2	3	4	5	6	16 "	2	3	3	4	5	7	16 "	2	3	3	4	6	7
18 "	1	2	3	4	5	7	18 "	2	3	4	5	6	8	18 "	2	3	3	4	6	8
20 "	1	2	3	4	6	8	20 "	2	3	4	6	7	8	20 "	2	3	3	4	7	8
22 "	1	2	3	5	7	9	22 "	3	4	5	7	8	9	22 "	3	4	4	5	8	9
24 "	1	3	4	5	7	10	24 "	4	5	6	7	9	10	24 "	3	4	4	6	9	10

"As stated above, the difference in figures occurs only below 12 inches. From 12 inches upwards the figures are authentic, as furnished by Mr. Scribner.

"We would consider it a wise plan for the lumbermen of the north-west, wherever this scale is used, to get together and decide on one standard rule."

The suggestion seems to be a good one, and it might be well for the more important lumber manufacturers' associations of the country, in sections where small logs are numerous, to take this matter up and settle it once for all. It should be noted that it involves merely the scale for logs below 12 inches in diameter, and not for the larger sizes.

There is, furthermore, in this subject, the question as to measurement of small logs, which is worth consideration and discussion. Conditions surrounding lumber manufacture have so changed since the adoption of any of the present rules that if such a thing could be done an entirely new rule adapted to the new condition might with profit be adopted as more intelligible as well as more equitable.

A unique blotter has been sent out bearing the compliments of Messrs. Sadler & Haworth, manufacturers of oak tanned leather belting, Toronto and Montreal. The blotters are held together by a celluloid button bearing an illustration of the Union Jack, while the name of the firm is inscribed on a fine sheet of celluloid covering the blotters.

MONTMORENCY IN OLDEN DAYS.

The following lines, reminiscent of the lumber trade at Montmorency, were received from Mr. W. B. Dillingham, a former resident of Montmorency, by Mr. F. H. Andrews, of Quebec, who was at one time employed in the saw mills there. The sentiments expressed will no doubt peculiarly appeal to many yet in the timber trade at Quebec:

GREETING.

To the few old friends that are living,
To the memory of more that are dead,
To the days of the boom and the saw logs,
And the blue skies over head.
To the men that wrought in the Chantier,
To the men that wrought in the mills,
To the roar of the Montmorency
And the green Laurentian hills.

These are the visions that haunt me,
When the evening fires burn low,
And the scenes that I loved come back to me,
With the faces I used to know.
And the reason why I'm writing
These unstudied rhymes,
Is just for a last kind greeting
To the boys of the olden times.

To the smell of the old mill office,
When the season's work was o'er,
When they signed the list for the shanties
A hundred men or more.
To the smell of the new beef moccasins,
Stuffed with pogy oil,
And the natives' home cured tabac,
Smoked by those sons of toil.

To the men that tramped on snow shoes,
Miles o'er the untracked snow;
Planned the camps and the rollways,
Far up on the Gatineau.
Where silence reigned unbroken,
Save when the wintry winds
Woke the low sad music
From the needles in the pines.

To the ring of the woodmen's axes,
In rhythmic strokes and slow,
Till the giant pine tree reeled and fell
Deep bedded in the snow.
To the trimmers and the sawyers,
And the swampers that clear the way,
Out to the well tracked logging road,
The forest's grand highway.

To shanty life in the pine woods,
When the daily work was done,
When the cook had cleaend the kitchen
And the boys were at their fun.
To the wheezy old accordion,
The fiddle that lacked a string,
To the wonderful tales they used to tell,
And the songs they used to sing.

To the brave and well-trained athlete,
Detailed to follow the drive,
With never a thought of the chances
Of coming out alive.
To the men that broke the big jam,
Or man'd the long canoe,
That followed the logs like an arrow,
Down through the boiling Soo.

To the men that formed the crib-work
And builded the mighty raft,
With axe and auger and dowel,
All skilled in the woodmen's craft.
With earthworks for their camp fire,
A cabin close beside,
Were ready to catch the tow line,
And pull out for the ebbing tide.

To the grand old River St. Lawrence,
Where waves are never at rest,
But bears an Empire's burdens
Save on her heaving breast.
To the green slopes and headlands,
To the gleam of the village spires,
Where the happiest of all peoples
Guard their altars and their fires.

To the timber coves on either shore,
Guarded by boom and pier,
From Indian Cove to Sillery, and
From Cap Rouge to Chaudiere.
Where the timber ships of England,
Moored in lines along the strand,
Took out the wealth of Canada
Home to the Mother Land.

To the call of the old tug's whistle,
That turns the boomsmen out,
And brings them down the Beauport cliff,
Like an army in a rout.
To the swing of the signal lantern,
The rattle and roar and din,
To the wierd wild song of the boomsmen,
As they hauled the huge raft in.

To the men that worked in the saw mills,
In watches night and day,
To the jolly crews of pilers,
From the stables to the quay,
To the shippers counting off the deals,
Along the river's side,
And the white winged fleet of batteaux
That went up on every tide.

To the clerks in the shipping office,
Working with pencil and pen,
With books of calculation
Compiled by wonderful men.
(Oh, useless waste of labor,
Oh, waste of lead and steel),
Converting simple honest feet
To the mythical 'Standard deal.'

These are the phantoms that haunt me
When the evening fire burns low;
And the scenes that I loved come back to me,
With the faces I used to know.
And this is why I hasten
Before the vital spark,
Fades like the fading firelight
And leaves us all in the dark.

W. B. DILLINGHAM.

24 Highland street, Auburn, Maine.

HARDWOOD LUMBER PRICES.

GUYSBOROUGH, ONT., April 17th, 1900.

Editor CANADA LUMBERMAN:

We notice in your weekly issue of April 4th that it is stated that the prices of hardwood lumber are showing signs of weakness, and that log run maple, dry, is being offered at $12 at the mill, and black ash at $15.50. This may be true in the case of a millman who has part of a car-load and wishes to get his piling ground clear. Under these conditions he may have offered a mixed lot at the prices mentioned, but they cannot be considered ruling quotations.

In your issue of the 11th inst. you state that it is expected that prices will weaken slightly as soon as the dry stock of this season's cut is offered to buyers. This is not very encouraging to hardwood millmen, but seems a hint to retail yards and users of hardwood lumber to defer buying as long as they can, and thus drive us, the manufacturers, to other markets, such as the United States.

A few years ago we paid $5 per thousand for elm in the log, $1.50 for sawing, $1.25 for teaming to the station, and 10 cents for loading on car, to say nothing of the expense of handling during inspection or use of money for different periods, time being generally required by buyers. This brings the total cost of the lumber loaded on car to $7.85. The average selling price was about $8.25, which left 40 cents per thousand as the millman's profit. We have struggled along on this basis for years with some kinds of lumber, but for dimension stuff we obtained a little better price. Now, when higher prices are ruling, those who have standing timber are selling it at a higher figure, but how about the millman who is compelled to buy his logs? The only solution of the difficulty is to maintain the present prices of hardwood lumber, as it is a fact that logs have been run up in price beyond our reach unless we can obtain a fair price for the lumber. As an instance, the hardwood (beech and maple reserved) on about thirty acres of land near here has just sold for $735. On another tract of land a few white ash and basswood trees sold for $300, while another small tract of timber which a few years ago would hardly be taken as a gift sold for $110. We are just getting living prices for our lumber, when yard-men and manufacturers are given hints to wait as long as they can before buying, as prices are likely to come down. This does not seem fair. Prices here are much lower than in the United States, and my advice to millmen is, not to be in a hurry to sell as there will be a market for all the hardwood lumber that will be manufactured this year.

Having been in the mill business over fifty years, I subscribe myself,

GRAY-HEADED MILLMAN.

The S. S. Stephens Co., of Kingston, N. S., are building a sluice-way four miles in length to carry lumber.

Numerous enquiries received at this office for box shooks, doors and mouldings, hardwood specialties, etc., are an evidence that there is a vast market in Great Britain for Canadian timber products. It is only necessary to make an effort in order to secure a greater share of this trade. The opportunity of placing yourself in communication with importers will be afforded by the proposed Export Number of the CANADA LUMBERMAN.

TIMBER LEGISLATION AGAIN SUSTAINED.

The Court of Appeal at Toronto has sustained the judgment of the Trial Court in the famous timber case, in which certain Michigan lumbermen sued for the right to export saw logs cut on Crown lands. The judgment is unanimously in favor of the Crown, the law requiring saw logs to be sawn in Canada being upheld. Following is a review of the judgment :

SMYLIE V. THE QUEEN.—Judgment on appeal by suppliants from judgment of Street, J., dismissing a petition of right with costs, and on motion for leave to amend the petition so as to claim relief by way of damages as well as specific performance. The rights claimed by the suppliants have their origin in three licenses to cut timber upon certain public roads of the Province of Ontario, the first dated April, 1873, and e other two dated Octobe 1888, and issued under the authority of certain statutes and orders-in-council by the Commissioner of Crown Lands. The licenses were renewed from time to time under the regulations at such times in force, and in 1895 a new form of license was adopted by order in-council, and in this form these license were issued to the suppliants, the Canadian Bank of Commerce, who then and for some time before held them. The "Act Respecting the Manufacture of Pine Cut on the Crown Domain," 61 Vict. (O.) ch. 9, was passed in January, 1898, and provided that licenses thereafter issued shall be subject to the condition set out in the first regulation of schedule A of the act called "The Manufacturing Condition," and come into force on 29th April, 1898. This condition provided that pine cut into logs or otherwise under a license shall, except as therein provided, be manufactured into sawn lumber in Canada. After 29th April, 1898, the snppliants applied to the Commissioner of Crown Lands for a renewal of their license for the year 1898-9 without the insertion of the manufacturing condition. They based their claim to such a renewal upon the ground that they or their predecessors had purchased the right to the timber upon the limits from the crown, upon a contract for perpetual renewal of the yearly license so long as they complied with the regulations in force at the time they purchased, and that in the absence of the clearest provisions to that effect in the writings forming their contract, it would be unreasonable to hold their right to be subject to alterations from year to year to their prejudice by orders-in-council made without their consent.

The court below found that the suppliants and their predecessors had periodically accepted renewals of the licenses with additional conditions ; that the right of renewal conferred by the regulation of 1869 must be taken to be a right of renewal upon the conditions in force at the time of renewal, that is, that persons desiring to obtain timber licenses are notified by statute, by conditions of sale, and by the form of license, that they can only obtain licenses upon the understanding that the conditions may from time to time be altered at the discretion of the Crown, and that as their sole protection against wrong they may relv upon the "infallible justice of the Crown." so termed by Esten, V. C., in Craig v. Templeton, (1860), 8 Gr., 483 ; that under 61, Vict., (O.), ch. 9, the manufacturing condition is properly inserted in that renewal, the statute not being ex post facto legislation, but a simple application to the undoubted rights of the suppliants of the undoubted rights of the Crown, and that such act was not ultra vires of the Legislature. It was contended that it is found that the suppliants are entitled to renewal subject to variations in the conditions, but that such conditions must be within the meaning of the contract. The manufacturing condition is not so, it has nothing to do with the property or the way in which the suppliants are to deal with it, but merely to their disposition of logs which have been cut and become absolutey their property. Apart from the statute such a regulation is not within the power of the Lieutenant-Governor-in-Council to pass or enforce, as not being within the purview of the contract, and, if so, even the statute does not validate it. The statute should be construed to deal solely with limits sold subsequent to its passing. At all events the statute is ultra vires because it interferes with the trade and commerce, and on the evidence, which shows that it affects the commerce of the Dominion of Canada and foreign countries, it comes within the principles laid down by the Privy Council in Parsons v. Citizens' Insuance Company, 7 App., Cas. 553. Held, that the licenses in question are for 12 months only, and there is nothing in them to show a right to a continuance or reissue. The rights of the suppliants depend upon statutory enactments with regard to timber upon the unpatented lands of the province, which regulate the powers of the Commissioner of Crown Lands. These enactments make it clear that the rights of licenses are limited to the period of the license, and do not empower the commission to give a right of renewal to a purchaser of timber limits, and the regulations should be construed as not intending to enlarge the rights of persons dealing in respect of timber beyond such as the statute authorizes. The term "renewal" is not an accurate description, what takes place is really a new grant, which bears no necessary relation to the preceding license. The manufacturing condition applies to all licenses issued after 30th of April, 1898, whether the berths were or were not the subject of previous license. The terms of the statute, 61 Vict., ch.9, assented to on 17th January, 1898, are clear. Nor is the Act ultra vires. The subject with which it is concerned is within the powers of the Legislature, and the language is effective, and the statute deals only with the property of the province, and dictates the terms upon which it may become the property of private persons or corporations. Though trade and commerce may be incidentally affected the Act does not in any way purport to regulate them. In disposing of its own property the Legislature to which is adjudged by sec. 92 (5), of the B.N.A. Act, exclusive jurisdiction over public lands of the province and the timber thereon, must necessarily have power to impose the terms upon which such lands and timbers may be acquired. Appeal dismissed with costs. The application made at the trial to amend the petition, which was renewed quia timet on the hearing of the appeal, appears to have been acceded to by the trial judge and ought now to be allowed quantum valeat. H. J. Scott, Q.C., for suppliants; S. H. Blake, Q.C., and Walter Gow for the Crown.

PRODUCT OF ONTARIO FOREST AND LUMBERMAN'S AXE. [From the Ontario Forestry Report.]

MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company
of Toronto, Limited
CONFEDERATION LIFE BUILDING, TORONTO
BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Special pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the tr Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. it ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

REMOVAL NOTICE.

After May 1st the Montreal office of this publication will be removed to larger quarters in the Imperial Building, 107 St. James street. Customers will always find the office open during business hours, and visitors in Montreal are extended a cordial invitation to call at the office, where they will be given every possible assistance and furnished with requisites for answering correspondence. The telephone number is Main 2299.

AN EXPORT NUMBER.

THE first special number of the CANADA LUMBERMAN to be devoted exclusively to assisting the development of the export trade in Canadian timber products is now in course of preparation, and will be published about midsummer. The proposed publication of this number is the result of a constantly increasing number of enquiries from foreign countries regarding the timber resources of Canada and her ability to supply wood products of various kinds. The present is undoubtedly an opportune time to make our products more widely known abroad, and to bid for a larger share of the foreign trade.

The contents of this export number will include illustrations and descriptions pertaining to the Canadian lumbering and pulp industries, and information regarding the requirements of foreign markets. It is proposed to issue two thousand copies for circulation abroad. These will be placed in the hands of the leading importers and consumers of timber, and also on view in the Chambers of Commerce, the offices of the Brirish Consuls, and the leading hotels in foreign countries, carefully selected lists of the above having been obtained by the publishers.

A considerable proportion of the issue will be distributed in Great Britain, at present the largest wood consuming country, but it is intended to cover also Germany, France, Spain, Australia, South Africa, China, Japan, South America and the West Indies, all of which countries import Canadian wood products.

As an advertising medium for Canadian manufacturers and exporters of timber products, this number should prove of incalculable value, since it will afford them an excellent opportunity of bringing their goods to the attention of probable buyers in foreign markets. An announcement in this number might prove to be the means of building up an extensive and profitable foreign trade. Already some of our manufacturers and exporters have arranged for announcements, but as it is desired that every person seeking export business should be represented in this number, the publishers would be pleased to be advised regarding the space desired at as early a date as convenient. Full particulars as to rates will be gladly furnished upon request.

TIMBER REQUIREMENTS OF GREAT BRITAIN.

IT has sometimes been said that the British timber market has been exploited by Canadians to its full extent, and even that the trade has been overdone. In respect to square timber and pine and spruce deals this may in a measure be true, but there are undisputable evidences that Canada will supply in the near future a much greater proportion of the timber reqirements of Great Britain than she does at the present time. The vast manufacturing industries of our Mother country are constantly calling for a class of timber products of which Canada has as yet supplied but a small proportion. This class of wood products may be termed specialties, and it is in this direction that we anticipate the most noticeable expansion in our timber trade.

The publishers of this journal are constantly in receipt of communications from British importers asking for the names and addresses of manufacturers of certain stock. The stock enquired for has included pine doors and mouldings, spruce mouldings, box shooks, maple blocks for flooring purposes, veneers, handle stock, mangle roller stock, wood powder, basswood boards, birch spool wood, pulp wood, butchers' skewers, golf sticks, wooden mantel pieces, plasterers' laths, pit props for mining purposes, railway sleepers, birch and maple dowels, barrel staves, etc. These are sufficient to indicate the character of the timber products for which there is a market in Great Britain, and which the importers and consumers are desirous of purchasing in Canada.

It is not unusual for a correspondent to state that he has been obtaining his stock from other countries, perhaps Scandanavia or the United States, but that he now desires for some reason to establish a connection in Canada. In the case of doors, it is said that those of Canadian manufacture are of finer appearance and comparatively cheaper in price than the Scandinavian doors.

Canadian manufacturers cannot expect that British importers will put forth more than a reasonable effort to establish a connection in this country. If they are not met with some encouragement, and if some desire is not shown on the part of our manufacturers to secure their trade, they will find other sources of supply.

Granting that there is a market in Great Britain for a greater quantity of Canadian timber products, the question naturally arises as to the most feasible and productive method to be adopted to secure this trade. In the past our export trade in timber products has been almost entirely controlled by a few large shippers on this side, who have their agents in Great Britain or who sell to importers there. The result of this course has been that the number of profits to be taken by middlemen has reduced almost to a minimum the price which the manufacturer has received for his stock. The present tendency is towards a closer business connection between the manufacturer and the consumer. Manufacturers are being solicited to ship direct to agents or importers in Great Britain, and in our opinion this is the course which the trade will eventually take. There are in Great Britain many responsible wood brokers who are prepared to handle the stock of Canadian shippers, and in whose honesty and integrity entire confidence may be placed. These brokers are familiar with the market requirements, and should be in a position to place stock to the best possible advantage. Frequently they make advances on the shipments, and guarantee accounts in case of the failure of the buyer. Under these circumstances the interests of shippers would be protected. At the same time, every shipper of stock to the British market should take the precaution of not being misled by some unreliable party.

GRANTING OF PULP WOOD LICENSES.

THE interest that has been shown in the question of dealing with the large but scattered pulp wood resources of the territory in New Ontario seems to call for some remarks on the subject. The situation is one that presented many difficulties and called for the initiation of a new policy radically different from that so successfully adopted in dealing with the pine timber. The opposition to the Government measures—so far as it is honest and not factious—seems to be largely due to the mistaken conception that some similarity of conditions between the two cases exists, so that the system which has been found satisfactory in disposing of the pine should form a precedent for the sale of spruce. The facts brought out in the controversy show that there is little ground for such an assumption.

There are two leading points of difference which are sufficient to indicate the need for an entirely different system of treating spruce producing lands to that which obtains in the case of pine forests. Firstly, while the pine grows thickly over very extensive areas, so that its value is easily estimated within given limits, and it is readily accessible to the operator, the spruce, on the other hand, is sparsely scattered

over a wide extent of country, so that if a limit of any marketable value were set apart, settlement would need to be excluded from an extensive district in order to secure a comparatively trifling revenue. Secondly, pine can be manufactured into lumber with a small outlay of capital. The utilization of pulp wood, however, requires a far more costly and elaborate process. If the raw material is to be worked up in the province, encouragement must be given to extensive capitalists to undertake the erection of large pulp and paper factories involving the expenditure of hundreds of thousands of dollars. It would obviously be impossible to induce investors to risk such amounts in the enterprise unless they were assured in advance of an adequate supply of raw material, and such assurances can only be given by definite agreements such as those which have been made with several companies. The proposal that the spruce should be put up to competition and sold to the highest bidder, as is done with pine, is, we believe, impracticable. If coupled with the restriction that the raw material should be worked up in the province, no one could be found to buy on such terms. It would seem that the only way in which the pulp wood could be exploited on the principle that the manufacture of the finished article is to be done within our own borders is along the line of the plan the Ontario Government are persuing.

Bearing in mind this essential feature of the case, that in order to secure the manufacture of pulp wood into pulp and paper here, it is absolutely necessary to find capitalists ready to sink large sums in buildings and machinery on the faith of obtaining sufficient and constant supplies of raw material for a term long enough to secure the financial success of the enterprise, it is difficult to see how the interests of the public could have been much more thoroughly safeguarded than has been done in the agrement with the Spanish River Pulp Company. The company guarantee to expend $500,000 in the erection of a pulp mill, to manufacture 20,000 tons of pulp annually, and to employ on an average 250 hands. In return they get absolutely nothing but the certainty of being able to purchase their raw material for twenty-one years at a price to be fixed by the government. The agreement is far more stringent than the previous contracts under which the Sault Ste Marie and Sturgeon Falls companies are operating, as it limits the kinds of wood to be cut to spruce, jack pine and poplar, and is subject to any increase of dues which may in future be imposed. It is not likely to interfere in any respect with the settlement of the country, as it distinctly specifies that the lands covered by the concession are to remain open for settlers, who upon taking up a lot become the owners of the pulp wood as well as the other timber. All possible objections in short of the character usually raised against the granting of large areas or special privileges to companies appear to have been considered in advance and met by the terms of the agreement.

In view of what has already been accomplished at Sault Ste. Marie and at Sturgeon Falls under agreements of a similar character, though less favorable to the public than the Spanish River contract; having regard to the lavish expenditure of capital, the rapid development of the country at these points, the influx of population, the growing markets afforded to the farmers for their produce and to the manufacturers of other parts for their wares, the action of the government must be regarded with some approval. Everyone interested in national development is practically agreed as to the proposition that the national resources of the country should be utilized as speedily as may be, and that Canadians should receive the full benefit of the resultant industries by carrying on the manufacturing processes within our own boundary. Rarely has a policy enunciated by a provincial administration been more enthusiastically received than the departure in this direction. But had the principle that spruce should not be disposed of otherwise than by public competition, regardless of the practical difficulties in the way of adopting that system, been sanctioned by the Legislature, we fear it would have been a serious check to the movement for industrial expansion, and would have thwarted and delayed for years the opening up and development of New Ontario, so largely dependent upon the growth of the pulp industry. It would have been an unfortunate thing indeed for the country had the government been compelled, out of deference to a misapplied precedent, to sell off the pulp timber in lots to small operators with permission to ship it as raw material abroad owing to the lack of manufacturing facilities within the province. The system of disposing of pulp wood adopted is in fact simply the logical conclusion and the corollary of the general policy of encouraging home manufacture, and the government is to be commended for the firmness with which they have adhered to the principle, no less than for the foresight and fidelity exhibited in providing against any possible abuse of the privileges granted.

A HANDY HAMMERING BENCH.

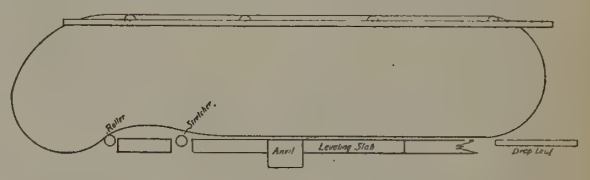
By J. S. Philipps.

I see so many inconveniently arranged hammering benches, or at least such as I would not wish to work at myself, that I will give you the "plans and specifications" of what, to me, is the handiest bench I have seen. We are all so prone to do things as we were taught to do them that it is a continual bar to our advancement. I have never gone into a strange mill where the hammering bench was such as I could work at any longer than I had to, and then it was a question of tearing down and building over at the first opportunity, even if it had to be done on Sunday. Bet then, quite likely, those following me had to go through the same process again and make it over to suit them. There is no accounting for tastes.

First, I place center of anvil seven feet from left-hand end of bench and the rolls of stretcher four feet, center to the left of anvil, leaving three feet of bench yet to the left of rolls. Then I place the leveling slab immediately to the right and against the anvil. Instead of the stationary brackets usually used overhead for handling the saw around or over above bench, which I always regarded as very inconvenient, I use the following: I take two strips ot wood about 1x2½ inches, of sufficient length, and suspend them parallel with the bench, at the proper height, by wooden hangers or cleats, from the ceiling, and about sixteen inches apart.

About even with the left-hand end of the bench I make the necessary gain in each of those strips to receive the ⅜-inch iron pins which are driven into the ends of a light wooden roller about three inches diameter and sixteen inches long. At the right-hand end of those strips I make a series of those gains, say four or six inches apart, to receive another roller. Then in the intervening space, for one or two more according to length of saw. To raise the saw up on them, instead of having to raise and throw the whole upper half of saw together, I simply take out one of the rollers at a time, the center ones first, the outside ones last. In letting saw down I reverse the operation, taking the outside rollers out first. Some use the above, as I know, but there are many who know of none but the bracket system.

Now fit a roller of about three inches diameter to the extreme left end of bench. Put your saw on rollers overhead and on the bench, ready, let us say, to work on the inside of saw. Instead of having the bottom half of saw rest on bench full length, as is usual, roll the upper part to your left until the end projects over the end of bench and sags down something as shown in the accompanying sketch. Drop your right-hand



top roller into one of the series of gains I referred to, to hold the saw from running any farther to the left than is desirable.

You will now notice that the saw is resting heavily on the little roller fitted on to the left-hand end of the bench, and raises up off the bench three or four feet immediately to the right, yet lies level on the anvil and for a few feet to the left of it. There are a number of very marked advantages in this arrangement of the bench, among which I will mention: First, when you are working at the anvil and raise the saw with your left hand to try for tension, you will find it much more easily raised than when it is lying full length on the bench—an advantage you will most assuredly appreciate when working on heavy saws 12 to 14 inches. Second, when you take hold of the saw while still standing at the anvil, to push it to the right or forward, you will find so great a portion of saw resting on that little roller to the left, and so small a portion comparatively on the bench to the right, that it will move so much easier; another decided advantage on heavy saws. Third, if you have just sufficient overhang at left end of bench, as shown and described, when you push the bottom to the right or forward, the top of the saw will of itself roll to the left without your putting a hand to it. The above position of the anvil will also be found convenient when working on the out or log side of the saw.

Still another improvement that can be made on those over-head rollers, if the ceiiing is high enough, is to fit them in sliding frames, which can be counterbalanced. Whatever of good there may be in the above, I shall be pleased to learn of other conveniences in this line.—The Wood-Worker.

EXTEND YOUR TRADE.

If you are desirous of finding a market for your timber products you should place an announcement in the forthcoming Export Number of this journal, to be published about midsummer. Write the publishers to-day for rates.

LUMBERING OPERATIONS IN NEW BRUNSWICK.

[Correspondence of the CANADA LUMBERMAN.]

As the winter operations of the lumbermen of New Brunswick are about over, we can get a fairly correct idea of the actual as compared with the estimated output of deals and logs for the present season. The logs in most cases have yet to be stream-driven to the mills, and the contingencies arisng therefrom will, to some extent, naturally affect the final results.

The portable saw mills operated during the winter sawing deals have been generally successful. This class of mills is practically confined to the counties bordering on the Bay of Fundy, and while preparations of a very considerable extent had been made during the fall and early part of the winter, operations were much interfered with owing to the absence of snow, and the prospect up to the middle of February was not reassuring. However, from that time to the 1st of April winter, with its accompaniment of snow, held with much of its old time force, resulting in the earlier expectations of the portable mill men being fairly well realized.

The lumber operators on the Miramichi and north to the Restigouche had a long winter, with about the right depth of snow until March came in, when it was a greater depth than usual, necessitating a considerable expense in shovelling out the roads to get logs from the woods to the landings on the rivers. It is reported that a much larger quantity of logs than usual will have to lay over a year on this account, but that the average annual output will be obtained.

The mills will not begin operations generally before between the 20th of May and 1st of June, owing to there being no logs to saw until the new stock arrives. It is not often that there is such a clean-up of logs in the booms as was the case last year. Millwrights and engineers are busy putting the mills in order and making improvements where necessary, and the usual quickening of the business pulse is seen and felt incident to the return of spring after the long and comparatively dull winter season.

J. & C. Hickman, general merchants, Dorchester, N. B., last year acquired the valuable timber property, mills and town property of Hazen Copp, Port Elgin, N.B. The mills consist of a grist and a rotary saw mill. The latter they have entirely renewed, excepting the power, which is steam of 100 h.p. They have installed a modern rotary mill, with the latest improvements as to haul-up and means of handling lumber through the mill. Lumber that requires sizing or dressing goes direct to the planing mills. The shipping facilities are very complete, the lumber going from either the saw or planing mill direct to car, vessel or yard as required. The firm are taking out about four million feet of spruce logs this season. The length of drive is from fifteen to twenty miles.

Beharriel & Pelton purchased the mill and timber lands of Ogden & Hicks at Midgic, on the N.B. & P.E.I. R.R., and are operating about three million feet this season. T. B. Calhoun, Calhouns, N. B., has three million feet of spruce for his season's operation. He also had a large portable mill sawing during the winter a few miles back from the I.C.R. near Memramcook. The Calhoun Lumber Company, Gaspe, Que., of which Mr. Calhoun is the general manager, are putting in four million feet of spruce logs at their mill for the season's cut. L. DeB. Lockhart, Humphrey's Mills, has two million feet of spruce, hemlock and pine assured. Lockhart & Lowther, Notre Dame, N.B., are about beginning operations for the season. They have two million feet.

J. D. Irving, Buctouche, N.B., is getting four million feet of spruce and hemlock. He cut about six hundred thousand feet of hardwood and spruce with his portable mill during the winter, shipping from Adamsville, on the I.C.R. M. McLaughlan, Buctouche as two million feet stocked to saw in his rotary mill. He also has a 50 barrel flour mill, which has induced the farmers in the surrounding country to go quite extensively into the raising of wheat, some farmers supplying themselves and having a surplus for sale.

J. & T. Jardine, Kingston, N.B., will saw in their band mill about seven million feet, spruce and hemlock mainly, and have purchased the cut of several small mills in the vicinity which will give them about twelve million feet of a total output six million feet, of which will be English deals, the remainder being for United States and local markets. This firm have about four million feet of old logs ready to operate on as soon as the ice is clear. They have added a new boiler to their plant this winter. The Messrs. Jardine are also extensive farmers and stock raisers, horses and cattle being their specialty in the live stock line, and are also general merchants and ship owners.

R. O'Leary, Richibucto, N.B., has a first-class rotary saw mill. He is taking out four million feet to supply it this season. He saws principally English deals. Mr. O'Leary is also a general merchant and one of the largest operators in salmon, smelts and lobsters in the Maritime provinces. McLeod & Atkinson, Kouchibognac, have a gang saw mill, and have a stock of one and a half million feet for this season. Geo. Jardine, Kouchibognac, has a rotary saw mill and shingle machine. His output for the season will be about six hundred thousand feet, spruce, hemlock and hardwood. The Bonny River Lumber Company, Bonny River, N.B., will take out for the season's cut about seven million feet of spruce for English deals and enough cedar to supply two shingle machines during the season. They will also manufacture lath, etc. C. M. Bostwick & Co., whose mills are at Salmon River, N.B., have begun sawing and will have five million feet of stock. C. T. White's stock of logs in New Brunswick and Nova Scotia will total nine million feet, Point Wolfe furnishing about two-thirds of the quantity. C. & J. Prescott, Albert, N.B., have stocked fully three million feet and have begun sawing.

G.D. Prescott, West River, has one and a half million feet of spruce logs.

H.E. Graves, Harvey Bank, has two and a quarter million feet ready to begin sawing on. He will employ portable mills.

McLellan Bros., Albert, have one million feet. They put in a new portable saw mill, which has been doing splendid work for a couple of months. McLellan & Turner, Riverside, N.B., have at their mill one million feet of logs and are now sawing them—the greater part is spruce, remainder hardwood.

W. J. Carnwath, Riverside, during the winter and early spring, will saw two million feet in his portable saw mill. J. Lewis & Co., (John L. Pecik, Hillsboro, N.B., manager) have a portable mill sawing back of Hopewell Corner, in which they will cut two million feet. J.W. Smith, Hopewell Hill, N.B., are finishing up one and a half million feet in their portable mill.

W. N. Duffy, Hillsboro, N.B., has a portable saw mill in which he has sawn one million feet during the winter, and with stock of logs on hand and some summer logging which he will do, will cut another million feet during the season. He saws English deals. Mr. Duffy is interested in a saw mill and lumber operations on the Liverpool river, eight miles above Milton, in Nova Scotia, and also does a general merchandise business at Hillsboro, N.B. Mr. Dryden, of the firm of Dryden & Gibson, Hillsboro, N.B., has carried on the lumber business for several years in different parts of the county of Albert. He is operating in five places this season and getting out three million feet of deals, which was cut by portable mills engaged for the purpose. The firm do a large business in agricultural implements, carriages, sleighs, etc., also in oats, feed and groceries. John Fawnes, Havelock, N.B., will succeed in getting out the quantity estimated earlier in the season, viz., one and a half million feet.

Mill owners and operators on the Miramichi have concluded their winter's cut and have got about all to the landings. The mills will be a little later starting than usual, as all the old logs were sawn last fall, and will have to wait for new stock. Adams, Burns & Co., Bathurst, N.B., expect a fair season's sawing, although not to the full capacity of their mill. Sumner Company, Bathurst, have six to seven million feet of spruce on their landings, and besides have cedar enough to keep four shingle machines running the whole season. They also ran a winter mill sawing shingles at Russell Siding on the I.C.R. John Culligan, Belledune, got out four million feet of spruce and cedar—about half of each—and ran a shingle mill during the winter, and also cut a large quantity of spool wood stock.

Geo. Montgomery, Dalhousie, has two million feet of spruce and enough cedar to supply two shingle machines. His mill is a rotary, with steam power. Geo. Moffat, Dalhousie, has five million feet of spruce and will begin sawing on the 1st of May. Mr. Moffat's mill is a live gang and rotary, with lath machines and re-saw, and is reputed to be one of the fastest cutting mills on the north shore of New Brunswick. Dalhousie is a good shipping port and a large part of the English deals sawn along the line of the I.C.R. north as far as Sayabec is shipped from there.

Wm. Currie & Co., Eel River, have a large shingle and saw mill and will saw this season one million feet of spruce, and besides stock cedar for six shingle machines.

David Richards, Campbellton, is the largest spruce operator in northern New Brunswick. His cut of spruce will run close on fifteen million feet this season, he also takes out a considerable quantity of cedar. He has a very fine mill built on the site of one burnt two years ago, in which he has a rotary stock gang, three shingle machines, also clapboard and lath machines and planer, the whole mill being strictly modern and up-to-date. Kilgour Shives, Campbellton, will saw from five to six million feet of spruce deals this season and also run ten shingle machines. There is a complete box factory convenient to the saw mill, with dry house of the latest pattern. In the sawing season the cuttings are utilized here, while in the winter a large quantity of suitable logs can be procured, so the box factory runs continously. Mr. Shives is of an inventive turn of mind, and I have no doubt that if he was not so thoroughly immersed in the shingle and lumber business as he is, his attention would be given to the planning of new devices and improvements in machinery for working up lumber. A. E. Alexander, Campbellton, is also a large lumber operator and mill owner. His principal lumber business is in the manufacture of shingles, having thirteen shingle machines, all of which he runs during the summer season and also from two to four machines all winter. He also has a rotary saw mill in which he cuts about one million feet of spruce deals and timber. Mr. Alexander is also the largest general merchant in the town and holds the position of Mayor.

J.B. Champion, of Campbellton, has purchased the Reid mill at Dalhousie and is putting it in order for the season's cut. The mill contains a rotary saw mill and two shingle machines, besides a complete plant for sash and door making and general building lumber.

J. & D. A. Harquail and Curry Bros., of Campbellton, each have a sash and door factory, and are doing a considerable business supplying the building trade.

The David Inglis Company, Limited, Flatland, N.B., operate a shingle mill. This property was formerly owned and operated by F. Stancliffe, of Montreal. Some two years ago the mill was burned, when Mr. Inglis purchased the property and rebuilt the mill. The company handle the output of their mill—about twenty million shingles annually—without the intervention of middlemen or commission agents, as some members of the company are located at Springfield, Mass., and are large dealers in shingles and lumber. The mill is kept running steadily day and night, summer and winter. Mr. David Inglis is the resident manager, and an inspection of the mill and surroundings, with the care taken in manufacturing the best class of goods, shows that he is entirely competent for the position.

W. J. P.

CANADA'S COMMERCIAL AGENTS.

FOLLOWING is the official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries :

J. S. Larke, Sydney, N.S.W., agent for Australasia.

G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.

Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.

D. M. Rennie, Buenos Ayres, Argentine Republic agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders :

J. G. Colmer, 17 Victoria street, London, S.W., England.

Thomas Moffat, 16 Church street, Cape Town, South Africa.

G. H. Mitchell, 15 Water street, Liverpool, England.

H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.

Harrison Watson, Curator, Imperial Institute, London, England.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES AND OTHER FOREIGN MARKETS.

VOL. VI. TORONTO, ONT., MAY 2, 1900 No. 15.

CANADA LUMBERMAN

PUBLISHED BY

The C. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE.—2,000 arpents Boardwood Limits near St. Hilaire Station, only 22 miles from Montreal—Red Oak, Maple, Beech. B. F. CAMPBELL, St. Hilaire Station, Que.

JOHN HARRISON & SONS CO., LTD., OWEN Sound, Ont., offer the following specials: 5 cars No. 1 White Pine Lath and 6,000 Cedar Posts, 8, 9 and 12 feet long.

DECKING FOR SALE.

58 M FEET 3x3 25 TO 35 FEET B. C. PINE Decking, edge grain, clear stock. THE BRADLEY COMPANY, Hamilton, Ont.

TO CANADIAN MANUFACTURERS.

BRITISH FIRM OF TIMBER IMPORTERS desire shipments from Canada of large quantities of doors and mouldings. Manufacturers are asked to send particulars, stating the quantity they can supply, to BOX 30, CANADA LUMBERMAN.

FOR SALE

Large Tract of Timber

THE PROPERTY OF

The Canadian Land and Immigration Company of Haliburton, (Limited).

This company has a larger tract of well timbered land about 125 miles north-east of Toronto. There are large quantities of Cedar, Hemlock, Spruce, Balsam, Basswood, Cherry Birch, Maple also considerable Pine, Elm and Ash on this tract. It is well served by two railroads, one of which is about to be extended through the centre of the property. The Company are prepared to sell this timber in blocks ranging from 5,000 to 10 000 acres, or more if desired.

There are several good mill sites on the property. This would be a good opportunity for parties who are at present cut out and are looking for a new location.

Maps and plans and further particulars can be had by applying to

W. H. LOCKHART GORDON,
Managing Director,
157 Bay Street, Toronto.

HAVE YOU ANY STOCK WHICH YOU WISH to sell? If so, make the fact known to probable buyers by placing an advertisement in this department. Address, CANADA LUMBERMAN, Toronto.

WANTED—Hard Maple Logs in lots of 30 M ft. board measure, and upwards, to be sawn to order; whole product taken except culls, a large percentage green. Address, R. E. KINSMAN, Hamilton.

FOR SALE.

SOME MAPLE AND ELM LUMBER; ALSO 45 horse power Steam Mill, cheap; Foundry and Machine Shop to rent, very reasonable. J. C. SCRIPTURE, Colborne, Ont.

BOOKKEEPER WANTED.

COMPETENT BOOKKEEPER; ONE CONversant with the lumber business. Apply giving age, qualifications and copy of references. Box 18, CANADA LUMBERMAN.

Limits For Sale

TOWNSHIP OF ARMAND, P.Q.

About 42 square miles in above Township, well timbered and well watered. Logs can be hauled partly to Temiscouata Railway, but the greater part can be driven to advantage into the St. John River. For particulars apply to

H. M. PRICE & CO,
Quebec.

CURRENT TRADE CONDITIONS.

ONTARIO.

The topic of conversation among lumbermen is the fire at the Chaudiere, which destroyed a vast quantity of lumber and several mills and yards. It is difficult to estimate the effect of taking out of the market upwards of 150,000,000 feet of lumber. Much of this stock was sold for shipment to England and the United States, and the remainder was intended to supply the local demand. Other sources of supply will have to be found, and the result will likely be a decided stiffening of prices. In addition to the lumber burned, mills were destroyed, and thus the market will be relieved of a portion of the intended cut of these mills. Some of the logs will probably be manufactured by other mills, but the total cut of the Ottawa Valley for the season is certain to be considerably reduced by the fire. The lumber was dry stock, which at the present time is very scarce. In our opinion, there will be a general advance in the price of white pine, this advance to hold until the dry stock of this season's manufacture is ready for shipment, which will not be until midsummer at least. At the present time contracts for new stock are being entered into very freely. There is an exceptionally good demand for export lumber, both of pine and hardwood.

QUEBEC AND NEW BRUNSWICK.

Some of the Montreal and Quebec shippers were affected by the recent fire at the Chaudiere, and as a result export trade is somewhat unsettled. The destruction of such a large quantity of lumber may possibly diminish the shipments from the St. Lawrence. The Quebec timber market is quite firm, square and waney pine showing a tendency to advance in price. Square pine, 40 to 45 feet average, is quoted at 30 to 36 cents, and Ottawa waney, 19 to 21 inch average, from 38 to 47 cents. In New Brunswick and Nova Scotia the outlook for the season's trade is good, although it is feared that a considerable quantity of logs will be hung up in the streams. In Nova Scotia, River Plate specifications are selling about $1.50 per thousand higher than last year, as the cut in some districts will be about 50 per cent. short of last season, on account of a scarcity of logs. Several vessels have been chartered to load at Yarmouth for Buenos Ayres.

UNITED STATES.

The peculiar position of the United States lumber market renders it difficult to give a review setting forth the actual conditions. It cannot be disputed that trade is by no means as active as it should be, although there has been some improvement during April. Manufacturers in the west are holding firmly to prices, but as it is admitted that the present high values cannot rule throughout the season, some dealers have concluded that the time has come to reduce their prices. The white pine dealers of Buffalo held a meeting last week to discuss the price question, at which it was decided to hold to the present list. In the Albany market 2½ and 3 inch uppers have been reduced to $65, 4 inch uppers to $70, 2½ inch selects to $55, 2½ inch fine common to $45 to $50, 1 by 10 and 12 shippers to $22, 1 by 12 No. 1 barn to $28, and 1 by 10 and 12 No. 2 barn to $24. From Bay City and Saginaw comes the report that prices are slightly weaker, 1 to 2 inch uppers selling at $54, and selects 8 inches and up at $49. A reduction of about $1 per thousand has also been made in No. 1 cuts, barn boards, inch box and shaky clear stock. The best grade of white pine shingles is quoted at Saginaw at $4.15, and C. B. shingles at $3.15. Cedar is worth $3.20 and $2.20 respectively, and lath is quoted at $4 and $4.50.

The spruce market has recovered as a result of a meeting of spruce manufacturers held at Bangor, Maine, on April 24th, at which it was agreed not to ship any lumber on the market, but to sell all cargoes before loading. A price list, published elsewhere, was also adopted.

Although no break in hardwood prices can be reported, the market is somewhat weaker, particularly for the class of hardwoods used in building operations. For elm, basswood, and maple for manufacturing purposes the demand is keeping up. At Boston maple sells at $30 for 1½ inch, $31 for 2 inch, and $34 for 2½ and 3 inch.

FOREIGN.

There is still a feeling of uneasiness in the British market, due to the high price of lumber and the consequent decrease in consumption at London and a few of the other leading ports. Inland buyers and builders are buying with the strictest economy, and unless the demand shall improve very considerably, some dealers anticipate lower prices. On the other hand, it is said that at the first sign of renewed trade importers will show a strong desire to contract for the balance of their season's requirements. It is reported that Sweden has 60,000 standards less for first-open-water shipment than last year, and that a limited quantity is expected from Finland. On the east coast of England spruce deals have been sold quite freely, and more enquiries have been made for this class of stock than has been experienced before. Referring to spruce deals, the Timber Trades Journal says that if Canadian producers would try to meet the requirements of the east coast trade by accurate cutting to specifications, there is little doubt but that a footing in those markets could be established, notwithstanding the fact that Atlantic freights and insurances are much greater than from the Baltic. Plasterers' laths are reported to be scarce in the British market, with correspondingly high prices. Birch planks also sell freely. Late advices fron Madrid and Santiago, Chili, state that the demand there for Canadian lumber this season will be quite extensive.

HICKORY SQUARES WANTED.

A British firm write us that they are desirous of purchasing large quantities of hickory squares, 44 in. x 7⅞ in., of perfect quality and cut to exact size. Persons in a position to supply such stock are asked to communicate with this office.

ENQUIRY FOR BLACK WALNUT.

A German firm of timber importers write the CANADA LUMBERMAN that they are in the market for black walnut, and that they can use any quantity in lumber as well as logs. We understand that there is a quantity of black walnut in Western Ontario, and would be pleased to open up correspondence with any person in a position to supply this class of timber.

STOCKS AND PRICES

Chappel Bros., of Tidnish, N.S., have taken out 8,000,000 feet of logs in Hants County the past season.

C. T. White has about 13,000,000 feet of logs ready to cut at his mills at Point Wolfe, Albert county, N. B.

The town of Toronto Junction, Ont., has let to A. H. Clemes the contract to supply 70,000 feet of lumber.

A. & P. White, of Pembroke, Ont., have sold all their season's production of red pine deals and sidings for export to Great Britain.

The Winnipeg city council has accepted the tender of D. E. Sprague for the supply of from 500,000 to 1,500,000 feet of lumber.

The first shore logs have arrived at the Springhill booms, above Fredericton, N. B. Spruce logs are said to be worth from $8 to $8.50 per thousand feet.

Fraser & Co. and Walter & Humberstone have purchased the timber limits of Moore & McDowall, fifty miles up the Saskatchewan river from Edmonton, N. W. T.

S. Gillies & Son, of Ailsa Craig, Ont., took out one and three-quarter million feet of logs last winter. Of this one million feet was soft elm, and the balance rock elm, maple and basswood. They have just finished shipping fifty cars of lumber.

This season the cut of Mohr & Ryan, of Killaloe Station, Ont., will be about 2,000,000 feet, a portion of which has been sold at a considerable advance on last season's prices. The above firm also took out last winter 6,000 telegraph and telephone poles.

It is learned from A. F. Bury Austin, of Montreal, that his stock of lumber which was consumed by the Hull fire last week was fully covered by insurance. He wishes to advise the trade that the fire will not interfere with this season's cut, as arrangements have been made with other mills to manufacture the logs, so that all contracts placed for the new cut will be filled promptly.

THE OTTAWA FIRE AND THE LUMBER MARKET.

(Correspondence of the CANADA LUMBERMAN)

Ottawa's lumber industry, in which was invested millions of dollars, and in which were employed thousands of men, suffered a severe blow by the fire which swept Hull and the western part of Ottawa on Thursday, April 26th. It is estimated that the loss will total $3,000,000 on the lumber destroyed. A leading lumberman states that in the twelve hours in which the flames played havoc in the immense reaches of lumber piles, at least 125,000,000 feet, representing all grades of lumber, were laid low in ashes. Over 2,000 men are temporarily thrown out of employment.

At present it is possible to give but an approximate idea of the individual losses. The heaviest loser is Mr. J. R. Booth, whose lumbering operations have made his name a familiar one on two continents. Mr. Booth's large mill was saved after a prolonged fight, but the greater part of his extensive yards are now nothing but an area of ashes. In his five yards Mr. Booth had at least 80,000,000 feet of lumber, he states, and of this fully 55,000,000 feet were destroyed. This was all valuable lumber, worth at least $18 per M, making the loss almost $1,000,000. All the outbuildings, stables, workshops, etc., at Booth's mill were destroyed, entailing a loss of at least $40,000. Over $60,000 was invested in the fitting up of the five yards. Mr. Booth's handsome private residence was also destroyed, entailing a loss of $60,000. A row of twenty houses belonging to him were also burned. Mr. Booth's total loss will probably be $1,200,000, on which no official insurance estimate can be secured. It is said, however, by responsible parties, to be $550,000.

The loss on the buildings, machinery, finished products and lumber of the E. B. Eddy Company will total nearly $1,500,000. This company lost over 4,000,000 feet of lumber. The loss on finished woodenware, paper, etc., amounted to over $300,000, the stock of matches alone, consisting of 20,000 cases, being valued at $60,000. The insurance on the Eddy property is placed at $400,000. Over 1,200 men are thrown out of employment. The Eddy Company will probably rebuild on a smaller scale, and it will be at least four years before the works assume the proportions attained before the fire.

In the extensive yards of the Export Lumber Company there were piled 45,000,000 feet of lumber, valued at $900,000, all of which was destroyed. This lumber was fully insured.

The Hull Lumber Company was also a heavy loser. Its well equipped mill and yards of lumber, containing at least 10,000,000 feet, rolled skyward in smoke, entailing a loss of $260,000. About 300 men are thrown out of employment as a result of the visit paid by the fire fiend to this industry. With characteristic energy the members of the company promptly decided to commence cutting operations at once, in Bronson & Weston's old mill and in Mason's mill at Hintonburg. As the Hull Lumber Company owns extensive limits, its mill will likely be rebuilt, probably on the old site. The insurance on this firm's property is estimated at about $100,000. As yet, however, the amount of the insurance has not been ascertained, as the insurance papers have not been arranged.

Gilmour & Hughson's well equipped mill and extensive yards at the east end of Hull had a close call, although situated over a mile from the scene of the first fire. As it was over 2,000,000 feet of lumber were consumed. A stern fight, successful in the end, was put up by the mill employees, assisted by 300 lumbermen employed at Bingham's boom farther up the river. Most of the lumber destroyed was the property of English and American firms, and is well insured. The insurance was carried by the Ottawa firms as mentioned above. The English, Canadian and American firms who had bought the lumber were Watson & Todd, Robert Cox & Co., Sharples & Company, Dobell, Beckett & Company and the Standard Oil Company.

It is estimated that nearly two-thirds of the extensive stock of lumber piled in and about Ottawa was swept away. J. Parr's planing mill was also destroyed, entailing a loss of $10,000. Fraser Hamilton's mill was reduced to ashes, loss $7,000; J. Oliver & Son's furniture factory was swept away, loss $10,000; and the Ottawa Specialty Company will have to build anew. The loss in this case was $45,000.

The fire may work a revolution in the lumber industry of Ottawa. It is doubtful whether it will again attain the proportions it had assumed before the fire. The sister cities of Ottawa and Hull depended largely on the lumber industry to support their poorer population which is now thrown on the charity of the public. Many of the knowing ones saw in the recent decline of the Ottawa lumber business the beginning of the end. Others, however, J. R. Booth amongst the mumber, were equally as positive that the lumber industry would for many years to come continue to support a large proportion of the population, and encouraged by their predictions, all are hoping that the lumber industry, re-organized with better protection, will employ even more men than before. It is understood that the Hull Lumber Company, which also suffered from fire a few years ago, intended to enlarge their mill, and it is possible the present mill will be restored on more extensive plans.

Already large gangs of men, under the personal supervision of Mr. J. R. Booth, are engaged repairing platforms, tramways, etc., and the large mill will be in operation in less than a week after the fire. This mill lay in the path of the fire fiend, but it was saved, the success being in a great measure due to the admirable private protective system of sprinklers and waterworks introduced about four years ago by Mr. Booth. During the progress of the fire, the mill was saturated with water inside and out, and the floors were covered with it three inches deep. As a result, though the wind carried the flames in and through the mill and piles in the vicinity, they could not secure a foothold, though stone buildings less than 100 feet away suffered the fate of the other estabments on all sides. Mr. Booth has many sympathizers in his loss, and the entire population of Ottawa and Hull shares his feeling of pride in the escape of his splendidly equipped mills.

It is doubtful whether the shores of the Ottawa river within the limits of the suffering sister cities will ever again loom high and majestic in the long lines of lumber piles. The lumber, while always a source of pride, has by some been looked upon as a source of danger to the closely populated districts, and now that the long expected destruction has been done, the citizens express a firm determination that the lumberman must find his piling ground outside the city gates. The problems confronting the lumberman will be the difficulty of transporting the lumber from the mills, and the still greater difficulty of securing new quarters. The problem will probably be solved in part at least by direct shipment on car and boat from the mill, as is done in many large mills in the United States.

The fire loss cannot be represented by the figures denoting the value of the lumber destroyed. It must be remembered in this connection that a marked shortage in the lumber supply has been caused by the fire, and prices are bound to advance accordingly. For building purposes in Ottawa and Hull little lumber is available, and it is not likely there will be any large shipments to outside points. On the other hand, considerable lumber will have to be secured from other mills. The local market, for the present at least, is bound to be unsettled, and the disposal of the coming cut and the price thereof is a matter of conjecture.

OTTAWA, April 30th, 1900.

MEETING OF SPRUCE MANUFACTURERS.

At a meeting of eastern spruce manufacturers held at Bangor, Maine, last week, an association was formed called the Eastern Lumber Manufacturers' Association, and the following scale of prices adopted: 10 and 12 inch dimensions per M, $20; 3 by 9 inch dimensions, $19; 8 inch and under dimension, $18; 10 and 12 inch random lengths, 10 feet and up, $18; special bills, 24 and 25 feet, 10 and 12 inch, $21; random, 3 by 9, $18; special bills, 24 and 25 feet, 3 by 9, $20; 2 by 3, 2 by 4, 2 by 5, 2 by 6, 2 by 7, and 3 by 4 inches, 10 feet and up, random, $16; 2 by 9, 10 feet and up, random, $17 50. All other random lengths, 10 feet and up long, 8 inches and under wide, $16.50.

The existing scale of prices adopted March 14 by the manufacturers' association for rail shipments to Boston points, was adopted by this association for shipments to Boston points by water; terms on Boston shipments, the usual terms, viz., settlement in thirty days from date of delivery.

It was further agreed not to ship any lumber on the market. All lumber is to be shipped on orders only and sold before loaded.

It was reported that a committee for each river made a canvas of the situation in their respective districts to ascertain the amount of old logs and lumber now on hand and the amount of new logs that will be available for the supply of saw mills this season, with the following result:

Old logs and lumber—Kennebec river, 5,000,000 old logs; 1,000,000 old lumber. St. John river, 6,500,000 old logs; 4,000,000 old lumber. Penobscot river, 19,500,000 old logs; 4,000,000 old lumber. Total, 31,000,000 feet old logs; 9,000,000 feet old lumber.

New logs, available some time in June and later, providing the drives are clean, for manufacture into lumber for water shipment—Kennebec river, 40,000,000; Penobscot river, 55,000,000; St. John river (American logs), 86,000,000. Total, 181,000,000.

Add to this 15,000,000 of Ashland Mfg. Co.'s output of 28,000,000 feet of lumber, to be shipped by water from Bangor, balance going by rail, and the grand total available, under favorable driving conditions, for shipment by water, is 196,000,000 feet of spruce, the estimates not including pine or hemlock, or pulp logs.

This shows a shortage of spruce, as compared with the average of the past five years, approximating 25 per cent.

The steamer Ardova has been chartered to carry a cargo of deals in June from St. John, N.B., to a British port. The bark Dilbhur has been fixed to load deals at same port for Barcelona, Spain, at 63s 9d.

ENQUIRIES FOR WOOD PRODUCTS.

The following were among the enquiries relating to Canadian trade recently received at the office of the High Commissioner for Canada in London, Eng.:

28. The names of Canadian firms making "3-ply" hardwood (i. e., one thick and two thin veneers cemented together) are asked for.

29. The same enquirer wishes to correspond with Canadian lumber merchants who can sell large quantities of spruce-wood boxes, planed and unplaned, cut to size and packed in bales.

Canadian manufacturers may open up correspondence with any of the firms making the above enquiries by addressing a letter to the publishers of the CANADA LUMBERMAN. When writing refer to the number of the enquiry.

The schooner Joseph Hay has been chartered to load lumber at Belleveau's Cove or Weymouth Bridge, N.S., for Cuba, at $7.

For 25 years Messrs. C. F. Denny, Frances D. Mott and James Dickson have constituted the firm of Denny, Mott & Dickson, timber importers, London, Eng. On March 31st last the business of the firm was transferred to a new company to be known as Denny, Mott & Dickson, Limited. Mr. C. F. Denny becomes chairman of the company, Mr. F. D. Mott vice-chairman, and Mr. James Dickson general managing director, while Messrs. M.S. Allan, Frank D. Mott, J. P. Dickson and Charles E. Denny, complete the board of directors.

UP THE TOBIQUE RIVER.

[By a Travelling Correspondent.]

In reviewing the lumbering interests of the St. John river, in New Brunswick, prominence must be given to the work done upon one of its most important tributaries, the Tobique. Of the many streams and rivers flowing into the St. John, this river drains by far the greatest area of all.

The Tobique river proper, which flows into the St. John about 190 miles from its mouth, passes through the centre of Victoria county, and is just 60 miles in length, branching then into the right and left hand branches, themselves streams of good length, which draw their head waters from Northumberland and Restigouche counties respectively. It is a stream well fitted for driving and rafting; a peaceful stream, without falls or rapids to speak of, with the exception, perhaps, of its famous narrows, two miles from its mouth. There the banks contract and transform to perpendicular walls of rock of great height, at the base of which the stream drives through with great velocity. All of the brooks and streams flowing into the Tobique are operated upon by lumbermen, and have been for years, with slight diminution in their lumbering value.

The Wapskehegan and Gulquac, the Odell and Otellock, Three Brooks and Sisson Rivers all contribute largely to the output of logs. At present the greatest output, in fact more than half of the total Tobique timber, is cut on the left hand branch and on the Sisson branch. Nearly all the rest comes from the Mamozekal, Gulquac and Serpentine.

The Tobique river is well settled for its whole length, the first thirty miles containing some flourishing districts with splendid farming lands. Rily Brook is the furthest settlement on the river, and is a flourishing little spot in a beautiful location. There are numbers of islands in the stream, some of which are covered entirely with the finest of ash trees of great size. One of these, Long Island, thirty miles up, is now being denuded of its growth, which is close and heavy, for the sole purpose of cultivation, there seeming to be, unfortunately, no paying demand for this lumber. In the valleys of the Tobique and its branches spruce and hemlock predominate. On their upper reaches there is much white birch. The poplar is not seen to much extent. On the high lands and ridges the growth of maple and birch is large and heavy.

The location for pulp mills could not be better than on the Tobique, and its openings for the manufacture of its own lumber are yet barely discovered. For years the highway up the river has been one of the greatest portages in the province, and the portaging and toting in fall and winter has been one of the greatest boons to the farmers. Now that a railway, a branch of the C. P. R., runs up the river for 28 miles, much of this business has been largely reduced, but from the railway's terminus the transportation of supplies still depends upon the teaming.

One of the prime objects in the building of the railway was the development and shipment of gypsum from the place now known as Plaster Rock, the terminus of the road. Gypsum of the finest grade exists at this point in inexhaustible quantities, its red and white cliffs stretching in great height for over a mile along the river banks. A large plaster mill with improved machinery and good capacity has been erected, but its shipments have so far not been as great as anticipated. Just at this point the waters of the Tobique are now held in restraint by a big dam erected last year by the Tobique Manufacturing Company. They have in view the manufacture of lumber on a large scale, and at some future date the erection of pulp mills. Already it is stated that Tobique real estate has advanced from 40 to 50 per cent. The company is composed of the Hon. John Costigan, the Dominion representative of Victoria and Madawaska counties; Senator Baird, of Andover; Fred Hale, M. P., of Woodstock, N. B; Geo. A. Murchie, of St. Stephen, and James Stratton, of Ottawa. They control all the railway lands on the Tobique and intend eventually to handle all the lumber above the mill's location. The Tobique Manufacturing Co. expect to make a decided profit by shipping their manufactured lumber by rail. The cost of rafting cedar, going through the Fredericton booms and towing to St. John, is about $2.50 per M. With shingles this would be about 25 cents per M, as 100,000 feet in the log is about equal to 10,000,000 shingles. The rate by rail to Boston direct is 40 cents. This would give a difference of 15 cents per thousand in favor of sawing and shipping direct to Boston. So far all the Tobique lumber to speak of has been driven down the river to the booms. If this company carries out its expectations their work will be far reaching in its effects, as it means the transportation by rail of millions which now go by the river route.

R. A. Estey, of Fredericton, has been engaged on the river about ten years, though Jacob Hazen worked for him in this locality for years before that. He will get out about 3,000,000 feet, all of which he will cut in his Fredericton mills.

Geo. Upham will get out 3,000,000 feet from the Wapskehegan, which will also go to his Fredericton mill.

Donald Fraser & Sons, whose mill on the Temiscouata Lake was described in the last issue of The Lumberman, are getting out 1,000,000 feet. They have a big mill in Fredericton which cuts all this lumber.

Beveridge & Sons, whose cut extends partly over Salmon river, are handling 1,000,000 feet. They are located at Andover, at the mouth of the Tobique, where they have a store and do a general business. Their operations extend back 12 years, though the old Beveridge concern did business in the same line and location for as many years longer.

F. D. Sadler, of Perth, across the St. John from Andover, is now opening up in lumber, and has handled about 1,000,000 feet from his Rowena mill, five or six miles up the river. The aggregate cut on the whole river may be placed at about 26,000,000 feet, which is not, however, as great as in some years previous.

At Red Rapids Hilyard's mill is running this summer and will cut a good many shingles. It has also a rotary.

Murphy Bros. have a small clapboard mill on the headwaters of Three Brooks. Carter Edgar has, at the mouth of this stream, a mill which manufactures shingles and spruce. About a half million is being cut on Three Brooks this year. At Burnt Land Brook Martin Watson has a small shingle mill, and at Riley Brook is Topley's shingle mill. He also has a rotary which cuts a few deals. Gosline Bros., in Tilley Settlement, have a shingle mill and get out about 2,000,000 feet annually. Fifteen miles above the mouth of the Tobique the Salmon river enters the St. John. Two miles from its mouth are situated the mills of the Stevens Lumber Co. This mill does a large business and turns out in total about 15,000,000 feet per year. Most of its deals are shipped to St. John, where the firm is now filling a contract for several millions. The equipment is a rotary, a lath machine and six shingle machines. All the lumber manufactured is drawn from the Salmon river. Owing to their location, over two miles from the railway, they are put to an expense of about $30 a day in delivering. The headquarters of the firm are at Stevensville, near Fort Fairfield, Me., about ten miles distant, where they have a larger mill.

Mr. Frank Murchie, manager of the Murchie mill at Edmunston, reports good business and satisfactory prospects. His mill cuts long and short lumber, having an equipment of a rotary, lath, and seven shingle machines. Last year he cut about 17,000,000 shingles, 3,000,000 feet of long lumber and about the same amount of laths. They ship to Boston, via St. Stephen. They also have a large local trade and sell to the Temiscouata and Canadian Pacific railways. The mill has just been opened after an overhauling and the installation of some new machinery. About 60 men are employed. The Murchies operate also a mill at Milltown, Me., which contains two gangs and a planer; a rotary mill about 15 miles from McAdam, N. B.; a mill at Benton, containing gang and rotary, and one at Cabano, Que., having two shingle machines.

Octave Le'Stalien, of St. Rose, in Quebec, near Edmunston, has put another shingle machine in his mill from the factory of Connell Bros., Woodstock, N. B.

The butter factory at St. Bazil, Med. county, has been supplied with about $1,300 worth of machinery, furnished by the Canadian Dairy and Supply Co., Montreal, including a 10 h.p. Leonard engine and boiler.

Jos. Hayes is considering the erection of a mill 15 miles below Edmunston.

Wages for stream drivers are unprecedented, and hundreds of men are being engaged on the Tobique and upper St. John at $2 a day, while $2.50 is given in some places, and occasionally $3 has been offered.

ASSOCIATION OF CEDAR SHINGLE MANUFACTURERS.

Through the initiative of Mr. F E. Blackhall, manager of the J. P. Mowat Estate at Campbellton, N.B., a meeting of shingle manufacturers of New Brunswick, Quebec and Maine was held in Riviere du Loup, Que., on Tuesday, March 20th, for the purpose of considering the formation of an association of shingle manufacturers for the above districts. Mr. Kilgour Shives, of Campbellton, N.B., was appointed president, and Mr. F. E. Blackhall secretary of the association.

There were present the following persons: J. D. Sowerby, Oak Bay, Que.; F. E. Blackhall, Manager Estate J. P. Mowat, Campbellton, N. B.; George Berube, Notre Dame du Lac, Que.; John Mullin, of Fort Kent Milling Co., Fort Kent, Me.; Duncan Sinclair, Fort Kent, Me.; T. H. Phair, Presque Isle, Me.; O. L. Stadig, of Jones & Stadig, St. Francis, Me.; C. V. Carleton, of Rimouski Lumber Co., Rimouski, Que.; J. A. Morrison, Fredericton, N.B.; W. B. Hayes, of Grey & Lawrence Co., River Charlo, N.B.; Jas. Hayes, Notre Dame du Lac, Que.; Donald Fraser, of Donald Fraser & Sons, Fredericton, N.B., and Cabano, Que.; C. B. Champion, of C. B. Champion & Son, Campbellton, N.B.; Thos. Crockett, of Kennedy Island Mill Co., Riviere du Loup, Que.; Kilgour Shives, Campbellton, N.B.; A. E. Alexander, Campbellton, N.B.; John Montgomery, Barrister-at-Law, Campbellton, N.B.

A resolution was adopted fixing the following schedule of minimum prices to go into effect on 1st of April, 1900. Extras $3.25, clears $2.85, 2nd clears $2.35, clear whites $2.25, and extra No. 1 $1.85. These prices are based on Boston rates f.o.b. from the I.C.R., which is 20 cents per 100 pounds, or $54.00 per car billed at 27,000 pounds.

A resolution was also passed that the commission to be allowed wholesale commission men be 5 per cent. on the net amount of sales after freights have been deducted and from Canada duty also.

It was decided to hold another meeting at the same place on April 18th, and the secretary was authorized to prepare in the meantime a constitution and by-laws.

The second meeting was held as above stated, at which the uniform grading of shingles was briefly discussed and steps taken looking to the adoption of such a system. Arrangements were also made to take over the stock of small manufacturers who might feel obliged to sell on a low market. The association has so far been given a hearty reception by the trade, and it is hoped to eventually secure as members nearly every shingle manufacturer in Quebec, New Brunswick and Maine.

"WANTED AND FOR SALE."

Persons having for sale or wishing to purchase a particular lot of lumber, a mill property, timber limits, second hand machinery, etc., in fact, anything pertaining to lumbering operations, will find a buyer or seller, as the case may be, by placing an advertisement in the "Wanted and For Sale Department" of the Canada Lumberman Weekly Edition. Testimonials to the value of this department by those who have given it a trial state that the results of advertisements were frequently better than anticipated. The cost is comparatively small. Mill owners might, with profit to themselves, make use of this method of advertising their stock to a still greater extent.

LOCATING AND CUTTING BELT-HOLES.

There are many practical ways of doing this important work ; important because it is done in "any old way." It is often a source of great annoyance and in many cases considerable expense, as belts are left to run against sharp edges in some places, while in others you can "throw a dog through" the extra space, thereby weakening the floor until it shakes the machine operator equal to the ague.

The sketches in the December Wood-Worker are quite easy of comprehension, but the plan is not so well adapted to planing mills. Most planing mills and sash, door and blind shops are two or more stories high, with line-shaft suspended from second floor joists, the heavier machines on the first floor, the lighter ones on the upper floors, necessitating belt holes. These lighter machines, or most of them, have small counters on floor, with tight and loose pulleys 6 to 10 inches diameter, and as they invariably run at high speed, require a large driver. To get the necessary belt length the distance between

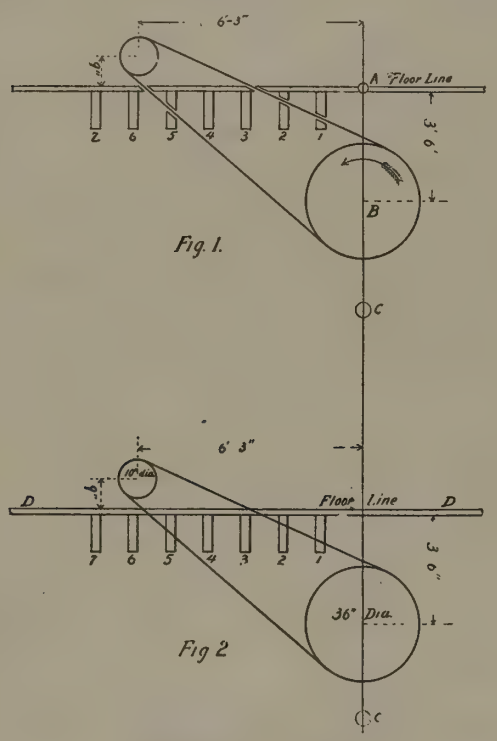

Fig. 1.

Fig 2

CUTTING BELT HOLES.

main and countershafts must be at least 6 to 10 feet. In 99 of every 100 cases the joists run in line with or in same direction as the line shaft, necessitating, in addition to belt holes in floors, cutting away portions of several joists. Frequently girders and beams are butchered up in order to set a machine in a certain position. This should be avoided as far possible, as mill floors are seldom too rigid at best; the millwright or machine man should locate the machine or counter and draw his plans to see that he does not interfere with any girder, and have as little cutting to do as possible. It may be necessary to make several trial positions to get the best results, but it requires very little time to see where belts will run, and it pays in the long run.

To locate belt holes is very simple, as the sketches herewith will show. There are other ways, but none easier or more nearly correct. Fig. 1 shows a 10-inch tight and loose pulley on machine countershaft, centre of which is 9 inches above floor line, with 36-inch driving pulley on lineshaft, center of which is 3 feet 6 inches below floor line ; from center to center of shafts is 6 feet 3 inches.

To find where such a belt will require belt holes we will refer to Fig. 2, which is almost a duplicate of Fig. 1, and should be drawn full size on floor where machine is to set. First, find point A, Fig. 1, by plumbing down main line to countershaft—B, Fig. 1 at two places on mill floor, not less than 8 or 10 feet on each side of driving pulley to be belted. If a new plant, or several machines are to be set, find points A at two extreme ends of main floor. Through points A A thus found, draw an indefinite line, which is line of shaft—C C, Fig. 2. Next draw floor line D D, Fig. 2, at right angles to C C, indefinitely or a little longer than distance to driven pulley.

Circles are now inscribed full size of pulleys, the one for driver, on line C C, same distance below floor line D D, as per measurements. The ones for small pulleys are drawn on a line at right angles to D D, measurements for distance from floor line and centres of shafts to be taken from Fig. 1 or actual measurements of shafts and pulleys being belted. Draw actual position of joists, beams, etc., that come between the two lines of shafting, also full size, and number them on plan, beginning at the one nearest to drive pulley, for future reference. Draw line of belts over pulleys, which will show where cutting is required. By the positions of pulleys in this case, it will be seen that joist No. 1 will require a portion of the lower edge cut away. No. 2 has a mortise through it about 3 inches wide and 2 inches longer than double the width of belt to be used. This will allow for sagging or flapping of top or loose belt. No. 3 also needs a portion of the upper edge cut away. The lower or tight belt only strikes one joist, No. 5 necessitating a mortise about 1½ inches wide, as this belt will not sag as does the top one. The floor holes should have a neat battten mitred around them on top of floor, about ½ by 3 inches.

Often belts are run at half twist through floor holes, and almost invariably cut away one or two joists entirely. In this case it is better to take up a portion of the floor and cut and frame in double headers, for strength, rather than have a weak floor. This is better than setting a post below as some do.—George W. Mershon, in Woodworker.

PERSONAL.

Mr. and Mrs. McLeod, of London, Ont., recently celebrated the fiftieth anniversary of their wedding. Mr. McLeod is manager of the London Lumber Co.

Hon. Peter White, of Pembroke, ex-speaker of the House of Commons, has again been chosen by the Conservatives of North Renfrew to contest that riding at the next Dominion election.

Mr. James Scott, vice-president of the Georgian Bay Lumber Company, is president of the Northern Navigation Company. This latter company has taken over the Beatty steamship line of Sarnia, and has thus secured control of the passenger traffic of the Canadian side of upper lakes, except that part carried by the C.P.R.

Mr. Carl Zeidler, of Toronto, has been appointed freight agent for the several lines of steamships despatched from New York by Messrs. Barber & Company. He has also secured the agency of the Bristol City Line of steamships from New York to Bristol. Mr. Zeidler is therefore in a position to furnish low rates of freight for car or cargo lots.

Mr. J. G. Scott, manager of the Pacific Coast Lumber Company, New Westminster, B.C., was recently on a visit to Ottawa and other eastern cities. Mr. Scott states that the lumber business in British Columbia is flourishing and that the prospects for next year are most encouraging. His company intend erecting a new mill during the coming summer.

THE NEWS.

—Albert Eplett has moved his shingle mill to Victoria Harbor, Ont.

—The Spicer Shingle Mill Co., of Vancouver B. C., has been incorporated.

—Chas. T. Monroe has purchased a shingle mill at Douglastown, N. B.

—The Parry Sound Lumber Co., of Parry Sound, Ont., are building a new tug.

—Rutherford & Keating have purchased a lumber business at La Riviere, Man.

—The Huntsville Lumber Company are building new offices at Huntsville, Ont.

—A new planing mill is being built by G. Murray on the Red River bank, Winnipeg.

—A Mr. Lamb, of Brechin, intends to erect a saw mill at Big Eddy, on Black river.

—It is reported that a sash and door factory will be started at Russell Village, Ont.

—A new boiler has been placed in the saw mill of Charles Stewart at Honora, Ont.

—The Fernie Lumber Co., Limited, Fernie, B. C., has succeeded the Fernie Lumber Co.

—N. J. Raymond, of Meteghan Station, N. S., desires to engage a sawyer for a rotary mill.

—Howard & Moore have purchased the lumber busines of Caughlin Bros., at Cartwright, Man.

—Price Bros. & Company, of Quebec, have commenced the erection of a large saw mill at Rimouski.

—Wood & Colgate have added a circular saw to their shingle mill at Bear Cave, in Cardwell township.

—H. C. Rees, of South Woodslee, Ont., is building an addition to his saw mill and putting in stave machinery.

—Dunlop Bros., of Kintore, Ont., will manufacture chese boxes in connection with their saw milling business.

—The Grand Forks Lumber, Sash & Door Co.,of Grand Forks, B. C., has been incorporated, with a capital of $15,000.

—Shurly & Deitrich have commenced work on their new office building in connection with their saw works at Galt, Ont.

—Machinery is being installed in Cameron & Playfair's new saw mill at Midland and Chew Bros.' new mill at Dollartown.

—The Whaley Lumber Company, of Huntsville, Ont., are refitting their mill and will shortly commence sawing operations.

—W. T. Mason, of the late lumber firm of William Mason & Son, Ottawa, has embarked in the lumber business in Montreal.

—The Fairview Sash & Door Factory Company has dissolved partnership, and in future Edward Cox will carry on the business at Fairview, B. C.

—Dunlop Bros., of Kintore, Ont., are building an addition to their saw mill, which they will use for the manufacture of cheese boxes.

—The C. Beck Manufacturing Company expect to operate their mills at Penetanguisnene, Ont., day and night during the coming season.

—The Aylmer Manufacturing Company, of Aylmer, Ont., has been organized and will manufacture staves, heading, and handle stock.

—The A. T. Wood Co., of Hamilton, are negotiating for the lease of a building in Belleville, Ont, in which to commence the manufacture of bent wood articles.

—A Seattle firm has purchased five million feet of cedar logs in the vicinity of Nanaimo, B. C. These logs will be towed to Seattle and manufactured into shingles and lumber.

—The Boston Wood Rim Company, Limited, of Toronto, has been incorporated, with a capital of $50,000. The directors are : C. H. Hurndall, Walter Seldom, and George Edwards.

—A meeting of the Moodyville Land & Saw Mill Company, of Vancouver, B. C., was held in London, England, last month to receive a statement concerning the business of winding up the company.

—It is definitely announced that Firstbrook Bros., box manufacturers of Toronto, will locate in Midland, they having purchased the factory of the Midland Box Shook

& Planing Mill Company. Alterations and additions will be made to the buildings and plant.

—At the annual meeting of the Tobique River Driving Co., held last month, directors were elected as follows: Henry Hilyard, George D. Murchie, G.W. Upham, R. A. Estey and J. E. McCollum.

—Judge McDougall last month gave judgment for $94.-69 for the plaintiff in the action of the S. I. Wilson Lumber Company against Solomon Clark and William J. Thomson, of Peterborough, on a promissory note.

—The Edmund Hall Lumber Company have completed arrangements to build their proposed saw mill at Sarnia, Ont. The mill will be built on a pile foundation, and a tramway will be constructed across the bay to Sand Point. The annual capacity of the mill will be about 20,000,000 feet of lumber.

—The timber limits in New Brunswick owned by the late Hugh McLean, and situated on the Salmon river, are being offered for sale by the trustees. The limits comprise an area of about 200 square miles, and with them there will be sold the new gang saw mill, situated at Chipman, in Queen's county.

—The large planing mill of Brown & Rutherford, at Winnipeg, Man., which contained much valuable machinery, was destroyed by fire last month. The building was two storeys, frame, 100 x 50 feet, and the machinery consisted of planing and moulding machines, band saws, rip saws, turning lathes, etc. It is understood that the work of rebuilding has been commenced.

—The annual meeting of the St. John Log Driving Company was held at Fredericton, N. B., on April 4th., at which the following directors were elected: W. H. Murray, President: A. H. Beveridge, R. A. Estey, Donald Fraser, and F. H. Hale. An assessment of one per cent. per thousand feet, in addition to the regular driving fees, was ordered to be levied to meet the expenses of the company.

TRADE NOTES.

Messrs. Long & Thompson, foundrymen and manufacturers of shingle machines, Orillia, Ont., purpose building a new brick foundry this season.

The Stuart Arbuthnot Machinery Company, of Winnipeg, are supplying the machinery for a planing mill being erected at Altona, Man.

The McKee Machinery & Lumber Company, of Ottawa, recently formed, are carrying in stock a complete line of mill supplies. They are also agents for the Hart Emery Wheel Company, of Hamilton.

Charles J. Sawyer, of Bangor, is said to have been appointed superintendent of a large pulp mill to be built in Japan.

Waterous List—Rebuilt Machinery

We find it impossible to avoid taking machinery in trade. This we refit, guarantee in good working order and sell very low:

7½ x 36 ft. Direct Steam Feed.
8 x 12 Cunningham Rope Feed.
11 x 20 Cunningham Cable Feed, 48 x 12 drum, 10 grooves, ⅞ cable.
3 Block girder steel 40 in. Carriage, steel faced, 14 in. wheels. Boss Dogs run one year.
2 Block cast iron Hamilton 40 in. Carriage, Boss Dogs.
3 Block Sewry Carriage, 40 in. Boss Dogs, run one season.
7 Block Stearns Carriage, King Dog, would make two carriages. All have rolled V and flat track planed.
Waterous iron frame, Three Block Carriage, R. H. Single Edger.
Small wood frame and Two Block Carriage.
Kelley Kicker, Kline Loader, Steam Jump Saw, 60 in Saw.
1 Waterous Shingle Mill.
1 Boss Shingle Mill.
3 Saw Hamilton Edger, Single Edger, Slabsaw.
Endless Log Jack, spiked roll.
450 feet Conveyer Chain, ¾ in. round, 2 x ⅜ in. flat.
Steel Conveyor Chain, 18 in. iron flights.
11 x 15, 12 x 12, 12 x 14, 20 x 24, Engines.
60 x 16 Boiler, forty-four 4 x 16 tubes.
6 x 12 Boiler, Seventy-eight 3 x 12 tubes.
48 x 14 Boiler, forty-four 12 foot tubes.
Several smaller boilers.
10, 12, 16 horse upright Boilers.
25 h.p. submerged tube Marine upright Boiler, good for 100 lbs., two 2½ in. take offs, double geared.
No. 5 Rotary Fire Pump, good as new.
Several Hand Fire Engines; one 600 gallon Steam Fire Engine.
21 in. Little Giant Water Wheel with sun.
48 in. Leffel Water Wheel with sun.
12 in. Centrifugal Pump and 17 x 12 Engine.
7 in. four-sided Moulder.
20 in. Chopper, 30 in. Chopper, 12 in. Jolietter Crushers.
Circular Saws, 68, 64, 60, 59 and 55 in.
24 in. Champion Planer and Matcher.
Several Marine Engines and Boilers.

WATEROUS, BRANTFORD CANADA

WOOD PULP DEPARTMENT

PULP MANUFACTURE AT SAULT STE. MARIE.

IN an address at the Board of Trade in Toronto on April 2nd, Mr. F. H. Clergue, of the Sault Ste. Marie Pulp Company, referred in a most interesting way to the steps which led to the establishment of the present large pulp mill at Sault Ste. Marie. Much that he said has a common interest. It seems that, having selected that place on account of its valuable water power, he and his sssociates set about to find a means of profitably utilizing this power, and were, of course, attracted by the vast supply of birch, maple, elm, balsam, poplar, tamarac, pine and spruce timber. Except the spruce, none of the above woods would float to the proposed point of manufacture, so it was proposed to engage in the manufacture of pulp. They proceeded to build a small pulp mill, and agreed with the government to expend the sum of $250,000 in the construction of works. They had not gone far before they found that it cost just as much to run a works of that size practically—except mere labor charges and the additional cost of the raw materials—as a works twice as large, and that their competitors in foreign lands, running on a more extensive scale, could produce pulp for the use of the paper makers throughout the world at a price beyond their competition. So the first step of the evolution was to enlarge the pulp mill from a ground wood pulp mill of 20 tons a day to an output of 150 tons of pulp a day, requiring the use daily of about 200 cords of wood.

The subsequent steps are thus related by Mr. Clergue :

"Having gotten along so far as to build the new pulp mill, we found that even then the influx of this product of ours on a large scale on to the markets of the world was taken advantage of by the paper manufacturers, who needed Canadian pulp, and they began to mark down the values of Canadian pulp. When we originated the mills the market price in the United States was high and profitable, and we had a handsome dividend calculated on the output of the mill. When the wheels began to turn over and the product began to come out, the paper manufacturers in the States resolved that there was a new source of supply on a grand scale and that they could be supplied forever at their own price.

"Up to the time we constructed this mill the ordinary method for producing pulp for the use of paper manufacturers was by attaching the grindstone to a water wheel. Then against the grindstone is placed a block of spruce wood, and that block of spruce wood is pressed against the grindstone by an hydraulic piston, and this continuous pressure against the grindstone results in pulverizing this wood into liquid form. That pulp in liquid form goes off to another machine, where it is crushed around the wooden roller, which presses from the pulp about one-half of the water, and the consequence is you obtain a sheet of pulp something like a thick sheet of blotting paper, containing about 45 to 50 per cent. of wood fibre and 50 to 55 per cent. of water. When the product is shipped to the paper mill the papermaker does not pay for the tons of pulp you ship to him, but he pays you for the amount of pulp fibre, which is about 50 per cent. of the shipment. That circumstance confined our works to the nearby paper manufacturers. We could not ship to England, Germany or any of the foreign countries for these reasons : In the first place we would be paying a freight on 55 per cent. of stuff we never get paid for ourselves, and that would be impossible ; another thing, if the foreign markets justified this extraordinay and expensive means of carrying raw material, we could not send it to distant markets because by this grinding process a great deal of the resinous matter remains in the fibre, and just as soon as you expose this moist pulp to the varying temperature, the moist and dry climate and hot and cold, the resinous matter in the fibre commences to decompose and cause the green stain which is seen in pine boards where they have not been properly seasoned, and we were getting into difficulties. This great undertaking, where we had already spent one million dollars or more, out of which we expected to do very well, was simply a source of annoyance, distress and loss. Then we came along to the next evolution in the process.

"It was decided we must make that pulp marketable all over the world, and it was decided to attempt a process for turning out this pulp as a dry product. An investigation was made among all the paper-machine manufacturers in Europe and the United States with the hope of securing apparatus by which this ground wood pulp just as it came from this grindstone could be taken and turned into a sheet like a sheet of paper. Everywhere the process was declared impracticable. No paper-machine manufacturer in the world would attempt it. In the meantime we were turning out pulp and losing money. We decided to design a machine ourselves, and we did. We designed a machine which we thought on paper would answer the purpose. Having had a long training in mechanics myself, I gave the matter my own attention, and after a while succeeded in designing an apparatus which seemed practical, and this design was sent around to the paper-machine makers, and no paper-machine man would build that machine, and it became necessary to build our machine shop. It involved a large drying cylinder and of a different form than had ever been attempted.

"Having decided to build the machine shop we found it was necessary to build a foundry. We built a foundry of stone of general architecture and design adopted in our mills, then we went on to build the machine shop. Before we were ready to turn out a single machine we had spent abont one hundred and twenty-five thousand dollars, all for the object of obtaining dry pulp, and then after all our trouble we got out one of those machines. Well, I took the most skilled foreman we had in the mill and told him to nurse the machine, and told him how it should run and how the paper would come out. He started to run that machine, and in less than a week the man was ready to commit suicide. We gave it to all the foremen in the mill, and it was six months before that machine ever made a sheet of pulp, and now there is not any other machine in the mill except of that class. After a while, correcting this and remedying that, we evolved out of that conception a machine which to-day earns net at the mill a profit of one thousand dollars a day more in that one mill than the profit was by the same output by the process formerly in use. That is the only mill in the world making pulp in that form, and since I have been in Toronto I have received, and I have now with me, telegrams from Paris, from England, and from the United States for orders at our own price, which would more than take the product of that mill for six months if we would accept them. So that the evolution so far was all right. My associaties were well pleased. They thought at last their expectations had begun to be realized and they were content to go on with our development. Having produced this dry machine and dry pulp, and having gotten the product into a form where we could now reach the foreign markets, we ship every week pulp to Japan, Austrailia, France, and England, besides all over the United States, and no important contract is made to-day without first enquiring from Sault. Ste. Marie, Ont., what the price will be.

"Having carried the process along so far, we concluded it was a shame to allow that raw material to go out in a manufactured form which sold at so low a price as mechanical pulp, when the same raw material could be further enhanced in value by making it into chemical pulp. Now, as probably most of you know, this paper is made very largely of ground wood pulp, but it must have some chemical pulp in it, some sulphite pulp, having a longer fibre to make it sufficiently strong to pass over the rollers of a printing press. This requires that all the resinous matter in the wood fibre be taken out. That involves a chemical process. Sulphate of lime is the name of the liquor, as it is called, used in removing from the wood fibre the resinous matter necessary to produce this refined pulp. So that I advised my associates it would be wise to increase our gross earnings, our net earnings, and our labor force and the general opportunities of our works there, by proceeding to produce a more refined and perfect quality of pulp ; and, therefore, it was decided that we should appropriate money enough to build a sulphite pulp mill. That was the next step in the evolution.

"While investigating the question, we found that, besides the raw material we had, which was the wood itself and the clean cold water, we required to have sulphur, and we found, in carrying the investigation still further, that the only economic source of sulphur, and the source for sulphite pulp mills, was the sulphur mines of Sicily, owned by a syndicate imposing its own value on its output, so that the cost for sulphur for a sulphite paper mill in Canada is practically $25 a ton, and at the time of the Cuban war the price went up at one time as high as $40 a ton. We were very far distant from the coast, and bringing sulphur from Sicily seemed unreasonable, in fact, it seemed, with the confidence I have in Algoma, unnecessasy. So I began to look around for some sulphur. I went up to the works at Sudbury, and found they were racing sulphurous acid gas off into the air at a value of $2,000 a day, at an expense and loss.

"I proposed that they take the ore to Sault Ste. Marie, where we could utilize the sulphurous acid. The company said they had investigated it and had found it impracticable. My recollection of what the paper machine manufacturers had said about dry pulp machines came back to me. I was not going to Sicily to find sulphur with all the sulphurous acid gas going out into the air at Sudbury. So I went to Sudbury, and after looking around there found any quantity of mines. We found nickel ore enough there to last the world one hundred thousand years. I found the people, the prospectors, valued their mines there rather highly, but still I took an option on one property for a sufficient length of time to allow us to carry on those experiments and determine whether or not that sulphur could be used for a sulphite pulp mill. Mind you, I was not looking after nickel steel : I was just after sulphur. I got a carload of ore to Sault Ste. Marie, and I found that the scientific men with whom I had advised on the subject—because, although it is half an hour's discussion now, it has taken years to evolve all these things up to the time we are now discussing—after getting the ore up to Sault Ste. Marie I found that the prediction of these scientific men, who had said that the sulphur could not be successfully taken out of the pyrotite ore, was practically true, by any method in vogue up to the present

time. But I have had the good sense to assemble about myself practical and scientific men from all parts of the world, who are supposed to represent the latest knowledge and experience in every class of scientific and practical undertakings which we have to engage in. So, with all these gentlemen to assist, we began a study of the question of extracting sulphurous acid gas from pyrotite ore. We were entirely successful, just as successful as in pulp making.

Then we went down to Sudbury and paid them $100,000 for a nickel mine, and we proceeded to carry on our reduction until we found that the gas which we got from the Sudbury ore was exactly what we wanted for a sulphite pulp mill. Then we proceeded to establish our sulphite mill. It is now under construction and will be in operation about June 1st. It will utilize as much wood as the ground wood mill. It will employ as many men, and will make our total requirements of wood about 300 cords per day this summer. But, having got this sulphite pulp business established and under way, then the question came up whether the residue which was to be left from the ore could not be put to some use. We investigated it, put it through our chemical laboratory, and found that we had left in this residue nickel and iron in a natural state of union so perfect that when smelted and reduced to a metal it produced an alloy of nickel and steel so far superior to anything else which had yet been used, and when offered to Krupp, the great gunmaker in Germany, he made a contract at once for a supply for five years.

"And we then proceeded to erect our reduction works and our ferro-nickel plant. But when we began to ship this ore out of Sudbury, we found that although a very considerable proportion of it consisted of nickeliferous pyrotite principally, a still larger proportion consisted of copper pyrites. Of course, it is a well-known fact that a little copper in nickle-steel, or steel of any kind, ruins its value, use and efficacy, and, therefore, it became necessary, in order to mine this ore profitably, to devise a means of taking out the copper ore with the nickel. So it became necessary to reduce and refine a part of the copper and nickel together. So again was our laboratory set to work. And now we have devised a process by which the copper and nickel together are taken out in a refined form equal to that in any part of the world and as cheaply. That was the next step in the evolution.

"But we found that in this process also we required certain chemicals, certain alkalis. We found that, although we had to go outside Algoma for this resource, we still had not to go outside the Province of Ontario. We only had to go to Windsor or Goderich to get our supply of salt, bring it up to Sault Ste. Marie, take one of our dynamos, attach it to an iron pot, fill the iron pot with brine, start the electric current through the brine, and the chlorine gas came off through suitable pottery tubes, which we got from Hamilton (still in Ontario.) The other part of the salt, the sodium itself, came off as a caustic soda through the water. Thus we found ourselves provided through Ontario resources with all the alkalis said to be necessary, and which are necessary, for a certain process of refining, all procured within the Province of Ontario.

"So the next step was the establishment of an alkali plant—a chemical works. We began to investigate all around the world for the latest devices for the electrolytic decomposition of salt, and we finally selected a process which had been recently invented, known as the Rhodin process. After a careful examination on a practical scale, we have finally adopted it, and are now building these alkali works up there. What we needed chiefly of the salt product was the sodium for the metallurgical processes. We did not need the chlorine, but we could not allow any of it to go to waste. So we came to the next step in the evolutionary process. Chlorine is universally made into bleaching powder, and that is a substance which is used for bleaching woods, cloths and fabrics of all sorts. The most of it is made in England, but a great deal comes from Germany; practically all of what is used in Canada and the United States comes from Great Britain. This powder consists of 44 per cent. of active chlorine gas, and the other 56 per cent. is just lime. The lime is a medium for conveying this chlorine gas around. It has an affinity for the chlorine, and thus, seized by the lime in the lime chambers, it becomes impregnated up to 44 per cent., and then ceases to take any more. 'Well,' I said to myself, 'Here is case just like our moist wood pulp.' Our people were now shipping that all around the world, and yet, here we were paying for something that was entirely idle. At Sault Ste. Marie, where we want to originate something new, we could not tolerate any such waste as that. So we decided to take the gas from the receptacle where it was formed, and pump it with a glass pump into lime water. The lime water is then utilized for bleaching the sulphite pulp. So, you see, here was a continuation of the sulphite evolution. Every constituent it thus utilized. But we found further on experimentation that while the bleaching powder contained 44 per cent. of chlorine gas, the amount actually available and useful when the powder is dissolved in water is only about 35 or 37 per cent., 37 per cent. theoretically, but only 35 per cent. in actual practice. So, you see, there is a loss, never recovered, from this source of the difference between 44 per cent. and 35 per cent. But we found still further that when we carried the gas directly from the apparatus into the bleaching liquor we saved the whole 44 per cent.

We have carried the investigations on theoretically, until we have formed these conclusions,

step by step, and, whenever the laboratory experiments have justified it, we have gone on with the necessary expenditure and completed the works. We have allowed no bye-product to escape us, in fact, when we reduced our ores at the refining works, we found that the amount of ore profitably available was so great that our sulphite pulp mill could not begin to consume the sulphurous fumes from all these ores, and we must allow these to escape into the air at a loss, or devise some other use. What other use could we put them to? To find a use for that sulphurous acid gas was the next step. We discovered that this gas is, by a suitable and economical process, turned into sulphurous acid, which is sold to the oil refineries and put to other uses in the arts. When the market for sulphurous acid becomes supplied another step, and one economical in its process, is the compression of the sulphurous acid gas into liquid sulphurous acid. That is the substance which other sulphite pulp mills in Canada will, in my opinion, be using exclusively before long. They will not have to go to Sicilly for sulphur. We will, after our works are once in operation, be able to ship sulphurous acid in iron tanks at a price about one-half the present cost of sulphur.

PULP NOTES.

The North Shore Timber Company have made application to the Ontario legislature for a charter to engage in the pulp business on Nipegon river.

Mr. L. P. Snider, of Toronto, has purchased the Norris flour mills at St. Catharines, and it is said that he will engage in the manufacture of pulp and paper.

It is reported that a company is negotiating for the purchase of the mill of Samuel Adams at Bathurst, N.B., with a view to converting it into a pulp mill.

The bill providing that after May 1st all pulp wood cut on Crown lands in Ontario must be manufactured in Canada has been sanctioned by the legislature.

Three pulp companies are seeking incorporation in Nova Scotia, namely: Bear River Pulp & Paper Company, Sheet Harbor Pulp & Paper Company, and Meteghan River Pulp & Paper Company.

Messrs. Tower & Wallace, architects, engineers and pulp mill experts, have removed to larger quarters in the Mutual Reserve Building, 309 Broadway, New York.

Mr. George Johnson, Dominion statistician, is engaged upon a report of the pulp wood resources of Canada, it being the intention of the government to circulate 10,000 copies of the report at the Paris Exposition. Mr. Johnson estimates that $20,000,000 is at present invested in pulp mills in the Dominion.

It is announced that John Mather, of Ottawa, has formed an English syndicate to build a pulp mill at the water power on the Winnipeg river recently harnessed by the Keewatin Power Co. Mr. Mather states that the syndicate will invest $1,000,000 providing that the Ontario government will give a guarantee that no pulpwood will be shipped from the district for a period of thirty years.

The Department of Trade and Commerce at Ottawa has received a communication from a firm of shippers, who propose, should sufficient encouragement offer to warrant the outlay, to charter a sailing vessel of about 400 tons to load at Montreal about the 15th May, 1900, for Port of Spain, Trinidad. The probable rates of freight would be as follows: Lumber, $9 per M feet, and general cargo 15 cents per cubic foot or $7.50 per ton weight at ship's option.

IMPROVED GANG LATH MACHINE

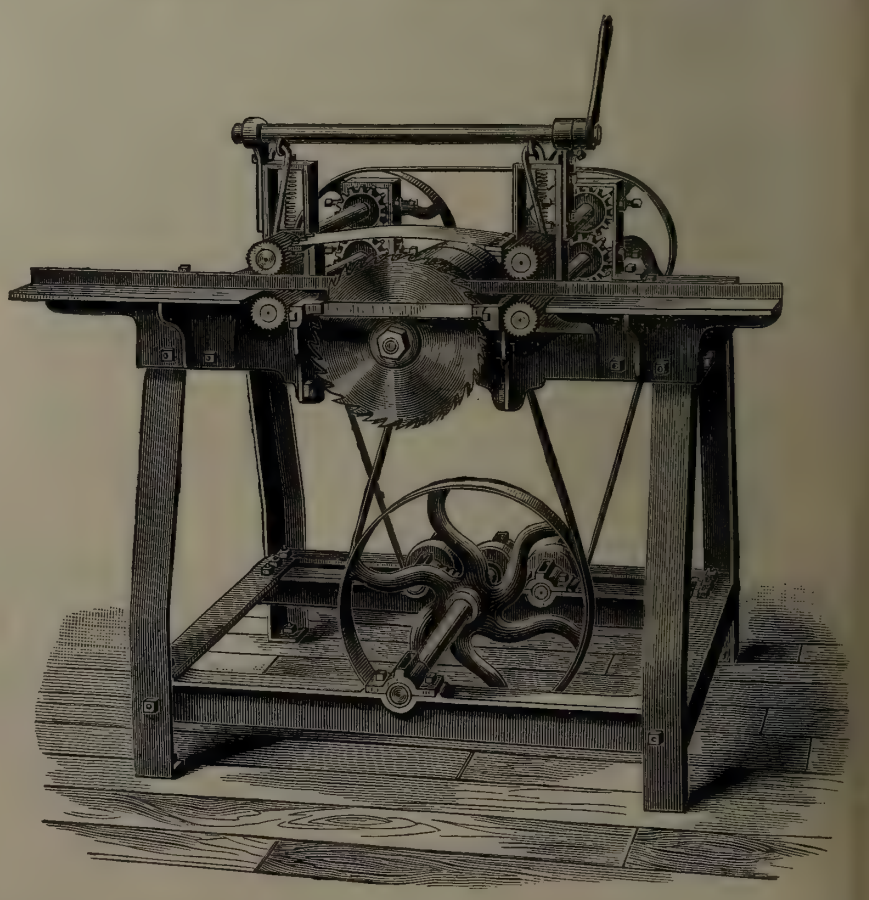
THIS machine is entirely self-contained. It has a very heavy and strong iron frame, and is constructed throughout of the best material. The saw arbor is of 2-inch steel, with 1¾ inch bearings 6 inches long. The drive pulley is 8 inches diameter, 9 inches face, all the shafts are steel and feed rolls are made from a solid steel bar.

The feed rolls are driven from 4-inch pulley on saw arbor to 18-inch pulley on counter shaft; thence from a 4-inch pulley the belt runs under the idler pulleys and around two feed pulleys on the feed shafts. This system of driving the feed is very powerful and does away with all necessity for a crossed belt.

By means of the hand lever shown at top of machine, the feed can be stopped instantly. The machine is provided with supports for the lath between the saws; these supports prevent any short pieces of lath from breaking off and becoming stuck between the saws. This is the principal cause of so many Lath Saws becoming heated and ruined.

This Lath Machine is fitted with four 12-inch saws which should run about 3,000 revolutions per minute, and will cut fully as much, if not more, than any other similar machine in the market.

Weight 800 pounds.



IMPROVED GANG LATH MACHINE.

R. H. SMITH CO., LIMITED

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

Simonds' Process

in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, Decemer 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test ette r than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

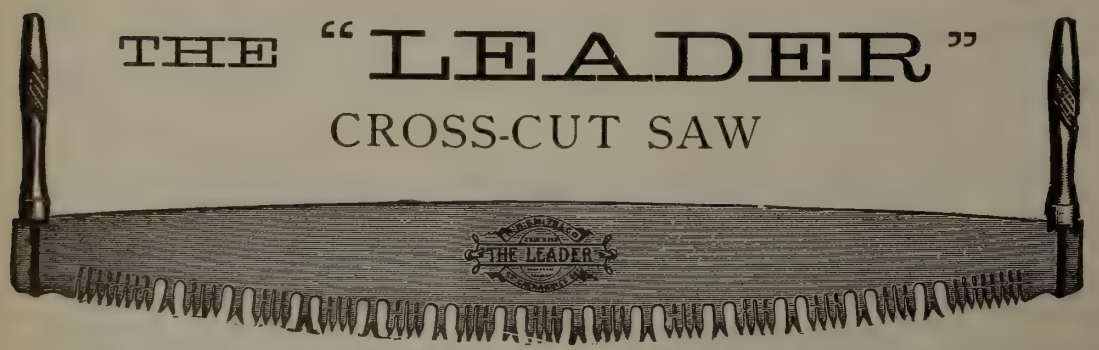
R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.

THE "LEADER" CROSS-CUT SAW



These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

THE "LEADER" SAW SWAGE

Made in 3 Sizes—$2.00, $2.50, $3.00 Net.

OUR PRICES ARE RIGHT. KINDLY ALLOW US TO QUOTE YOU BEFORE PURCHASING.

To Be Published About Midsummer

EXPORT NUMBER

OF

The Canada Lumberman

THE publishers of the CANADA LUMBERMAN have now in course of preparation an Export Number, to be published in July next. This will be the first Special Number of THE LUMBERMAN to be devoted exclusively to assisting the development of the export trade in Canadian timber products. The contents will include illustrations and descriptions pertaining to the Canadian lumbering and pulp industries, and information regarding the requirements of foreign markets. **Two Thousand Copies** of this issue will be placed in the hands of the leading Importers and Consumers of timber, British Consuls and other interested persons in foreign countries, including

Great Britain, Germany, China, Japan, France, Spain, Australia, South America, South Africa and the West Indies

This issue will be a valuable advertising medium for Canadian Manufacturers and Exporters of timber products, and will afford them an excellent opportunity of bringing their goods to the attention of probable buyers in foreign markets. Every lumber merchant catering to the export trade should be represented in this number.

THE CANADA LUMBERMAN

VOLUME XXI. NUMBER 6. | TORONTO, CANADA, JUNE, 1900 | TERMS, $1.00 PER YEAR. SINGLE COPIES, 10 CENTS

AFTERMATH OF THE FIRE.

(Correspondence of the CANADA LUMBERMAN).

THE accompanying photographs will enable the reader to form a reasonably correct idea or the magnitude and wealth of the lumber industry of the Chaudiere which was fire-swept in the great Ottawa-Hull fire. A true portrayal of the work of destruction when at its height is also given. Where the Quebec and Ontario shores of the Ottawa river loomed up imposing in their flanking of immense lumber piles, there is now but a vast area of ashes—even the crib work on the river front was swept away, leaving the naked limestone foundation exposed, a blackened wall and waste. It is only a question of months, however, till the Chaudiere resumes, in part at least, its former importance as a lumber centre. The Booth mill's output is as great as ever, and the adjacent yards are being piled high with it. The Bronson mill, Thackray, manufacturers of doors, sashes, etc., states that the building operations will tax the output of his mill. The class of buildings proposed is of more substantial character than those destroyed. The advance in the price of lumber is held in part accountable for this, and fireproof structures will be more in evidence.

Although complaints are heard that the drives on the streams running into the Georgian Bay are progressing slowly, the mill owners in the Ottawa valley are said to be experiencing no trouble in this direction. Owing to the late spring, the streams tributary to the Ottawa and Gatineau rivers are high, and the drives are progressing satisfactorily. On the Gatineau, Ottawa, Lievere, Rouge, Coulonge, Black, Snake, Dumoine, and other streams, the logs are being well handled, and present indications are that the mills will be kept running continuously all season.

Mr. John Gilmour, member of the well known Ottawa lumber firm of Gilmour & Hughson, has just received letters from his two sons, Allan and Felton, who are serving with the Canadian troops in South Africa. Allan has been promoted to the position of corporal in the first Canadian contingent, and Felton has been appointed to a position on the regimental staff of Strathcona's Horse. Mr. W. G. Cameron, member of the well known lumber firm of that name in Ottawa, has also heard from each of his three brothers who are serving their Queen and country. Gunner Harry Cameron, of D Battery, second contingent, was through the long desert march. Pte. Russell Cameron is now with the first contingent, and Capt. George Cameron is attached to Strathcona's Horse. All these young men are serving with distinction. The Cameron and Gilmour boys are well known in Ottawa valley lumber circles, having been identified with the trade for some time.

GENERAL VIEW OF THE CHAUDIERE LUMBER DISTRICT, SHOWING SEAT OF THE RECENT FIRE. Photo by Lancefield, Ottawa.

secured by the Hull Lumber Company, has been fitted up and cutting operations will commence next week. The same company is already cutting high grade lumber at the Mason mill, and the Ritchie mill at Aylmer is also contributing to the cut, which promises to be even greater than heretofore. It has not been definitely decided when the Hull Lumber Company will rebuild, but this will be known shortly. This company own valuable water power and limits.

The E. B. Eddy Company has already started rebuilding, and a saw mill, pulp mill and paper mills will be completed by November of this year.

The Ottawa city council has thrown out the proposed by-law restricting the piling of lumber, but nevertheless Mr. J. R. Booth has expressed his intention of complying with the terms of the rejected by-law as far as possible, inasmuch as he will pile only within certain areas and at a safe distance from streets and structures. His action was favorably commented upon in the city, where the action of the council in rejecting the by-law was strongly condemned.

The Ottawa lumber market has not yet recovered from the depressing effects of the fire, nor will it for some time. The price of culls will undoubtedly advance, as the extensive building operations in Ottawa and Hull will increase the local consumption. At present considerable lumber is being shipped in from Aylmer and the Gatineau mills, while the local mills will also increase the cut of cull lumber.

Ald. James Davidson, of the firm of Davidson & Almost all the better class of lumber will be required for the European and American markets, while much of the cheaper class will be kept for local use. There will be a falling off in the American demand for the latter, and hence the carrying business will suffer.

The local dealers expect an early and brisk demand for lumber and lath for building purposes, but as yet no marked change has been experienced in prices. Summing up, it may be predicted that the lumber industry of Ottawa will recover its lost footing, and though a temporary agitation in the market may be looked for, prices will soon reassert themselves to a normal standard.

Word was received in Ottawa to-day of the death, at his home in Boston, Mass., of Mr. Otis Shepard, President of the Shepard & Morse Lumber Co., of Ottawa. The deceased was well-known in lumber circles, and was esteemed for his upright character and business principles.

The government dredges being built at Ottawa are nearing completion. They are constructed thoughout of British Columbia fir, and are considered the finest yet built at this port.

The assistance lent the sufferers of the Hull-Ottawa fire by the leaders in the lumber business in Canada, United States and Great Britain is very favorably commented upon here. Its position and prominence as a lumber centre has given Ottawa a prestige it would not otherwise enjoy in as great a degree as it does in the outside world. This prestige is in part responsible for the generous relief fund piled up by large-hearted people throughout the English-speaking world.

Contracts have been let for most of the paper-making machinery for the E. B. Eddy Company's new works. The paper machines will be of special design and large capacity. It is expected that they will be installed and paper manufactured inside of four months. Work is also being pushed ahead rapidly on the addition being built to the Eddy pulp mill, which alone escaped the recent fire. When the improvements are completed the output will be 40 tons of pulp a day.

The handsome new fireproof factory and warehouse being erected on Queen street, Ottawa, by Mr. J. W. Woods, manufacturer of lumbermen's supplies, tents, etc., is being pushed ahead at a good rate. When completed the building will present an imposing appearance, and house a thriving industry. Mr. Woods will branch out in his business when located in the new establishment. He reports a marked increase in business for the past year, and looks forward to a steadily increasing trade.

Hurdman & Elmitt, lumber dealers, of Ottawa, are now established in new and larger quarters in the Central Chambers, Elgin street, Ottawa.

The smaller mills along the Ottawa river are being put in shape for the season's business. They will cut quite extensively.

Mr. Robt. Cameron, member of the firm of Cameron Bros., lumber dealers, of Ottawa, has again resumed work after a prolonged illness.

Ottawa, May 23rd, 1900.

MILL-BUILDING EXPERIENCE.

PINE KNOT, IN WOOD-WORKER.

WE have had at times in these columns a discussion of the merits of planing mills with shafting under the floor and shafting overhead. I am now building a planing mill with shafting under the floor. The mill, when complete, will have a capacity of 50,000 feet per day. From observation, and not from experience, I was one of the advocates of shafting overhead, with loose belts and swing tighteners, and while I concede that there are some very excellent reasons why a shaft under the floor is desirable, as a general thing it is a close place and a tight fit all around.

GOVERNMENT LUMBER FLUME AND PILES, OTTAWA. Photo by Lancefield.

One of the strong claims was low cost as compared with the overhead system. That doesn't hold good all the time, for this one reason : This plant is on the side of a hill, with an incline of six feet in fifty, and as the plan showed bents of framing in the foundation, it required 17 excavations, 54 feet long, averaging 48 cubic yards of earth, that had to be wheeled two hundred feet away from the mill site, and to make room for the shafting, engine, edger, countershaft, cut-off saw and cut-off counter, required an additional 620 cubic yards.

The building is at the ground level on the upper side and the floor level is 34 inches above the car floor level on the loading side. This of itself is not a fault, as down loading is preferable to level or up-grade loading. That is speaking from a loading view of the matter. But as all of the lumber comes to the mill in the rough, and is dried, ripped and dressed, and has to be unloaded from the same track level, it begins to look as if it might not be so handy. More particularly is this the case when the lumber to be dressed will be large dimensions, car sill or timber.

It has been suggested that the track could be higher, but the railroad people will not put cars on a switch that has a down grade to the main line, so that is entirely out of the question. Nor would it do to have the mill machinery in a pit in a country where rain sometimes falls so fast that it will almost flood on a hillside and the soil is so sandy that if it puddles over ever so little, will wash off in a body. As to cost, I think the excavating more costly than the slight additional cost to make the roof strong enough to carry the shafting. This roof span is 54 feet in the clear, without a post, except directly under the exhaust fan.

The engine has a six-foot drive wheel that just clears the floor one inch, and is one inch clear of the ground. With the exception of being in close quarters the engine is in a good position, compact and solid, but will have to take steam about ninety feet from the boilers. There will be a steam main four inches in diameter from the boilers to a line from the kilns to the engine, 60 feet long, and this main is 170 feet from the engine to the kilns. This means excessive condensation, unless means are used to avoid it. Right here I am going to use one of the best non-conductors that I have ever seen tried, and that is plain cottonseed hulls and air-slacked lime. As the doctors put it, here is the Rx : Air-slacked lime, water (acqua pura,) mix, and add cottonseed hulls sufficient to make to consistency of mortar. Have pipe in a box two inches larger than external diameter, and fixed permanently in place, then apply, working in corners compactly, level off, put on cover, and let it go at that. A covering of this sort will allow just enough warmth to get through to bear your hand on it with steam at 125 pounds. It is first-class for covering boilers on top and in any exposed place. It can be put on when pipe or boiler is hot or cold, and is equally as effective. In fact, it is as good for the purpose indicated as any patent medicine is for "that tired feeling." And one of its by no means small merits is its cheapness and ease of application. I don't mean that any boy can apply it. Let your engineer see that it is properly done, and it pays. Too much of this "boy" work is what keeps the junk stores supplied with machines and material that ought to yet be in the prime of their usefulness.

Will tell you something further about this mill next month.

USES FOR PINE NEEDLES.

Oregon pine needles, or those long, slender spears that grow on sugar pine trees in lieu of leaves, have fallen on the ground for countless ages, to be converted into soil by the slow process of decomposition, or into ashes by the quicker medium of fire, without a thought being given to their commercial value, says the Portland Oregonian. This condition is now to be changed, according to D. A. Cords, president of the Pacific Pine Needle Company, of Grant's Pass. Mr. Cords says the pine needles of Southern Oregon are now worth $5 a ton delivered at his factory, and that, as the enterprise grows, whole families may engage in picking pine needles as they pick grapes in California vineyards.

The uses to which pine needles may be put are many, but Germany has hitherto had the monopoly of the business. The needles are first boiled, and then run between horizontal wooden rollers, where the juice is extracted and called "pine-needle oil," which is supposed to possess medical properties. The pulp becomes a medicated material for upholstering, and is said to be a good substitute for horsehair. No bugs or insects of any kind will live in furniture that has been upholstered with pine needle wool.

The Germans make flannel under-clothing of the fibre, as well as socks for men and stockings for women, while knee-warmers, knitting and darning yarn, cork soles, quilts, wadding, deafening paper for walls, pine-needle soap, incense, and even cigars made from this raw material have been imported from Germany for forty years.

Bathing resorts have also been established by the thrifty Teutons at points where the pine needles are crushed, and these resorts have long been popular with people afflicted with rheumatism, consumption, etc. Mr. Cords hopes to make Grant's Pass a Mecca for afflicted people, as the climate is mild and equable at all times of the year, while the winters are simply superb in their freedom from high winds or severe frosts, and Grant's Pass has more sunny days than any other portion of Western Oregon.

At present the factory uses only half a ton of the needles a day, as the enterprise is still in its infancy. When in full blast, Mr. Cords thinks he can use several tons, with an upward tendency as the market for pine-needle products expands.

Another point in Oregon where a pine-needle factory may be established in the near future is Hood river, as the location affords an unlimited supply of pine needles, while better rates for transportation can be obtained on account of Hood river's proximity to Portland. Oregon, he says, has a monopoly on the needles, while he has a monopoly on the manipulation.

ONTARIO FOREST LANDS.

THE annual report of the Commissioner of Crown Lands of the Province of Ontario for the year 1899 has been issued. The report states that the total revenue of the woods and forests branch was $1,092,848.64. Of this $296,752.79 was on account of bonus, $69,713.44 ground rent, and $20 transfer fees, leaving the net revenue from timber dues $726,362.41. The gross revenue was larger than that of 1898 by $111,662.19. The receipts from timber dues were less by $30,071.93, but there was an increase in bonuses of $137,054.05, and in ground rent of $4,660.07.

The year was the first under the legislation requiring sawlogs to be manufactured within the province, and the figures submitted show that the new order has been beneficial to the province.

In previous years no charge has been made on the transfer of a timber license from one person to another, but a regulation was passed on December 1st, 1899, fixing a bonus or fee of one dollar per square mile on all limits transferred after that date.

The export of logs in the summer of 1899 is shown to have been 29,000,000 feet. According to the opinion of the Commissioner the increase in the cut of logs in the winter just closed would be about 300,000,000 feet greater than the cut of the previous winter.

The number of licensees having fire rangers on their limits during the year was 73. There were 190 rangers employed on licensed territory, who cost the department for wages $17,795.33, and for expenses in connection with extinguishing fires $1,666.40, and the licensees like amounts. There were twelve rangers employed on Crown territory in Rainy River and the Temagaming country, which latter region is well timbered and is becoming a favorable resort for tourists. The fire service, it is stated, continues to meet with the approval of all those who are acquainted with the valuable work that is being done. The Commissioner is of the opinion that the service should be extended on lands of the Crown and efforts put forth to see that rangers are employed on all licensed territory. It is not fair that large sums should be expended by lumbermen to protect their timber, when this expenditure may be rendered useless by fire running over from territory on which the licensee was either too careless or too penurious to employ rangers. Litigation having arisen between individuals as to the payment of rangers and involving their duties and powers, it is recommended that the service should be placed on a statutory basis, so that such doubts may be set at rest and the service itself strengthened and more efficiently organized.

The statement of timber shows that the following quantities were cut on Crown lands during the year :

Pine saw logs	498,607,068 feet B.M.
Other saw logs	15,396,393 "
Pine dimension timber	29,361,695 "
Other dimension timber	2,189,998 "
Square white pine timber	1,723,274 cubic feet.
Birch timber	13,384 "
Ash	1,238 "
Elm	18 "
Maple	134 "
Tamarac	297 "
Cedar	88,230 lineal feet.
Cordwood	18,067 cords.
Tan bark	1,267 "
Posts	3,079 "
Shingle bolts	2,024 "
Pulp wood	29,238 "
Railway ties	453,855 pieces.
Telegraph poles	3,231 "

THE LATE A. T. WHITE, M.P.P.

Andrew T. White, member of the Ontario Legislature for North Renfrew, died suddenly at his home in Pembroke, Ont., on May 15th last. Although it had been apparent for the past year or two that Mr. White's health had been failing, no one expected that the end was so near at hand.

The late Mr. White was born on December 3rd, 1835, in the White homestead in which he resided at his death. He was the third son of the late Peter White, one of the pioneers of Pembroke. Settling in Pembroke, he while a young man engaged in lumbering, and followed that occupation all his lifetime. For many years he did much to develop the timber resources of the Ottawa Valley. In 1858 he formed a partnership with his brother, Hon. Peter White, under the firm name of A. & P. White, a name which has been the synonym in the lumber trade for honest dealing and business uprightness. The firm has existed for 42 years, and is still doing a large local and export trade. Mr. A. T. White was also a director of the Pembroke Lumber Co., one of the largest lumbering concerns

THE LATE A. T. WHITE, M.P.P.

in the Ottawa Valley, and he was closely associated with the industrial development of Pembroke and vicinity.

Besides being a lumberman, Mr. White was one of the foremost agriculturalists in the north riding of Renfrew, having an excellent farm on the borders of the town of Pembroke.

Mr. White entered public life in 1884, when he was elected reeve of the township of Pembroke. That he continuously held that office up to the time of his death is an evidence of his great popularity. In the general elections for the local legislature in February, 1898, he was elected as the representative of the Liberal-Conservative party by a majority of 153. He gave every promise of a useful career, and his death will prove a distinct loss to the party.

Personally Mr. White was very much esteemed. Broad-minded and deeply interested in everything that tended to help his fellow-men, he enjoyed an unusual measure of public regard and affection. His charities were unostentacious, while his free easy manner made him a great favorite with the masses. He was a member of the Methodist church. In 1871 Mr. White married Miss Mary, daughter of Mr. Richard Ranson, Deux Rivieres, who survives him, together with a family of four daughters and five sons. In his death the town of Pembroke loses one of its best citizens and the lumber trade an esteemed member.

QUESTION FOR LUMBERMEN.

"Woodman," Guelph, Ont., writes : Would you kindly inform me as to the correct method of measuring sidings 6 inches and wider, 1 inch thick, 10 to 16 feet long. I have been taking tally and classifying them into lengths and widths, making a total of the number of pieces of each length and width and extending that into feet. Some people, however, assert that the proper way is by rule, and marking down the number of feet in each piece. Please state which is correct, also what is the correct method of measuring a piece 1 x 7 x 11 feet, 1 x 8 x 11 feet, 1 x 11 x 10 feet, 1 x 9 x 13, etc., by rule. I will give an illustration of the two methods: By rule one piece 1 x 7 x 16 feet long = 9 feet, and 40 pieces would be 360 feet, but to take it the other way and extend, the 40 pieces 1 x 7 x 16 feet = 373 feet. Again, one piece 1 x 8¼ x 16 feet measured by rule equals 11 feet, and 40 pieces 440 feet, but in measuring the other way this would be put down as 40 pieces 1 x 8 x 16 feet equals 427 feet. It has been customary with me when measuring boards of various widths to put any board measuring under the half inch as the inch below, that is 7⅜, 7¼ and 7⅛ inches wide would be called 7 inch, and those above the half inch 8 inches. But here all lumber is sold of an even width, as 1 x 6, 1 x 7, 1 x 8, etc. The 8¼ inch board goes as 8 inch, but I am not allowed to put in a 7¾ inch board as an 8 inch.

The CANADA LUMBERMAN asks its readers to give their views as to the correct method of measuring sidings.

SAW MILL PRACTICE.

A correspondent writes to Modern Machinery as follows :

I need the advice of a practical man on the subjects of "Back Drafts from a Furnace," and "Damper Regulator for a Saw Mill Plant." I am in charge of a plant where shavings and sawdust are used for fuel. Occasionally the fireman gets what we call a "back draft," which fills the fire room with smoke, and as the flames are forced out of the furnace there is danger of serious accident.

(1) Can you suggest the cause and a remedy ?

(2) Will it improve matters if a deep combustion chamber is excavated back of the bridge wall ?

(3) Is it practical to use a damper regulator where shavings are burned ?

(1) It is caused by putting in too much fuel at once, so that the fire is partially smothered, then when the draft is put on it begins to burn and form explosive gases, and when they ignite and explode, they cause the trouble you mention. If you never put on enough fuel to cover the fire, but always leave some flames in sight, you will have no further trouble.

(2) No, it will not. This has been tried to the extent of making it seven feet deep, without curing the evil.

(3) There is no reason why a damper regulator should not be used where shavings are burned, and if it is used it will save fuel there as well as elsewhere. It may be necessary to prevent the damper from closing tight, for that might fill the room with smoke, but it may be closed tight enough to control the fire.

MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company
of Toronto, Limited

CONFEDERATION LIFE BUILDING, TORONTO

BRANCH OFFICE:
IMPERIAL BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but it is invited from all who have any information to communicate or subjects to discuss relating to the trade or in anyway affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the trade. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

AN EXPORT NUMBER.

The first special number of the CANADA LUMBERMAN to be devoted exclusively to assisting the development of the export trade in Canadian timber products is now in course of preparation, and will be published about midsummer. The proposed publication of this number is the result of a constantly increasing number of enquiries from foreign countries regarding the timber resources of Canada and her ability to supply wood products of various kinds. The present is undoubtedly an opportune time to make our products more widely known abroad, and to bid for a larger share of the foreign trade.

The contents of this export number will include illustrations and descriptions pertaining to the Canadian lumbering and pulp industries, and information regarding the requirements of foreign markets. It is proposed to issue two thousand copies for circulation abroad. These will be placed in the hands of the leading importers and consumers of timber, and also on view in the Chambers of Commerce, the offices of the British Consuls, and the leading hotels in foreign countries, carefully selected lists of the above having been obtained by the publishers.

A considerable proportion of the issue will be distributed in Great Britain, at present the largest wood consuming country, but it is intended to cover also Germany, France, Spain, Australia, South Africa, China, Japan, South America and the West Indies, all of which countries import Canadian wood products.

As an advertising medium for Canadian manufacturers and exporters of timber products, this number should prove of incalculable value, since it will afford them an excellent opportunity of bringing their goods to the attention of probable buyers in foreign markets. An announcement in this number might prove to be the means of building up an extensive and profitable foreign trade. Already some of our manufacturers and exporters have arranged for announcements, but as it is desired that every person seeking export business should be represented in this number, the publishers would be pleased to be advised regarding the space desired at as early a date as convenient. Full particulars as to rates will be gladly furnished upon request.

THE PRODUCTION OF LUMBER.

THE recent inflated prices for lumber have given a stimulus to production throughout Canada. Coming after an extended period of depression, the natural tendency of mill owners is to increase their production to the greatest possible extent, in the hope of securing such returns as would in a measure recompense them for the years of unprofitable business. While the present commercial prosperity is not, to our mind, in the nature of a boom, we think that the limit of high values has almost been reached, and that in the near future prices of all building materials will show a slight decline. In fact, although lumber prices have not yet receded, there has been a material reduction in the price of steel and iron and certain other classes of building materials. During the next three or four years we look forward to a period of prosperity, but with the average of prices slightly lower than at present.

In view of the above conditions, a word of caution to lumber manufacturers may be in season. In order to maintain prices at a profitable basis, it should be the aim of manufacturers not to unduly crowd their mills, but rather to pursue a policy of caution, restricting their output to such an extent as to prevent a collapse of the market even should the lumber demand suddenly fall off. The result of over-production will be to bring down the price of lumber, making it necessary to produce a large quantity of stock in order to obtain the same returns as if a small cut were made and disposed of at a profitable price. It should also be remembered that the world's supply of standing timber is gradually becoming diminished, and that there is no more valuable asset to-day than an area of timber lands.

The future condition of the trade may be greatly improved by the exercise of a little foresight on the part of lumbermen. It should be their policy to take advantage of the present period of prosperity to seek new markets for their stock, so that they will be less dependent upon the local demand. It is the usual custom to wait until the period of depression is at hand, then to exploit new fields and to find that considerable time is required to form a business connection.

There is an enormous demand for wood products in Great Britain, France, Germany, Spain, Australia, etc., and as we have previously pointed out, a much greater share of the trade may be secured by Canadian manufacturers and dealers if properly sought for. Now is the time to get in communication with foreign importers.

THE ALGOMA CENTRAL LAND GRANT.

THE provisions of the measure extending assistance by a land grant to the Algoma Central Railway, adopted at the late session of the Ontario Legislature, are of general interest to the business community, as they involve an important new departure in the conditions on which such aid is extended which may probably form a precedent for future action. They have in addition a particular significance for the lumbering interest on account of the conditions laid down as regards the timber embraced in the grant. The Algoma Central Railway, opening up a large area of "New Ontario" and connecting Sault Ste. Marie with the C. P. R. and Michipicoten harbor, is one of the undertakings set on foot by the group of interests of which Mr. Clergue, of Sault Ste. Marie, is the head and front. In consideration of receiving a grant of 7,400 acres per mile, the companies included in the agreement undertake, not merely to build the road, but to settle 10,000 male emigrants upon the land within ten years (1000 each year), to build an additional 40,000 horse power canal at Sault Ste. Marie, and to erect smelting and reduction works, chemical works and a pulp mill at that town, in addition to the industries they have already established there. They also contract to maintain a line of not less than four steel steamships for traffic between Sault Ste Marie, Michipicoten and other points. The freight and passenger rates of the road are to be subject to the approval of the Governor-in-Council.

The land to be granted the company is to be laid out in alternate blocks, each containing as nearly as may be 148,000 acres, the railway passing through the centre of each block. The company is to place a station in the centre of each block, whether on its own land or that reserved for the public, when requested to do so by the Commissioner of Crown Lands. They are to survey a town plot in the neighborhood of each station on their own blocks, and to build school houses and public halls when the government declares it necessary for the wants of the population.

The grant includes all ores and minerals and also pine timber, but the latter is to be paid for at prices to be fixed by public competition in the following manner: When the land is surveyed the Crown Lands Department are to offer for sale by public auction the right to cut the pine timber on the reserved alternate blocks, subject to the usual conditions. Instead, however, of its being sold by area, it will be disposed of in quantity, that is, at so much per thousand feet board measure. The price paid per thousand for the right to cut by the highest bidder for the timber on reserved blocks, will be the price charged the company for each thousand feet cut on the land granted to them, and they will in addition have to pay the Crown dues. A part of the pine on

the block is to be cut each year and the whole in ten years from the time of the sale on the reserved blocks. The purchasers of pine on the reserved blocks are also to cut a part of it each year and to remove the whole within ten years. In case of non-payment by the company for pine, the timber on the company's blocks reverts to the Crown, and may be sold in the usual manner adopted in the case of pine reserved in patents.

All nickel and copper ore found on the company's land is to be subject to such regulations as to treating or refining in Canada as are applied to other lands under the general law. It is also provided that neither the pine nor spruce shall be exported in an unmanufactured condition. The pine is to be manufactured into sawn lumber or square timber, as provided by the general act adopted two years ago respecting the manufacture of pine cut on the Crown domain, and the spruce is to be made into pulp or paper in Canada.

EDITORIAL NOTES.

We are told that in the June number of the Inland Printer, of Chicago, there will be published a leading article on wood pulp and forestry. A growing recognition of the important relation of the timber supply to the paper trade no doubt accounts for the interest shown in the subject by the publishers of the Inland Printer. Upon the perpetuation of the forest supply depends the future of the printing and publishing business, at least unless there should be discovered a satisfactory substitute for wood for paper-making, and the present outlook does not seem to promise hopeful of this result. The Inland Printer will point out the importance of forestry in utilizing non-agricultural lands, in assuring the permanency of a lumber supply, to the regulation of water supply, etc.

THE Ontario Government have passed an order-in-council prohibiting the exportation of tan-bark taken off hemlock trees cut on Crown lands. This legislation was asked for as a protection to the tanning industry of the province, which has increased very materially of late. It was contended by the tanners that if exportation was not soon prevented the future of the industry might be seriously jeopardized. In the United States there is but a lim ted supply of hemlock timber, and consequently large importations of tan-bark were made from Canada. Although, perhaps, the action of the government will not be in the immediate interests of lumbermen, it is one which meets with our approval, as being a further step to encourage the home manufacture of raw material and in line with the legislation respecting the exportation of saw logs from the province.

So far as we are aware, the credit of introducing the first floating saw mill in Canada belongs to Mr. J. H. Dansereau. This mill, which has already been described in THE LUMBERMAN, was operated last season at Calumet, a small town on the Ottawa river, near the city of Ottawa. It is learned that the operation of the mill has been eminently satisfactory. The cost of its construction, including barge, machinery, etc., was in the neighborhood of $18,000. Last season Mr. Dansereau sawed in 97 days 4,500,000 feet of spruce lumber. The combined cost of sawing and shipping the lumber to Montreal is said to have been about $1.75 per thousand feet, while the corresponding cost to the large Ottawa mills is nearly twice this amount. It should be explained, however, that the lumber was loaded on barges direct from the saw. This could not be done, of course, in the case of pine lumber, which would require to be piled for seasoning purposes. We do not expect that the floating saw mill will become very generally used, but it no doubt possesses some advantages over the stationary mill, and might, we think, be employed to a greater extent in certain districts of Canada.

MAHOGANY VS. WHITE PINE.

Some people are seriously considering the possibility of African mahogany taking the place of the better grades of white pine for miscellaneous lumber uses. It may seem somewhat farfetched, but it is not impossible that but for one or two considerations this could be done. It is understood that African mahogany is a comparatively soft and easily worked wood, and, except in color, would answer every purpose for which pine is used. The timber can be bought for practically nothing, and, if the conditions are as we understood them to be, it could be cheaply gotten to milling points along the coast and the freight would be no more than from the United States or Canadian ports to Great Britain or the continent. So far, so good, but to establish saw mills on the west coast of Africa is impossible. White men cannot live and do efficient work in that climate and the blacks cannot be depended upon. Even logging is conducted with difficulty and becomes expensive merely because of the class of labor that has to be employed. It is thought by some that there is more mahogany in the world than any other variety of timber ; and furthermore that it is accessible as far as location is concerned ; but the climate in which it grows is the obstacle which will never be so overcome that mahogany can be as cheap as would be warranted by the supply and cost of standing timber.—American Lumberman.

BELTS AND PULLEYS.

THE following questions are asked by a correspondent of Modern Machinery :

(1). How shall I determine the exact amount to cut out of a belt where a small pulley has been substituted for a larger one? (2) Is their gain or loss of power where two large pulleys are removed from shafts that run at the same speed, and a smaller one substituted, keeping the speed constant? (3) Which side of the belt should be put next to the pulley, and why?

The answers are as follows : (1) We advise you to use a tape line or a cord that will not stretch, and draw it over the pulleys, thus finding the exact length needed. If the new pulley is not much smaller than the old one, their respective circumferences may be calculated, and one-half of the difference taken, but if the diameter is very much less than before, the change in the angle of the two sides of the belt will affect the result. Therefore, the tape line method is the safest. (2) If you mean to ask whether more or less power can be transmitted, we should say less, for the belt speed is reduced and less surface is in contact with the pulleys, both of which are factors in the calculation. If you mean to ask which will require the most power to drive, there will be a slight difference in favor of using the smaller pulleys. (3) When a double belt is made, the hair or smooth sides are always put outward, so that it makes no difference which way the belt is put on, except on account of the rivets, and this shows plainly what the belt manufacturer thinks about it. If a single belt is examined it will be found that the rivet heads, which should run next to the pulley, are on the hair side, thus showing that the maker intended this side for the pulleys. The matter is in much dispute among machinists and mill men, and it probably always will be.

TREATMENT OF DRIVING BELTS.

The Werkmeister Zeitung gives directions on the best treatment of driving belts, whose faultless working is of great importance in every factory. The good drawing of a belt increases with the friction between belt and pulley. Hence it is obvious that the belt must surround as large a portion of the pulley as possible. For this reason crossed belts always pull better than open ones. If in any way practicable, open belts should cover at least almost half the pulley. If the circumference of one pulley be very small in proportion to the other, thus allowing the belt to cover only a small portion of the smaller pulley, a sliding of the belt frequently takes place, especially if the distance between the two pulleys be slight. It is plain, continues the Werkmeister Zietung, that a slow running of the engine makes a strong stretching of the belts necessary. For this reason a tightening-pulley is frequently placed midway between the two pulleys, so as to avoid a repeated resewing. If a large power is to be transmitted at little velocity, a broader belt should be employed than would be necessary with greater velocity, or else two belts are made to run on top of each other. If one does not care to tighten the belts still more or use one of the many belt lubricants, the best makeshift is to cover the pulley with sail cloth. This is done by cutting the sail cloth so exactly that it is difficult to get it on the pulley. By thoroughly moistening the sail cloth on the pulley with warm water it clings more closely to the pulley, as the water causes it to shrink. It is still more practical in the long run to fix, instead of canvas, a leather strip of corresponding breadth on the middle of the pulley, by having a few holes bored into the rim of the pulley which are tightly filled up with wooden wedges, in order to be able to nail the strip of leather on it. This process is said to have proved useful with ordinary proportions of the size of the belt to the effect of power to be transmitted. If all is unavailing, the belt is too weak and must be replaced by a broader or double belt. Of great advantage in such cases are the wooden belt pulleys, which increase the driving power.

PERSONAL.

The sympathy of a wide circle of friends is being extended to Mr. Wm. Margach crown timber agent at Rat Portage, Ont., upon the recent death of his wife.

Mr. J. G. Henderson, of the firm of Henderson & Craig, London, Eng., was a recent visitor to Canada. His firm are large importers of pulp, and his mission was with a view to increasing the imports from Canada. He states that with some slight improvements in the method of manufacture Canadian pulp will be superior to the Scandinavian article.

FRICTION IN STEAM PACKINGS.

BEFORE the meeting of the American Society of Mechanical Engineers in December, 1899, Mr. C. H. Benjamin, of Cleveland, Ohio, read a paper on the above subject, describing some experiments made at the Case school with several varieties of packings. He gives four tables showing the results, which we reproduce, together with his comment and general conclusions.

TABLE I.

Kind o Packing.	No. of Trials.	Total Time of Run in Minutes.	Average Horse-Power Consumed by Each Box.	Horse-Power Consumed at 50 Pounds Pressure.	Remarks on Leakage, etc.
1	5	22	.091	.085	Moderate leakage.
2	8	40	.049	.048	Easily adju ted ; slight leakage.
3	5	25	.037	.036	Considerable leakage.
4	5	25	.159	.176	Leaked badly.
5	5	25	.095	.081	Oiling necessary ; leaked badly.
6	5	25	.368	.400	Moderate leakage.
7	5	25	.067	.067	Easily adjusted and no leakage
8	5	25	. 82	.082	Very satisfactory ; slight leakage.
9	3	15	.200	.182	Moderate leakage.
10	3	..	.275	....	Excessive leakage.
11	5	25	.157	.172	Moderate leakage.
12	5	25	.266	.330	" "
13	5	25	.162	.230	No leakage ; oiling necessary.
14	5	25	.176	.276	Moderate leakage ; oiling necessary.
15	5	25	.233	.255	Difficult to adjust ; no leakage.
16	5	25	.292	.210	Oiling necessary ; no leakage.
17	5	25	.128	.084	No leakage.

TABLE II.

Kind of Packing.	Horse-power consumed by each box, when pressure was applied to Gland Nuts by a 7-inch wrench.						Horse-p wer before and after oiling rod.

TABLE III.
VARYING STEAM PRESSURE
SCALE 1 INCH = 0. 1 H. P.

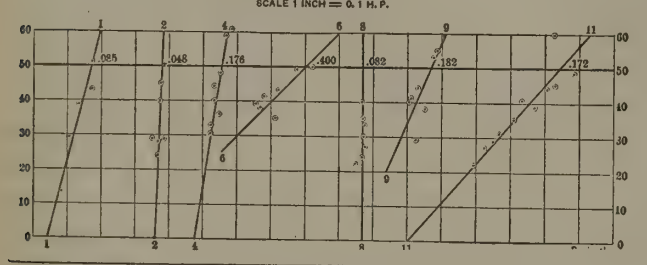

TABLE IV.
VARYING STEAM PRESSURE
SCALE 1 INCH = 0. 1 H. P.

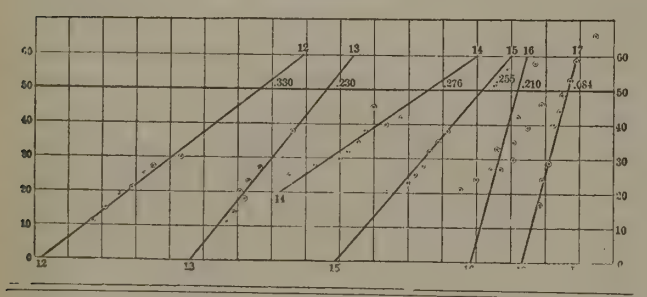

Table I gives a summary of the results, showing the average horse-power consumed by each packing box at varying pressures, and, for purpose of comparison, the power at 50 pounds pressure of steam. The friction of the machine has been deducted.

Table II shows the effect of tightening the gland nuts on the friction of the packing, and also the effect of oiling the rod.

In most of the experiments detailed in Table I the nuts were tightened with the fingers only, and then just enough to prevent leakage, and no lubricant was used except that incorporated in the packing itself. With some of the dry rubber packings it was necessary to use oil from the first. A good quality of cylinder oil was applied.

The effect of varying the steam pressure is best shown graphically, as in Tables III and IV. The numbers at the ends of the lines correspond to numbers used in the the other tables. The ordinates indicate the steam pressures observed, while the abscissas represent the horse-power consumed by each box. The points where these lines cut the line of 50 pounds pressure are those used for comparison of the different packings. It will be seen that the friction varies with the pressure in approximately straight line ratios in many of the cases.

GENERAL CONCLUSIONS.

1. That the softer rubber and graphite packings, which are self-adjusting and self-lubricating as in Nos. 2, 3, 7, 8, and 11, consume less power than the harder varieties. No. 17, the old braided flax style, gave very good results.

2. That oiling the rod will reduce the friction with any packing.

3. That there is almost no limit to the loss caused by the injudicious use of the monkey-wrench.

4. That the power loss varies almost directly with the steam pressure in the harder varieties, while it is approximately constant with the softer kinds.

The diameter of rod used—two inches—would be appropriate for engines of from 50 to 100 horse-power. The piston speed was about 140 feet per minute in the experiments, and the horse power varied from .036 to .400 at 50 pounds steam pressure, with a safe average for the softer class of packings of .07 horse-power.

At a piston speed of 600 feet per minute, the same friction would give a loss of from .154 to 1.71 with a working average of .30 horse-power, at a mean steam pressure of 50 pounds.

THE CARE OF WOODEN PULLEYS.

Wooden pulleys are very good things to have in the mill. They hug a belt very tight and stay in place pretty well if decently taken care of ; but it will not do to let them go year atter year without attention. A wooden pulley which is not properly taken care of will soon begin to squeak ; and once a wooden pulley gets to squeaking, all the tightening up that can be done will not prove a cure. When a wooden pulley begins to squeak the usual thing is to tighten up the clamp bolts under the idea that the pulley is slipping on the shaft.

Even when tightened up sufficiently to draw the nuts and washers into the wood the squeaking will continue. In such a case the squeaking is not between the pulley and the shaft, but between the parts of the pulley itself. Some of the joints have become loose and the parts thereof rub together, and, under the heavy belt pressure, cause the squeaking which proves so annoying. To make good pulleys which are in this condition, take them partly to pieces, removing any loose or partly detached segments that may have started up in the joints. Make a sort of dry room either by putting a coil of pipe into a big air-tight box, or by inclosing some heating coils at a number of radiators. If there is a dry room for lumber near, say in a neighboring planing mill or furniture factory, it will be just the thing and should be utilized. Otherwise, take a packing box large enough to contain the pulley, pipe in steam, and slowly heat the partially demolished pulley two or three days, or until it has been slowly heated entirely through. Then take the pulley into the shop and work every crack and crevice full of thin hot glue. The wood being hot, the glue will penetrate to the innermost portion of each crack without becoming chilled, as would be the case were it attempted to fill a cold pulley with glue.

After giving the pulley all the glue it will absorb, replace the portions removed, tighten up the iron braces, castings or screws there may be, then put the pulley back into the dry house for at least twenty-four hours more, but do not have the heat too great—say at least 160°—and let there be good ventilation to the dry house or box while this final heating is going on. After removing the pulley from the dry room, give it two coats of good orange shellac inside and out, to keep the dampness that may be in the atmosphere from again getting into the wood. As long as moisture is kept out and the load upon the pulley is not too great, there will be no more squeaking. Pulleys which for any cause have been exposed to the weather for some time, or those that have been exposed to water in a flooded mill or at a fire, may be heated in the manner indicated, and they will come out nearly as good as new.

There are usually a number of wood pulleys around the mill which are not in use. Idle pulleys should never be allowed to remain on the shafting. Although very slight, it still does cost something to impart motion to idle pulleys ; therefore it is an expense to keep them on the shafting. Gather up all such spare pulleys, look them over and make such repairs as are necessary. Usually only a little glue is needed. Then give each pulley a good coat of orange shellac, and place in a dry room, there to stay till wanted. Mark each pulley with its diameter and face width. White chalk will do this effectually. Pulleys thus marked and ranged up side by side are as good as cash in the assets of a mill. When a pulley is wanted it can be found in an instant by the chalk marks upon it, and it is certain that the pulley is in good repair and all ready for instant use without any possible delay for repairs. When iron pulleys are stored, range them in a similar manner in a row and mark in the same way, but also add the shaft diameter to the sixteenth of an inch.—Paper Mill.

Paul Robarge, of Como Bridge, N. B., was drowned near St. Leonard's, while in charge of Keswick & Son's log drive.

A distressing accident occurred at Goldthrope's saw mill near Dungannon, Ont., when Charles Carpenter, a mill hand, was thrown on a circular saw and literally cut to pieces.

Messrs. J. F. Lillicrap & Co., Lakefield, Ont., have sold their planing mill business to Messrs. Moore & Baptie, of the same place, Mr. Lillicrap retiring to give his whole attention to the wholesale lumber trade.

FORESTRY EXHIBIT AT THE PAN-AMERICAN EXPOSITION.

In the prepared plan of the building outlay of the Pan-American Exposition, which will be held at the nearby border city of Buffalo in the summer months of 1901, the Architectural Board has placed the Forestry building in a prominent position on the grand court; this structure being connected with the Horticultural building by an ornamental colonnade, and balancing the Graphic Arts building, which also connects with the Horticultural building by a similar colonnade on the opposite side. The accompanying illustration of the Forestry building shows the importance the management attach to a proper classification and exhibition of the rare and interesting woods of Pan-America, for the building is beautiful in conception and amply large to make a display on a splendid scale.

When one considers the scope of the coming great Exposition during the summer months of next year, it is not hard to imagine a forestry display of surpassing interest, as the western continent is at present the one section of the world where a magnificient forestry display could be secured. With the banyan trees of India and the giant swamp eucalyptus of New Zealand and Australia alone excepted, the rarest trees in the world are to be found in one or more of the countries of North or South America, or on the islands now dependent on the United States.

From far away Oregon and the upper portion of the Dominion of Canada the great pines and firs will be brought; their sections to repose within the Forestry building in competition with the polished sections of mahogany and ironwood from the forests of the Amazon more, which, though sporadic, attains perfection in Arizona. From Virginia the red cedar comes, and the samples from there will be of interest when shown in connection with the machinery which annually reduces entire forests of the species into tiny lead pencils; for a majority of the countless millions of lead pencils used each year are cut from Virginia red cedar. Another species of the red cedar, harder, more ornamental and much more scarce than that used for lead pencil making, is found some hundreds of miles below the Virginia forests. These are called swamp cedars, and they grow in pools and swamps, many of them standing in from four to six feet of water, the pools and lakes being simply floored with countless thousands of these trees which have flourished, fallen and sunk below the surface.

The basswood of the far northwest lends itself readily to interesting displays, and a splendid showing will be made of hickory, that tough and wiry wood which, according to the late Leland Stanford, made the American trotting horse a possibility. Before the days of the bicycle sulky no wood except second growth hickory was light and strong enough to form the wheels and spokes ot the old high cart, and without that material there would have been no Sunol and Maud S. records to amaze the country and show to breeders the wonderful possibilities of the American trotter.

In the showing of these and countless other varities of woods which abound in the Americas, it will be the aim of the management to have the exhibit so prepared that interest will be felt by the casual spectator as well as by the forester or the lumber merchant. Of the rare woods these will be shown in the rough bark intact, as well as as cross and tangent sections showing the grades, grain

in South America, while from the Yosemite valley of California great slabs of the giant red woods, the greatest trees in the world, will be brought to amaze the visitors. It is generally conceded that these red woods are the greatest trees, though some authorities raise the contention that the swamp eucalyptus has attained greater heights. It is said that one of these giant trees of New Zealand, when it fell, was found to measure nearly 400 feet in height. Enormous as that seems, it has been exceeded in the Yosemite, for a forest giant of the red wood species, called "The Wallace," was found to be approximately 500 feet in height, or nearly as high as the Washington monument, the tallest structure on the American continent, and with the single exception of the Eiffel Tower, the tallest structure in the world.

In their diameters these giant trees of California are as unusual as in their height, and some of the cross sections of the trees will be vastly interesting when seen in their entirety. It is known that one of these trees attained such enormous bulk that through a hole in the trunk a coach and four was able to pass with ease, and on the levelled stump of another forty people were able to dance. The bark frequently attains a thickness of eighteen inches, and the body of the tree is capable of a rich deep polish similar to the red cedar of North Carolina. It will be a task of vast proportions to secure for the Forestry exhibit at the Pan-American a full cross section of one of these giant trees, but an effort will be made to have one shown in such manner that the onlooker may obtain a fair conception of the size of the tree and of the grain and texture of the wood.

Besides this and other rare woods, the director of the Forestry exhibit will show the so-called common woods, notably samples of the giant sugar maples of Indiana, some of which attain a height of 120 feet, and the great elms and oaks of Connecticut and Maine, and the sycamore and textures. There will also be samples of abnormal or unusual growths, and an effort will be made to procure a sample from the giant fir trees of Oregon in order to show the immensity of the trees. At the World's Columbion Exposition was shown a counter, the entire top of which consisted of one single plank 150 feet in length and over 3 feet in width. It is hoped that one equally large may be secured as Oregon's contribution to the forestry display at the Exposition at Buffalo.

CANADA'S COMMERCIAL AGENTS.

FOLLOWING is the official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries:

J. S. Larke, Sydney, N.S.W., agent for Australasia.

G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.

Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.

D. M. Rennie, Buenos Ayres, Argentine Republic agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders:

J. G. Colmer, 17 Victoria street, London, S.W., England.

Thomas Moffat, 16 Church street, Cape Town, South Africa.

G. H. Mitchell, 15 Water street, Liverpool, England.

H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.

Harrison Watson, Curator, Imperial Institute, London, England.

LUMBERING OPERATIONS IN QUEBEC.

The annual report of the Commissioner of Lands, Forests, and Fisheries for the province of Quebec, states that during the year ending June 30th, 1899, the receipts from woods and forests were $894,289.48. This includes the proceeds of a sale of 1,933 square miles of limits, which brought $135,281.40. The area of timber limits under license is 45,889¾ square miles.

The report contains the usual statement of timber cut within the province during the year under review. This is as follows:

Pine, at dues of $1.30 per M	195,722,426	feet.
Pine " " 80c "	48,992,290	"
Spruce " " 65c "	303,393,832	"
Boom timber	86,899	"
White pine timber	840,199	cub. ft.
Red "	51,627	"
Birch timber	368,338	"
Cedar "	293,766	lin. ft.
Firewood	3,355	cords
Pulp wood	3,806	"
Railway ties	466,368	pieces
Spool wood	1,107	cords
Shingles	11,864,000	
Pickets	4,234	pieces
Telegraph poles	5,883	"

A comparative statement is also given of the quantity of different varieties of timber manufactured since 1866, from which we extract the following:

Seasons of Production.	Pine Saw-logs at $1.30 per M	Spruce and Hardwood Sawlogs	Pine logs at 80c per M	White and Red Pine Sq. Timber	Birch, Elm Maple, Etc.	Small Tamarac Pine, Spruce, Boom and Flat Timber

FROM THE TIMBER TRADE.

THE great interest shown in Colonial affairs by Great Britain has been demonstrated by the numerous contributions from that quarter in behalf of the sufferers from the recent fire at Ottawa and Hull. THE CANADA LUMBERMAN acknowledges the receipt of contributions of $50 for this purpose from Messrs. Irvin & Sellers, timber importers and merchants, Liverpool, Eng., and $10.00 from Messrs. Sieveking, Podmore & Co., timber importers, London, Eng. Several other timber merchants and brokers in the Mother land have also contributed to the fund through the Ottawa banks.

The height of a chimney to create a draft for any kind of fuel will depend to a large extent upon the area of the flue. A chimney that is too high in proportion to its diameter will create no better draft than one that is not high enough, while the cost of the higher structure will, of course, be greater. The cause of chimney draft, that is the intensity of the draft, is due to the difference between the weight of the column of hot gases inside the chimney and the weight of a column of the external air of the same height.

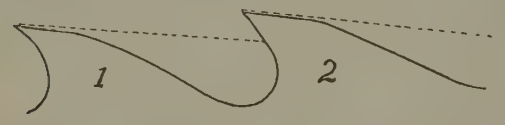
INCREASING THE EFFICIENCY OF BAND RESAWS.

By A. J. Burton.

A writer wants the opinions and experiences of expert band filers on how to increase the efficiency of band resaws. I do not consider myself expert, therefore will not give my opinion, but will tell some of my experiences and what has given me good results.

I think 75 feet a minute a slow feed for a 6-inch 19-gauge resaw. If he runs his saw 9,000 feet per minute, as he should do, and if the saw is the usual 30-foot length, the saw will go round 300 times per minute. Putting the stock through at the rate of 75 lineal feet per minute will only give him a 3-inch feed. If he will have his filer put up his saws according to the following instructions he can just as well make the feed 150 lineal feet per minute ; the lateral movement of the saw at that speed will not exceed ¼-inch, and will not reach that except in 20-inch cuts or over. Neither will the saw dart forward on the wheels when not in the cut, nor will it show a tendency to crack. How to do it :

First, get a good make of resawing machine, with perfectly balanced wheels and the face of wheels flat. Set the mill on a solid foundation. Pay as much attention to oiling the straining device as to oiling the bearings, so tension on saw will be entirely sensitive at all times. The



rolls must be in line with saw so stock will pass through straight and at even speed. Then comes fitting up the saws. Put a crown in back edge of saw equal to 1-32-inch in 5 feet 6 inches in length. Don't do this by guess or you will probably not get it even. Make a straight-edge 5 feet 6 inches long, then pene out the back edge until it shows proper concave on front edge. Now roll back edge of saw the length of straight-edge, then place straightedge against back edge of saw; by changing end for end you can easily see whether you have the proper concave or not. Now file it a little, or draw out back of saw as the case may be, until straightedge fits tightly to saw when held either end to. Fit back of saw to straightedge all the way round. Tension the saw to a 36-foot circle from one edge to the other. This must be well done. There must be no loose or stiff spots in the saw. All this should be done with the stretcher.

Next, level the saw by taking out all the cross-face lumps on the inside first, then the long-face lumps. Go over the outside in the same manner and repeat until saw is perfectly flat, with a true back and good, even tension. Space the teeth 1¼ inches, 1½-inch deep, with good, large, round gullet made by a ½-inch emery wheel. Use 6½-inch hook in 10 inches, which is equal to 3½ inches in a 6-inch saw. Round or raise the back of teeth a little like 2 in sketch. You will observe that 1 has a hook of 35 degrees angle, which is 8½ inches in 10 inches, while 2 has but 6½ inches in 10 inches. Never raise back higher than shown by dotted lines. Sketch shows 1½-inch teeth, but you can make 2 with 1¼ inch space. Swage with a face swage and side dress with a pressure side dresser or shaper. Don't use a side file at all, and don't use a heavy swage. Do all your sharpening with the grinder; if the machine is properly adjusted it will do better work than can possibly be done by hand with a file.

If you put saws up according to these instructions they will not oscillate, but will run straight as a string, without a quiver, making no noise in the guides—you can take off the back guide and sell it if you wish, for your saws will not run back on the wheels in the cut. You can feed them until they snake or break, but they will not go back on the wheels. Have wheels in perfect line and use the tilt but not the crossline. Don't use a top swage on a band resaw unless you desire to date yourself back 15 years.—The Woodworker.

SOME INTERESTING FIGURES.

The wholesale lumber dealers of Buafflo and Tonawanda held a joint conference at the former city on January 20th. Close comparisons of stock with those of a year ago were made at this meeting, and it was shown that no accumulations existed.

A very interesting feature of the meeting was the table of prices on white pine uppers and culls, compiled by Mr. M. E. Priesch, vice-president of the Buffalo Lumber Exchange. Mr. Priesch first set out to show also the prices on common, but found this grade had changed so radically as to make comparison impossible. His figures are as follows :

		Uppers.	Culls.
186	July	$18 00	$ 7 50
1863	January	19 00	8 50
	July	15 00	11 00
1864	January	30 00	13 00
	July	30 00	15 00

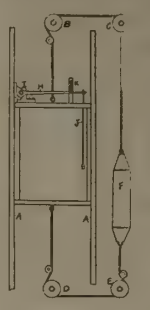
	July	51 00	14 00
1900	January	57 50	19 00

Mr. Priesch pointed out that present conditions were similar to those of 1879—a reaction following a long depression. He said 1879 ushered in a period of five very prosperous years, and he drew from this the pleasing conclusion that present prices on lumber generally would persist for at least that long.

A SIMPLE ELEVATOR.

The simple form of elevator for use in planing mills, furniture and chair factories, carriage and wagon and agricultural works may be cheaply erected. The cage is operated between the corner pieces A, A, the latter reaching from floor to floor. The cable passes around wood-grooved wheels, B, C, D and E, as shown, and a sheet iron cylinder, F, is connected in and filled with sand to counterbalance the weight of the cage.



Therefore, in shifting loads from floor to floor, only the weight of the load is required to be lifted by hauling on the cable. The cage is held in place at a floor level by means of the shoe H, which presses against the upright at I, when the lever is drawn down with the hand piece J. The spring K releases the shoe when pressure is withdrawn from the hand rod F.—Lumber.

ABOUT CONDENSERS.

In arranging for jet condensation with engines of ordinary dimensions, it is necessary to use considerable cau tion, says the American Machinist, as by reason of the short time required to overflow there is danger of water backing up into the cylinder at stopping, or slowing down, and in such a case a breakdown is likely to occur on again starting ahead.

It is not always convenient to arrange the injection valve within such range of the throttle that it can be at once closed on slacking the speed, and even where it is so placed it is much more satisfactory to provide against flooding in a way that allows the valve to remain at normal opening, as the injection requires some attention to properly readjust after being once changed.

The best all-round method of accomplishing the desired result is to place a float in the condenser, an air cock being operated by the lever when water rises above a safety point. This arrangement relieves the engineer of all anxiety, his only responsibility being to see that the apparatus is maintained in proper repair and working condition.

If a float cannot be used, a simple air cock, worked from near the engine throttle, will be found the next best device, as by a turn of the hand wheel at slowing down air enters the condenser and holds the condensation water back without necessitating the closing of the injection valve.

The class of engine known as "high-pressure condensing," in which there is no vacuum under normal conditions—the exhaust steam being simply discharged into a tank of feed water for the purpose of heating the latter—should be supplied with a float and air cock, as on stopping the steam in cylinder on exhaust side of piston is liable to condense, and in that case, unless proper provision has been made to prevent it, the feed water in tank will block up in the engine and possibly fracture the cylinder head when steam is again turned on.

The use of a float in either type of engine prevents flooding due to the pumps failing to function properly.

Air-pump valves are often found broken, if of metal, or torn, if of the soft rubber so often used, and in such cases the pump is likely to fail to clear the condenser.

Foreign substances, waste, chips, etc., are very often jammed in the passages, and where the valves open downward—hanging—held to their seats by springs, the stud nuts are liable to work loose, letting the valves fall into the chamber below. For this reason pumps should be designed with lifting valves only, in which type the springs can be much lighter, and the seating is far more satisfactory than where both the weight of valve and column of water must be balanced by the stiffness of a wire coil.

George Dowding & Sons have made improvements to their saw mill at Kerwood, Ont.

The construction of a new saw mill at Princeton, B. C., has been completed by Hardwick, Martin & Harris. Their dam gives a direct waterfall of twenty-feet to a twenty-eight inch turbine.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VI. TORONTO, ONT., MAY 30, 1900 No. 19.

CANADA LUMBERMAN

PUBLISHED BY

The C. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

WANTED.

CIRCULAR FILER AND MILLWRIGHT FOR large mill in Newfoundland. State experience, wages, when could start. "WATEROUS, BRANTFORD.',

Waterous List—Rebuilt Machinery

We find it impossible to avoid taking machinery in trade. This we refit, guarantee in good working order and sell very low:

7½ x 36 ft. Direct Steam Feed.
8 x 12 Cunningham Rope Feed.
11 x 20 Cunningham Cable Feed, 48 x 12 drum, 10 grooves, ⅞ cable.
3 Block girder steel Carriage, 40 in. opening, steel faced, 14 in. wheels. Boss Dogs run one year.
2 Block cast iron Hamilton 40 in. Carriage, Boss Dogs.
3 Block Sewry Carriage, 40 in. Boss Dogs, run one season.
7 Block Stearns Carriage, King Dog, would make two carriages. All have rolled V and flat track planed.
Waterous iron frame, Three Block Carriage, R. H. Single Edger.
Small wood frame and Two Block Carriage.
Kelley Kicker, Kline Loader, Steam Jump Saw, 60 in Saw.
1 Waterous Shingle Mill.
1 Boss Shingle Mill.
3 Saw Hamilton Edger, Single Edger, Slabsaw.
Endless Log Jack, spiked roll.
450 feet Conveyer Chain, ¾ in. round, 2 x ⅜ in. flat.
Steel Conveyor Chain, 18 in. iron flights.
11 x 15, 12 x 12, 12 x 14, 20 x 24, Engines.
60 x 16 Boiler, forty-four 4 x 16 tubes.
60 x 12 Boiler, Seventy-eight 3 x 12 tubes.
48 x 14 Boiler, forty-four 12 foot tubes.
Several smaller boilers.
10, 12, 16 horse upright Boilers.
25 h.p. submerged tube Marine upright Boiler, good for 100 lbs.
No. 5 Rotary Fire Pump, two 2½ in. take offs, double geared, good as new.
Several Hand Fire Engines; one 600 gallon Steam Fire Engine.
21 in. Little Giant Water Wheel with sun.
48 in. Leffel Water Wheel with sun.
10 in. Centrifugal Sand Pump, 300 feet of 2 guage delivery pipe.
7 in. four-sided Moulder.
30 in. Chopper, 20 in. Chopper, 12 in. Jolietter Crushers.
Circular Saws, 68, 64, 60, 59 and 55 in.
24 in. Champion Planer and Matcher.
Several Marine Engines and Boilers.

WATEROUS, BRANTFORD CANADA

WANTED.

WANTED.—Stock to cut. Have fifty horse new portable mill, Waterous make, at liberty after June fifteenth, possibly so ner. THOMAS HOLLIS, Damascus, Ont.

WANTED.

FROM 50 TO 100 M. FEET OF MAPLE LOGS. Address KERR & HARCOURT, Parry Sound, Ont.

WANTED.

BAND SAW FILER AND MILLWRIGHT, FOR Australia. Year's engagement. Must have large experience and come thoroughly recommended. THE WATEROUS CO., Brantford, Ont.

WANTED.

30 TO 50 M CUBIC FEET OF ROUND SPRUCE, 10 in. and up; 750 to 1,000 pcs. Round Hemlock, 12 in. and up, for month June, 1900. Cash on delivery. Address, Box 630, Sorel, Que.

TELEPHONE POLES.

THE UNDERSIGNED HAVE FOR SALE 5,000 Cedar Telephone Poles, all lengths, from 25 to 55 feet. Also 5,000 Fence Posts. Quotations given by mail or wire. GEORGE & MCGREGOR, Killaloe Station, Ont.

WANTED.

BY A BRITISH IMPORTING FIRM, WANEY log pine boards. Canadian manufacturers having this class of stock to offer are invited to send particulars and prices to Box 85, care of CANADA LUMBERMAN, TORONTO.

FOR SALE.

25 HORSE-POWER ENGINE, 40 HORSE-Power Boiler, one 4-Side Moulder one 3-side Moulder, one 12-inch Janitor, one 24-inch Surface Planer, one 8 horse-power Engine and Boiler. TORONTO MACHINERY SUPPLY CO., TORONTO.

DIMENSION TIMBER WANTED.

A quantity of square White Pine, 12 x 12, twenty-two feet long and upwards; also twenty and twenty-two feet logs, White Pine, 14 inches diameter at small end. Must be sound. MOORE & MCGILLICUDDY, Goderich, Ont.

VALUABLE WATER POWER FOR SALE

Within ten miles of North Bay; estimated strength 2,000 horse-power; two hundred thousand cords pulpwood within radius of ten miles; railway facilities convenient. For further particulars apply to DR. J. B. CARRUTHERS, North Bay, Ont.

FOR SALE.

PINE AND HEMLOCK LATH, AND CEDAR Shingles. Write for prices. Also White Maple, Red Birch, Quartered Maple, Brown Ash, Basswood, Rock and Soft Elm, Maple. Have a few cars of 2 in. and 4 in. dry Soft Elm on hand at present time. Write us. KEENAN BROS., Owen Sound, Ont.

FOR SALE

Large Tract of Timber

THE PROPERTY OF

The Canadian Land and Immigration Company of Haliburton, (Limited).

This company has a larger tract of well timbered land about 125 miles north-east of Toronto. There are large quantities of Cedar, Hemlock, Spruce, Balsam, Basswood, Cherry, Birch, Maple, also considerable Pine, Elm and Ash on this tract. It is well served by two railroads, one of which is about to be extended through the centre of the property. The Company are prepared to sell this timber in blocks ranging from 5,000 to 10,000 acres, or more if desired.

There are several good mill sites on the property. This would be a good opportunity for parties who are at present cut out and looking for a new location.

Maps and plans and further particulars can be had by applying to

W. H. LOCKHART GORDON,
Managing Director,
157 Bay Street, Toronto.

WANTED.

LUMBER INSPECTOR DESIRES SITUATION; has had experience on the road. Apply Box 28, CANADA LUMBERMAN.

HARD-WOOD MILL—GRIST MILL

For a good hard-wood mill site and grist mill site, also large quantity of timber fit for wood flour, write L. O. ARMSTRONG, C. P. R. Colonization Agent, Montreal.

FOR SALE.

LUMBER SAW MILL PLANT SITUATED IN Algoma, in hard wood and pine locality; 70 h. p. boiler, 65 h.p. engine, one circular saw, gang edgers, etc. Good lumber docks and railway sidings complete. Also two residences, stables, office and store. Price $8,000. The business nets from $4,000 to $5,000 a year when properly run. The owner is retiring from business. Apply Box 888, CANADA LUMBERMAN.

CURRENT TRADE CONDITIONS.

ONTARIO.

Low water in the streams in the Georgian Bay district is causing lumbermen much anxiety, and it is feared that a considerable proportion of the winter's cut of pine logs will be hung up. The failure to secure a supply of logs has already delayed the starting up of some of the mills. These mills, even if they should commence cutting almost immediately, will not be in a position to have dry lumber ready for shipment before August. The outlook, therefore, is that there will be no recession in prices before midsummer at the earliest. Although a fortnight ago it seemed that the market was on the verge of a considerable decline, the circumstances since that time have been such as to give little hope that prices will weaken in the near future. An increased number of enquiries have been received from the United States during the past week, and it is expected that there will be a considerable demand from this direction, which, with the local trade, will consume the entire production of lumber for these markets. In the Ottawa valley there is, as might be expected, a strong demand for the lower grades of lumber to be employed in rebuilding operations in Ottawa and Hull. Pine box culls are quoted at an average of $14.50 per thousand, and mill culls at $13, the range of prices being about one dollar below and above these figures. No. 1 pine lath is still selling at $3 to $3.25, but No. 2 has declined slightly in value, selling at $2 to $2.50.

QUEBEC AND NEW BRUNSWICK.

Recent rains in the eastern provinces have greatly improved the outlook for rafting operations. The indications are that the entire cut of logs on the principal rivers in Quebec, and on the St. John and Miramichi rivers in New Brunswick, will be gotten safely to the mills. On some of the smaller streams driving work has already been completed. Most of the mills are in operation, and an average production of lumber is expected this season. In Quebec the home production of lumber promises to be above the average. There is a scarcity of dry lumber for building purposes, and contractors are paying about $5 per thousand feet more than they did this time last year. For cedar shingles there is a moderate demand, and large manufacturers are holding firmly to prices.

UNITED STATES.

The consumption of lumber in the United States is by no means as large as it should be. Strikes in the building trades are still handicapping the growth of demand, although it cannot be said that there has been no expansion during the past week. The east has improved, and there are indications of more active trade in the near future. The chief interest in the lumber market pertains to the log supply and the present prospect that a considerable quantity of logs will be hung up in the streams in Minnesota, Wisconsin and Michigan. At time of writing seventeen mills on the Mississippi river above Minneapolis are shut down for want of logs, and at other points similar conditions exist. As pointed out in an article elsewhere, it is not improbable that the cut of Norway and white pine may be reduced by from 15 to 25 per cent. This circumstance has already had the effect of strengthening the market, and holders of pine who showed a disposition to cut prices are now asking full list quotations. At eastern wholesale points pine and spruce are held at firm prices, although the movement of stock is slow. There seems reason to believe, however, that the eastern consumers will be compelled to yield, as buyers who have visited western producing points have not been able to purchase stock at prices lower than were paid for their present supply. In the New York market spruce is held at $18.50 to $21 for log run. The hardwood market has undergone no important change. Buffalo dealers are said to be selling at the following quotations, in car lots f. o. b. Buffalo: Common and cull black ash, $31; inch black ash strips, $27; inch firsts and seconds, black ash, $39; 1¼ inch cull basswood, $20; 1¼ inch common maple, $19 to $21; inch firsts and seconds, soft elm, $27; 1½ inch red birch, $45. At Boston 1 to 2 inch ash sells at $48 to $52, and three inch at from $55 to $60. Maple brings $29 to $31 for one

inch, and $31 to $33 for 1¼ to 2 inch. Elm is quoted at $30 to $32, and basswood at $31 for 1 inch and $33 for thicker. Hemlock prices have declined about one dollar per thousand.

FOREIGN.

More favorable reports are to hand from Great Britain, and it now seems that prices, for Canadian deals at least, are not likely to weaken in the near future. The demand is improving and stocks are gradually becoming reduced. At Liverpool pine deals have advanced in price within the past fortnight, and there is a likelihood of a further advance in Quebec spruce. Consumers of white pine, fearing a limited supply this season, are showing a strong disposition to purchase for their requirements. Third quality pine is being held as high as £15 per standard, and cargoes of New Brunswick spruce have been sold at £7 15s for delivery at Liverpool. Considerable stock has been sold for shipment to South Africa, and upon the termination of the war an important demand from this source is expected. In square timber elm and birch seem to be most enquired for, and high prices are being realized for stock on hand.

THE LUMBER SITUATION.

It is believed that there will be a considerable shortage of lumber this year in the United States and Canada, brought about by the Ottawa fire, forest fires, and the prevailing drought. Mr. Chas. A. Stone, of the Nicola & Stone Lumber Co., Duluth, Minn., has set forth the situation in the following words :

"The continued drought and forest fires in the lumber-producing territory of the North-west are becoming a serious matter to the lumber-producing interests, as they are bound to add greatly to the shortage which existed at the beginning of the season.

"A summary of all pine stocks on hand December 1, 1899, showed a shortage as compared with the same date of 1898 of 766,000,000 feet ; as compared with 1897, 1,187,000,000 feet, and with 1895, 1,452-000,000 feet, showing a large ratio of decrease of product. It was expected, on account of the advanced values, that the production for 1900 would overcome a large part of this shortage for the present season by the stimulation of log output, but because of unfavorable logging conditions there has resulted an additional shortage of log production. The principal cause therefor was the lack of snow. Of this reduced log output a large proportion is still on the rollways of the rivers, because the usual winter and spring floods did not occur to bring it out. The logs now hung up must in all probability remain where they are for many months, and can probably only come out for the next season's sawing, unless most usual flood conditions occur. But the season of floods is largely past, and it is a matter of interest that a prediction that this will be a year of unusual drought is at least being verified in the lumber-producing country of the North-west. Such rivers as the Brule, Nemadji, Amicon and the Iron, principally tributaries to Ashland and Duluth waters, have their rollways of logs still unbroken. This will reduce the possible production of lumber by all mills except such as have rail facilities to supply logs, and must reduce the possible output of the Ashland and Duluth districts alone by over 200,000,000 feet.

"The territory west and north of Lake Superior will suffer more than Duluth and Ashland, as it is almost entirely dependent on the rivers for raw material. Added to this are the enormous losses of logs by forest fires, of the amount of which no accurate estimate is possible.

"The Ottawa fire destroyed not alone 125,000,000 feet of sawn lumber, but in the burning thereof reduced their possible output for this year at least 200,000,000 feet more, which does not include 100,000,000 feet which will be required to replace the burned district. The markets depending on the Ottawa production will naturally look to their nearest source of supply, which is the Georgian Bay district, and this demand will largely remove that output from the available supply for the United States.

"This summary of the situation shows a shortage in the Norway and white pine production this year as compared with last, in the North-western States and Canada alone, of about 1,900,000,000 feet, made up as follows : Shortage in stocks on hand at the beginning of the season, 766,000,000 feet ; hung up by drought at the head of Lake St. Superior, 200,000,000 feet ; hung up in the Mississippi valley and north of Lake Superior, 500,000,000 feet ; loss through the Ottawa fire, 425,-000,000 feet. This shortage is about one-third of the entire cut of the year 1899. It follows that such a shortage must produce a heavy loss to the lumber producing interests, but more than this, all that can be produced this season can only be at a very largely increased cost, because of the increase in the cost of stumpage and a large advance in wages and the cost of supplies.

"This condition of shortage in the pine available finds a parallel in other producing fields, as in yellow pine, which shows a shortage of several hundred million feet, because of lack of water to float logs.

"These facts show that instead of an increased production of lumber this year, as many predicted early in the season, there is bound to be a great shortage in the stocks available for the consuming market."

STOCKS AND PRICES.

During last winter there were shipped from St. John, N.B., to trans-Atlantic ports 14,526 standards of deals, or about 29,000,000 feet.

John Kilburn, of Fredricton, N. B., has 11,000,000 feet of logs from the Upper St. John in safe waters, but 3,000,000 feet have been hung up.

Considerable lumber has been purchased by the Botsford-Jenks Co., of Port Huron, Mich., for the construction of their new elevator at Midland, Ont.

About one week ago seven large barques were loading deals at Halifax, N. S., for the United Kingdom. These vessels alone will carry over 5,000,000 feet.

The Rat Portage Lumber Co., of Rat Portage, Ont., have just been given a contract to supply 1,500,000 feet of lumber for new elavators to be built in Manitoba by the Ogilvie Milling Co.

Lowther & Wood, of Oxford, N. S., have just purchased the Nix property at River Philip. They have about 400,000 feet of spruce sawn, and expect to have 2,000,000 feet ready for shipment by August 1st.

The Tracadie Lumber Co., of Tracadie, N.B., have completed driving operations, and have a stock of 10,000,000 feet of pine and spruce logs at their mill. The company have sold the greater part of their output for this year.

The St. John Sulphite Pulp Co. have 3,000,000 feet of logs in the Mispec river en route to their mill at St. John. About the same quantity has been secured on the St. John river and a million more will go down the Mispec river in July.

Messrs. Heidritter Bros., of Elizabeth, N. J., have secured control of the old Beland mill on the Jacques Cartier river near St. Gabriel, Que., and intend operating it. The firm own extensive limits on the Jacques Cartier river and formerly operated a mill in Quebec, under the name of the Batiscan Lumber Co.

The deal trade is likely to be an important factor in the Penobscot lumber business this year, as several steamers have been chartered to load at Bangor, Maine, for the United Kingdom. Shipments to Europe from Bangor have generally been from 5,000,000 to 7,000,000 feet, but this year's exports are likely to reach 8,000,000 feet.

The Port Hood Coal Co., of Halifax, N. S., want tenders for 70,000 lineal feet of spruce or hemlock wharf logs, not less than 10 inches at small end under bark, not more than 20 per cent. to be 12 feet long, and 25 per cent. to be 25 feet long, also 43,000 lineal feet of spruce or hemlock ballast floor logs, in 12 feet lengths, not less than 5 inches at small end.

General Alger has sold the last of his Ontario timber limits, 108 square miles on the north shore of Lake Huron, to Ferguson & McFadden, of Renfrew, Ont., for $150,000. The deal was negotiated by Mr. Peter Ryan, of Toronto. General Alger is largely interested in the Laurentide Pulp Company at Grand Mere, Que., who own large timber limits on the St. Maurice river.

Mr. Pendennis White, of the firm of White, Rider & Frost, North Tonawanda, N.Y., thus refers to the lumber market : I can see no reason why there should be much reduction, or a permanent reduction, in the selling price of lumber. The cost of production is not likely to decrease, but it is more likely to increase. The value of stumpage is at least 50 per cent. higher than it was eighteen months ago, and will undoubtedly continue to increase, as the quantity is being rapidly diminished by the amount of lumber being produced and also by the destruction of the small timber by turpentine manufacturers. The seriousness of this last feature has been largely increased by the greatly increased price of turpentine and resin during the last few months. Another reason for stumpage increasing in value is that timber lands are gradually going into the hands of a few holders who will be able to control the production of lumber. The rates of wages for labor have been advanced in all lines, and are likely to be advanced still more, owing to the scarcity of labor, which is being felt everywhere. The cost of mill supplies is not likely to decrease much, if any. So upon the whole there seems to be no reasonable ground for supposing that the cost of lumber will be less than at present, nor, so far as I can see, is there any reasonable ground for thinking that the demand for lumber will be materially lessened. We may soon expect South Africa to be a large buyer, and this, with only a normal demand by the regular markets, will do much toward stiffening prices.

BRITISH AUCTION SALES.

At an auction sale held by Foy, Morgan & Co., London, Eng., on May 16th, Canadian timber sold at the following prices :

PINE—Ex. Shakespeare, from Miramichi, N. B.—9-18 feet 3 x 14-19 in. fourth quality, £7, 10s ; 10-19 feet 3 x 12, £7 10s ; 10-16 feet 3 x 11, £8 10s ; 10-17 feet 3 x 10, £8 10s ; 10-17 feet 3 x 9, £8 5s ; 10-17 feet 3 x 9, £8 10s. Ex. Milwaukee, from Quebec—12-18 feet 6 x 11 in. first quality, £17 10s ; 12-18 feet 6 x 9, £17.

SPRUCE—Ex. Sylvanian, from St. John, N. B.—11-23 feet 3 x 11 inches, unassorted, £11 10s ; 10-18 feet 3 x 11, £11 10s ; 3-18 feet 3 x 11, £11 5s. Ex. Ailsa Craig, from Quebec—13 feet 3 x 9, second quality, £19.

PINE DOORS—60 doors 6 feet 6 inches x 2 feet 6 inches x 1¼ inches, £2 10s per door.

At a sale held by Hodson, Mabbs & Co., London, on May 17th, spruce deals sold as follows :—Ex. Zanzibar, from St. Thomas, Que. —10 feet 3 x 9, first quality, £11 and £11 5s. Ex. Erling, from Saguenay—10-13 feet 3 x 8, second quality, £9 10s ; 10-14 feet 3 x 7, £9 10s. Ex. Kinsale, from Batiscan, Que.—12 feet 3 x 9, second quality, £10 5s and £10 10s. Ex. Devona, from Quebec—12-14 feet 3 x 9, third and fourth quality, £9 10s.

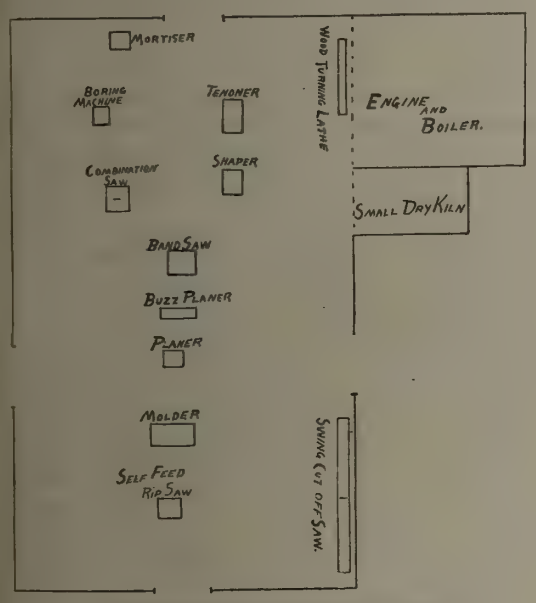
A MODEL WOOD-WORKING PLANT.

By Gerard Lester Parker, in The Tradesman.

Many problems confront the builder of an up-to-date wood-working plant, and the subject requires, for many reasons, considerable study. Careful thought should be exercised as to the character of the building, the amount of power to be employed, and the selection of the best machinery for the class of work to be manufactured. Excellent judgment should also be used in arranging each machine to the best advantage and so to economize time and labor in handling material, as well as to avoid the use of mule stands and twist or quarter turn belts.

The ideal building for a general wood-working plant should be, according to my views, a one-storey structure, where all machines are placed on one floor. This does away with all vibration, and with the expense of more than one foreman, and of carrying material up several stories, besides possessing many other advantages. The building should rest upon a substantial foundation about the height of a wagon body, to facilitate unloading and loading material. Provision should also be made for an abundance of light.

I think I can safely say that nine out of ten people practice too strict economy when it comes



A Model Wood-Working Plant.

to purchasing an engine. This is an important matter, and one that should be given careful consideration. An engine which can barely do its work, and which groans and grows weary under its load, is an expensive and unsatisfactory thing to have around; while an engine of generous size running the same machines will give perfect satisfaction and accomplish the work with much greater economy, both as to fuel consumption and wear and tear. Of course, in many woodworking plants every machine is not running all of the time, but to be on the safe side and to be prepared for an increasing business and for running additional machinery I advise purchasing an engine of at least 50 per cent. more power than what the combined power figures for the original bill of machines. The engine should be located if possible nearest the group of machines requiring the most power. This, however, cannot always be done, but it is a good rule to observe.

Another fault common in the wood-working factory concerns the size and speed of the main line shaft. A shaft 1 15-16 inches in diameter will in every case spring under its load and create undue friction, while one 2 7-16 inches will run beautifully under the strain of any work it may be called upon to do. A slow running main line in a factory where machines require high speed necessitates the use of large driving pulleys and many times intermediate countershafts. As a result extra expense is incurred, slippage of belts and loss of power. To get perfect results the main line should run 350 or 400 revolutions per minute.

The next subject that presents itself is that of pulleys, and quite a difference of opinion exists as to which is the better kind—wood or iron. The wood split pulleys are preferable for the reasons that they cost less, are lighter and easier to put up, cause less friction on the main line boxes, present a better surface for the belt, and at the same time are equal to any demand that may be made upon them.

Cheap machinery is to be avoided, and is dear at any price.

The plan herewith presented represents a small sized one-story factory, 120 by 72 feet, with engine and boiler in a detached brick building, and a small dry kiln. It is arranged as I would recommend it for an up-to-date plant, and one which could be operated with the greatest convenience and profit to its owner. The main line runs lengthwise of the building and the machines are so set and arranged that no twist or quarter-turn belts are required.

With this arrangement the rough board enters at one end of the building to swing cut-off saw or to the self-feed rip saw and passes successively from these machines to each of the others until it comes out at the further end of the building in the finished product. Thereby the greatest economy is practised in the manipulation of the material worked.

The swing saw and self-feed rip saw are located in a group near the door where the lumber enters the mill. The material is here cut to an approximate length or ripped up into strips preparatory to being operated upon by the other machines.

The molder is conveniently situated at the side of the rip saw to receive from it the strips that have been prepared for the production of moldings.

Next comes the planer for smoothing the boards and for bringing them to the desired thickness.

The hand jointer or buzz planer is next in order.

Following this are the band saw and shaper, with the combination saw by their side at the left in the plan. The latter machine is very convenient to the central and rear groups, to both of which it bears particular relation.

The tenoner and mortiser, which are even more dependent upon each other than the shaper is upon the band saw, are located in the rear group within close proximity to each other.

In this same group will also be found a boring machine of either the horizontal or vertical pattern, as may be preferred; and close to the side of the building, at the right of the plan, the wood turning lathe.

By reference to the plan here shown, twelve machines will be found to be represented and would cost from $1,500 to $1,800. The combined power for all, including a blower system, figures about forty-five horse power; consequently the plant should have an engine of at least seventy-five horse power. The entire plant, including building, engine and boiler, machines, main line and a good blower system, could be built for about $8,000.

In such a building as has been described, with good arrangement, first-class machinery, and an ample amount of power, the work will be accomplished conveniently, economically and satisfactorily.

ENGLISH OPINION OF WOOD PULLEYS.

The makers of wooden pulleys claim that they (1) have much greater driving power than iron pulleys; (2) that they are much lighter; (3) that they are cheaper. As regards the first claim, it cannot be denied that a good wooden pulley is superior to an iron one in driving power, owing to the increased grip of leather driving bands on wood. The best wooden pulleys are also about 45 per cent. lighter than wrought iron pulleys, and 65 per cent. lighter than cast iron, which means a considerable reduction in the power required to turn them round and in pressure on the bearings.

Another point in favor of wooden pulleys, at any rate for light powers and high speeds, is the question of centrifugal force and its effects on the shaft and bearings. In the case of heavy cast iron pulleys, this is often a matter of considerable moment, as the centrifugal force is as the square of the velocity. In some cases, with the object of strengthening the rim of the pulley, its thickness has been increased, but this only accentuates the evil; as the centrifugal force increases with the weight, the pulley becomes more dangerous for high speeds, and the strain on the driving shaft and bearings is increased in ratio.

Although wooden pulleys have been considerably improved of late, inferior ones are still made, and some of these will be found to wear out of shape or warp, especially if used in a damp atmosphere. Many wooden pulleys are built up in ring segments, glued, nailed and dowled together and faced with poplar or maple, and it is claimed for this arrangement that as the wood alters only very slightly in the line of grain, the shape is maintained.—Timber Trades Journal.

From a lecture delivered recently in the Sorbonne by M. Mangin, it would appear that Paris possesses about 80,000 trees in the streets and public places of the city. It is calculated there are 26,000 plane trees, 17,000 chesnuts and 15,000 elms, the remainder consisting of sycamores, maples, lindens, etc. Apparently there is only one oak and one mulberry. Although the trees add so much beauty to Paris, there is a large percentage of mortality among them. In the centre of the city they suffer from want of air. In the gardens of the Luxembourg, Tuileries, and in fact in all which are surrounded with houses, what M. Mangin calls the reverberation of the sun's rays is fatal to many trees. He maintains that the trees breath not only by means of the leaves, but also by the roots, and consequently in streets where the ground is hard it is difficult for a tree to be in a healthy condition. Of late years the scavengers have cast salt on the pavement in order to dissolve the snow. The substance, he considers, is most prejudicial to the roots of trees. But M. Mangin believes the greatest enemy to the Paris trees is the engineer, who carries out excavations without regarding their existence.

THE NEWS.

—James Dunbar is building a saw mill at Sundridge, Ont.

—R. F. Houston is building a sash and door factory at Tweed, Ont.

—Long & Thompson are reported to have sold their foundry at Orillia, Ont.

—A local paper states that J. W. Munro may build a saw mill at Pembroke, Ont.

—The Pembroke Lumber Company have lately put in an improved machine for filing saws.

—The Anderson Furniture Company, of Woodstock, are building a saw mill at Trout Creek, Ont.

—Nichols & Son have just completed a new saw mill on the north shore of the river near Almonte, Ont.

—It is reported that Grey & Riley, of Bay City, Mich., purpose building a saw mill in the Georgian Bay district.

—The Royal City Planing Mills Company have just completed a new shingle mill at New Westminster, B. C.

—Walker & Faulkner, lumber dealers, Grenfell, N. W. T., have dissolved partenership, John Walker continuing.

—The Rat Portage Lumber Company recently installed a new engine and boiler in their No.1 saw mill at Rat Portage, Ont.

—A dry kiln in connection with the Royal City Mills at Vancouver, B. C.,was destroyed by fire on May 4th, at a loss of $5,000.

—Mr. Stout has changed the location of his saw mill at Columbia, B.C., and is building a spur line of railway to the mill-yard.

—The Firstbrook Company expect to commence the errection of their new factory at Penetanguishene, Ont., at an early date.

—It is rumored that Clark, Skillings & Co., of Boston, have under consideration the erection of a spool factory at Newcastle, N. B.

—The Knight Bros.Co., of Burks Falls, Ont., will probably erect a large planing mill and woodworking factory at some other point.

—Spencer Bros., Turner & Logan, of Truro, N. S., have just completed an extension to their woodworking factory and installed several new machines.

—James Niblett, scaler of the St. Anthony Lumber Company at Whitney, Ont., is said to have scaled during six months 83,500 logs, representing 8,250,000 feet of lumber.

—R. & T. Ritchie, of Aylmer,Que., have secured a contract to saw a considerable quantity of logs for the Hull Lumber Company. They will operate their mill day and night this season.

J. W. Munro and Thomas Mackie, lumber merchants of Pembroke, Ont., have, with others, formed the Allumette Oil Company, to bore for oil and natural gas and to refine petroleum.

—Davidson & Thackray, of Ottawa, have announced their intention of building a saw mill outside of the corporation limits. The mill will have a capacity of ten million feet per annum.

—An effort is being made to induce several Michigan lumbermen to establish saw mills at Windsor and Sandwich, Ont. Mr. R. Y. Smylie, of the People's Saving Bank, Detroit, is interested in the matter.

—P. G. Gordon & Co.,of Montreal, have leased the old Mason saw mill at Hintonburg and will saw logs for the Hull Lumber Company. It is said that arrangements may be made whereby the mill will be operated during the entire year.

—The Ottawa Saw Works Company suffered the loss of their works by the recent fire in Ottawa, and consequently they have been unable to fill all orders. We are pleased to learn,however, that they are now rebuilding on a more extensive scale than before.

—For twenty-nine years Shaw & Dougall have carried on a saw and shingle mill business at Hallville, Ont., but on March 31st last James Shaw purchased the interest of his partner and became sole proprietor. R. J.Dougall purposes engaging in the mill elsewhere if a suitable site can be procnred. In the year 1892 the mill and stock of lumber belonging to the above firm was destroyed by fire, entailing a loss of $10,000, on which there was no insurance.

—Mr. E. Stewart, Inspector of Forestry for the Dominion, has recommended that in order to protect the forest areas against fire the government should employ a number of fire rangers for at least four months in the year. He estimates that there would be required seven men in the British Columbia railway hills, twelve for the foot-hills and Edmonton district, and ten for the other districts of Manitoba and the Territories.

—The red mill at Little Current, Ont., has been completely refitted by the W. A. McArthur Company, of Cheboygan Mich. The building has been overhauled and a new iron roof put on. The improvements to plant consist of a steam log loader, three block carriage, edgers, trimmers, etc., as well as a new 48 inch Wick's gang saw furnished by Mershon & Co., of Saginaw. In the boiler room there are five boilers and the necessary engines for operating the machinery and for supplying power for the electric light plant siuated on the premises. The refuse from the mill is carried to an iron burner 26 feet in diameter and 90 feet high. The yards are equipped with tramways and other modern improvements to facilitate the carriage and piling of lumber.

CASUALTIES.

—A young man named Cover was instantly killed in the saw mill at Ethel, Ont., by being struck by a board thrown from the saw.

—As a result of a boiler explosion in the shingle mill of Frank James near Hobart, Ont., Fred, son of the proprietor, was hurled about 75 yards and instantly killed. Another son, Albert, was severely scalded by escaping steam.

—George Kinsley, head sawyer at Gordon's mill at Thessalon, Ont, attempted to remove some bark under the saw when his arm was caught by the saw and almost cut in two. It was considered necessary to amputate the arm, and he died in a few hours.

—Paul Godin was employed in William Peter's mill at Parry Sound, Ont. A log having jammed on one side of the slide from the jackladder, he left a boy in charge of the lever and went down to start the log; while thus engaged, a log came up the ladder and the boy in charge moved the wrong lever, throwing the log over on the side where Godin was working. The log struck him on the head, resulting in almost instant death.

NEW BRUNSWICK NOTES.

[By a Travelling Correspondent]

Small & Fisher's machine shop and factory in Woodstock are well worth a visit at any time, and one finds them well managed and up-to-date in their equipment. The concern is one of the "old reliable," and their name is known particularly well throughout the Maritime provinces. They turn out a splendid make of shingle machine, and do a good deal of mill work, manufacturing rotaries to order. The shingle machine which they are now making is much heavier than that formerly turned out, having 2½ inch steel arbor and other parts in proportion. It is of eccentric gear and is fitted with self-oiling boxes. They have filled orders for this machine from Quebec, Ontario, and even as far west as British Columbia, and have also shipped into New Hampshire, Maine. In another column may be seen a cut of this machine. When the LUMBERMAN representative called a big order was being filled of bridge castings for the Hartland bridge. The Small & Fisher Company turn out great quantities of farm machinery, including threshing machines, plows and harrows, also some fine lines of stoves. Their machine shop is fitted with modern apparatus for manufacture, including four lathes, two planers, four drilling machines, bolt threading machine, etc. One lathe is 22 feet between centres and swings 40 inches. The foundry is a good one and the wood-working departments are well fitted up. Adjoining the machine shop is an electric plant of a capacity of 500 lights. This is a commercial plant which supplies the town to a large extent. It is well fitted up, there being two Maegher dynamos connected in series, driven by a Buckeye automatic engine. The machine shop engine is of E. Leonard & Son's manufacture. Mr. John Hastie, the foreman, whose services has but recently been acquired, is a Scotchman of good experience.

Maritime millmen are well acquainted with the firm of Connell Bros., of Woodstock. They have a good sized machine shop and foundry, and turn out quite a few shingle machines. They recently shipped three of these to Fenderson's mill at Sayabec, Que., where eight of the same class of machines have been in use for some time. Among other recent orders were eight for the Tobique Manufacturing Company, one for L'Itchen's mill at St. Rose, near Edmunston, one for J. J. Wheelock, Connors, N.B., and one for T. Crockett, St. Rose. They send quite a number to Quebec province, and state they have about 70 in use there now.

The writer was shown, at the office of Chas. Dickinson & Company in Woodstock, one of the best things in the way of larrigans ever brought out. This firm is going into the mannfacture of lumbermen's foot wear, and show some fine samples. The Henderson patent non-rip larrigan is not likely to belie its name, and is guaranteed in every way against ripping. Practical lumbermen know how the snow packs up under the ankle flaps and that stubs catching in will tear the sewing. This is fully prevented by the new construction, which may be seen in the cut in Mr. Dickinson's advertisement in another column. The vamp overlaps the quarter, making it much the same as a lace shoe, and the gusset being inside makes it thoroughly waterproof. Mr. Dickinson shows many testimonials from leading lumbermen and dealers in the Maritime provinces, all speaking in the highest terms of the waterproof and non-ripping qualities of his larrigans. Patents have already been secured in both the United States and Canada. The firm's premises on Connell street are being refitted and doubled in capacity. They will also manufacture belt lacing, and their past long experience in leather should guarantee their lacing leather being of good quality.

J. W. Boyer & Co., of Victoria Corners, near Woodstock, tell of good business during the past year. They are manufacturers of lumbermen's boots and shoes and heavy harness. All their goods are the best of hand made. This spring they made about 2,500 pairs of driving shoes and boots. Their books show large orders from the best concerns in eastern Canada. They are now extending their business into Quebec more than before.

Albert Hayden will shortly make improvements to his mill in Woodstock, making it practically a new mill with the exception of the undergear. It now contains a rotary, shingle, lath, and clapboard machines and planer. Mr. Hayden cuts over 3,000,000 feet of long lumber per year and nearly as many shingles. He also has a sash and door factory and intends putting in a new edger. It is intended to tear away the whole upper part of the mill and raise the main floor one storey, bringing it on a level with the railway tracks, thereby greatly facilitating the shipment of lumber.

Gilman Bros. & Burden, of Pokiok, are cutting over 6,000,000 feet of long lumber this year. They have a gang and rotary mill and manufacture laths and shingles. Their wood-working factory turns out doors and sashes, flooring, hardwood sheatting, mouldings, sidings, and all kinds of house fittings.

Jas. Carr's mill near Woodstock is cutting about 1,500,000 feet of lumber this year. He has 10,000 acres of timber land nearby, chiefly hardwood.

L. S. R. Lockhart will make considerable changes to his grist mill in Hartford, near Woodstock, this summer. He will improve his wheat flour plant by putting in a gradual reduction system.

The St. John Sun, in recently estimating the Tobique output of lumber, undoubtedly exaggerated it. The amount given in the last issue of THE LUMBERMAN, 26,000,000 feet, is about accurate. Hale & Murchie are not getting out over 7,000,000 feet at the most, instead of 12,000,000 as the Sun states. R. A. Estey's cut is not expected to be over 4,000,000 feet.

Jas Pinder has a good mill in Temperance Vale, fitted with a rotary, shingle and lath machines, planer and edger. He cuts about one-half million shingles each year. Quite a few of these are hemlock, but for local trade supply only. They sell at $1.50 per M.

Donald Frazer & Sons have 6,000,000 feet of logs well on the way out of Green River, in Madawaska county. They do not, however, expect to get it all out until about the first of June.

May 18th, 1900. A. B. P.

FORESTRY FOR INCOME.

When a person owns a piece of timber land and every year cuts off the matured timber in such a manner as to secure an income without reducing the value of the estate, that is forestry —practical forestry, with a view to a perpetual annual income. It is practised in all civilized countries to a more or less extent except in the United States. Even Canada, one of the greatest wooded countries, has regulations for timber cutting that tend to perpetuate her forests and bring a large annual income to the government. In England, on private estates, and in most of the countries of continental Europe, a system of forestry prevails that not only permits of large annual incomes from forest products, but actually increases their forest resources, both in volume and value. A recent London timber trade paper contains this item :

"The annual sale of timber on the Duke of Leeds' Kiveton Park estate was held on March 30 by Mr. F. Bannister at the Kiveton Park Hotel, Rotherham. There was a good attendance of buyers. The sale was the most successful held for the last twenty years, the quality of timber being exceptionally good, and creating very keen competition. There were twenty-nine lots offered, and the total proceeds exceeded £1,400."

A $7,000 income annually from the increased growth of timber on one estate is not a very small matter. It will require a pretty big cotton plantation or farm to equal it. Income from practical forestry is like pension money : it comes without effort or labor, only requires common-sense supervision and management. The land improves in fertility under proper forestry, and the standing timber—the owner's capital—is unimpaired in value. Money from a cotton crop or grain crop comes mightily like digging it out of the ground with constant toil and sweat and discomforts, with a large and ever-present factor of uncertainty as to whether there will be any outcome at all.

Aside from any immediate or prospective money profit, it is apparent to any one with the least foresight that the present rate of forest destruction is a menace to the future welfare of the entire country. If not done otherwise, the time will come in the next century when the States or the Federal Government will be compelled to enforce laws for the protection and promotion of forest growth. Why not every timber owner begin now, even if on a very small scale, to conserve timber now standing and to plant more?—Lumber Trades Journal.

A BUSINESS NECESSITY.

The Goderich Lumber Company write : Kindly send to our address, Owen Sound, a copy of the CANADA LUMBERMAN. As we have bought out the Pickard & Rowan business, we think we need the LUMBERMAN there as well as in Goderich—in fact, we think we cannot do without it in our business, it is so full of useful information regarding the trade. We cannot see how anyone in the business can get along without it.

The stem of a globe valve should never be left in a horizontal position, unless for some cause it is absolutely necessary, as it causes a trap to be formed that prevents the water draining out.

A CEMENT FOR WOODWORKERS.—A cement recommended for fastening wood to iron is made by dissolving glue in boiling water, making it of the consistence of cabinet-maker's glue, and then, while stirring, add a sufficient quantity of wood ashes to produce a mixture resembling varnish. The surfaces to be united are heated and covered with this cement and allowed to cool.

On the subject of "Power Transmission by Belting," a writer in the American Miller says : "The advantage gained in running the grain side of a belt next to the pulley is not, as some belt makers have claimed, that more power is obtained by running it in this manner, but rather in the saving of the belt. It is well known that if a piece of belting be split in the center and submitted to a tensile strain, that the part next to the flesh side will be found to possess nearly double the tensile strength of that of the side next to the grain. Now, while we claim that the difference between the fractional power of each half amounts to but little, if any, the saving in the belt by wearing it off upon the grain side by running it next to to the pulley amounts to enough to make it an object to run belts in that manner."

WOOD PULP DEPARTMENT

SODA AND SULPHITE PULP.

Dr. Max Muller, who has had a long experience in the manufacture of sulphite and soda wood pulp, states that 108.4 parts of sulphite pulp are obtained by the sulphite process from the same quantity of wood which yields 100 parts of soda pulp by the use of pure caustic soda. As this figure was obtained from many years' manufacturing practice it is particularly interesting, and indicates clearly the advantages to be gained by pursuing the sulphite process.

The cost for alkali in the process is less than that in the caustic soda method. Salt cake is cheap and is easily decomposed into sulphides, but there is no doubt a larger proportion of alkaline salts to be dealt with in the sulphite process, which has a tendency to increase the labor account. Besides the presence of sulphide of sodium in the lyes, as well as the formation of this body in the furnace itself, gives rise to inordinate wear and tear. Lyes containing sodium sulphide act more severely upon cast or wrought iron than those containing pure caustic soda, so that the plates of the digester and tubes of the evaporator, if a multiple evaporator is used for soda recovery, are more or less acted upon and suffer injury in course of time. This is particularly the case in evaporators in which the fluid at a high temperature is caused to impinge against any cast-iron part.

But perhaps the most serious objection to the sulphite wood pulp process is the foul odor escaping from the digester when the pressure is blown down after the digesting operation has been completed. This smell is so penetrating and offensive as almost to preclude the possibility of the manufacture being carried on in populous districts. In countries such as Norway and Sweden, where pulp works are, as a rule, far removed from centres of civilization, the manufacture can be carried on with impunity, but in England it would be practically impossible to do so, unless some special means were adopted to absorb or otherwise render harmless the vapors given off. The odor doubtless arises from the formation inside the digester at high temperatures of sulpho-compounds of the turpentines, and other closely allied bodies which exist in the wood, and which being of a highly volatile nature, pass away with the steam as the pressure is blown down.

Several schemes have been devised with a view to miminize the evil, such, for example, as passing the vapor through a scrubbing tower through which there flows a plentiful supply of water, but obviously the water which absorbs the sulpho-compounds becomes itself tainted, and its disposal is quite as serious and difficult a matter as the vapor itself. The best mode of getting rid of the vapor is to first condense all steam associated with it, and then pass it through incandescent fuel in the ordinary fireplace of the recovery furnace. The sulpho-compounds are then decomposed and their odor destroyed.

Notwithstanding this serious objection the sulphite process is the more frequently used of the two, due to the fact that it yields a larger quantity of pulp from unit weight (or volume) of wood, that the fibre is stronger, has greater bulking properties, and bleaches quite as well as soda pulp, and that the cost for alkali in its preparation is reduced to a minimum.—James Beveridge, in The Paper Trade Review.

SPRUCE PULP WOOD PILED ON THE ICE.—THESSALON RIVER, ONT. [From the Ontario Forestry Report]

THE FIRE AT GRANDE MERE.

ON May 6th fire broke out in the mills of the Laurentide Pulp Company at Grande Mere, Que. The first report of the fire was that the entire buildings of the company had been destroyed. This proved to be incorrect. The loss was confined to the pulp mill, chipper mill and pump house. Fortunately the magnificent paper mill and the saw mill of the company were saved by the shifting of the wind. An estimate of the loss places it at $80,000.

The fire was caused by a heated shaft on a rope pulley leading to the pulp mill. Six hours after the fire rebuilding operations were commenced.

The pulp mill contained a fine set of grinders made by the New England Machinery Company, of Sandy Hill, N.Y., with 300,000 gallons per hour capacity.

THE PAPER SITUATION.

The destruction by fire of the extensive mills of the E. B. Eddy Company at Hull, Que., created a partial paper famine in Canada. The situation was further complicated by the destruction, about one week afterwards, of a portion of the works of the Laurentide Pulp Company at Grand Mere, Que. The Minister of Customs was requested by some of the newspaper publishers to suspend the duty on paper coming into Canada until such time as the demand could be supplied by the Canadian mills. It was claimed by the advocates of this action that the remaining mills were overcrowded with work, and that they could not supply the trade. The Minister of Customs, however, refused to remove the duty, on the ground that it would be an injustice to the Canadian paper-makers and might bring about unlookedfor complications. This decision will no doubt prove to have been a judicious one, as it is said that already the supply is almost equal to the demand.

TO MAKE PULP FROM SHAVINGS.

A patent, covering a process of making pulp from shavings, has been issued to Joshua Norton, of Boston. The inventor says :—"My invention consists in utilizing shavings by subjecting them to a water-pressure sufficient to thoroughly saturate and soften them and then directly subjecting them to the beating treatment in any ordinary beating-engine without any intermediate reducing treatment whatever. No attempt is made to destroy or remove the gum or other constituents from the shavings in this invention.

"I am aware that attempts have been made to make fibre from sawdust and shavings by cooking in alkali, and my patent No. 496,275 treats sawdust, shavings and waste by both the alkali and sulphite processes; but I am not aware that pulp or fibre has been made from shavings by saturating and softening such material by water pressure and directly, without intermediate manipulation, introducing the same to the action of the common-beating engine."

PULP NOTES.

The Mayor of Parrsboro, N.S., states that London capitalists are still considering the erection of a pulp mill at that place.

Mr. George Johnson, statistician for the Dominion government, is engaged upon a voluminous report of the pulp wood resources of Canada.

Over two hundred men engaged in building the paper and pulp mills of the Lloyd Paper Company at Sturgeon Falls, Ont., struck for higher wages recently.

Arrangements are reported to be nearing completion for the purchase by, Montreal capitalists, of James Reid's paper mills at Lorette, Que., and their transformation into ground and sulphite mills, at a cost of $100,000.

A meeting of the Labrador Electric and Pulp Company was held at Montreal recently, at which Raymond Prefontaine, Q.C., was elected president, Hon. A.H. Thibaudeau vice-president, and Mr. A. V. Roivin secretary-treasurer.

Incorporation has been granted to the Nipegon Pulp Company, with a capital of $250,000. Messrs. John Flett, W. N. Rowell and J. G. Shaw, of Toronto, F. S. Wylie, of Port Arthur, and Paul Weidner, of Detroit, are the provisional directors of the company.

Rumors are afloat that New York capitalists have purchased the option of a valuable water power at a point on the famous Saguenay river from its source at the Grand Discharge, at the foot of Lake St. John, to Wilson's Power, about twelve miles above Chicoutimi. It is believed that the erection of a pulp mill is under consideration.

Previous to the destruction by fire of a portion of the Laurentide pulp works at Grand Mere, Que., the company had placed an order with the Bagley & Sewell Company for a 120-inch news machine. This machine, it was expected, would bring the product of the mill up to 80 tons of paper per day.

The Spanish River Lumber Company are laying out the site for their proposed pulp mill on the Spanish river. They have also had surveys made for a railway to connect the works with the Soo branch of the C.P.R. The works will be located near Webbwood, where there is a fall of sixty feet, capable of developing, it is said, twenty thousand horse power.

A meeting of the paper manufacturers of Canada was held in Montreal on May 18th, at which questions affecting the trade were considered. Although the press was not admitted, it is understood that the question of making an advance in the price of paper received some attention. Two committees, one for the west and one for the east, were appointed to make arrangements to entertain the delegates of the Paper Makers' Association of England, who will make a tour of the United States and Canada during the summer months of this year.

In a communication to the CANADA LUMBERMAN, the editor of Paper and Pulp, London, Eng., states that the term "moist pine" as used in Great Britain means ordinary mechanical pulp containing 50 per cent. of moisture, in which form the great bulk of mechanical pulp is shipped to that country. "Dry pine" is the same pulp in an air-dried condition. He says further: "Most of the mechanical pulp used here is imported from Norway, the quantity received from Canada being insignificant compared with the total. Canadian mechanical pulp has the reputation here of being better than that from Scandinavia, but it does not as a rule realize higher prices, so that the quotations in our market reports apply equally to Norwegian and Canadian. There is a great scarcity at present, and high prices are being realized, but for delivery onwards from July it is being quoted at from 60 shillings to 65 shillings per ton, 50 per cent. moist."

DOMES ON STEAM BOILERS.

By W. H. WAKEMAN.

A few days ago I fired up a boiler that had not been used for about six months. After the air was forced out of it by the steam, through an open safety valve, the valve was closed and pressure allowed to accumulate. It was not tight, so I raised the lever and let steam blow freely through it. At first this steam was dry, but after about 30 seconds the discharge pipe was nearly half full of water that was coming out with the steam. As this boiler has no dome on it my attention was called by the incident to the difference between boilers that have domes and those that have none. In the above mentioned case the boiler was not flooded with water, as there was only two gauges, or no more than would be carried in practice.

The philosophy of the water coming out with the steam is as follows: When the safety valve was lifted enough to give the full capacity of pipe, there was a very great rush of steam through it, which lowered the pressure on the surface of the water immediately under the steam pipe. I do not mean to say that it was lowered very much, for it probably was not, but a difference of one pound is enough to cause trouble; for, as the pressure is maintained on the remainder of the water surface, it forces the water directly below the steam pipe out with the steam. Domes are put on boilers to obviate the evil, for they afford a very much larger opening for the escape of steam, consequently the velocity is less, and the water below the opening is not forced up with the steam. It is not assumed that the shell is cut away for the full size of the dome, as that would weaken the shell more than is necessary, but an opening that is twice the diameter of the steam pipe should be provided. Where there is a manhole in the dome, the shell is cut away enough to make an opening as large as the manhole. Those people who object to domes point out the fact that an opening of this size greatly reduces the strength of the boiler, but there is no good reason for this remaining so.

A boiler without a dome is usually fitted with a manhole in the shell, and this is reinforced with a frame that is supposed to be as strong as the metal in the shell was before it was removed. Suppose it was decided to put a dome on his boiler, and to locate it over the top manhole. Could any boiler maker consider it necesary to remove the frame as useless? I think not, for he would say that it supported the shell and made the whole structure stronger than it otherwise would be. This being true, why is it not good policy to put on a supporting frame inside of the dome when a boiler is built? If this was done the claim that a dome weakens the shell of a boiler would no longer be tenable; and this is the principal objection to having one included in the specifications. The claim that it acts as a reservoir for steam, to be used when wanted, as presented by those who favor it, is not worthy of serious consideration on account of its small capacity; neither is the objection offered to it by the opposition, who say that it acts as a condenser, as the surface exposed is not large, and it should be protected by sone good covering. The conclusion of the whole matter is, therefore, that a dome furnishes dry steam to the engine as above described, and it does not weaken the shell when properly constructed, any more than it does to put a manhole in the shell at some other point. —The Wood-Worker.

Do you wish to extend your trade? If so, place an advertisement in the CANADA LUMBERMAN Export Number.

AN UP-TO-DATE CATALOGUE.

We have received a copy of a handsome 266-page catalogue just issued by the Dodge Manufacturing Co., of Toronto, entitled B 6 Catalogue for 1900. This is a most complete work, handsomely bound, and with complete illustrations of the entire line of power transmission machinery manufactured by the company, taking in shafting, with extension tabulated lists of weights per foot of all the various sizes used, as well as tables showing the horse power transmitted by the different sizes at all speeds. Many up-to-date shafting couplings of the latest types are also illustrated, also improved set collars, safety pattern, a most complete line of the Dodge Co.'s new ball and socket adjustable hangers, open side, and with all the most modern self-oiling types of bearings, including the "Capillary," "Ring Oiling" and "Chain Oiling" improvements. The Dodge Co.'s system is to stock this hanger in all drops for immediate shipment.

There are also illustrated a wide range of self-oiling bearings for all mill purposes, and adjustable floor stands, belt tighteners, the Dodge patent split friction clutch pulley and clutch coupling. They show something entirely new in a clutch pulley for powers as small as 1 h.p.

The Dodge system of rope driving is well illustrated in many forms, and the Dodge Company are now thoroughly equipped for the manufacture of iron ground rope wheels.

The work includes complete and handy tables and lists covering link chain and sprocket uses, as well as many of the company's specialties for grain elevator work. A feature of the work is the complete dimension tables appended, making it invaluable to mill architects and superintendents laying out plants, a full line of pulleys of all kinds, including up-to-date patterns in cast iron pulleys, special iron centre wood rim pulleys, as well as the celebrated Dodge wood split pulley, which the company controls the manufacture of in Canada.

The Dodge Co.'s B 6 Catalogue for 1900 will, we are sure, be welcomed by every mill and factory man in Canada, and we are told will be mailed free on application.

A charter was recently made from a British Columbia port to the United Kingdom at $21 a thousand. Timber which pays that freight is worth something at point of delivery; but then there is nowhere else to go for timber of just the size and quality that can be obtained on the Pacific coast, says the American Lumberman.

Executive Offices:
Nos. 346 and 348 Broadway, NEW YORK CITY, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the company at any of its offices. Correspondence invited.

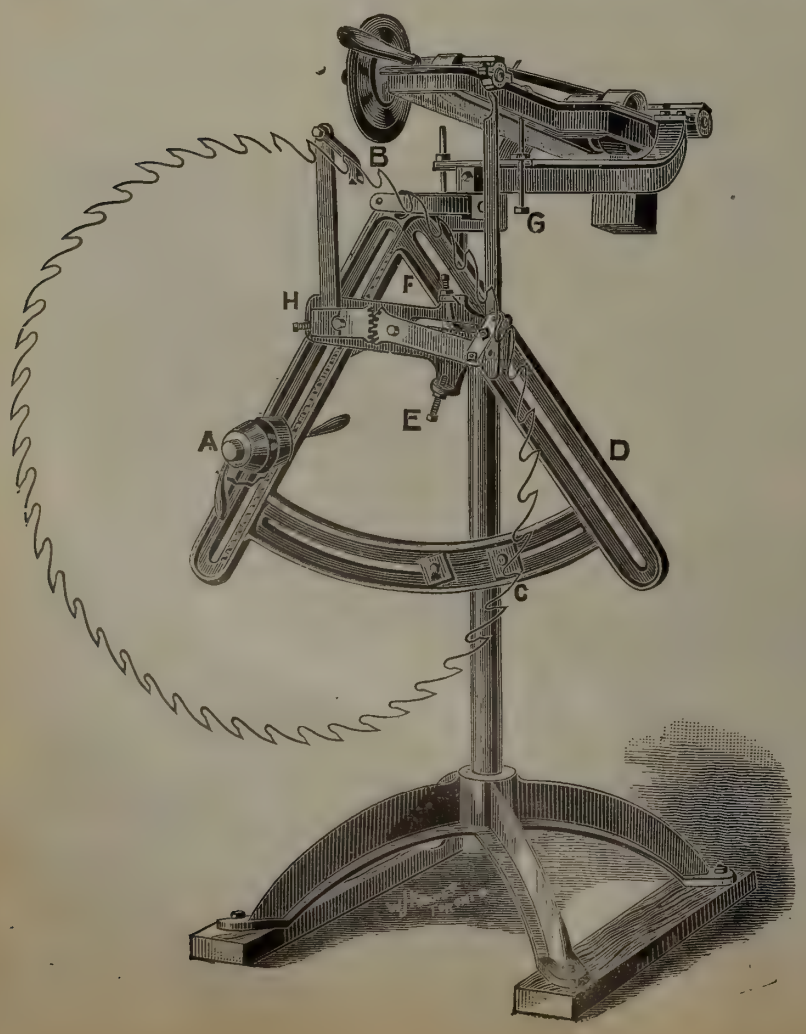
FOR VARIETY, CAPACITY OR QUALITY OF WORK

. . . OR FOR . . .

SIMPLICITY, DURABILITY, CHEAPNESS



Will take saws from 6 inches to 5 feet diameter ; sets the saw forward one tooth at a time automatically ; sharpens any saw perfectly, giving the teeth any desired pitch, and making all the teeth exactly alike. Will sharpen 20 teeth in an ordinary saw mill in one minute, or 100 teeth in a shingle saw in four or five minutes. The cut shows outline of mill saw 54-inch diameter.

PEMBROKE, ONT.

MR. F. J. DRAKE, Belleville :

Dear Sir,—Re the conversation you had with our manager, I am instructed to inform you that the machine we purchased from you early last spring has proved to be a very useful piece of machinery. Our Mr. McCool, who uses it, is greatly pleased with it, and recommends it to any person who may require a Saw Filer. Wishing you much success with your Filer, we remain,

Yours truly,
(Signed) THE PEMBROKE LUMBER CO.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

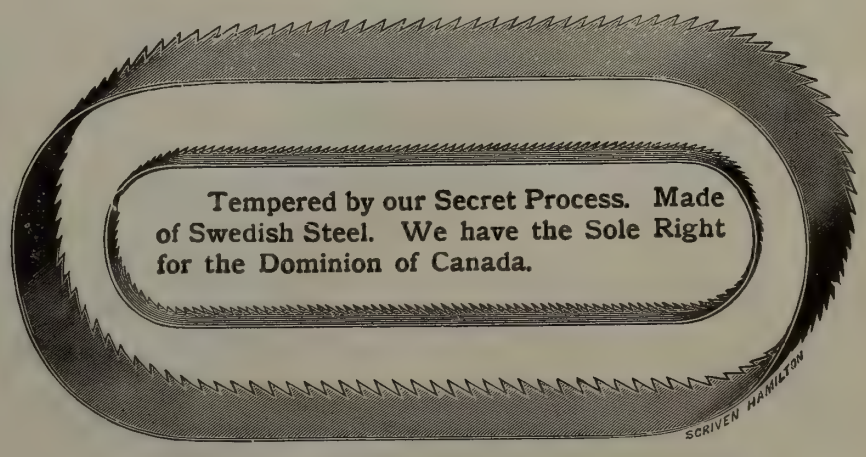
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

PETERBOROUGH, ONT.

R. H. SMITH CO., LIMTED.

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

Simonds' Process

in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, Decemer 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

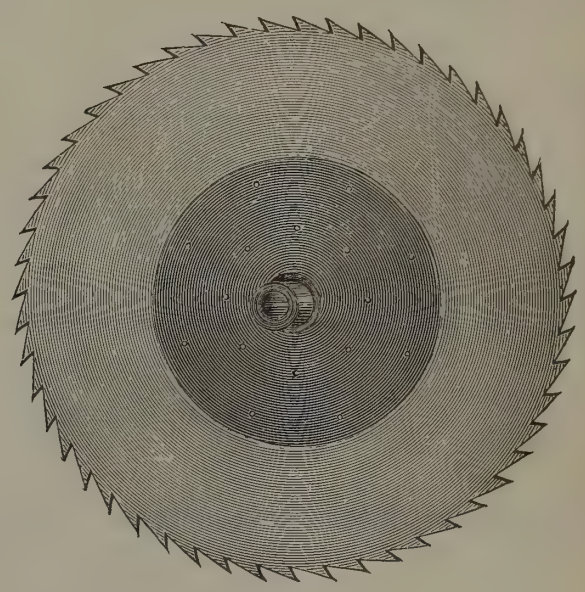
CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



THE "LEADER" CROSS-CUT SAW

These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

THE "LEADER" SAW SWAGE

Made in 3 Sizes—$2.00, $2.50, $3 00 Net.

OUR PRICES ARE RIGHT. KINDLY ALLOW US TO QUOTE YOU BEFORE PURCHASING.

THE CANADA LUMBERMAN

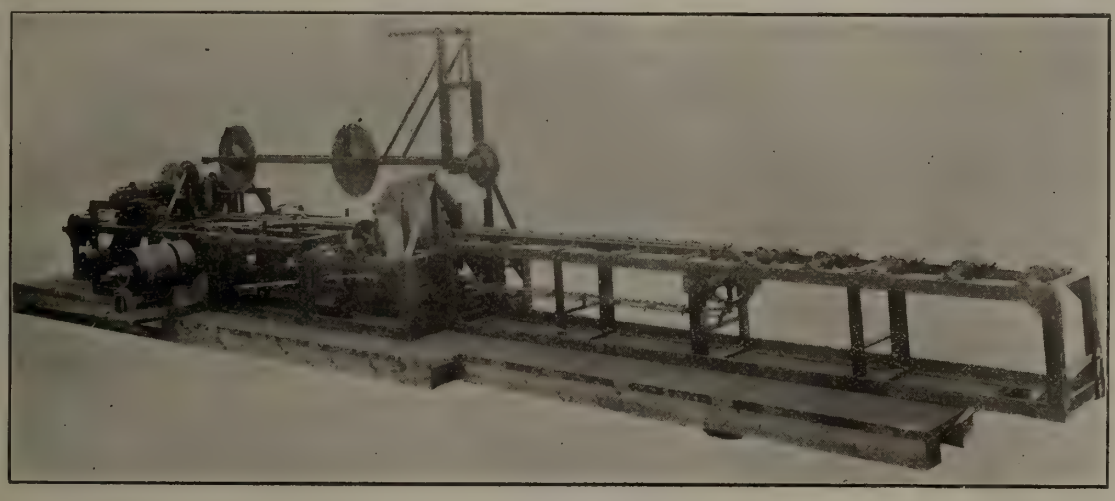
VOLUME XXI. NUMBER 7. TORONTO, CANADA, JULY, 1900 TERMS, $1.00 PER YEAR. Single Copies, 10 Cents

NEW TIE SAWING MACHINE.

The accompanying illustration and particulars of a new type of tie sawing machine will be of interest to readers of the CANADA LUMBERMAN. This machine has been patented in Canada and the United States by Mr. George E. Smith, of Sherbrooke, Que., and is now manufactured by the Jenckes Machine Company, of that place.

The frame of the machine is 35 feet ; it is in three pieces, made of 5/16 angle steel, and can be taken apart very easily. It should be explained that the illustration herewith does not show the machine exactly as it is manufactured, as the patentee has changed the planer by using vertical heads instead of discs, and has added the butting saws and tie cant, thus making the machine automatic in every respect. The saw and planer frame is 5½ feet wide and the balance of the frame 2 feet wide. The tooth discs on top of the superstructure are for the purpose of holding the tie in place, and may be raised and lowered for ties of different sizes. The five concaved rolls on the small frame are for centreing the ties.

The ties are fed through the machine by an endless chain over sprocket wheels and the aid of friction pulleys. After the tie leaves the saws the slabs are taken from each side of the machine ; the tie then passes on to the planer, and after leaving the planer is thrown on to the three endless chains and carried to the butting saws, where both ends are cut off the desired length.



NEW TIE SAWING MACHINE.—PATENTED BY MR. GEO. E. SMITH, OF SHERBROOKE, QUE.

The machine will saw and and plane ties from 5½ to 10 inches thick, as the saw and planer shafts are in movable boxes. By actual count the machine is said to have cut 2,700 ties in four and one-half hours, the ties being hauled by teams from the yard to the machine. To obtain the best results the machine should be placed on a stream or lake and the ties fed to it from the water by an endless chain, as in this way but six men, exclusive of engineer and fireman, would be required to operate it. The power required for the machine is from 25 to 30 h.p., and as it is made of steel, it is light and easily handled over rough roads.

The machine has been used by the Quebec Central Railway Company, and is said to have given entire satisfaction.

The advantage of planing ties is that some railway engineers claim that a sawn tie will hold moisture and thus be more likely to rot. Another advantage is that every tie is made of the same thickness.

NEW BRUNSWICK TIMBER LANDS.

ACCORDING to the thirty-ninth annual report of the Surveyor-General of New Brunswick, the receipts from timber lands for the year ended 31st October, 1899, were $160,655.67, made up as follows : Timber licenses, $31,121.15 ; renewals, $31,240 ; stumpage, $98,294.52. This is an increase over the previous year of about $25,000, due principally to the large sale of limits held on 30th August, 1899. At this sale 1,169½ square miles were disposed of, for which the sum of $24,360, or nearly $21 per square mile, was realized. The licenses were sold for the balance of the 25 year term, which began in 1893.

PACIFIC COAST LOGGING METHODS.

LOGGING methods have undergone a great change during the past five years, and cattle, then commonly used in a majority of the camps, have been superseded by the "donkey" engine and the logging locomotive. In a number of the camps heavy logging horses are still much in demand, but usually the horses are supplemented by steam power and all the latest up-to-date appliances. Logging oxen have been practically relegated to the rear, and are now to be found in but few camps in the entire Pacific northwest. On the other hand, the machine shops and foundries have been taxed to their utmost capacity to supply the demand for logging engines, and this in turn has created an enormous demand for wire rope and cable and all other accessories made necessary by the heavy timber of this section. Several "donkey" engines are frequently used in the same camp, being located from half to three-quarters of a mile apart, from which wire cables are run into the timber in distances varying from a quarter of a mile to a mile, the logs being hauled over skid roads, covering the entire distance in twelve to fifteen minutes. These engines will pull from 8,000 to 10,000 feet at a load.

In other localities the logging locomotive is used exclusively, reducing the laborious work involved, increasing the output and putting the whole business upon the systematic basis of modern railroad operations. To the uninitiated or to those who are not familiar with present methods, a visit to the logging camps of the coast would be a revelation indeed, especially to the eastern lumbermen. Timber, climate and surroundings are entirely different. In the white pine states the logging season begins as soon as the first heavy frost of winter occurs, and ends with the breaking up of the ice in the rivers and streams. Much depends on the first frost. If the ground is covered with snow before the freeze-up, the foundation is bad, especially in the swamps, and the roads will be bad all winter. On the other hand the absence of snow is not felt very much, because the roads can be easily sprinkled from day to day so long as the frost is severe. The timber is small and easily handled, and horses are universally used. "Driving" is easily accomplished, too, on account of the small logs.

On the Pacific coast, however, things are reversed. Cold weather and snow constitute obstacles not easily overcome. Instead of ice roads the skid road offers the foundation, the use of skid oil supplies the absence of ice, and the donkey engine furnishes the motive power from the woods to the landing. So, too, the jack supersedes the peavy, on account of the size of the logs, and the logging locomotive is rapidly taking the place of the river driver. There is no such definition as the "logging season." All seasons look alike to the Pacific coast logger. The work in the woods goes merrily on every month in the year, except when it snows, which is a rarity, and the logs are snaked over the hills as rapidly in December as they are in July.—Pacific Lumber Trade Journal.

BARBADOES LUMBER DUTIES.

The last report of the Department of Trade and Commerce contains a new customs tariff act passed by the government of Barbadoes on June 21, 1899. According to the tariff the duty on wood products is as follows : Hemlock, birch, beech, white pine, spruce and pitch pine lumber, 7s. 6d. per 1000 superficial feet ; coiled and straight hoops, 9s. per 1200 pieces ; white and red oak staves, 9s. per 1200 pieces ; shingles, 2s. 3d. per 1000 ; all other kinds of wood, except in naves, felloes, spokes and unsquared posts, 12s. 6d., per 100 cubic feet.

EXTEND YOUR TRADE.

If you are desirous of finding a market for your timber products, you should place an announcement in the forthcoming Export Number of this journal, to be published August 1st.. Write the publishers to-day for rates.

LARGE PINE TREE.

Mr. H. A. Hough, of Renfrew, Ont., has sent us a photograph showing a large log cut on the Ross property near his mill. The tree from which it was cut made four sixteen-foot logs, one twelve-foot log, and two shorter ones. The butt log, shown in the illustration, was five feet in diameter. The tree was perfectly sound, and

Mr. Hough believes it to be the largest one cut in the vicinity for many years.

TO EXPLORE NORTHERN ONTARIO.

The Ontario Legislature at its last session, voted the sum of $40,000 for the purpose of exploring the timber and mineral resources of New Ontario. In pursuance thereof, ten exploration parties have been appointed. Each party consists of from four to six men including surveyor, land and timber estimator, geologist, cook and canoemen. The following are the names of the principal men in each party :—

Party No. 1.—In charge of T. B. Speight, O. L. S., Toronto ; T. G. Taylor, West Gravenhurst, and Graham Belt, Toronto, land and timber estimators ; K. C. Coulthard, Toronto, and W. B. Baker, B. A. Geoglogists. No. 2 party—In charge of A. Niven, O. L. S., Haliburton : J. L. Bremmer, Admarton, James M. Milne, Queensville, land and timber estimators ; A. G. Burrows, Napanee, and D. L. Fraleck, Belleville, geologists. Party No. 3. —In charge of Mr. G. R. Gray ; E. E. Silvester, Sudbury, surveyor ; Roly Parsons, geologist. Party No. 4.—In charge of Mr. Baird, O. L. S. Baird, O. L. S. ; John McConachie, Huntsville, land and timber estimator ; G. Stewart, Toronto, geologist. Party No 5.—In charge of W. S. Davidson O. L. S., Daniel Procter, Walkerton, land and timber man ; E. V. Neelands, Toronto, geologist. Party No. 6.—In charge of J. M. Tiernan, O. L. S ; J. L. Haines, Utterson, land and timber man ; A. H. A. Robinson, Peterboro', geologist. Party No. 7.—In charge of H. B. Proudfoot, O. L. S.; A McGillivray, Murillo, land and timber man ; F. J. Snelgrove, Moronto, geologist. Party No. 8.—In charge of David Beatty, O. L. S'; John Piche, Cooper Cliff, land and timber man ; A. H. Smith, Toronto, geologist. Party No. 9.—In charge of Jas. Robertson, O. L. S.; Capt. D. McPhee, Port Arthur, land and timber man ; J. E. Davidson, Toronto geologist. Party No. 10.—In charge of John McAree, O. L. S.; John Nash. Rat Portage, land and timber man ; John A Johnston, Toronto geologist.

Mr. A. R. Vinnage, secretary of the National Hardwood Lumber Association of the United States, advises us that revised copies of the inspection rules of the above association have been printed, and ten copies are being sent to each member. Extra copies may be obtained from the secretary at ten cents each, and any member of the lumber trade may secure a copy at the same price.

Numerous enquiries received ot this office for box, shooks, doors and mouldings, hardwood specialties, etc., are an evidence that there is a vast market in Great Britain for Canadian timber products. It is only necessary to make an effort in order to secure a greater share of this trade. The opportunity of placing yourself in communication with importers will be afforded by the proposed Export Number of the CANADA LUMBERMAN.

FINANCIAL RESULTS OF FOREST MANAGEMENT IN GERMANY.*

Germany has an area of 133,000,000 acres, about one-fifteenth of our country ; a population of about 47,000,000, or less than three acres per capita, or only one-tenth of our per capita average. Its forests cover 34,700,000 acres, or 26 per cent. of the entire land surface. A large portion of the forests cover the poorer, chiefly sandy soils, of the North German plains, or occupy the rough, hilly and steeper mountain lands of the numerous smaller mountain systems, and a small portion of the northern slopes of the Alps. They are distributed rather evenly over the entire empire. Prussia, with 66 per cent. of the entire land area, possesses 23.5 per cent. of forest land, while the rest of the larger states have each over 30 per cent., except small, industrious Saxony, which lies intermediate, with 27 per cent. of forest cover. Out of 64 provinces and districts 18 have less than 20 per cent. forest ; 18 have from 20 to 29 per cent.; 23, including the greater part of the country, have from 30 to 39 per cent., and five of the smaller districts have from 40 to 44 per cent. of forest. The districts containing less than 20 per cent. of forests are, as might be supposed, mostly fertile farming districts, in which the plow land forms over 40 per cent. of the land, but they also include neglected districts like Hanover and Luneburg, where a former short-sighted, selfish and improvident policy has led to the deforestation of poor, flat lands, which have gradually been transformed into heaths, where an accumulation of bog-iron ore and other obstacles render the attempt at reforestation difficult, expensive and unsatisfactory. Left to forests, these same lands, which now are unable to furnish support to farmers or to produce a revenue to their owners, could easily pay the taxes and interest on a capital of $50 to $100 per acre. to reforest them now costs $10 to $50 per acre, and requires a lifetime before any returns can be expected.

Since it is one of the common claims in the eastern United States that all the land is needed for agriculture, and since it will be conceded that in hardly any state east of the Mississippi much land necessarily remains untilled, it may be of interest to note that in this densely populated empire of Germany out of 67 disiricts and provinces the plow land forms less than 20 per cent. in four districts, 30 to 39 per cent. in 10 districts, 40 to 49 per cent. in 26 districts, 50 to 59 per cent. in 20 districts. and 60 to 69 per cent. in seven districts—in spite of the fact that the larger part of the forests are in private hands and would be cleared if the owners saw fit to do so. In our country the total area in farms is only 18 per cent. at present.

Of the total of 34,700,000 acres of forest land (an area about as large as the state of Wisconsin) 32.7 per cent. belongs to the several states as state property ; 19 per cent. belongs to villages, towns and other corporations, and 50 per cent to private owners.

The condition of the forests to a great extent depends on the degree of supervision or control exercised by the state authorities. It is best in all cases in the state forests, is equally good in the corporation forests under state control, and is poorest in the private forests, particularly those of small holders.

The amount of state interest or control varies in the several states, and varies in some cases even in the same state for different districts. Of the state forests, without exception it can be said that they are nearly in that form which, according to present knowledge and reasonable effort, is able to produce the greatest quantities of wood material in those dimensions and of such kinds as best to satisfy the demands of the markets and at the same time render the management as profitable as possible. This does not mean that they are not improving, for as forestry knowledge increases and the methods are perfected the results are better. All state forests as a whole pay, and pay handsomely, where the low intrinsic value of the land they cover is considered.

The control of the corporation forests is perfect only in a few of the smaller states and in some districts in Prussia. Of the private forests, those of Prussia and Saxony, involving 69 per cent. of all private forests of the empire, are entirely free from any interference.

They can be managed as the owner sees fit, and there is no obstacle to their devastation or entire clearing and conversion into field or pasture. The remainder of the private forests are under more or less supervision.

* From a report by B. E. Fernow, late chief of the Division of Forestry of the United States, Department of Agriculture, now Director of the New York State College of Forestry, Cornell University.

Of the entire 34,700,000 acres of forest land there are approximately :

(1) Managed by state authorities as state property, 11,360,000 acres, which is 32.7 per cent.

(2) Managed by state authorities, but the property of corporations, villages, towns, etc., a little over 2,212,000 acres, which is 6.3 per cent.

(3) Under strict government control, the plans of management and the permissible cut having to be approved by state authorities (corporation property), 3,875,000 acres, which is 11.1 per cent.

(4) Under supervision of the state, not only as common property, but as special property, subject to inspection and, in part, to control of state forest authorities ; nearly all private property and partly belonging to large estates, 4,767,000 acres, which is 13.7 per cent.

(5) Without any goverment control or supervision beyond that of common property. These forests may be divided, sold, cleared, and mismanaged, except in certain cases. Here belong all private forests of Saxony and Prussia and part of the corporation forests and all those of Saxony, 11,490,000 acres, which is 33 per cent.

The amount of timber cut per acre is very large as compared with average yields in wild woods. Of late the average feet per acre in Prussia to 9,000 cubic feet for the Saxon state forests. The yield has been steadily increasing since the beginning of this century, and in most states it has been nearly doubled through better management. At that earlier time much land was badly stocked or devoid of any cover, much timber was injured and stunted by continual removal of the litter and consequent impoverishment of the soil, and in most forests the young timber occupied much more than its share of ground, and thus less timber grew. In every one of the states and districts these conditions have been changed materially for the better, the cut was increased from year to year, the wood capital or standing timber grew in total amount, and the productive capacity of the forest soils has generally improved.

The present total annual cut of the entire empire is about 1,910,000,000 cubic feet, 710,000,000 cubic feet coming from the state forests, 370,000,000 cubic feet from the corporation forests, and 830,000,000 cubic feet from forests belonging to individuals. Thus Germany has a steady and increasing supply of over 1,900 million cubic feet of timber per year from the lands which in most other countries remain barren wastes. Of these 1,900,000,000 there are nearly 600,000,000 cubic feet of saw timber and the like, the rest being cordwood and mostly firewood. From this it would appear that Germany produces about 40 cubic feet of wood per head of population, and that of this about 12 cubic feet are saw timber, etc. But in spite of the great economy of wood, this amount of home raised material does not satisfy the demand of the home markets, and Germany today is the second greatest importer of wood, particularly of saw timber, in the world.

The consumption of wood per capita of population (in cubic feet) in four leading countries is as follows :

	Total.	Produced at home.	Import over export.	Log timber.	Relative wood consumption per head
					P. C.
England	15	3.6	11.5	13	4.3
Germany	44	40.5	3.8	15	12.7
France	32	30	2	8.3	9
United States	350	349.7	0.3	*50	100

*This refers to lumber or sawed material alone.

Since the consumption by saw mills of large timber, particularly coniferous material, is still increasing, it is clear that Germany has not nearly as much forest lands as it needs, or else must still improve greatly its methods of production. At present 26 per cent. of its saw timber, etc., is imported.

The prices paid by Germany have so far been very reasonable. Thus her imported lumber cost in 1892 only $18.30 per thousand feet, firewood only $6.50 per cord, fine hewn timber, mostly hard pine in long pieces) $30 per thousand feet, etc.

With the enormous resources in European Russia and Sweden, part of which are not even organized yet, there is no apprehension of rapid advances in prices and no likelihood of scarcity of supply.

Concerning the financial results of forest management only, the records of the state forests are acces-

sible. It is clear that the income depends on the amount of timber cut and the prices obtained. If, therefore, the yearly cut has been increased, in some cases doubled, by good management since the beginning of this century, the income naturally is doubled. To this increase in the amount of salable material there was added a general advance in prices, partly due to the depreciation of money in general, but vastly increased by the improvements in transportation, for which large sums have been expended, especially during the last fifty years.

The financial results of the various government forest administrations vary considerably, as is natural, since market conditions vary much. It is believed that all these administrations are less profitable than they might be, being managed with great conservatism, and less for greatest financial result than for desirable economic results.

The following table exhibits in a brief manner the results of this kind of management, the figures referring to conditions in 1890 or thereabout. The record for the city of Zurich is added to show how an intensively managed small forest property under favorable conditions

YEARLY INCOME AND EXPENSES PER ACRE OF FORESTED AREA.

State Forests.	Cut of wood per acre. Cubic feet.	Gross Income.	—Expenses.— Total	As a per cent of gross income,	Net revenue.
*Germany	62	$3 47	$1 66	48	$1 81
Prussia	54	2 66	1 38	52	1 28
Bavaria	72	3 71	1 78	48	1 93
Wurtemburg	81	6 50	2 64	40.5	3 80
Saxony	90	6 90	2 36	34	4 54
Baden	73	5 82	2 69	46.2	3 13
Alsace-Lorraine	57	4 24	2 09	49.4	2 12
Hesse	75	4 95	2 37	48	2 58
Mecklenburg-Schwerin.	61	2 52	1 47	58	1 05

*This figure represents the ave age for 90 per cent of all state forests, and would be little changed if data for the other 10 per cent. were a essible

From these figures it appears that the several governments expend on an average about $1.66 per acre per year on their forest property, and that they obtain thereby a gross income of $3.47 per acre and a net revenue of $1.81, or 52 per cent. of the gross income per acre per year. Considering the $1.81 as the interest on the values of the forest lands, and using the 3 per cent. interest rate as customary for large investments, these figures show that by proper management the German states keep their poorest lands at a capital value of over $60 per acre; in other words, that the German state forests pay $19,000,000 for labor and taxes, and in addition pay interest at 3 per cent. on a capital of $60 per acre. A large part of this land if deforested would not support a farmer and would rapidly degenerate into mountain pasture and heath, which at best could not be sold at over $5 per acre, and even then would prove more a detriment than advantage to the community. It also appears from the above figures that the revenue is largely in proportion to the expenses, that the forest which is best cared for also pays the best. The same conclusion is reached by a study of the past. In 1850, when the total expenses per acre in the Prussian forests were only 37 cents, the net income was only 46 cents; to-day it is $1.38 and the net income $1.28, and the same holds for other states. Thus Saxony expended 80 cents an acre per year in the beginning of this century and received 95 cents net income; to-day she spends $2.36 and receives $4.54, or nearly fivefold. That these advantages are not merely the expression of higher prices for wood is clear from the fact that the average price of wood for the Prussian cut (300,000,000 cubic feet) has advanced since 1850 from $3.27 per 100 cubic feet to only $4.40, or 37 per cent., while the net income rose from 46 cents to $1.28, or 176 per cent.

Since so much has been argued as to the impossibilities and impracticability of employing these better forestry methods elsewhere, and especially since the idea of sowing or planting forests has at all times been ridiculed in the United States, it may be of interest to note just how Germany spends her money in the woods.

The figures of the table at the end of this article present the various large items as per cent. of the gross income. Thus the total expenses in the Prussian forest use up 50 per cent. of the gross income, the logging alone 14.8 per cent., etc.

The figures that conclude this article are doubly interesting, since they show that in Saxony, the very state where the timber is usually cut clean and the land restocked entirely by planting it with nursery stock, the item of planting, etc., uses up the smallest per cent. of the total income—6.4 per cent.

From this brief outline it will be apparent that forestry in its modern sense is not a new, untried experiment in Germany; that the accurate official records of several states for the last 100 years prove conclusively that wherever a systematic, continuous effort has been made, as in the case of all state forests, whether of large or small territories, the enterprise was successful; that it proved of great advantage to the country, furnished a handsome revenue where otherwise no returns could be expected, led to the establishment of permanent woodworking industries, and thus gave opportunity for labor and capital to be active, not spasmodically, not speculative, but continuous and with assurance of success. This rule has, fortunately, not a single exception. To be sure, isolated tracts away from railroad or water, sand dunes, and and rocky promontories exist in every state, and the management of these poor forest areas costs all the tract can bring and often more; but the wood is needed, the dune or waste is a nuisance, and the state has found it profitable to convert it into forest, even though the direct revenue falls short of the expense.

PROPORTION OF EXPENSES TO INCOME.

State forest of	Total expenses Per cent.	Administration and protection (mostly salaries) Per cent.	Cutting and moving the timber. Per cent.	Planting, sowing, drainage, work. wood roads, etc. Per cent.

of market compares with the more extensively managed larger forest areas:

The latest figures (1897) show a considerable increase in all directions, expenditures, gross and net income, over those prevailing ten years ago, and, as we will see further on in the discussion of the conditions in the single states, these increases have been steady for a long period.

The following figures represent the income and expense for state forests of the entire empire and for the principal states as at present:

FINANCIAL RESULTS, 1897.

State forests.	Gross Income.	Total expenses.	Net revenue.
*Germany	$39,361,000	$18,833,000	$20,528,000
Prussia	17,445,000	9,079,000	8,366,000
Bavaria	8,100,000	3,881,000	4,219,000
Wurtemberg	3,019,000	1,224,000	1,795,000
Saxony	2,865,000	1,032,000	1,833,000
Baden	1,337,000	618,000	719,000
Alsace-Lorraine	1,522,000	752,000	770,000
Hesse	840,000	405,000	435,000
Mecklemberg-Schwerin	609,000	356,000	253,000

*This item is a trifle below the truth, as the small principalities are here assumed to have no larger income than the average of the larger states.

From this statement it appears that Germany has a yearly gross income of nearly $40,000,000 from its state forests, i.e., from one-third of its total forest area alone, while the value of its forest products from the entire forest area (35,000,000 acres) may be estimated to sum up the handsome total of over $107,000,000, or round $3 gross income for every acre under forest cover.

The following table illustrates the results of forest management in the several states. For comparison the figures represent the yearly income and outlay per acre of total forest area, so that for instance, the gross income of $3.47 per acre for Germany means that the German state forests yield each year about that sum for every acre of state forest, or $39,300,000 on the whole:

PERSONAL.

Mr. Angus McLean, of the lumber firm of Hugh McLean & Co., Buffalo, left a fortnight ago on a trip to Europe.

The sympathy of many friends is extended to Mr. John Bradley, of the Bradley Lumber Co., Hamilton, who was recently bereaved of an only daughter.

Mr. John A. Bertram, lumber inspector, has recently removed from Toronto to Little Current, Ont., and will be pleased to show the lumber in that district to prospective buyers.

Miss Edith Julia White, daughter of Mr. Aubrey White, Assistant Commissioner of Crown Lands of Ontario, was recently married at Holy Trinity church, Toronto, to Mr. Frank Bailie.

Mr. David Ward a pioneer Michigan lumber, who was reckoned to have accumulated riches to the amount of $25,000,000 died last month at his home in Pontiac. Mr. Ward owned some limits in Ontario.

Mr. M. M. Wall, of the Buffalo Hardwood Lumber Company, has been appointed surveyor-general for the National Hardwood Association of the United States, and has taken up the duties pertaining to that offiice.

Mr. J. W. Munro, the well known lumberman of Pembroke, Ont., has been elected by acclamation to represent the riding of North Renfrew in the Ontario Legislature. The seat was made vacant by the death of Mr. A. J. White. Mr. Munro is a liberal.

The news of the recent death by drowning of Mr. James King, of the well-known lumber firm of King Bros., Quebec, has caused a feeling of widespread regret throughout the trade. A more extended reference to the life of the deceased will appear in our August issue.

Mr. John Grant, who for a number of years had been general superintendent of Mr. C. P. Holton's lumber business at Belleville, Ont., died recently of heart failure. Deceased was 52 years of age, and had been for the greater portion of his life identified with lumbering operations.

Mr. J. A. Duff, of the School of Practical Science, Toronto, has been commissioned by the Ontario Government to proceed to Algonquin Park to study the location of timber there. This will be followed by scientific tests as to the strength and durability of the pine and other woods for building purposes.

Mr. R. H. Campbell, assistant secretary of the Canadian Forestry Association, was a welcome visitor recently at the office of the CANADA LUMBERMAN. Mr. Campbell was in Toronto on business in connection with the association, and had a conference with Mr. Thomas Southworth, chief of the Ontario Forestry Department.

Mr. Aubrey White, assistant commissioner of crown lands, Toronto, has lately recovered from illness, and left on June the 14th for a trip to England. Upon the eve of his departure he was presented with a very handsome gold watch by the staff of the Crown Lands Department. The presentation was made by the Commissioner, Hon E. J. Davis, and was suitably acknowledged by Mr. White.

Mr. E. Stewart, chief inspector of timber and forestry for Canada, left early in June for Western Canada. He will visit Winnipeg, Calgary, New Westminster, B.C., and other points in connection with the question of protecting the timber and providing for the perpetuation of the supply. Mr. Stewart expects to arrange for a system of ranging, which will guard as far as possible against the danger of fire.

The death of Mr. G. White, of Albany, N.Y., will be learned with deep regret by his numerous friends in Canada as well as the United States. He was identified with the well known lumber firm of Douglas L. White & Company, of Albany. For several years he represented this firm in Canada, and later become their New York representative. He was recognized as one of the leading salesman of the wholesale lumber trade, and as an expert in all branches of the business. Mr. Douglas L. White, jr., of Midland, Ont., is a brother of the deceased.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS' AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company of Toronto, Limited
CONFEDERATION LIFE BUILDING, TORONTO
BRANCH OFFICE:
IMPERIAL BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in anyway affecting it. Even when we may not be able to agree with the writers, we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

EXPORT NUMBER.

IT has been decided to issue the proposed export number of the CANADA LUMBERMAN on August 1st. Already a liberal advertising patronage has been accorded to this number, which will contain the announcements of many of the leading Canadian manufacturers and exporters of timber products. The contents of the number will be of such a character as to give persons in foreign countries an intelligent conception of our timber resources, as well as of our facilities for manufacturing the timber. As considerable time and labor will be involved in the production of this number, persons who have in view the placing of an advertisement are requested to forward copy immediately.

LOSS FROM DROUGHT.

The absence of rain has been one of the features of the past spring, and as a result the timber industry of the country has suffered heavy loss. Towards the end of May forest fires were reported to be in progress in certain districts of Ontario and New Brunswick. The greatest damage seems to have resulted in New Ontario, where it is said large tracts of timber were swept by fire, and in some instances the logs lying on the banks of the streams were burned. The Ontario Government, immediately upon receipt of the news, increased its staff of forest rangers, but little could be accomplished until the fires were finally quenched by rain.

The lumbermen have been seriously affected by the drought, inasmuch as the water in the streams has not been sufficiently high to permit of the driving of logs. Recent rains have somewhat brightened the outlook, although there will no doubt be a considerable quantity of logs hung up. One firm in northern Ontario is reported to have 20,000,000 feet hopelessly stranded.

The logging situation is becoming a more perplexing one each year. As the timber becomes cut away, lumbermen are compelled to drive their logs a greater distance, which carries with it an increased risk of having them hung up. It may be that in the near future some of the lumbermen will have to wrestle with the question of building their mills nearer to the source of timber supply.

THE CANADIAN EXHIBIT AT THE IMPERIAL INSTITUTE.

The resources of Canada, and particularly of the province of Ontario, are by no means properly or creditably represented by the exhibit at the Imperial Institute in London. The visitor would be much more favourably impressed if the exhibits of the various provinces were placed side by side, instead of on different floors. The present arrangement does not give the idea that Canada is one Dominion, but rather that it consists of a number of separate provinces having little or no connection with one another. The exhibit should be arranged in compact form like that of Australia. As to the character of the exhibit, and more particularly that of the province of Ontario, the richest and most important of the provinces, there is good ground for complaint. One would suppose from the numerous views of Niagara Falls placed about the walls, that this great natural phenomenon was the one distinguishing characteristic of the province of Ontario, while the specimens of Indian work are well calculated to confirm the idea, already too prevalent in the minds of some of the people of Great Britain, that Canada is a wild and uncivilized country. Ontario is known on this side of the Atlantic as a fruit-growing province, and the quality of its productions in this line is not excelled by those of any other country. In view of this fact, it is extremely humiliating to a Canadian to observe that the jars containing samples of Canadian fruit shown in this exhibit have apparently not been refilled during the last decade. What was once fruit might now, judging from appearances, be almost any other substance under the sun.

There is also displayed a view of the Toronto Industrial Exhibition of date the year 1885, which, of course, conveys a totally inadequate idea of the character and extent of the Exhibition of to-day. We would suggest that all relics such as this and the photograph of the ruins of Fort Erie, might well be thrown out of the exhibit, and modern views of our principal cities and industries substituted, so that visitors would be given an approximately fair idea of the kind of country Canada is, the extent of its development, and its advantages as a place of residence and business enterprise. The Canadian Pacific Railway show some excellent views of harvesting operations in Manitoba. These are well calculated to make a favorable impression upon intending emigrants. There is also an excellent geological map of Ontario containing a large amount of information with regard to the population and resources of the province. There is a fairly good exhibit of building stones and marbles, also of hardwoods. Other features equally valuable might be added, so as to convey to visitors a proper idea of the country and its resources. The entire exhibit should either be rearranged, improved, and brought up-to-date, or entirely done away with.

VALUE OF HEMLOCK.

A FEW years ago hemlock lumber was regarded as of little value, but recently it has steadily gained in favor until its commercial value has almost reached that of white pine. The scarcity of white pine is in part responsible for the greater attention given to hemlock. It is quite remarkable that in the North-Western States the production of hemlock lumber increased during the year 1899 over 200,000,000 feet. This indicates that hemlock is gradually occupying a stronger position as a staple article. In Pennsylvania and the east hemlock has for some time been used for the cheaper classes of buildings, and now that it has come into more general use in the west, the question has arisen as to its value in relation to white pine. The opinion seems to be gaining ground among the hemlock manufacturers that there is no reason why it should not command a price equally as high as white pine; in fact, the North-Western Manufacturers' Association have established a list only $1.50 below the pine quotations. This, it might be said, is the highest relative price yet obtained for hemlock piece stuff.

It is not only for building purposes that hemlock has a value. As is well-known, hemlock bark is greatly in demand for tanning purposes, and to such an extent that a considerable quantity has been imported from Canada by United States tanners. This, however, will no longer be the case in respect to the province of Ontario, as an act recently passed by the legislature prevents its future exportation.

Hemlock has also been called into requisition in the United States for the manufacture of pulp, and in certain districts there is no other available suitable material. But hemlock is only adapted for making the lower grades of pulp, and will probably never be very extensively used for this purpose. Notwithstanding, the demand from this quarter will be sufficient, in some districts at least, to materially enhance the value of hemlock stumpage.

What has been said regarding the hemlock of the United States is equally true of the Canadian product. There are, in Canada, two varieties of hemlock. The timber commonly known as hemlock is found more or less abundantly in the provinces of Ontario, Quebec, New Brunswick and Nova Scotia, while the western hemlock is common to British Columbia only. The quality of the western hemlock is superior to the eastern article. It is likewise shown by tests that the hemlock of eastern Canada is of better quality than that of the United States. The specific gravity, elasticity, transverse strength, and resistance to indentation are higher in the Canadian article, while only in resistance to longitudinal compression is the United States article shown to be superior. It is also worthy of note that tests of hemlock

show that material to be superior in some qualities to white pine, but, of course, it is generally inferior to that timber, and is not capable of taking as good finish.

There is, we believe, a promising future for the hemlock timber of Canada, and although it may never become as generally used as the white pine, its value will no doubt advance as the merits of the timber become more generally known.

THE PROPOSED DOMINION EXHIBITION.

THE Executive of the Canadian Manufacturers' Association have been considering the question of the advisability of holding a Dominion Exhibition in Toronto next year. The opinion of the members of the Association has been asked as to whether the Association should go beyond this and make an exhibit at the Pan-American exhibition to be held in Buffalo. The consensus of opinion seems to be that, if the project for a Dominion Exhibition is gone on with, no attempt should be made to exhibit at Buffalo. This opinion seems to be well founded. If a Dominion exhibition is undertaken and carried out on a creditable scale, it will sufficiently tax the energies of the Association. It must also be borne in mind that the possibility of finding a market in the United States for Canadian manufactures is extremely small, seeing that the United States have now an over-production in almost all lines of manufacture, and are looking for outlets in foreign markets for their surplus goods. We have felt for several years past that the holding of an Exhibition in Toronto, on such a scale as to attract visitors from all parts of the Dominion should be productive of much good, and if the attempt is to be made it might as well be next year as any other time. The Exhibition at Buffalo would not be likely to interfere with it success, but on the contrary might add to it, as some of the visitors to the larger exhibition might be disposed to visit Toronto also. Speaking generally, it would seem as though the Exhibition idea is likely to be carried to an extent which will eventually deprive it of any novelty or usefulness. We observe that on the heels of the Buffalo Exhibition is to come another one at St. Louis, preparations for which are already in progress. There is also to be one held next year in Glasgow. If Canada is to have an Exhibition on a national scale, it would be as well to launch the enterprise at once, so that we may not come in at the tail of the procession.

EDITORIAL NOTES.

Great things are predicted in some quarters for a new commodity known as artificial lumber, but although it has been on the market for some time, it does not seem to have diminished the demand for ordinary lumber. This artificial lumber is produced from straw by means of compression, and as the raw material will be reproduced each year, there is little danger of the supply becoming exhausted. It is four times the weight of ordinary lumber, and it is claimed can be produced at one-half the cost—a claim which seems open to question.

SUGGESTIONS are frequently offered to Canadian lumbermen by our British contemporaries, and usually they can be recommended to the "serious consideration" of our manufacturers. It is the lack of knowledge of the requirements of the British markets that has prevented a greater share of the timber trade of Great Britain from being supplied by Canada. A recent issue of the Timber Trades Journal says: "It is somewhat surprising that Canadian lumbermen have not yet followed in the footsteps of their brethren across the frontier and sawed their oak into special sizes, shipping it in that form. The import from Quebec during 1900 was 2,500,000 feet, but the demand has been dull throughout the year, and prices have barely brought out the cost. Elm, once an important factor in the days of shipbuilding, is now but a minor one. The increasing amount of trade in United States ash has almost run the Canadian squared logs out of the market." These remarks reflect the sentiment existing in Great Britain in favor of importing manufactured lumber instead of logs, and it is along this line that Canadian manufacturers should direct their efforts.

THE MODERN SAW MILL.

THE fundamental idea of the modern saw mill is organization, the combining and correlating of parts so that all the different machines composing it work together as one. It was not very long ago, says the American Lumberman, that the saw mill was an aggregation of independent machines, but that time has passed, and now a live roll or a transfer is as essential a part as the cutting mechanism itself. It is this organization of the saw mill that chiefly distinguishes present methods from the past.

The chief sawing machine stands just where it has stood for fifty years, with improvements, of course, which have replaced the circular or the more primitive mulay saw by the great fast band. The edger occupies the same place in the mill that it has for a generation, and so with the trimmer, but now they are strongly linked together; and it is within ten years or so that the saw mill could properly be considered one complicated machine rather than a juxtaposition of several.

This is not to say that there have been no improvements in the individual parts of the mill. The band when it was first introduced was distinctly a slow machine; the wheels were light, the saw narrow, and there was much to be learned in regard to adjustment; but now the band is a most efficient tool and in its latest form is the greatest lumber producer of any sawing tool devised. The edger has seen some improvements within the last quarter of a century, but not many. The trimmer is also substantially the same machine it was twenty-five or thirty or forty years ago, though it has been much improved in effectiveness and convenience of operation. In mills of large capacity the most improvements to this tool are to be seen. There the latest practice is to place a man above and in front of the machine where he can see every board passing through it and whence, by manipulating a series of levers in front of him, he can trim an enormous output of lumber.

Notwithstanding these improvements of late years, the chief attention, beyond the improvements in the band mill, has been devoted to the secondary devices. Note the means used in the modern mill for handling the material from the log pond to the sorting shed, so that little if any strength is required on the part of the operators, leaving them more free to the exercise of skill and care in handling the stock. Guided onto the haulup in the pond, the log is drawn by an endless chain from the water up onto the floor of the mill. There a log flip or unloader, worked from a foot or a hand lever, throws the log on to the deck, or to either deck if it be a double mill. The logs lying on the sloping deck are held in place by the lower one coming against the log stop and loader. This device, also operated by steam, throws the log onto the carriage and holds the next one in check. As the log rolls onto the carriage, the steam nigger adjusts it to place and during the process of manufacture turns it as the sawyer wishes.

As the lumber or other material drops from the carriage it falls on live rolls which carry it on in the process of manufacture. The slabs move on to a point where they are automatically transferred to the slab slasher, which cuts them into lath, picket or cordwood lengths. Not a hand has touched anything so far except as the off bearers may have pulled the boards or cant down onto the live rolls.

The lumber is automatically transferred from live rolls to cross chains which take it to the edger. There all the edger man has to do is to straighten out the lumber for the edger and send it on its way, all the strength of any account that is required being furnished by machinery. If a gang saw is used, the cants are also transferred from the live rolls by a cant lifter and then by transfer chains. From the edger the lumber drops on another set of cross chains by which it is carried to to the trimmer, where for the second time hand is placed upon it so that it may enter the trimmer properly; but here again little strength is required. Leaving the trimmer the boards drop on a continuation of the trimmer chains which carry it to the sorters and here for the first time in the average large modern mill is there any real handling of the stock. The result is a saving of man power, a saving in the number of men required and a premium to brains rather than muscle.

Altogether a saw mill is one of the most highly organized manufacturing establishments there is to be found in this country. The material is rough, operations are on a large scale, and there is a roar and tumult about it which blinds the ordinary observer to the real intricacy and delicacy of the process and to the exact organization which characterizes it; but as a matter of fact there is no manufacturing establishment which shows perfection in the application of mechanism on a large scale and covering an extensive series of operations in a higher degree than the saw mill. It is worthy the study of anyone interested in mechanics.

WORDS OF APPRECIATION.

THE president of the Auger Lumber Company said of the CANADA LUMBERMAN; "I enjoy reading it. There are papers and papers; some publications are prepared to publish anything that there is money in. The CANADA LUMBERMAN takes higher ground, and seeks to give the truth, presenting questions affecting the trade in a fair manner. For this the LUMBERMAN deserves the loyal support of all who are interested in the trade."

Have you sent in your advertisement for the Export Number of this journal? If not, you should do so immediately. Rates from the publishers.

THE LATE JAMES MURCHIE.

James Murchie, head of the lumber firm of James Murchie & Sons, died on May 29th at his residence in Milltown, N. B., at the age of 87 years. Mr. Murchie was one of the most extensive lumbermen in the Maritime Provinces.

The subject of this sketch was born in St. Stephen, N. B., on August 13th, 1813, of Scottish decent. He received a common school education, and at the age of 23 years purchased a farm, on which he lived for 18 years, cultivating his farm in summer and cutting and hauling logs in winter. This was the first step in the direction of building up the extensive lumber business of which he was the head. At that time a permit to cut timber on the Crown Lands of the province of New Brunswick could be purchased for a small sum per square mile, and Mr. Murchie soon became the largest operator in the district, selling his logs to the mill owners.

After having accumulated some wealth, he engaged, in 1853, in the manufacture of lumber, and as the business increased his sons, one by one, became partners with their father, and thus was established the firm of James Murchie & Sons. The firm is at present operating mills at Calais and Princeton, in Maine, and at Benton, Deer Lake, Fredericton, and Edmundston, in New Brunswick. The mill at Princeton is used almost exclusively for the manufacture of orange boxes for the Florida and Sicily markets, and will ship during the present season

THE LATE JAMES MURCHIE.

three cargoes, or about six hundred thousand boxes, to Sicily, having contracts for these already booked. They are also large owners of timber lands in Maine, New Brunswick and Quebec, own quite a fleet of vessels, and have large investments in real estate in Maine and New Brunswick.

While the firm of James Murchie & Sons has been eminently successful, few have had more serious losses. At different times fire destroyed their large milling property at Mageguadadic, mills at Benton, N. B. and at Calais, Maine, also wharves and a large quantity of lumber at St. Stephen. In the great fire at Calais their loss amounted to $50,000. But with undaunted courage these obstacles were overcome, and the business continued to expand until it reached its present large proportions.

The late Mr. Murchie was one of the original stock holders of the New Brunswick and Canada Railway, in connection with which project he encountered, and speedily overcame, many difficulties.

In public life Mr. Murchie was as successful as in his business enterprises. He represented Charlotte county in the provincial legislature and filled many other positions of trust and honor. He was trustee of the St. Croix and Penobscot railways, president of the St. Croix Cotton Mills Company, and a director of the St. Stephen Bank for over twenty years, and at the time of his death was president of the New Brunswick and Canada Railroad Company, Frontier Steamboat Company, and St. Croix Lloyds Insurance Company, and a director of the Calais Tug Boat Company.

A writer has said of his private life: "In any sketch o a life such as Mr. Murchie's, it is but the salient points that can be presented, but the kind deed, the pleasant word, the sound, practical advice, and the many little things that go to make up and round off such a life, are all unknown, except to those who have his personal friendship. And this friendship is prized by those who are so fortunate for more than the tinsel honors on which the world puts so much store."

It is said of the sons of Mr. Murchie that, like their father they possess sterling characters and are an honor to the community in which they live. One of the sons is Mayor of the village of Milltown, N. B., and two have established a very successful lumber business in New York City, while others are associated in the management of their extensive lumbering and shipping interests.

DOMINION TIMBER LANDS.

THE annual report of the Department of Interior for the year 1899 contains the usual information regarding the timber lands under the control of the Dominion government, also the first report of Mr. E. Stewart, Inspector of Timber and Forestry, which forms a very interesting part of the report.

The timber dues received during the year amounted to $155,765.25, being an increase of $39,996.22 as compared with the previous fiscal year. Of the revenue from timber $41,405.40 was for bonuses, ground rents, royalties and dues on timber cut from lands in the railway belt in the Province of British Columbia, being an increase of $20,324.14 as compared with the previous year. The total revenue received from timber in Manitoba and the North-West Territories and the Yukon Territory up to July 1, 1899, was $1,734,933.86, and the total revenue from timber within the railway belt in British Columbia up to the same date $367,591.59. The total revenue from the Yukon Territory for timber was $98,009.35. During the year 52,359,740 feet of lumber were manufactured from timber cut under license in Manitoba, the North-West Territories, and in the railway belt in British Columbia.

In Manitoba, it is stated, the saw mills were run to their fullest capacity, the output being about 20,000,000 feet B. M., an increase of 10,000,000 feet over that of the previous year. The output in the Territories was 7,547,218 feet B. M., in the railway belt in British Columbia 27,076,624 feet B. M., and in the Yukon Territory 8,494,963 feet B.M.

The following is a comparative statement of the average price of lumber within the several Crown Timber Agencies during the past fifteen years:

Agency.	1885.	1894.	895.	1899.
	Per M.	Per M.	Per M.	Per M
Winnipeg	$13 50 to $ 5	$ 7	$17 to $19	$13 to $15 50
Brandon	20 to 22	15	15	13 to 15 00
Whitemouth	11 to 12	.....	10	10 to 11 00
Calgary	25 to 0	8 to 16	8 to 16	8 to 16 00
Fort McLeod	30	10	10 to 16	7 to 16 00
Lethbridge	.....	9 to 16	.....	.....
Prince Albert	30 to 45	10 to 25	8 to 25	16 to 17 50
Edmonton	25 to 30	18	13 to 16	10 to 12 00
British Columbia	.....	10	7 to 9	9 50

The number of timber berths licensed or authorized to be licensed in the Province of Manitoba and the Territories is 120, and within the railway belt in British Columbia, 117. Fifty-eight berths have been granted in the Yukon Territory, covering a total area of 123 square miles.

The regulations of July 1, 1898, governing the granting of yearly licenses and permits to cut timber on Dominion lands in Manitoba and the North-West Territories and within twenty miles on either side of the Canadian Pacific Railway, were amended by an Order in Council dated February 17, 1899, by adding to section 20, which provides for the issue of a free permit to a homesteader to cut a certain quantity of timber on his land, a clause giving him the right to cut 2,000 fence rails; also rescinding the provision of the section for payment, by actual settlers, of dues at the rate of 12½ cents per cord for cordwood and rails made from dry standing timber, and giving the settlers free permits to cut dry timber for their own use.

By an Order in Council dated January 19, 1899, the regulations were amended so as to permit the owners of timber berths in the railway belt in British Columbia to sell the timber thereon to mill-owners and not be required to manufacture the timber taken from their berths.

The regulations were also amended on January 13, 1899, by rescinding clause 17 thereof, which authorized the granting of permits to cut timber without competition to saw-mill owners.

Mr. E. F. Stephenson, Crown Timber Agent at Winnipeg, reports to the Department as follows:

"The saw mills in Manitoba, of which there are thirty operating under license, have been run to their fullest capacity the past season, many of them working night shifts to meet the demands for lumber. It is the general belief that the timber in Manitoba suitable for manufacturing purposes has become about exhausted, but such would not appear to be the case, as this year the output at the mills reached 25,000,000 feet; an increase of 10,000,000 feet over that of the previous year. The extensive spruce forests on the Winnipeg river and to the north on Lake Winnipeg remain as yet almost untouched. The construction of the Great Northern Railway through the Dauphin district and further north has opened up a rich timber region, and considerable valuable timber has been reached by the building of the South-eastern Railway."

"While, as has been said, the sales of spruce lumber in this district amounted to 25,000,000 feet during the year, that is but a small proportion of the total sales. I find that during the year no less than 149,813,531 feet of lumber was sold in Manitoba and at points as far west as Regina; while the total sales in Manitoba and the territories would raise that quantity to 170,000,000 feet. The bulk of this lumber, as you will perceive, comes from the United States; shipped in as rough lumber and in logs from northern Minnesota, floated to Rat Portage and Keewatin, and manufactured at Canadian mills."

"Each year shows a decided increase in the sales of lumber in Manitoba and the North-west. The sales for the present year exceed in quantity those of 1898 by about 25,000,000 feet, and of 1897 by nearly 60,000,000 feet. The fact is, the country is making great material advancement, and there is no better proof of this than the figures given above and also hereinunder."

Following is a statement showing the amount of lumber sold in the Province of Manitoba, and in the North-West Territorries, West of Regina, and where manufactured:

	1897.	1898.	1899.
Red and White Pine from the State of Minnesota and from Crown Lands in Lake of the Woods District, manufactured at Rat Portage and Keewatin	45,000,000	53,000,000	
Red and White Pine logs manufactured from logs brought from the State of Minnesota	.....	.....	37,300,000
Red and White Pine manufactured from logs on Ontario Crown Lands Lake of the Woods District	.....	....	36,000,000
Red and White Pine manufactured from Canadian logs at mills between Rat Portage and Lake Superior	10,000,000	13,000,000	9,000,000
Canadian Spruce manufactured from timber cut on Crown Lands in the Province of Manitoba	14,741,909	15,267,041	16,68 ,000
United States Pine (manufactured) shipped in from Northern Minnesota and Wisconsin	16,871,164	35,751,960	33,351,851
Cedar and Fir lumber brought in from British Columbia	6,000,000	9,000,000	14,000,000
Total..	92,613,013	126,719,001	149,813,531

From October 31, 1897, to October 31, 1898, there was imported into Manitoba and the territories 4,219,438 feet of dressed lumber and 31,532,322 feet of undressed lumber. Last year there was imported 4,703,796 feet of dressed lumber, and 28,114,228 feet of undressed pine and 553,827 feet of undressed oak. There was also brought in last year 108,400 laths, 1,185,704 shingles, 25,000 railway ties, and 2,535 cords of wood.

Mr. James Leamy, Crown timber agent at New Westminster, B.C., reports that during the year the volume of business increased about 25 per cent. over that of the previous year, and that the price of lumber averaged 10.50 per M. The shingle business also increased, and the price of shingles advanced about 25 per cent.

NOVEL PLAN FOR CLEANING BOILERS.—For removing the incrustation of boilers, a French engineer, M. Savreaux, now announces an improved method. According to this, after extinguishing the fires the boiler water is blown off very gradually, at the same time admitting an equal volume of cold water, so that the water gauge shows no change of level. As soon as the water has in this manner been sufficiently cooled down, it is suddenly blown off; it is this latter operatiou which removes the major part of any incrustation which may be present; what remains being very easily detached by scraping. It is necessary, however, that the cleaning of the boiler be taken in hand immediately upon completion of the blowing-off operation, as otherwise the fur-stone will harden and adhere again te the boiler plates.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES AND OTHER FOREIGN MARKETS.

VOL. VI. TORONTO, ONT., JUNE 27, 1900 No. 23.

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:
IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

WANTED—Foreman for small Pulp Mill. c- A knowledge of the French language preferred. Address "DOMINION," CANADA LUMBERMAN.

HARD-WOOD MILL—GRIST MILL

For a good hard-wood mill site and grist mill site, also large quantity of timber fit for wood flour, write L. O. ARMSTRONG, C. P. R. Colonization Agent, Montreal.

FOR SALE

ONE MILLION FEET OF BIRCH, SOME Basswood, Ash, Oak, Elm, Maple, Hickory and Chestnut, also a complete stock of dry pine in all grades. Prices on application. THE ORILLIA EXPORT LUMBER CO., Orillia.

WANTED.

BY A BRITISH IMPORTING FIRM, WANEY log pine boards. Canadian manufacturers having this class of stock to offer are invited to send particulars and prices to Box 85, care of CANADA LUMBERMAN, TORONTO.

WANTED

A THOROUGHLY COMPETENT SHINGLE saw filer and hammerer, and general all-round up-to-date all-round shi gle mill man, who can do millwright work and understands handling men. Steady employment. Apply, with references, age, etc., and stating wages expected, to SPICER SHINGLE MILL CO., LTD., Vancouver, B. C.

WANTED

A LEADING ENGLISH MANUFACTURING firm are open to treat with a respectable Canadian lumber manufacturer for a sample carload of Ash, etc., with a view to further business. Ash to be sawn into scantlings, 3 x 3½ by 5 to 8 feet long, 4 x 4 by 5 to 8 feet long, shafts (slightly bent) 3½ x 3½ by 8½ feet long,

Oak spokes 1½ x 2¼ by 28 inches long, sawn out of small trees of good quality, free from sap.

The smaller scantling of ash and the shafts to be sawn from best quality logs, not exceeding 20 inches diameter. The 4 x 4 may be from larger trees, if of good quality. Payment in cash at Toronto bank. Delivery at Montreal. Address SMYTH, Peasenhall, Suffolk, England.

WANTED,—150 M feet 1-¼" and 1-½" Basswood, 20 M feet 2" Basswood. THOS. MYLES' SONS, Hamilton, Ont.

PORTABLE SAW MILL—The undersigned is prepared to cut all kinds of Lumber. First-class work guaranteed. Prices reasonable. Address W. E. RUTLEDGE, Holt P. O., Ont.

WANTED.

PLANER, MOULDER AND TENONING MAchine and other machines. Addres Box 89, Kagawong, Ont.

WANTED.

3 COMPETENT SAW FILERS. NONE OTHER need apply. Apply to Box 20, CANADA LUMBERMAN office.

HAVE YOU ANY STOCK WHICH YOU WISH to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

MILLWRIGHT WANTED

D. FRASER & SONS, CABANO, P.Q.

SOFT and ROCK ELM and ORHAM

Quotations for same in considerable quantities, shipped to England; continuous demand. EVERETT, 407 Yonge Street, Toronto, Ont.

FOR SALE—Old established Saw, Lath and Planing Mills at Sault Ste Marie, Ont., with all equipments and stock; machinery nearly new throughout; concern doing a large annual business. Possession given at once. Apply to W. G. SIMS, Box 35, Sault Ste Marie, Ont.

WANTED.

FOR THE FOREIGN TRADE, A LARGE LOT of first grade Rock Elm Hub Logs (trees), for which cash will be paid by purchasers New York banks. Address replies to this advertisement to Box 25, CANADA LUMBERMAN, Toronto.

BUILDING AND BRIDGE TIMBER FOR SALE

50,000 FEET PINE, 10 to 40 FEET LONG. Would cut to bill from 4 x 6, 6 x 6, up to 10 x 10, any length up to 40 feet. Also 40,000 feet 1-inch Pine Mill Run, 12,000 feet 6/4 Elm, 5,000 feet 6/4 Red Oak, 6,000 feet Elm Plank, 4 inches thick.

STEELE & GIBSON,
Humberstone, Ont.

FOR SALE

HARDWOOD LUMBER

3 cars	1 in.	and 1 car 1½ in. Beech.
2 "	1 in.	M. R. Basswood.
5 "	1¼ in.	Hard Maple.
10 "	1½ in.	Hard Maple.
2 "	1½ in.	White Maple, end dried.
1 "	2 in.	Hard Maple.
10 "	1 in.	M. R. Soft Elm.

Prices on application.

J. S. FINDLAY,
Owen Sound, Ont.

THE WEST INDIES.

Messrs Edgar Tripp & Co. Port of Spain in in their Semi-Monthly Market Report of June 6th, say :—"We have had no arrival of Lumber Stuffs during the fortnight. Nova Scotian White and Spruce Pine Boards continue wanted." Messrs. Gordon Grant & Co. in their Comemrcial Review of same date state :— "We have no arrivals of Pitch Pine to report but several cargoes are shortly expected which are likely to fill requirements for a time. Handy sized lots of Nova Scotian as well as Spruce command full prices."

CURRENT TRADE CONDITIONS.

ONTARIO.

The lumber situation at the present time is the most peculiar that has been known for many years past. There are a number of causes operating for and against a change in prices. Building operations, except at Ottawa, are proceeding at a much slower rate than was anticipated earlier in the year. The outlook early in the season was very promising, but investors appear to be holding off in consequence of the high price of materials and in the hope that prices may decline. Building operations in the principal cities of the United States, notably Chicago, have largely declined in volume as compared with last year, owing largely to labor disputes and strikes. This condition of affairs is having its effect upon the lumber market tending to weaken prices. The unfavorable outlook for this season's crops, due to the want of rain, is another influence adverse to the maintenance of prices. The demand from the farming community, under favorable conditions, is a large one. If the crops turn out badly projected improvements and repairs will not be undertaken, and there will be in consequence, a considerable falling off from this source. As against these adverse influences there is the fact, already mentioned, that many of the rivers and streams used to float the timber to the mills have, owing to the drought, lessened in volume to such an extent that it is not possible to get the timber out. The Spanish river, for example, is said to be 9 feet lower than in any previous year. The reduction in the cut of the mills this season due to the above circumstance must act as an important factor in maintaining prices, more particularly in view of the fact that stocks in hand at the opening of the season were unusually light. It may possibly be that prices may slightly decline for a time, but manufacturers are reported to be holding out for present figures. The manufacturers of packing boxes are said to be receiving very few orders, the reason for which is not yet apparent. A large amount of red pine boards and deals ranging from one inch and upwards in thickness, and from seven inches and upwards in width are said to have been sold at good prices to British buyers, and this is helping to steady the market.

QUEBEC AND NEW BRUNSWICK.

The export trade continues to be hampered by high freight charges, and shippers are somewhat at a loss to understand from what direction relief may be expected. The South African war, no doubt created a demand for vessels, but these should now be available for other purposes. Shipments to the United States have fallen off greatly during the present season as compared with last year, and the customs returns for May show that lumber exports from the port of St. John amounted to only $198,828 as compared with $424,267 in May 1899. There has, however, been a good demand throughout the season from the United States for spruce boards, for box stuff, prices ranged from $9 to $9.50 per thousand feet on the wharf at St. John.

MANITOBA AND BRITISH COLUMBIA.

The outlook for the sale of lumber to the farming community is discouraging, in view of the unfavorable crop conditions at present prevailing throughout Manitoba, and to some extent in the North West Territories also. While reports vary considerably, there is little question that the yield of grain in the North West this season will fall very far below that of recent years. The blow will not fall so heavily upon the farmers as it would have done a few years ago, seeing that they are not entirely dependent, as formerly, upon wheat growing, nevertheless, the shortage will be such as to be severely felt, and will be the means of restricting the use of lumber for improvements. Fortunately, as stated last week, building operations at Winnipeg have been unusually brisk, affording an outlet for a large quantity of lumber. There is no material change in the situation in the province of British Columbia.

The statistics of the Pacific coast shingle industry show that during the first five months of 1900, 900 more cars of shingles were shipped than during the same period of 1899. During the month of May the Canadian Pacific railway is reported to have transported 75 cars of shingles from British Columbia.

UNITED STATES.

There appears to have come a sudden dullness of demand for lumber, the cause, apart from the great falling off in building operations due to labor troubles, is not readily apparent, as business generally seems to be in a satisfactory condition. It is not improbable that already the presidential election may be affecting the situation. It is a well known fact that business conditions are usually seriously disturbed for months previous to the time of the election. Many business men engage in politics at such times, often to the

neglect of their business. The decline in the price of steel is taken as an indication, by some, that lumber prices will decline also. In support of this expectation, wholesalers point to the fact that last year when prices of iron and steel were advancing lumber prices steadily advanced also in sympathy therewith. Against this theory it is contended that lumber is likely to benefit by the increased activity in building operations consequent upon a reduction in prices of iron and steel, which now enter so largely into building construction. The total stocks of lumber in hand throughout the country are said to be below the average. A circular, issued by the Mississippi Valley Lumbermen's Association, calls attention to the fact that about twenty-five of the large mills on the Mississippi river and its tributaries have already closed down on account of the shortage of logs, due to the lowering of the water in the rivers. The circular says: "The lumber cut of the season is already greatly reduced and cannot be made up, even though heavy rains may fall soon. The rivers are falling an inch and more every day. These conditions must be reckoned with sooner or later, and are sure to exert a decided influence on the market. The shortage of logs and lumber precludes the possibility of lower values in 1900."

Prices of hardwood have declined somewhat compared with last winter. The cut is said to be heavier than last year and the supply fully equals the demand. Red cedar shingles have also declined somewhat in the Boston market, while prices of New Brunswick shingles have gone up a little.

GREAT BRITAIN.

Trade has been temporarily at a standstill owing to the holidays and rejoicings consequent upon the success of the British arms in South Africa. The market shows no sign of weakening however, and no change in values is looked for before the termination of the war, when it is not improbable that prices of deals and battens may advance in response to the expected demand from the Cape for material for the building of barracks and many other purposes. There is no present disposition manifested by importers to anticipate such an advance.

Considerable shipments of red pine boards and deals have been made this year by some Canadian manufacturers, and it is becoming more clearly evident that a large and profitable demand is springing up in this market for this class of timber. The demand was heretofore supplied with Swedish goods, but the supply from this quarter, particularly of the larger sizes, is constantly diminishing, while prices have advanced more than 25 per cent. in consequence, and even higher figures are likely to rule before the close of the season. There is therefore an opportunity for Canada to do a profitable trade in this class of timber. The difficulty of securing tonnage and the excessive freight charges is restricting importations to very moderate dimensions. A couple of cargoes of St. John spruce is reported to have been sold at Bristol the other day at £7 15s. c. i. f., which standard it is believed will be maintained under present conditions. According to the brokers' returns the import of spruce at Liverpool for the month of May, was only 1,520 standards, as against 11,588 standards for the same month last year.

STOCKS AND PRICES.

Mr. John Kilburn has brought down a drive of 10,000,000 feet of logs from Quebec to St. John.

The rafting of the logs to the St. John, N.B., mills is said to be progressing more satisfactory of late.

Messrs. Toner & Gregory, of Collingwood, are manufacturing 8,000,000 feet of red pine deals for export.

Common pine plank 4, 6 and 8 inches wide, recently sold at Huntsville at $13, 10 inch at $14, and 12 inch at $15.

Some of the best selling hardwood are reported to have dropped $2 per M. in in price during the last three weeks.

Mr. T. G. McMullen, of Ryans Creek, Hants county, Nova Scotia, will finish in about a month a cut of 800,000 feet.

Owners of the mills on the line of the Kingston and Pembroke railroad are said to be obliged, such is the demand, to ship lumber green.

A correspondent writes that he has American orders for large quantities of birch, but the prices asked by the manufacturers on the Georgian Bay are too high to warrant purchasing. He would be willing to pay $16 for selects and $11 for lower grades, but $20 and $14 are demanded. He estimates that the stock of birch in the Georgian Bay district will reach 16,000,000 feet, and that it will not pass out of the owners' hands unless more moderate prices are accepted.

THE BOSTON MARKET.

We quote the following from the Boston Herald: The spruce lumber market has received a setback in that the combination has put down prices about $2 per 1,000. This has really alarmed the trade, and resulted in no business. The verdict is that prices ought to have been put down early in April, and then building would have been encouraged. Users of spruce lumber say that to put down prices not that building has has been almost entirely stopped by high prices, simply amounts to killing what litte trade there is.

The new agreement prices are:

10 and 12 in. dimensions	$17.00
9 in. and under	15.00
10 and 12 in. and under	16.50
2 x 3, 2 x 4, 2 x 5, 2 x 6, 2 x 7 and 3 x 4	13.50
All other random, 9 in. and under	14.50
1⅝ laths	3. 0
½ laths	2.85
5 inches and up boards	14.00
Bundle furring	13.00

Hemlock lumber is nominally easier, although there is still very little offering:

Canadian and Eastern boards	$15.00 to $16 00
Pennsylvania	19.00

with $14 for 20s and $11 for 14s.

Western pine continues very easy:

Uppers, 1 in	$56.00 to $58.00
1¼ to 2 in	58.00 " 60.00
3 and 4 in	68.00 " 72.00
Selects, 1 to 4 in	52.00 " 64.00
Fine common, 1 to 3 in	45.00 " 60.00
Sheathings	38.00 " 54.00
Barn boards	28.00 " 30.00
Coffin boards	24.00 " 26.00

California redwood is in quiet demand at steady prices:

Strictly heart, 1 in	$48.00 to $55.00
1¼, 1½ and 2 in	50.00 to 57.00
3 in	55.00 to 60.00
4 in	60.00 to 65.00

Clear $3 less.

Hardwood lumber is in quiet request, with the market easy, although little change in quoted prices:

Whitewood, 1 in	$37.00 to $39.00
Whitewood, thicker	38.00 " 44.00
⅝ inch	30.00 " 34.00
Saps, inch	28.00 " 30.00
Common	25.00 " 28.00
Quartered oak	70.00 " 80.00
Fancy Oak	90.00 " 100.00
Plain Oak	35.00 " 48.00
Ash	38.00 " 50.00
Cherry	90.00 " 130.00
Maple	30.00 " 40.00
Sycamore, quartered inch	40.00 " 50.00
Walnut	100.00 " 130.00

Shingles are easy, with a very full supply:

Extra	$3.00 to $3.10
Clear	2.60 2.70
2nd clear	2.00 2.00
Clear white	1.75 2.00
Extra No. 1	1.50

Oregon, $2.50 to $3.50, as to grade and quality.

These prices are for Boston, freight paid. California redwood is quoted at $3.40 to $3.50.

Clapboards continue very dull:

Spruce, extra	$28.00 to $29.00
Spruce, clear	26.00 " 27.00
Spruce, 2nd clear	23.00 " 24.00
Pine, extra	38.00 " 42.00
Pine, clear	35.00 " 40.00
Pine, 2nd clear	30.00 " 32.00
California redwood, clear	42 50 " 45.00
Second grade	40.00 " 42.00

Laths are easy: 1⅝ inch, $3; 1½ inch, $2.85.

BARBADOES MARKET.

Messrs. Musson, Son & Co. report: There has been one arrival of spruce, the cargo reported by us as sold at $22 to arrive. In white pine there has been no arrivals, and nothing further reported since the cargo contracted for at $24.50 shipping, $20 seconds. In pitch pine no further transactions; there is a cargo on the way to our consignment. There is nothing new to report in shingles, shooks or woodhoops.

Messrs. Clairemont, Mann & Co. report: Both white pine and spruce are in great demand, as our yards are very bare of both kinds, particularly spruce, for which there is always a good demand during our reaping season. There has been one arrival with spruce, sold to arrive at $22 round. We also note the sale to arrive, of a cargo of white pine, at $24.50 round for first quality, and $20 for second quality. No arrival with pitch pine for some time, and it is now very much wanted.

Shingles—Gaspe cedar, in supply, and market dull—there is a large lot in store unsold, principally small, for which $3.75 per M is asked, but less would be accepted to make a sale. No late arrivals of laying shingles. June 5th: Schr. "F. A. Rice," from Church Point, N.S., with 145 M feet spruce—Sold to arrive at $22 round.

SHIPPING MATTERS.

Shipments of lumber, lath, shingles and telegraph poles are heavy at present from Deseronto, Ont.

Barkentine Antilla, which sailed from Bantry the other day, goes to Yarmouth to take in lumber for Buenos Ayres at $11, or if Rosario $12.

The steamer Bridgewater is discharging a large quantity of pulp at Central wharf, Halifax, for shipment by the steamer Sheldrake, which will be due from Brennan next week.

The British barque Lakemba of Glasgow and the American barque Sonoma are loading a cargo of lumber at the Hastings mill, Vancouver. The former is receiving a general overhauling and is being repainted.

LUMBER FREIGHT RATES.

CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, 9½ cents per 100 lbs Ottawa, Rockland and Hawkesbury to Montreal, for export only $1.10 per M ft., domestic 4½ cents per 100 lbs; Quebec, $2.10 per M ft., domestic 5½ cents per 100 lbs.; Arnprior to Montreal, for export only $1.60 per M ft., domestic 6½ cents per 100 lbs.; Quebec, export $2.60 per M ft, domestic 10½ cents per 100 lbs.; Pembroke to Montreal, for export only $1.85 per M ft., domestic 7½ cents per 100 lbs; Quebec for export only 2.85 per M ft., domestic 11½ cents per 100 lbs.; Ottawa to New York, all rail, 15 cents per 100 lbs; Arnprior to New York, 17 cents per 100 lbs.; Pembroke to New York, 18 cents per 100 lbs.; Ottawa, Rockland and Hawkesbury to New York and points within regular lighterage limits of New York Harbor, seasoned pine lumber, lots of 50 M feet and up, via Williams Barge line from Albany, $3.25 per M feet, lath 65 cents per M pieces, lots 250 M pieces and over; from Arnprior, seasoned pine lumber $3.75 per M feet, lath 7 5cents per M pieces; from Douglas, Eganville and Pembroke, seasoned pine lumber $4.00 per M feet, lath 80 cents per M pieces, Ottawa to Buffalo, 12 cts. per 100 lbs.; Ottawa to Port Huron and Detroit, 14c. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c., exports 13c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents. export 15 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany, 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N.B., and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N.S., and common points, 21 cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs. Rates quoted above are in cents per 100 lbs.; when quoted per M ft., minimum carload will be 10 M ft., lumber not exceeding 3,000 lbs. per M ft. Lath minimum carload 50 M pieces, not exceeding 600 lbs. per M pieces. Ottawa rates apply on shipments from Rockland and Hawkesbury.

POUNDING IN STEAM PIPES.

The strength of pipes, valves and fittings is a subject of vital importance at all times, one in which special interest has been revived of late by serious accidents which have called attention to the importance of providing a wide margin for safety in all steam connections. There should be no difficulty in providing for all the regular working stresses upon pipe connections, but in practice it is found that there are shocks and so-called hammer blows, the full force of which it is difficult to measure or estimate. This particular feature of the subject has been carefully investigated by M. Walckenaer, and his conclusions which have been published in Annales des Points et Chausees, are now receiving careful consideration among engineers.

The conditions that obtain in a pipe containing steam and water of condensation are not always fully understood. When a pipe contains air or a similar gas, there is an elastic cushion formed, which, in case of a sudden arrest of flow of water, absorbs the shock, and acts like a spring to prevent any serious hammer-blow. When, however, the closed end of the pipe contains steam, the projection into it of a volume of water may cause a sudden condensation, entirely removing any elastic cushion, and permitting the occurrence of a violent shock.

It is hardly practicable to compute the magnitude of the blows which are thus produced, but it is well known that they may cause serious ruptures in connections amply strong for all ordinary working pressures. M. Walcknaer cites certain experiments made in the German navy, in which pressure gauges placed upon the pipe showed sudden impact pressures ranging from 500 to 2,000 pounds per square inch. A number of accidents were investigated, and it was found that stop-valves between boilers were violently ruptured when communication was opened too suddenly between connections of marked difference in pressure. There appears to be little or no doubt that in most if not all these cases the hammer blow which caused the rupture far exceeded any normal working pressure.

Such accidents may generally be avoided by using care in making such communication, as the valves should be opened gradually, thus preventing a sudden rush of water and steam together. In many instances, however, it is not practicable to avoid shock. The connections between engines and boilers are sometimes so arranged that very serious water-hammer impacts may be produced.

In all of the accidents described the connections were so arranged that an accumulation of water of condensation in the pipes could occur. In one instance the ruptured valve formed a portion of the connection to a boiler which was out of use and cold while others in the same battery were in service. The opening of a valve permitting steam from a live boiler to flow into the general steam main caused a violent water hammer back against the valve on the cold boiler, causing rupture of the valve body with serious scalding of the attendant. This system of connecting a number of boilers in batter to one steam main is a very general practice, and while it possesses numerous advantages it has the defect of providing space for the collection of water at various points. Steam traps for the drainage of all places of accumulation of water should be provided, aud such traps ought to be of liberal capacity, in order that the drainage may be prompt and effective. Even when a system of piping is altogether free from water at the time of starting, the rapid condensation of steam which at first occurs may provide sufficient water to cause violent pounding, and this can only be prevented by a gradual warming up of the whole system, the admission of steam being so gradual that the traps can take care of the water of condensation as rapidly as it is produced ; the full volume of steam being admitted only after the pipes have become hot.

AN EASTERN MACHINERY FIRM.

PROMINENT among the large machinery manufacturers in the Maritime provinces is the firm of Alex. Dunbar & Sons, of Woodstock, N. B., who do an extensive business in saw mill and tanning machinery. This firm are the inventors of the original and the new improved Dunbar shingle machine so extensively used in the eastern provinces and throughout Canada. This machine has held its place among the leading machines of the kind for the last seventeen years, and as it has now been improved, leading millmen say that it has no equal. The popularity of the machine will probably be best shown by giving a few of the recent shipments : Eight for the new mill of Donald Fraser & Sons at Cabano, Que. ; five for new mill for George McKean at Bolitilee, Que. ; three for the Port Daniel Lumber Co., Port Daniel, Que.; two for Hilyard Bros., of St. John, for their Tobique mill, and one each for the following: W. Robinson, Notre Dame Du Lac ; McNair Bros., Vancouver, B.C. ; Hastings Shingle Co., Vancouver, B. C. ; John Fair, Black Cape, Que.; Wm. Currie & Co., Eel River Crossing, N. B.; Mr. Dowell, Black Brook, N. B.; and Russell & McDougall, Black Brook, N. B., and others.

But the fame of the Dunbar shingle machine is not confined to Canada, as several have been shipped to the United States. One was lately installed in the mill of F. C. Robinson at Robinson's Mills, Maine. It may be stated that Mr. Robinson is a shingle manufacturer of long experience, and that he has now in operation in his mill the second Dunbar shingle machine that was built. It has been in constant operation for seventeen years, and is said to be in good condition, without having had any repairs except to the saws. Mr. Robinson experimented with American machines, but decided to install the second Dunbar machine, notwithstanding that he was obliged to pay a duty of 45 per cent. He has also in his mill the first upright Dunbar clapboard machine ever built, also a clapboard planer by the same manufacturers.

Messrs. Dunbar & Sons have just shipped to William Richards & Co., for their mill at Campbellton, N.B., three shingle machines, one upright clapboard machine, improved jump-up cut-off machinery, clapboard planer, trimmers, etc., as well as a new rotary saw mill of large capacity. This rotary embodies several new feature. The feed, which is by wire rope, can be instantly changed from 3½ inches to 9 inches per revolution of saw by simply moving a lever. The feed works are extremely heavy, having frictions of 30 in. diameter and 17 in. face. The carriage is fitted with a new style of receding works, by which the setter can instantly place the beam in proper place automatically. It is also fitted with an offset from saw when running back, thus saving the saw teeth. There are three champion log dogs in the carriage, which have no superior for holding the logs on the carriage. They have the taper attachment on same frame. The carriage runs on trucks of 12 in. diameter, and is guided in alignment to saw by having guide rail and large trucks. The whole is extremely heavy, the saw arbor being of steel, 4½ in., and the weight of the mill being about 10 tons. It has a capacity of 60,000 feet per day.

Allan Hayden, of Woodstock, N. B., has a rotary mill of about the same style, made by Dunbar & Sons, and which has been run very successfully for the last four years. He has also Dunbar shingle machines, and an upright clapboard machine and planer, built by the same firm.

In the works of Dunbar & Sons at Woodstock, N. B., there is now under construction a large rotary mill for the Burgess mill at Grand Falls, also a rotary mill of smaller size for Mr. McDowell, of Pennfield Ridge, N.B., four shingle machines which will be shipped in a few days, for John Mair, Campbellton, N. B., and three to the order of W.R. Rawlings, of Campbellton. In the last week of April a carload of machinery was shipped to B. Davis, Grand Falls, N. B., including steam engine and boiler, shafting, shingle machines, etc. A steam engine and boiler is now being rebuilt in the shop for Shaw, Cassils & Co., tanners, of Hawkshaw, N. B. They have also recently shipped to this firm two boilers of 100 h. p. each, and they are also having built in Boston a 200 h. p. engine for an American customer.

The firm have as customers the principal millmen and tanners in their locality, beside their outside work. Among these firms are: Donald Fraser & Sons, W. Richards & Company, Ltd., A. H. Sawyer, Jas. Burgess & Sons, O. Shaw, Cassils & Company, J. D. Dickinson & Sons, C. D. Dickinson, and S. Ascott & Company, the last four being well-known names. The works are equipped with the most modern tools that could be procured. Among these is a large lathe, made by John Bertram & Sons, one of the best in the country. It swings 60 inches, has all up-to-date attachments, and weighs 6½ tons. There is a large drill, an iron planer, a bolt-cutting machine, and a 24-inch lathe, all of Bertram & Son's make, also a 24-inch engine lathe, made by McGregor, Gourlay & Co., of Galt, a key-setting machine, and all labor-saving machines, including the best American made twist drills, reamers, etc. In the foundry there is a crane of five tons capacity, and an oscillating engine for driving the fan, which was made by the American Champion Blower Co. The wood shop has band and circular saws, boring machines, etc. The shops are lighted throughout by electricity, supplied by a dynamo in the engine room. The engine is of 20 horse-power, and was built upon the premises.

The firm state that their work is only limited by their capacity, and that they contemplate enlarging their works shortly, to enable them to fill new orders, which at present they are unable to do. Although having worked 15 hours daily for several months past, they were forced to send outside some orders which they were unable to supply in time.

MR. ALEX. DUNBAR.

Mr. Alex. Dunbar, sr., came from Aberdeen, Scotland, in 1873. He served his apprenticeship with Jas. Abernethy & Co., Ferryhill Foundry, Aberdeen, commencing his apprenticeship in 1854. He has had a large and varied experience in the construction of machinery for various purposes. Before leaving Scotland he had charge of the steam plowing and traction engines and interests in Scotland of the celebrated firm of John Fowler & Co., Leeds, England, his residence being in Kincardinshire. After coming to Canada he was foreman for nine years for the well known manufacturers, Connell Bros., of Woodstock, N. B. He has now associated with him in his business his sons, Alexander, Andrew and William, while two other younger sons, Harry and John, are engaged in the factory.

MARKET FOR BOX BOARDS.

THE Department of Trade and Commerce at Ottawa has received a communication from Mr. Harrison Watson, Curator for Canadian Section, Imperial Institute, London, England, regarding an inquiry from a large firm, Belfast, Ireland, who requests quotations from Canadian manufacturers of box boards as per specifications below. If it is not possible to quote c. i. f. Belfast, give quotations f. o. b. ship, say at Montreal :

SPECIFICATION OF BUTTER BOXES.

56 Lb. Size.

Top	$13\frac{1}{8} \times 13\frac{1}{8} \times \frac{5}{16}$
Bottom	$12 \times 12 \times \frac{5}{16}$
Sides	$\frac{13\frac{1}{8}}{12} \times 13 \times \frac{5}{16}$
Ends	$\frac{12\frac{1}{2}}{11\frac{1}{4}} \times 13 \times \frac{5}{16}$

28 Lb. Size.

Top	$12 \times 10\frac{3}{4} \times \frac{5}{16}$
Bottom	$11 \times 10 \times \frac{5}{16}$
Sides	$\frac{12}{11} \times 8\frac{7}{8} \times \frac{5}{16}$
Ends	$\frac{10}{9} \times 8\frac{7}{8} \times \frac{5}{16}$

TRADE NOTES.

The Magnolia Metal Company have recently appointed Charles E. Moore & Company, engineers, as their agents at San Francisco. This firm have the exclusive agency for Magnolia Metal in the states of California, Oregon, Washington, Montana, Nevada, Idaho, Arizona, Utah, New Mexico, and the Hawaiian Islands.

The attention of lumbermen is directed to the advetisement of Dr. A. A. McCann & Company, of Mattawa, Ont., which appears for the first time in this number. This company are manufacturers of veterinary remedies, which have achieved a good reputation among leading lumber firms in the Ottawa Valley. Lumbermen will do well to enquire into the merits of these medicines, full particulars regarding which may be obtained from the manufacturers.

THE NEWS.

An American company have purchased Watson's stave factory at Kinmount, Ont.

—The Canadian Veneer & Lumber Company are building a factory in London, Ont.

—C.T. White, of Apple River, N. S., intends to build a saw mill to replace the one destroyed by fire.

—W. Hill, of Benmiller, has manufactured several thousand maple rollers for the British markets.

A new planing mill and sash and door factory have been built at Sudbury, Ont., by Thos. Evans & Sons.

—It is said to be the intention of Laing, Richie & Company of Essex, Ontario, to erect a saw and stave mill at Windsor.

—The Gash Point Lumber Company has been incorporated, with a capital of $40,000, and head office at Fort Francis, Ont.

—The Fred. Robinson Company, of Revelstoke, B. C., have made a proposition to purchase the business of the Kootenay Lumber Company.

We understand that the Imperial Lumber Company intend to close down their mill at Warren, Ont. their limits having become almost exhausted.

—J. Bell, of Beeton, Ont., has asked the council of Toronto Junction, Ont., for exemption from taxation in the event of establishing a saw mill there.

—The Orillia Export Lumber Co. are adding a shingle making plant to their saw mill in Orillia, and in a few days will be making pine and cedar shingles.

—The Parry Sound Lumber Company have just installed in their mill and yards a new electric light plant, from the factory of the Canadian General Electric Company, Peterborough.

—Holmes & Stevens, eastern sales agents for the Swan-Donogh Lumber Company, of North Tonawanda, N. Y., have removed their office from 38th Street to 18 Broadway, New York.

Ker & Harcourt have leased the saw mill at Shebashekong, owned by Dillon & Thompson, and have put it in operation cutting lumber for their spool and bobbin factory at Parry Sound.

—Work is in progress on the new mill of the Edmund Hall Lumber Company at Sarnia, Ont , but is doubtful if the mill will be completed in time to manufacture any quantity of lumber this season.

—The saw mill of the Harrison River Mill, Timber and Trading Company, on the Harrison river, near Westminster, B. C., is nearing completion. This company own extensive limits on Harrison Lake.

—Neibergall & Reaume, of Essex, Ont.,have purchased timber property in Anderton township, west of McGregor, and the Michigan Central railway are building a spur line from the property to their mill at Essex.

—Brown & Rutherford's new planing mill and sash and door factory in Winnipeg is nearing completion. It is 60 x 150 feet, two stories and basement, with large dry kilns, warehouses, and veneering rooms.

—J. Robertson, manager of the Robertson Raft Company, has lately returned to Vancouver, B. C., from the Orient, whither he went to arrange, if possible, for the sending of several rafts of lumber across the Pacific to China and Japan.

—By the destruction of the large saw mill of Price Bros. & Company at St. Etienne, Que., a large number of persons were thrown out of employment. A number of houses were burned, including that of Mr. Charlton, the manager of the mill.

—John Levey, of Lindsay, Ont., has purchased the fine water power known as Elliott's Falls, in North Victoria, and has now in course of erection saw, shingle and chopping mills. The power is a good one, and Mr. Levey is evidently an ardent expansionist.

—In 1890, 2,000,000 tons of logs were imported into Germany. In 1898, 2,600,000 tons were imported, an increase of 30 per cent. During this same period, sawed lumber increased from 1,200,000 tons to 2,200,000 tons, or an increase of about 100 per cent.

—Shurley & Dietrich, saw and tool manufacturers, of Galt, Ont., have made a proposition to the city council of Ottawa to establish saw works at that place. It is understood that the Ottawa Saw Works, whose factory was burned in the recent fire, are not likely to rebuild.

—The directors of the Eighteen Mile Railroads, which connect Racquet Lake with the New York Central system, will in future burn oil instead of coal. The line runs through the Adirondack preserve, and the State authorities refused permission to run engines that emitted sparks.

—A new company has been formed at Alexandria, Ont., to be known as the Alexandria Wood Export Company, the object being to manufacture lumber and wood products for home and foreign markets. The directors are Messrs. J. T. Schell, D. M. MacPherson, Hugh Monto, John McIntosh, and Donald Lothian.

—Arrangements have been completed for the building to be built at the Winnipeg Exhibition by the lumbermen of British Columbia. The lumber will be supplied by the lumber manufacturers and will be transported free by the C. P. R., while the Dominion Government has made an appropriation to cover the cost of erection.

—A statement of the winter trade of St. John, N. B., shows that during the season of 1899-1900 there were exported by the regular lines of steamships to Great Britain 25,000,000 feet of lumber and 38,384 bales of pulp. This shows an increase in the exports of lumber as compared with the previous season of over 7,000,000 feet.

—It is reported that a company which manufactures harvesters in Chicago has applied to the Division of Forestry for a working plan for a 54,000 acre tract of hardwood timber in Missouri. This is believed to be the first effort of an American manufacturing concern to employ scientific forest methods for the production of hardwood for its own use.

—The town of Brunswick, Maine, has shown a commendable example of municipal enterprise by setting out forest trees in a tract of 1000 acres of what was once pine lands, but which has been allowed to run waste. The council appropriated a sum of money to improve the land by planting white pine trees. Seeds will be purchased and a nursery established to raise the young trees.

—An unfortunate occurrence was the destruction by fire, on June 10th, of the Kings' saw mill at Kingsville, near St. John, N. B. The mill was built about 40 years ago, but had been closed down since 1898. On May 1st it was purchased for $13,000 by Stetson, Cuttler & Company, who made repairs thereto and had started sawing operations a few days previous to the fire. It contained gang and rotary saws, four shingle machines, planer, patent haul-up, and burner. The owners have not yet decided as to rebuilding.

—The value of the different kinds of wood for street paving has been demonstrated by an experiment at the King street subway, Toronto, where in November, 1894, blocks were laid in maple, beech, rock elm, soft elm, spruce, red pine, white pine, and cedar. An examination demonstrated the fact that hardwood was the least serviceable, the softer woods being more durable, and cedar the best of all, the latter still being in a comparatively good state of repair, while the hardwoods are badly worn.

—The lake freight situation at the head of the lakes is in rather a mixed state. Lumber rates have been weakening and have finally reached bottom for the present at $2.25 per thousand, about half what they were at the close of navigation last year. The lumber shovers are demanding 60 cents per hour for loading and the vesselmen are not willing to pay more than 50 cents. Some of the vessel owners are withdrawing their boats from the lumber trade and will carry ore. But the ore rates are also low. One dollar is offered, but the boats want $1.25.

—In Austria a new method of utilizing sawdust has been invented and seems to promise admirable results. At a certain saw mill the experiment has been tried of making brickettes of the sawdust for domestic heating purposes. The dust is heated to dryness and then to the point where the tarry elements begin to exude. These are used as the consolidating matter, the saw dust passing on steam heated tables to a press which forms them into brickettes. These it is said give 4 per cent of ash, and their heating power is equivalent to that of lidnite. The experiment has shown that the cost of manufacture is 16 cents per thousand, while the selling price is $1 per thousand.

—The experiment of attempting to drive hardwood logs by painting the ends in order to prevent them from water soaking, which was recently referred to as being under consideration in Maine, has been tried and has proved a failure. The logs were in addition end bored and plugged in order to create asmall air space, which it was thought would help some in buoying the logs; but the logs which were not treated came through the drive fully as well as those which were, about two-thirds of the logs coming through successfully. The experiment is to be tried next year of driving logs which are to be cut at once and which it is hoped will by that time be seasoned sufficiently for a successful drive.

CASUALTIES.

—While bringing in logs at Merritt's mill, Titusville, N. B., Norval Snovgrass was drowned.

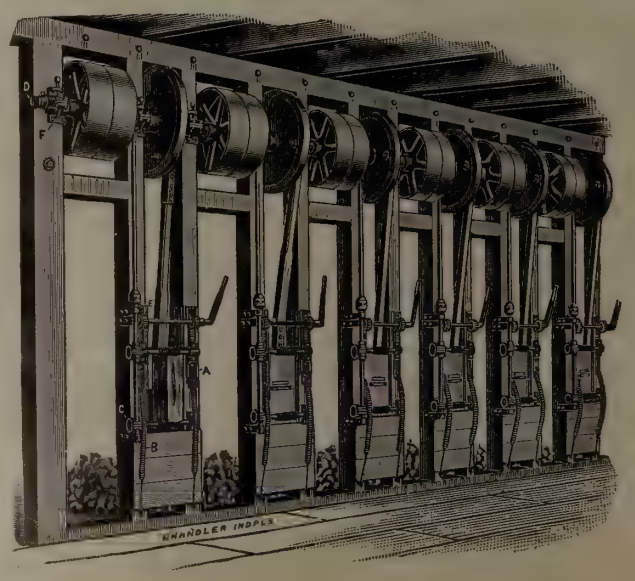
—Thos. Dube was killed in the Papiueauville Industrial Company's mill, at St. Angelique, Que., by a plank hurled from the edger.

—John Gagnon, in the employ of Henry Marsh, lumberman, Calendar, Ont., slipped into the water and was drowned while working on a boom of logs.

"WANTED AND FOR SALE."

Persons having for sale or wishing to purchase a particular lot of lumber, a mill property, timber limits, second hand machinery, etc., in fact, anything pertaining to lumbering operations, will find a buyer or seller, as the case may be, by placing an advertisement in the "Wanted and For Sale Department" of the CANADA LUMBERMAN Weekly Edition. Testimonials to the value of this department by those who have given it a trial state that the results of advertisements were frequently better than anticipated. The cost is comparatively small. Mill owners might, with profit to themselves, make use of this method of advertising their stock to a still greater extent.

The Best Excelsior Machine in the World



When two or more knives are run with one belt, all must stop when the belt is stopped to set bits or from any other cause. Our Machine has a belt for each knife, hence but one knife stops at a time. This great advantage should not be overlooked by purchasers. Time is money. Our Machine cuts more excelsior in a given time than any other machine. Get our circulars and prices.

INDIANAPOLIS, IND.

WHEN TO STOP ADVERTISING.

An English journal requested a number of its largest advertisers to give their opinions concerning the bes time to stop advertising, and the following replies were received :

When the population ceases to multiply, and the generations that crowd on after you and never heard you, stop coming on.

When you have convinced everybody whose life will touch yours that you have better goods and lower prices than they can get any where else.

When you perceive it to be the rule that men who never advertise are outstripping their neighbors in the same line of business.

When men stop making fortunes right in your sight solely through the direct use of the mighty agent.

When you can forget the words of the shrewdest and most successful men concerning the main cause of their prosperity.

When every man has become so thoroughly a creature of habit that he will certainly buy this year where he bought last year.

When younger and fresher houses in your line cease starting up and using trade journals in telling the people how much better they can do for them than you can.

CANADA'S COMMERCIAL AGENTS.

FOLLOWING is the official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries :

J. S. Larke, Sydney, N.S.W., agent for Australasia.

G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.

Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.

D. M. Rennie, Buenos Ayres, Argentine Republic agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders :

J. G. Colmer, 17 Victoria street, London, S.W., England.

Thomas Moffat, 16 Church street, Cape Town, South Africa.

G. H. Mitchell, 15 Water street, Liverpool, England.

H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.

Harrison Watson, Curator, Imperial Institute, London, England.

WOOD PULP DEPARTMENT

THE PULP MARKET.

The following pertinent remarks concerning the general market for pulp are found in the last issue Paper and Pulp, of London, England.

It is evident that the market for all classes of pulp is in a very unsettled state at present, and it is difficult to say exactly how it stands to-day, or what the prospects are for next year. There can be no doubt that recent prices are still being quoted, but that there are buyers at these figures is open to doubt. As regards sulphite we have received very conflicting reports, one stating that there are no buyers, and the other that several mills are uncovered for the second half of the year.

For next year it is reported that some sales have been made at high prices, but on the other hand a correspondent who is in the best position to know, writes: "I cannot see how sulphite and soda pulps can be much longer maintained at their present high prices. The war is practically over now, and the buyers who pay more than £8 15s. to £9 5s. for 1901 deliveries of sulphite, and £8 10s. to £8 17s. 6d. for sulphates, will probably live to rue the day they paid more." Another authority writes: "In my humble opinion chemical pulps are likely to be scarce for all this year and well into next spring, and I do not expect the market for next year to go below £9 10s. c.i.f. for bleaching sulphite, and £9 for other qualities, and the average may even rule above these figures. As the production of soda pulp is below the consumption, prices ought to be maintained at from £9 10s. to £10." It is reported, but with what truth we cannot say, that some makers, although quoting high prices, are quietly accepting comparatively low ones. There is, so far as we are aware, very little soda offering for prompt delivery, and what little there is, is being quoted at prohibitive figures. We have not heard of any sales for next year having taken place yet, as buyers and sellers evidently are so wide apart in their idea that they will not talk business. Mechanical is still scarce for prompt shipment, and it is expected that prices will reach 70s. c.i.f. for the latter half of the year. Farmand reports that sales have been freely made for next year at 49s. and 50s. f.o.b., and as mentioned in our last issue the Scandinavian Mechanical Association stated that over 100,000 tons had already been sold. Reports from both America and Scandinavia state that fears are already entertained of the drought during the coming summer and autumn curtailing the production, and there can be no doubt that the outlook for mechanical is more serious than for chemical.

Average current prices c.i.f. U. K. ports:—

Moist pine	£ 3 15/-
Dry "	7 5/-
Moist brown	3 10/-
Dry "	6 0/-
Sulphite, ordinary	10 0/-
" best	11 10/-
Soda	10 0/-

THE WOOD PULP OF CANADA.

THE above is the title of an attractive little pamphlet issued by the Dominion government descriptive of the pulp wood resources and water powers of Canada. It was compiled by Mr. George Johnson, Dominion Statistician, and is intended for distribution at the Paris Exposition. The work outlines briefly the steps that have been taken in the past five centuries in the direction of pulp and paper making, and besides giving much information as to the natural resources, contains a number of illustrations of pulp mills and water falls. Mr. Johnson says:

In 1891 there were in Canada 24 pulp factories, representing $3,000,000 capital invested, employing 1,025 persons, and having an output of $1,060,000. To-day there are 35 pulp mills, with a total capacity of 1100 tons a day. The largest has a capacity of 250 tons a day. The amount of capital invested is between $15,000,000 and $20,000,000. This development demonstrates the fact that Canada is the possessor of the largest spruce forests in the world. In 1899 the United States imported $1,500,000 worth of pulp from Canada. Britain imported $700,000

worth. It is estimated that this year England will use 500,000 tons of Canadian pulp.

She has "undoubted pre-eminence for the production of paper." What of Canada's supply of wood suitable for pulp of the highest character? It is practically unlimited. Where Canada's spruce grows is coterminous with her geographical boundary. Far east spruce grows along the Hamilton Inlet and north shores of the gulf. Far north around Ungava bay, northwest in Coronation gulf, and to the mouth of the Mackenzie river spruce matures. Far west in British Columbia the Douglas fir, a good pulp wood, reaching 250 feet in height and 50 feet around, abounds. Besides the acknowledged superiority of Canadian spruce for pulp has made spruce the equal of pine in the estimation of commerce and trade.

Mr. Johnson calculates that about 40 per cent. of Canada consists of woodland and forests. That is about 1,400,000 square miles. If one-half of this is spruce there will be 450,000,000 acres of spruce area in the Dominion. The manufacturer of newspaper wood pulp makes from a cord of spruce, or 50 feet of board measure, half a ton of sulphite pulp, or one ton of ground wood pulp. Newspaper stock is made up with 20 per cent. of sulphite pulp and 80 per cent. of ground wood pulp. An acre of spruce land yields a stand of 7,000 feet. This is equal to 6 tons of sulphite and 11½ tons of ground wood pulp per acre. Hence, taking ground wood pulp as the basis, and 10 tons per acre as the product, there are 4,500,000,000 tons of wood pulp in sight in Canada.

Dr. Bell, of the Geological survey, however, calculates Canada's area would yield 16,500,000,000 cords of spruce, so that Mr. Johnson's estimate is a conservative one.

The Weymouth Free Press says that the foundations are being put in for the new pulp mill of the Sissiboo Pulp & Paper Company at Weymouth Bridge, N.S.

The following table, showing the exports of wood pulp by the countries mentioned during 1897-98-99, has been compiled by the Philadelphia Commercial Museum :—

	1897.	1898.	1 99.
United States....	$ 242,186	$ 585,563	$ 626,716
Canada	741,959	1,210,923	1,274,376
Norway	4,835,001	5,453,001	5,636,334
Sweden.....	3,601,813	4,163,228	*4,680,000
Finland	380,369	501,960	*595,000
Austria-Hungary.	2,215,750	2,011,615	2,092,956
Germany.....	3,409,100	3,329,858	3,402,448
Belgium.....	1,719,000	1,418,300	1,308,300
France.....	7,873	8,406	7,359
Switzerland.....	269,283	225,016	*186,350
Totals.....	$17,452,234	$18,907,870	$19,809,839

PULP NOTES.

It is rumored that the Sheet Harbor Lumber Company, of Sheet Harbor, N.S., are considering the erection of a pulp mill.

It is announced that the International Paper Company will establish mills at Brompton Falls, Que., provided the municipality will give a bonus of $10,000.

It is said that W. C. Edwards, M.P.P,, of Ottawa, intends engaging in the pulp manufacturing business. Mr. Edwards owns extensive spruce limits.

It is said that J. C. Wilson & Company, whose pulp mill at St. Jerome, Que., was burned recently, will build a more modern mill, to cost about $100,000.

The last issue of The Paper Mill, New York, says: "The demand for wood pulp is strong, but there is none to be had. The nominal price is better than $25 a ton."

It is rumored that a company of Toronto capitalists is being formed to establish a large pulp mill on Jackfish Bay, on the Ontario side of Lake Superior. No names have been made public in connection with the project.

Mr. Philip Grosset, managing director of the Mispec pulp mill, has recently been in St. John, N.B., inspecting the mill. Mr. Grosset expressed himself as well pleased with its operation, and stated that the pulp had been very favorably received on the British market.

The National Pulp & Paper Company, of Montreal, has been incorporated, with a capital of $200,000. The incorporators are James Reid, Quebec; George S. Wilson, Montreal; Willam Robert Bond Reid, papermaker, Indian, Lorett; Hon. Charles Fitzpatrick, Robert A. Becket, Montreal; Dr. Frederick A. L. Lockhart, Montreal; Seth P. Leet, Montreal; Michael P. Davis, contractor, of Ottawa.

The E. B. Eddy Company, of Hull, Que., recently placed an order with the Pusey & Jones Company, of Wilmington, Delaware, for two large Fourdrinier paper machines.

Mackenzie & Mann are reported to have made application to the Ontario government for the right to develop the water power at Couchiching Falls, near Fort Francis, Ont., the intention being to secure the erection of one or more large pulp mills.

It is again stated that the building of what is expected to be the largest pulp and paper mill in the world is about to be commenced at Grand Falls, N.B., by American and British capitalists. The complete work, it is said, will cost $7,000,000. The capacity of the mill will be 300 tons of white newspaper, 225 tons of ground wood pulp, and 175 tons of sulphite pulp daily. The power at the falls is said to be immense.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the company at any of its offices. Correspondence invited.

The Timber Resources of Canada

TIMBER LANDS UNDER THE CONTROL OF THE DOMINION GOVERNMENT

BY E. STEWART,
Chief Inspector of Timber and Forestry for Canada.

EVERY general impression seems to prevail that the Dominion of Canada, as distinct from the provinces, is not the possessor of any extent of timbered lands. No doubt this idea is suggested to the traveller when crossing the continent on the Canadian Pacific Railway. The tourist going west by this route leaves the wooded district some forty miles east of the Red River, and from this on to the foot hills of the Rocky Mountains, a distance of about nine hundred miles, he sees very little timber, and as the older provinces on entering into Confederation retained their land, the inference hastily drawn is that the Dominion has no timber under its control. This, however, is a very erroneous conclusion, as I shall attempt to show, and arises from viewing the country as if it were a line having very great length to be sure, but very little breadth.

Let us take a glance at the map of the Dominion. We find that the total area of the five eastern provinces and the whole of British Columbia is 880,000 square miles, while the area of the territory outside of this is no less than 2,436,500 square miles, or nearly three times as great in extent. Let us now take from the latter the untimbered areas and the remainder will then, of course, be the extent of timber land directly under the control of the Dominion Government, except the very small part that has been granted to individuals or companies by the government.

It is not necessary in this calculation to subtract the area of the Indian Reserves, for the Dominion Government is charged with the administration of these, not only in the Dominion territory, but in all the provinces as well.

The prairie lands of the west may be roughly estimated at 250,000 square miles, and the barren lands of the north, that is, north of the timber line, at 1,000,000 square miles, amounting in all to 1,250,000 square miles, and this taken from the said 2,436,500 will leave 1,186,000 square miles as the timbered portion in Dominion territory, as compared with 880,000 square miles which is the united area of the eastern provinces with the whole of the Pacific Province of British Columbia added, or an area of timbered land belonging to the Dominion greater by 306,000 square miles than that of the combined areas of these Provinces.

But this calculation is too favourable to British Columbia and unfair to the Dominion, inasmuch as we have included its whole area as belonging to the province, whereas the Dominion owns a very large tract consisting of 40 miles in width, twenty miles on each side of the C. P. R., and extending from the summit of the Rocky Mountains to the Pacific Ocean a distance of 500 miles, or an area of about 20,000 square miles.

The fact is that the people of Canada utterly fail to realize the vast extent of the country which they possess, as well as the undeveloped and unexplored riches which it contains.

It would be difficult to define accurately the limits of the various forest belts under consideration, but the following may be considered as approximately correct: The first, which might for convenience be called our Great Northern Forest, extends from Alaska on the west to Hudson Bay on the east, and is bounded on the south by the northern boundry of British Columbia, the prairie lands of the Territories and the northern boundry of Ontario, and extends north to the limit of tree growth. East of Hudson Bay we have also an area partly timbered of 300,000 square miles.

LUMBERING IN CANADA.—WHITE PINE FOREST ON THE UPPER COULONGE, OTTAWA DISTRICT.

Of course it would be incorrect to assume that all this is thickly covered with timber. Dr. Robert Bell, F.R.S., estimates one-third of this territory to be brule (burnt country), in some cases bare of timber and in others covered with small second growth. Probably another one-third might be set down as consisting of lakes,

rock and muskeg, containing very little timber, and the remaining one-third as timbered land. In this vast extent of country the white and black spruce, now becoming so valuable for pulp, are everywhere likely to be met with, as they extend from beyond its southern limit up to the verge of the timber line, and are the varieties found skirting the tundra of the arctic regions. The other varieties in this northern forest are the larch or tamarac, the Banksian pine, balsam fir, aspen, balsam poplar, canoe birch, willow and alder.

The next to the notice is the belt along the eastern slope of the Rocky Mountains and west

LUMBERING IN CANADA—A LOG DUMP.

of the prairies. The varieties are similar to that in the northern belt, with a few added species, such as the mountain fir (pinus albicaulis) and the Douglas fir (Pseudotsuga Douglasii).

THE RAILWAY BELT IN BRITISH COLUMBIA.

Next we have the railway belt in British Columbia, above referred to. This tract of country was granted by the province of British Columbia to the Dominion as a contribution to the latter for the building of the Canadian Pacific Railway. The timber in this belt is divided into two parts by the "dry belt," a semi-arid district extending from Lytton to Shuswap Lake, a distance of about 130 miles. The latter contains but little timber, though there are some belts of yellow or bull pine (pinus ponderosa) scattered through it. The country west of the "dry belt" and extending to the Pacific coast deserves to be ranked with the most productive forest producing regions of the globe. This is the home of the magnificent Douglas fir (Pseudotsuga Douglasii), which increases in size as the coast is approached; of the western cedar (Thuya gigantia), the Menzies spruce (Picea Sitchensis) and the western hemlock (Tsuga Mertensiana). Unfortunately an enormous amount of this valuable timber has been destroyed by fire, and nearly every year the burnt area is being increased. This tract of country derives its great value as a lumbering district not alone from the quality of the timber, but from its position and the facilities for getting the product out. Being along the valley of the Fraser River the whole distance, and extending only twenty miles on each side of it, the facilities for floating the logs to tide-water are apparent.

Of the district between the "dry belt" and the summit of the Rocky Mountains Professor John Macoun says :—

"Descending from the Rocky Mountains summit by the Kicking Horse Pass, we meet the western cedar as a mere shrub, but in the Columbia Valley it comes a gigantic tree, often having a diameter of ten feet in the valley of the Beaver creek. Ascending the slope on the west side of the valley we come at once into a belt of the western hemlock and white pine, which is characteristic of all the mountains from here to the Coast range. Above these trees, but often intermixed with them, as at the Glacier hotel, Selkirk mountains, Patton's hemlock is found capping the mountains or forming the last groves on their sides. On the coast range a change takes place, and the upper slopes are clothed with this tree and the white fir (Abies amabalis).

"Fine groves of this shapely tree are to be seen here, and the difference between it and the Rocky Mountain species (Abies subalpina) is very apparent, as the former has green cones and the latter bright purple ones. Descending the Columbia river, groves of the western larch are seen below the Upper Arrows lake, and this fine tree is not uncommon on the lower slopes of the mountains on both the east and west sides of the Gold range.

"Generally speaking, all the valleys throughout both the Gold and Selkirk Ranges are filled with cedar and spruce, and the mountain slopes are covered with Douglas fir and hemlock. The trees are in all cases well developed, and from their size are suited for any purpose. This is the character of all the timber from the Columbia river to the Gold range. The valleys of the streams discharging westward from the latter ranges into the Eagle and Spallumcheen rivers and Shuswap lake are also filled with fine timber of the same species. Passing westward from these mountains we come gradually into the drier region, and the country becomes open, with only scattered groves of single trees on the lower slopes and plateaus, and the yellow pine (pinus ponderosa), so characteristic of the dry interior of British Columbia, is the chief feature in the landscape."

In addition to these districts there is a considerable extent of timbered land in what is usually known as the prairie belt, notably in the Riding mountains, Moose mountains and the Turtle mountains, as well as that found in smaller quantities surrounded on all sides by the prairie. The latter, though perhaps of not much value to the lumberman, is invaluable to the settlers in the neighborhood for building, fencing and for fuel.

FOREST FIRES.

I have now to refer to a destructive agency that has done more damage to this country than any other that could be named. It has been estimated that even in the Ottawa valley ten pine trees have been destroyed by fire for every one that has been cut by the lumbermen, and I believe this estimate to be quite within the mark not only in the Ottawa valley, but also in the pine producing districts of Ontario west of the Ottawa, and when we examine the coniferous forests on Dominion lands, whether in the northern belt or in the foot hills of the Rocky Mountains, or in the Railway belt in British Columbia, this proportion is greatly exceeded, and when it is known that most of these fires are caused by carelessness on the part of those living in the neighborhood or travelling through the territory, it is certainly not creditable to the people of this country that they have not adopted more adequate means to guard so valuable a heritage.

Mr. W. C. Edwards, M. P., one of the large lumbermen of the Ottawa valley, in a recent communication, writes as follows :—"Imperfect though the system of fire protection now in vogue in the Province of Ontario and Quebec may be, at the same time the result has been the saving of millions of dollars worth of timber to these Provinces. Previous to the employment of fire rangers in the Province of Quebec, annual serious fires took place in the Ottawa region, destroying enormous quantities of timber. Since the adoption of the fire ranger system there has not been, so far as I am aware, one very serious fire."

It is also worthy of notice in this connection that a forest fire is far more destructive than any system of lumbering no matter how irrational and destructive it may be. The lumberman removes the larger trees and leaves the younger ones standing. By his removal of the larger timber he lets in the light and gives room for the more rapid growth of the smaller trees, but when a fire sweeps over a district in a dry time it destroys every living tree and sapling and even the seeds that may be lying on the ground. In fact, so great and so widespread is this destruction that in nearly every report where the forests of the country are referred to their rapid disappearance from this cause is commented upon and urgent recommendations made for the adoption of means for their protection.

There can be no question that the monetary loss that Canada has sustained through forest

fires would be more than sufficient to pay our national debt. By this actual monetary loss, enormous as it is, is only one phase of the injury that the country sustains through its being denuded of its timber. The effect on the climate must be taken into account, the change in the distribution of moisture and the flow of the water in the rivers and streams.

One writer, in dealing with this phase of the subject, says : "The forest with which the hills and mountains are covered act as reservoirs to hold, retain and economize the water which rainy seasons shower upon them. The soil in the forest is loose and spongy. The roots and rootlets are so many pipes penetrating the earth, leading the water into deeper soil. The heaps of leaves, the layers of brambles, the beds of moss, all combine to hold and retain the waters, while the shade afforded by the foliage protects the ground from the parching rays of the sun and prevents too sudden evaporation. The waters thus retained percolate slowly through the ground to feed the numberless springs, creeks and rivers, which thus supplied will flow on evenly and continuously. Remove the forests and what will happen ? The plants that throve and flourished 'neath their grateful shade all die, the moss withers, the parched leaves are blown away by the winds. Then comes the rainy season. Rain falls in torrents and washes down the sides of hills and mountains, carrying off the rich mould, the deposit of ages, the life of the land ; overflowing the valleys, obstructing river channels, and often destroying life and property in its restless force."

Enough has been said regarding the loss that has been snstained, and the question is what can be done to lessen the destruction that is now taking place.

It must not be forgotten that though the axeman and fire may do their worst, they are unable to destroy the laws of nature, and the element of growth still remains, and the law of reproduction if given opportunities, will in time reclothe the denuded areas, fill up the gaps where only partial destruction has occurred, and in time (perhaps long as measured by the life of the indvidual, but short in that of a nation) the wounds will be healed and the first conditions restored. When the early colonist landed on the western shores of the Atlantic they were confronted by the forest everywhere, and it was necessary to subdue it in order to appropriate the land on which it grew to agricultural purposes, and they naturally looked upon it as one of their greatest enemies. They waged a long and laborious warfare with it, but in the end they were too successful, for had they allowed a fair proportion of the trees to remain, the country to-day would not only be much more attractive in appearance, but more productive as well.

I am old enough to remember hearing an old settler of Western Ontario tell of his experience in the beginning of this century in clearing the land of the valuable timber that grew in such abundance on his homestead, such as the oak, hickory, maple, beech, whitewood and black-walnut. At that time the timber was not saleable, and after felling the trees they were cut into logging lengths and then drawn into large heaps and burnt, and he said that black walnut was most difficult of any to burn.

No doubt these pioneers were working along lines that were necessary under the circumstances, but how much more beautiful would that favored district be to-day if they had left along the roadsides and a few acres here and there on their farms some of the choicest of the younger trees ; but as a rule they cut them all down, first to be burnt and afterwards to sell the timber for a mere trifle, then after a few years started to plant out young trees along their lanes and roads, which will take 50 or a 100 years to equal in beauty those which they destroyed.

I think the words of the poet Joaquin Miller exceedingly applicable to our case in this respect in Canada :—

"God gave us mother earth full blest
With robes of green in healthful fold ;
We tore the green robes from her breast,
We sold our mother's robes for gold.

We sold her garments fair, and she
Lies shamed and bleeding at our feet,
In penitence we plant a tree
We plant a tree and count it meet."

The conditions being so different in Canada from those prevailing in the older European countries, to adopt here any of their policies in detail would scarcely be practicable.

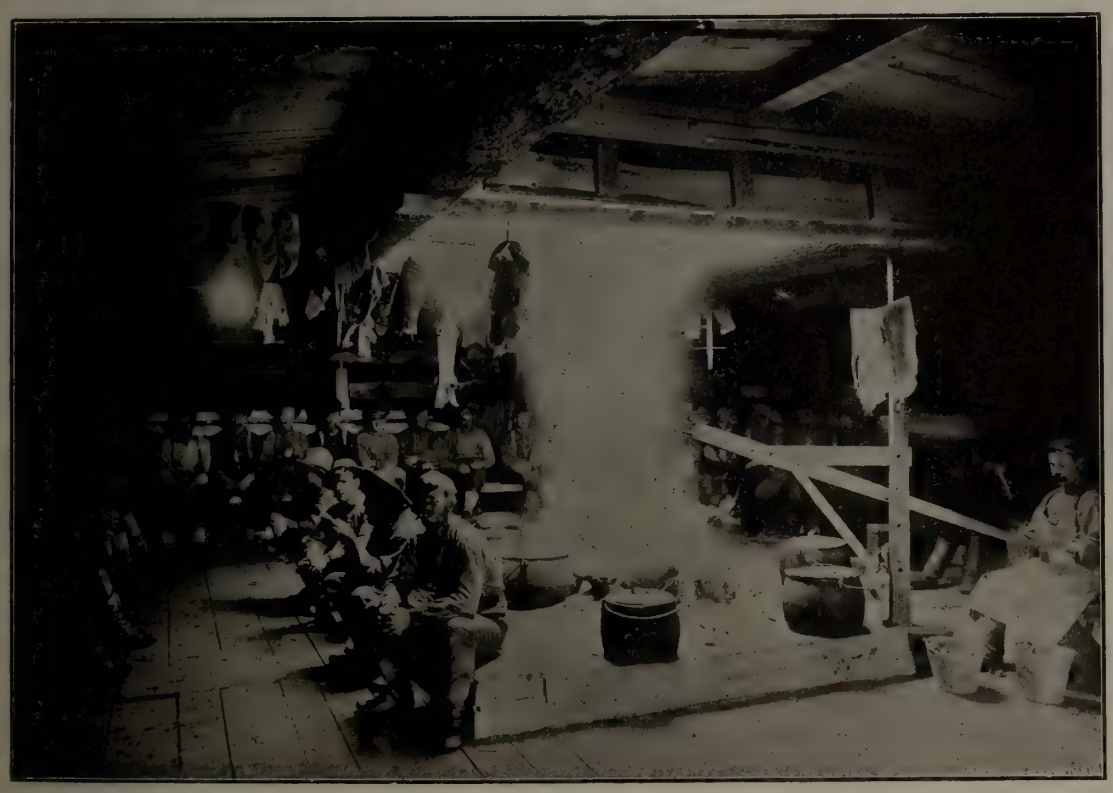
The United States, usually foremost in matters of interest to their people, have only within recent years moved in the direction of scientific forestry. They have now a well organized bureau in connection with the Federal Government at Washington, known technically as the "Division of Forestry."

Mr. Edward A. Bowers, formerly secretary of the American Forestry Association, says "large areas of the finest pine lands have been disposed of by the Government in Minnesota and elsewhere under the settlement laws. There was no other way by which the timber could be acquired, and so the lumbermen hired hundreds of choppers, who in addition to their regular work, were required to enter a tract of 160 acres under the pre-emption or homestead laws, and after a nominal compliance with the law, to deed the land to their employers.

After stripping the timber from the land it was abandoned, and over great areas once located for homes one can pass now without finding an occupant, the dead trees and barren stumps or an occasional cabin alone attesting the former occupancy of man."

Our system in comparison with this is preferable in several ways. In those parts of the country where timber is scarce and unevenly distributed certain portions are withheld from home-steading and divided into wood lots for the settlers who had none on their locations. In other cases permits can be given to settlers to get a certain quantity of timber from reserved areas, and in the heavily timbered land a large revenue is obtainable from the lumberman for the valuable timber thereon, and as the policy generally adopted both in the Provinces and the Dominion is to only grant yearly licenses to cut on certain areas under regulations that may be varied from year to year, it will be seen that the State may be said to still hold the management of its own forest, and is quite free to adopt from time to time a policy best suited to preserve the product and to conserve the national interests.

Though our system of granting land to the settler is favorable for the enactment of a wise forest policy, we have not been as ready to adopt methods as we should have been. There is no question that in the early days those who were far-sighted were enabled to appropriate at a small cost most valuable timber properties. We have also erred in the older provinces in not making a distinct classification of what lands should have been permanently set apart for the production of timber as distinct from others on which settlers should have been invited. The wise farmer will divide his homestead in certain parts for pasture, others for crops, and others for the growth of timber, and similarly the nation should explore its territory in advance of settlement and direct the settler to tracts suitable to



LUMBERING IN CANADA.—THE "CAMBOOSE" SHANTY.

The "Camboose" shanty is still in evidence on the Coulonge River. This old style has been abandoned on almost all other streams for the American style—the cooking range and the box stove, which is considered more up-to-date and economical, but there are concerns who prefer to keep up the old style on account of its being more cheerful for the men and because they think it more cleanly and healthful. The cooking is all done over the open log fire. The bread and beans are baked in the hot sand.

his vacations. Those districts best adapted for the production of timber should be set apart for that purpose and guarded from destruction by fire or other destructive agencies, and the regulation for cutting should be on proper methods so that the territory may continue indefinitely to produce its crops.

LICENSES.

A license to cut timber can be acquired only at public competition. A rental of $5 per square mile is charged for all timber berths excepting those situated west of Eagle pass in the province of British Columbia, for which the rental is at the rate of 5 cents per acre per annum.

In addition to the rental, dues at the following rates are charged :—

Sawn lumber, 50 cents per thousand feet B.M.

Railway ties, six and eight feet long, 1½ and 1¾ cents each.

Shingle bolts, 25 cents a cord.

All other products, 5 per cent. on the sales.

THE TIMBER RESOURCES OF ONTARIO.

THE importance of the lumbering industry of this province and the leading position occupied by the forest as a factor of our prosperity may be estimated from the annual returns of Canadian exports. During the fiscal year ending June 30th, 1899, the total value of exports from the Dominion, produced in Canada, was $132,801,262. Of this amount forest products furnish the second largest item, their aggregate value being $28,021,529, as compared with animals and their products, $46,734,130; agricultural produce, $22,952,915 ; mining products, $13,368,150 ; and manufactures $11,706,707. Ontario furnished considerably the greater portion of the amount, although the official returns give the value of the forest produce exported from Ontario at only $6,513,141, while the province of Quebec, the timber resources of which are much smaller, is credited with $12,459,064. The reason for this is that nearly all the lumber and timber exported from Ontario, other than that shipped to the United States, is entered for export at Quebec ports and consequently returned as being exported from that province. Ontario's shipments of forest produce to the United States alone were valued at $6,408,124, from which some estimate may be formed of the total extent of the output.

WHITE PINE.

By far the most valuable feature of the provincial timber resources is the white pine (pinus strobus), the great staple of the lumbering industry, for which there is a permanent and increasing demand from all quarters for building and manufacturing requirements. In its still extensive pine forests Ontario possesses a source of wealth and a provision for the industrial activities of the future equalled by few, if any, communities, for despite the inroads made upon them in the necessary work of clearing the agricultural portions of the country for settlement, there remain vast regions which, from the character of the soil, are unsuited for tillage, that with due care in exploitation will remain a permanent source of timber supply. A glance at the map will suffice to show that by far the greater portion of our pine-growing territory is as yet intact, settlement being largely as yet confined to the Ontario peninusula and the region between Lake Ontario and the Ottawa River, the northern portion of which is but partially cleared. Of the 142,000,000 of acres comprising the province, only some 23,000,000 is sufficiently settled to admit of the establishment of municipal government. North of the great lakes lies a broad belt of forest land covering about one-third of the province and extending from the Ottawa to the Manitoba frontier, much of which is pine bearing, particularly in the eastern and western portions. The existing timber licenses comprise about 22,000 square miles, or some 14,000,000 acres. It is therefore evident that the white pine areas of Ontario are far from exhausted. Much of the portion of New Ontario now covered with pine may be found adapted for farming, but making every reasonable deduction on this score, a very considerable area will remain which can more profitably be retained in forest than devoted to any other use, and it will enable us to maintain our position as a timber producing country, so long as it is managed so as to secure the natural reproduction of the crop. A large portion of the 22,000 square miles under license may also be regarded as a permanent source of supply, as where fire is

Lumbering in Canada—A Rapid in the Creek

kept out, the timber cut away is succeeded by a new growth.

The output of pine timber cut on the Crown Domain in 1899 was as follows, in feet, board measure : Saw logs, 498,607,068 ; boom and dimension timber, 29,361,695 ; square timber, 20,679,288; making a total of 548,649,051 feet. In 1898 legislation came into operation requiring all saw-logs cut upon Crown lands to be manufactured in Canada. As previous to that date a large number of owners of saw mills in the United States had been in the habit of exporting the logs cut on Ontario timber limits to be manufactured abroad, it was anticipated that the output would be largely decreased in consequence of the new regulations. Owing, however, to the general prosperity and the considerably increased demand for lumber, the falling off, as compared with previous years, was comparatively slight, and was largely compensated by an increased output of other kinds of timber. This year's business has been characterized by a steady expansion, and the beneficial effects of the manufacturing restriction have been apparent in the construction of new mills and the increase in the capacities of those already existing throughout the lumber districts.

In addition to the pine cut on the lands under license there is still a large amount taken from lands belonging to private individuals. There are about 1500 mills throughout the province engaged in producing lumber from this source, mainly for local supplies, concerning the operations of which no accurate data are available. A rough estimate made by the Bureau of Forestry on the basis of partial returns from the mill owners in answer to enquiries as to their output, gives a total yearly production of about 375,000,000 feet board measure. Of this probably about two-thirds is hardwood and the remainder mostly pine. This would bring the total production of pine timber upon Crown and private lands up to about 660,000,000 feet.

SPRUCE.

The value of the forest resources of Ontario has been enormously increased by the development of the art of manufacturing paper out of wood, spruce (abies nigra and alba) being the variety best adapted for that purpose, though poplar (aspen), balsam and basswood (linden) are also used. A few years ago the extensive spruce forests were hardly regarded as an asset in estimating the wealth of the woodlands, now they occupy a place second only to the white pine. The demand for paper is steadily increasing, and the supply of the kinds of wood available for the manufacture of wood pulp is being rapidly exhausted in the United States. Spruce is found largely in the region already referred to as the pine-belt, but usually scattered and intermixed with other growths. In the region north of the Height of Land it is the dominant tree, that country being covered with great spruce forests. This area, commencing a short distance north of Lake Temiscamingue at the eastern boundary of the province, extends westward to the sources of the Albany River and runs north to the Albany and James Bay. The spruce, in addition to growing more thickly, here attains much larger dimensions than in other parts of the province. The white pine is only found as a sparsely scattered tree, the principal other growths being tamarac, cedar, Banksian pine, birch and poplar. The best spruce land possesses a stand of about 7,000 feet to the acre, representing a product of 11½ tons of ground wood pulp. The magnificent water powers which abound throughout this region, combined with the unlimited supply of raw material in the

spruce forests, will in the not distant future make this now uninhabited and little known part of Ontario the seat of extensive pulp and paper making activities, with their allied industries. The market is an ever-extending one. At present Great Britain and the United States consume yearly about 900,000 tons of pulp wood, or the product of about 90,000 acres of spruce woodland. Last year the total cut of pulp wood on the Crown Domain amounted only to 29,838 cords, so that our pulp industry as yet is only in its infancy.

Owing to the large investments of capital required in order to establish the manufacture, the Ontario Government, in pursuance of its policy of building up home industries, has given considerable concessions involving the right to cut pulp wood on Crown lands on payment of the regulation dues for a term of years to several companies, on condition of their erecting mills of a stated capacity and producing a specified output. The extensive works at Sault St. Marie and Sturgeon Falls have done much for the development of the surrounding districts, and the manufacture of wood pulp promises to be one of the leading industries of the newer portion of Ontario. The mills erected will form a nucleus of settlements and afford the incoming population a market for the timber on their farms as well as for their produce, and give them opportunities for renumerative employment.

Lumbering in Canada—Using Dog and Line on the Creek.

Besides forming the raw material for paper, wood pulp is used in a large number of other articles in which it is desired to combine lightness with strength and durability, and is being employed very largely for constructive purposes.

HEMLOCK.

The hemlock (abies Canadensis) is found extensively in the Parry Sound district and on the north shore of Georgian Bay, and is distributed more sparsely throughout the northern part of eastern Ontario. The wood is much inferior to pine for ordinary building purposes, being coarser fibred, but it is in demand where strength and toughness are specially required, as for instance in bridge building. Being cheaper than pine it is used to some extent for rough carpentry. The principal value of the hemlock lies in its bark, which is in demand for tanning, some of that cut on private lands being exported as raw material, though the shipments of this article have latterly fallen off considerably. During the last fiscal year the export of tan bark from Ontario was only 13 cords. Hemlock bark cut on the Crown domain in this province is now required to be manufactured in Canada. The diminution of the export trade in this commodity is by no means to be regretted, as formerly, owing to the great demand for tanbark in the United States, many trees were stripped of their bark and their trunks allowed to go to decay in cases where no local demand for the lumber existed.

CEDAR.

Comparatively little cedar (thuya occidentalis) of commercial value remains in the older settled portions of the country. It is common in the forest region of northern Ontario, especially in swampy and low-lying localities, and will be a considerable factor in the industrial development of that section. The wood of the cedar is soft, light and fine in the grain and can be split exceedingly thin. Its extreme durability renders it highly valuable for out-door purposes, as it will bear exposure to any weather. Very large quantities of cedar are used for fence posts, street construction, railway ties, electric wire poles and similar purposes where the wood is liable to be continually exposed to wear and tear and must undergo severe strains. The consumption has been so great and the purposes to which it is better adapted than any other wood so numerous that the value of the cedar timber in the districts now being opened for settlement and industry is certain to increase greatly.

HARD MAPLE.

This tree (acer) is very widely distributed throughout the province and was one of the characteristic features of the hardwood forests which once clothed the settled portion of Ontario. It still furnishes a considerable proportion of the timber supplied by private land-owners to the smaller mills. There are considerable growths of maple, intermixed with birch and other woods, throughout Muskoka, east Algoma and the Nipissing district, where it is found principally upon the high lands. It is highly prized in the settled portion of the country for sugar production, large groves having been spared, especially in eastern Ontario, on this account. The timber of the maple is valuable for many architectural and manufacturing purposes. It is hard and close grained and has come much into vogue for flooring and finishing in buildings, as it is susceptible of a fine polish. The growths known as curly and bird's eye maple are much prized for fine cabinet work. Maple is used very largely in the manufacture of shoe lasts, and considerable quantities of maple blocks are exported to Britain for the manufacture of mangle rollers and for printing wall paper. Its timber occupies a leading position among the commercially valuable hardwoods, and is a source of profit to the settler, who instead of burning it in log heaps, as was the universal wasteful custom a few years ago in clearing land, can in most localities readily find a market for it at a renumerative price. Settlers in Muskoka district and other neighborhoods realize from $6.50 to $8 per 1,000 feet for hardwood logs. As the remoter parts of the country are opened up the maple and other hardwoods will become a valuable asset, provided the land owners have sufficient foresight to avoid the mistake of so many of the early settlers of Ontario who frequently burned up timber of greater value than the farm when cleared.

BIRCH.

The black birch (betula lenta) is the most valuable tree of the birch family. It is found generally throughout southern Ontario, and grows in large numbers in the forest region, being among the hardwoods which flourish north of the Height of Land. The timber possesses strength, firmness and durability and is easily worked, hence it is much used in manufacturing. It is coming largely into requisition as an ornamental wood. When properly cut and stained it much resembles cherry, and owing to the scarcity of the latter is frequently substituted for decorative purposes. It is in demand for cabinet furniture as well as for some kinds of wooden ware, and also for carriage making. The black birch attains a much larger size in the northern forests than in the older settled section, the trees, which are often found growing in groups, being frequently two and three feet in diameter. The white birch (betula alba) is also a widely distributed tree and a prominent growth in the country tributuary to James Bay. It is also used in furniture making and for other industrial purposes, while the bark is valued as furnishing the material for birch canoes.

OAK.

The red and white oak (quercus alba and rubra) rank high among the valuable hardwoods. They flourish in eastern Algoma and Nipissing and are found in the timbered portion of Old Ontario in lesser quantities. The white oak, which attains a height of from 60 to 80 feet, is the preferable variety, the grain being straight and the wood tough, elastic and durable, on which account it is adapted for implements, carriage making and cooperage work. The wood of the red oak is more variable and the tree somewhat more widely scattered than the white oak.

OTHER WOODS.

The poplar (populus tremuloides), a very numerous tree in northern Ontario, especially in parts where the pine woods have been destroyed by fire, was until lately despised as of little value, but latterly its worth has been more appreciated as raw material for pulp wood.

The elm, owing to its toughness and straightness, has many industrial uses and is particularly valuable for piling and the construction of wharves. It is principally to be found on low lying damp soil. There are several varieties which have a marketable value. The white or swamp elm (ulmus Americana) sometimes attains a height of eighty feet and a diameter of six or eight feet. It is the hardiest variety and is found in the extreme northern part of the province. The rock elm (ulmus racemosa) is also a large tree, the timber of which has a fine grain and is used in the manufacture of wagons, wheels and heavy furniture. The slippery elm (ulmus fulva) is a smaller tree found mainly along water courses.

The white ash (fraxinus Americana) is a tree which is not numerous in Old Ontario, but is found in the latitude of Algoma in considerable quantities. Its wood is used for the making of implements, furniture, baskets and barrels, as it is light, strong and separates readily into layers.

There are large supplies of beech (fagus ferruginea) in the forest region, which will before long be drawn upon to fill the demand of the factories for this wood, the principal use of which is the manufacture of tools and implements.

Basswood or linden (tilia Americana) is a durable though soft wood, and its combination of lightness and toughness renders it especially suitable for some purposes of the carriage and furniture makers, and also for wooden ware. It is found both in northern and southern Ontario.

The tamarac or larch (larix Americana) grows extensively in Algoma district and other parts of New Ontario. Being a strong, close-fibred wood is very difficult to split. It is in requisition for ship and railway building, and as joists, rafters, etc., and also for some kinds of implements. North of the Height of Land it attains a much larger growth than when found elsewhere.

TIMBER REGULATIONS.

The timber on Crown Lands in Ontario is disposed of by auction to the highest bidder. The regulations state that all timber berths shall be subject to an annual ground rent of $3 per square mile, together with the following Crown dues, viz.:

Black Walnut and Oak, per cubic foot	$0 03
Elm, Ash, Tamarac and Maple, per cubic foot	0 02
Birch, Basswood, Cedar, Buttonwood and Cottonwood and all Boom Timber, per cubic foot	0 01¼
Red and White Pine Timber, per cubic foot	0 02
All other woods	0 01
Basswood, Buttonwood and Cottonwood Saw Logs, per standard of 200 feet board measure	0 15
Red and White Pine Saw Logs and Boom Timber, per standard of 200 feet board measure	0 20
Walnut, Oak and Maple Saw Logs, per standard of 200 feet board measure	0 25
Hemlock and other Woods, per standard of 200 feet board measure	1 10
Spruce, per standard of 200 feet	0 20
Spruce pulpwood, per cord	0 40
Staves, Pipe, per mille	7 00
" West Indian, per mille	2 25
Cordwood (hard) per cord	0 20
" (soft) "	0 12½
Hemlock, Tan Bark, per cord	0 30

Railway Timber, Knees, etc., to be charged 15 per cent. ad valorem.

NOTES ON THE FORESTS OF THE PROVINCE OF QUEBEC.

By W. C. J. Hall.

THE area of the Province of Quebec since the recent addition of the new northern territories is 346,928¾ square miles, the extreme eastern point being at Blanc Sablon, in the straits of Belle Isle, the northernmost on lake Astray on Hamilton river, the southernmost the 45th parallel, and the westernmost being Lake Temiscamingue and the boundary between Quebec and Ontario as far as James Bay, and up to the mouth of East Main river.

The cutting of timber began as a matter of course on the banks of the main waterways, and gradually spread and extended itself inland and up the large tributaries in proportion to the expansion of colonization, until at the present time one can listen to the hum of the saw from Anticosti and the Gaspe peninsula to Mattawa, lying south of Lake Temiscamingue.

The quantity of timber of all varieties exported from the province would make up a very formidable total, Quebec having always been a large feeder of the British and other markets. A few may question the ability of timber lands to maintain the supply for an indefinite period, but with reasonable care and intelligence exercised by the controlling power and the trade, none need be anxious as to the forests lasting in perpetuity. In this connection an object lesson would not come amiss. The present Lieutenant Governor General of British Columbia, Sir Henry Joly de Lotbiniere, has, all his life, carried on a lumber business on freehold lands in the county of Lotbiniere, about 40 miles from Quebec City. The territory was cut over in sections, no trees under a certain size being taken, a generous nucleus of forest always remaining when each section was left, the result of such action being that there is now as much timber as ever on the whole tract, and certainly the quality is by no means inferior to the first cutting.

The local government has, of course, made provision in a measure for the perpetuation of the forests on Crown lands, the regulations now reading that pine trees 12 inches in diameter at the stump, spruce 11 inches, and other trees 9 inches, are the minimum sizes allowed to be cut. This ruling is in a great measure well lived up to by the trade. Thinking men naturally see where their interests lie, and co-operate with the authorities; the license-holders also work hand in hand with the government in protecting the forests from fire, a very satisfactory system being now in operation over a large area, which will probably be extended to the rest of the province before very long.

One must admit that removing the mature trees in a forest is a great stimulant to the younger growth, and under such circumstances the annual increase on the residue is materially hastened. Instances could be cited where areas have been rather closely cut and before 20 years had elapsed a very considerable second growth took place, permitting of a large second crop being taken off.

From the experience gained by judicious cutting, and the regulations duly respected, we conclude with good reason that our forests can be perpetuated whilst allowing a generous annual cut of timber. On comparing the relative rate of growth of pine and spruce, one is forced to the conclusion that the white pine actually grows as fast as spruce, but it seems that certain conditions of soil and surroundings must prevail before the pine will make a start in districts where it has been closely cut. In localities where the mature growth only has been removed there seems to be no difficulty experienced, and here the annual increase is probably greater than with the spruce; but where fire has run it would seem that until the ground is fairly covered with a new growth of young timber of different varieties the pine will not assert itself, naturally at least. On the other hand, our experience goes to show that the spruce will take hold in burnt and denuded areas very much more quickly, and as far as one can see adapts itself to almost any conditions of soil provided nature is left to its own devices. For argument's sake say that the pine will some day be exhausted (the day is far distant yet), we can with confidence look forward to the natural afforestation of these areas with spruce. Such conditions have arisen in the eastern townships

Lumbering in Canada—Raft of Timber on the Coulonge River.

and are apparent now on the river Gatineau. Lands formerly cut over, and where fire subsequently ran, are now developing a goodly growth of spruce.

Without going into an elaborate array of figures, we will broadly glance at the future prospects of the timber supply of Quebec. In round figures we have 32,000,000 acres of Crown lands under license in the province; of this, say 12,000,000 acres are pine bearing. Computing the stand per acre at a conservative figure with annual increase, and providing no serious conflagration occurs, the supply should certainly not be exhausted for the next 50 years. We have, then, spruce bearing lands under license covering an area of 20,000,000 acres. Assuming that the present amount of cutting is maintained and nothing done on other Crown lands, a supply for 75 years or more is actually in sight. But we have, apart from the Crown lands under license, a vast territory as yet untouched, in round figures 150,000,000 acres. It is known that some considerable part of this is very fairly timbered, but let us suppose that one with the other, the very modest stand of two cords per acre exists, and computing one and one-half cords as necessary to produce a ton of pulp, we are thus in a position to supply the British markets with 500,000 tons per annum for the next four hundred years, from the undeveloped areas of the province. If, therefore, we lay claim to being the source from which the pulp and paper industries must eventually look for their supply, none can very well dispute our pretensions, particularly when those interested observe the natural facilities in the shape of water powers which exist on the many important waterways for the exploitation of the raw material.

Of course, prominence is naturally given in this article to spruce as the staple timber of the province, and the fact that the black spruce has been found to produce, if anything, a superior fibre to the white has immediately given an increased value to the ordinary spruce timber limit, and furthermore has put a value on lands until now regarded as worthless. But besides pine and spruce we have an abundance of other varieties of timber. Throughout the Gaspe Peninsula and as far west as Lake Temiscouata a large quantity of cedar is to be found. The trade in shingles and railway sleepers has become a very large industry. We have on either side of the St. Lawrence large tracts of land heavily timbered with white birch admirably suited for the spool trade, and there need be no such waste in this line of business as formerly existed, for the red heart of this timber has been found to work up admirably for making trunks and boxes. The balsam also must be made mention of; it grows wherever the spruce flourishes, all over the province, and is really an excellent timber, although unsound as a rule at the stump like the cedar. It is claimed that the balsam produces a first-rate grade of pulp, and there can be little doubt of the truth of this assertion; it certainly cuts up into very good lumber and is especially adapted for box shooks, as there is hardly any shrinkage or warping.

In hardwoods, in which this province is rich, the principal trade so far carried on has been with Great Britain for what is known as square birch. No very large operations in sawn hardwoods have ever been carried on, but the day cannot be very far distant when our comparatively uncut hardwood groves, of which there is an abundance, will be exploited.

The Banksian pine is found on the north shore of the St. Lawrence, and on the St. Maurice river particularly there appears to be the heaviest growth, according to reports. It is rapidly growing in favor in the sawn lumber trade, and has long been known as an excellent timber for railway ties. The red pine is confined chiefly to the counties of Pontiac and Ottawa.

In conclusion, it must be remarked that apart from the Crown lands of the province, we have some 10,000,000 acres of seignorial grants and fully as much territory conceded by sales, grants, etc. Upon this area there is a vast amount of timber still standing, which of course belongs to the owners of the soil, and mention is made of it only to still further demonstrate that there is, practically speaking, an unlimited amount of timber within our borders, and that judgment and care of the forests is alone necessary to ensure its lasting for all time.

Appended is a copy of the present tariff on timber cut on Crown lands under license, also a copy of the clause referring to ground rent charges:

All timber, saw logs and wood goods of all kinds cut under licences now in force, or under any licenses which may hereafter be acquired, shall be subject to the payment of the following Crown dues, that is to say:

Oak and walnut, per cubic foot	4 cents.
Pine, birch, basswood, cedar, spruce, elm, ash, tamarac, and all other square timber, per cubic foot	2 "
Pine saw logs, boom and dimension timber and all other logs or woods intended for sawing, except spruce, hemlock, cypress, balsam and cedar per standard of 200 feet board measure (Equivalent to $1.03 per thousand feet board measure.)	26 "
Spruce, hemlock, cypress, balsam and cedar saw logs, per standard of 200 feet board measure (Equivalent to 65 cents per thousand feet board measure.)	13 "
Cord wood (hard), per cord of 128 cubic feet	20 "
Cord wood (soft), per cord of 128 cubic feet	10 "
Cedar rails, not exceeding 12 feet long, per 100	30 "
Cedar pickets, per 100	15 "
Rails of other wood than cedar, and not exceeding 12 feet long, per 100	15 "
Pickets of other wood than cedar, per 100	10 "
Cedar and pine shingles (short), per thousand	10 "
Cedar and pine shingles (long), per thousand	15 "
Cedar, or other, telegraph, telephone or electric light poles, not exceeding 10 inches in diameter at the butt or larger end, per lineal foot	¼ "
Ditto exceeding 10 inches at the butt, per lineal foot	½ "
Railroad ties of all kinds of wood, each	2 "
Hemlock lathwood, per cord of 128 cubic feet	20 "
Hemlock bark, per cord of 128 cubic feet	32 "
Pine, cedar, spruce, birch or other small logs, not exceeding 10 feet in length, nor 10 inches in diameter at the smaller end, for shingles, spool, small board stuff, or paper pulp, per cord of 128 cubic feet	25 "
Futtocks, knees, floors of birch and other shipbuilding material, and all wood goods not enumerated in the foregoing list, an ad valorem duty, on the invoice or bill of sale, of	10 per cent.

The duties on timber for export shall be charged upon the quantities shown by the specification of measurement at the office of the Supervisor of Cullers at Quebec, or at the offices of his deputies, or by other reliable measurement, but when such actual measurement cannot be obtained, each stick of white pine shall be estimated as containing 60 cubic feet, and red pine and all other woods as containing 30 cubic feet.

Newly acquired licenses, and renewals of licenses to cut timber, shall be subject to a yearly ground rent charged at the rate of three dollars for each square mile or fraction thereof, embraced within the area they cover, but no license shall be charged for at less than one square mile of area, nor shall any claim for refund of ground rent over calculated be entertained after the issue of such license.

THE TIMBER OF NEW BRUNSWICK AND NOVA SCOTIA.

THE province of New Brunswick is about 230 miles from north to south, and 190 miles from east to west. It is so situated that water shipments may be made from the south and east, while it enjoys the advantages of two great river systems, the St. John and Miramichi, with numerous small rivers and lakes, which afford facilities for floating the timber from the interior to the coast. It is also well provided for in respect to railway accommodation.

The total area of New Brunswick is 17,400,000 acres, and it is estimated that more than three-fifths of this is timber land. About 5,000,000 acres have been placed under license by the Government to lumbermen, the land, however, being still the property of the Crown, and reverting thereto at the expiration of the twenty-five years' lease. The New Brunswick Railway Company owns 1,647,772 acres of timber land. Mr. Alex. Gibson, of Marysville, owns 200,000 acres on the Nashwaak river, the Nova Scotia Land Company have still a considerable tract, and other large tracts are owned by private individuals and corporations. It has been estimated that there are over ten million acres of timber lands in New Brunswick on which lumbering operations of some sort could be carried on.

Spruce is the predominant timber. Other woods include, birch, maple, ash, beech, cedar and hemlock, but the commercial value of these is not to be compared with that of spruce.

The Crown lands of the province are leased by public competition for a term of twenty-five years. An upset price of eight dollars per square mile is fixed by the Government. This sum must be deposited by an applicant for license; the property is then offered at auction and sold to the highest bidder. The lessee is required to pay also an annual license of $4 per square mile and the following stmupage dues: Spruce, pine or hardwoods, $1 per thousand superficial feet; pine timber up to 14 inches, $1 per ton, with 25 cents for each additional inch; spruce timber, 50 cents per ton; hardwood timber, up to 14 inches square, 90 cents; cedar logs, 80 cents per thousand feet. Every pine or spruce tree cut must make at least a log 18 feet long and ten inches at the top end.

The great manufacturing centre of New Brunswick is St. John, where are situated a number of large saw mills, most of them doing an export trade. The lumber shipments from

St. John to trans-Atlantic ports last year were nearly 200,000,000 feet, while from the Miramichi there was shipped over 125,000,000 feet. Other ports from which large shipments are made are Moncton, Campbellton, Shediac, Sackville, Dalhousie, Richibucto and material Bathurst.

The next few years promises to witness a great development of the pulp industry in New Brunswick. Four large mills are now in operation, and capitalists are about to undertake the erection of others at different points where excellent water powers and an abundance of raw are available.

NOVA SCOTIA.

The area of timber lands in the province of Nova Scotia is in the neighborhood of 3,000,000 acres, of which over 2,000,000 acres are held by lumber operators. In this province the lands are not leased by the Crown as in the other provinces of the Dominion, but are sold outright, the only rights reserved by the Crown having relation to minerals. Besides spruce, of which there are extensive areas and which is of the greatest commercial value, the native woods consist of birch, beech, ash, maple and oak. There is also a small growth of pine. The export of lumber from Nova Scotia is considerable, and represents by far the greater portion of the entire production. For the last three years the shipments to trans-Atlantic ports have been on an average of 150,000,000 feet. Large shipments are also made to South America, West Indies, and the United States.

Among the leading lumber exporters might be mentioned Dickie & McGrath, of Tusket; Parker, Eakins & Company, Yarmouth; Rhodes, Curry & Company, Amherst; Alfred Dickie, Lower Stewiacke; E. D. Davidson & Son, Bridgewater; Nova Scotia Lumber Company, Sherbrooke; Chas. T. White, Apple River; and Clarke Bros., Bear River.

THE FOREST LANDS OF BRITISH COLUMBIA.

THE principal areas of timber lands in the province of British Columbia are situated on the western slope of the Cascade or Coast Range, and on Vancouver and adjacent islands. The largest compact area is on the eastern portion of Vancouver Island, extending north from, and including the valley of the Cowichan River to Hardy Bay, comprising about 4,400 square miles, all of which is densely clothed with a large growth of fir, spruce, cedar and some hemlock.

On the mainland the principal area of timber lands is in the valleys of Gordon Pasha and Powell Lakes and on the banks of the streams which flow into them and the rivers which are their outlets, on the Theodosia River valley, and along other streams of more or less size which flow into the many inlets of the sea with which the coast is indented, as far north as Queen Charlotte Sound, north of which point fir is not met with in any great quantity, its place being taken by a very dense growth of hemlock. In favorable situations the hemlock reaches a very considerable size, specimens 30 inches in diameter and 50 feet clear to the lower branches being not uncommon. The wood of the northern hemlock is of a very superior quality and will some day—perhaps soon—be much more generally used than it now is.

SHIPMENT OF TIMBER AT THE HASTINGS SAW MILL, VANCOUVER, B. C.

Very considerable areas of spruce, red and yellow cedar, (or cypress), are also found to the north of the point above mentioned and on Queen Charlottes Islands. The number of square miles of these sections of timber bearing lands may be placed approximately at 40,000. In addition large portions of the coast are covered with second and third class timber of various kinds, but which, owing to the cheapness and facility with which better timber can be procured, are entirely neglected by lumbermen in the province.

The principal exporting mills in British Columbia are those owned by the British Columbia Mills, Timber and Trading Company, who operate three saw mills—the Hastings saw mill in Vancover, the Royal City planing mills in Vancouver ann New Westminister, having a combined daily capacity of 215,000 feet, and the Moodyville Land & Saw Mill Company on Burrard Inlet (north side), which has a daily capacity of 105,000 feet. We might also mention the Brunette Saw Mill Company in New Westminster, with a daily capacity of 65,000 feet, the Victoria Lumber & Manufacturing Company, of Chemainus, Vancouver Island, which is one of the best constructed and most modern mills in the province, with a daily capacity of 220,000 feet, the J. A. Sayward Company, of Victoria, which has a daily capacity of 40,000 feet, and the North Pacific Lumber Company at Barnet. In addition to the above there are some sixty-five saw and shingle mills of greater or less capacity, which cut principally for local consumption, the North-West, and Ontario trade.

The exports of sawn timber from British Columbia for year ending June 30th, 1900, were:

Over sea	162,000,000	feet
By rail eastward	34,000,000	"
	196,000,000	"
Cut for local uses, railroad construction, etc.	58,000,000	"
Total cut in the province being	254,000,000	"

VISIT OF BRITISH PAPER MAKERS.

THE delegation of British paper manufacturers which have been visiting this continent returned to England by the steamer Parisian from Quebec on the 21st ultimo. The party first visited the United States, and inspected some of the leading pulp and paper mills in that country. From Duluth they went to Sault Ste. Marie by steamer and were there the guests of Mr. F. H. Clegue, president of the Sault Ste. Marie Pulp and Paper Company. They evinced much admiration for the magnificent plant of the Sault Ste. Marie Company. At Toronto they were dined at the National Club and afterwards taken in charge by Mr. John R. Barber, M. P. P., the well-known paper manufacturer of Georgetown, and others representing the paper and pulp industry. A trip round the harbor and island was furnished by Mr. F. B. Polson, of the Polson Iron Works, builders of pulp digestors, etc. In the Provinee of Quebec they visited Three Rivers, Shawinigan Falls, Grand Mere, Roberval and other places, and in Montreal were entertained by the Paper Manufacturers' Association and the International Paper Company. The extensive pulp mills in New Brunswick were, we understand, also visited.

The British paper makers were, it is said, delighted beyond measure with what they saw, and particularly with the extent of the timber resources of Canada. One of the party stated that since their arrival they had been constantly remarking upon the great possibility of the introduction of British capital to work up the forests of spruce and other pulp wood. He said that several of the delegates had their eyes on tempting limits with water privileges which had been brought to their notice. The paper makers of the United Kingdom had come to the conclusion that they had to look this way for pulp, as the supply from Sweden and Norway was rapidly becoming exhausted.

CANADIAN EXPORTS OF TIMBER PRODUCTS.

The accompanying three tables will help to an understanding of the Canadian trade in wood and wood products.

The first table shows the extent and development of our export trade in forest products. We began our life as a Dominion with an export trade in wood, and industries requiring wood as the chief staple, of $19,651,000. We ended the fiscal year 1899 with an export of the kinds of articles valued at nearly $31,000,000, an increase of 60 per cent.

We began with a despatch of squared timber equal to 650,928 tons. We ended the last fiscal year with an export of 175,186 tons, a decrease of 475,642 tons or 73 per cent. The decrease in total value is equal to 40 per cent., so that on the whole prices have not only been maintained but increased. The average export price of a ton in 1868 was $6.39 and in 1899 it was $14.30. Exports can alone tell how much more it cost in 1899 than in 1868 to obtain the ton, square it and convey it to the shipping port.

We began by sending out 630,800 pieces of wood in the shape of railway sleepers. We ended the period of 32 years by exporting 529,068 pieces, a decrease of 101,742 pieces, or 16 per cent. in quantity, accompanied by a decrease of 31 per cent. in value, showing that the value per gross has decreased more than the quantity.

The decrease in the value of fire wood exported has been $371,937, equal to 75 per cent. The value per cord has also decreased from $2.20 in 1868 to $1.75 in 1899, a drop of about 20 per cent.

"Other wood" being products of the forests almost untouched by the transforming hands of labour shows a large increase from $691,013 in 1868 to $2,803,033 in 1899. There has, however, been a considerable decrease in the value of the export under this sub-head during more recent years. It reached its highest point in 1894, when the value for export was $3,859,086. With this fluctuation in recent years and this large increase when the whole period of Confederation is taken into account, further analysis of this column may prove interesting. The articles included in this column are saw-logs of all kinds, knees and futtocks, spars, basswood, hickory, hop poles, etc. Saw-logs formed 56 per cent. of the total of 1899 ($2,803,033), and wood blocks for pulp 30 per cent., leaving other articles to form 14 per cent. In 1894 saw-logs formed over 74 per cent. of the total of $3,859,086, and pulpwood about 10 per cent., leaving other articles to be represented by 16 per cent. It appears, therefore, that the decrease seen in 1899 when compared with 1894, is due to a diminution either in the value or the quantity of the sawlogs. An examination of prices will show that the decrease is altogether due to a diminution in the quantity of the sawlogs exported in 1899. From the point of view of labour and capital both, this fact cannot but be deemed a gain. In 1894 we exported 340,900 thousand feet of logs, and in 1899 only 185,363 thousands.

The great gain in the amount of lumber measured in dollars exported in 1889 as compared with 1894 sufficiently emphasizes the importance of the change. We sent abroad $2,862,152 worth of logs in 1894 and $19,411,500 of lumber. In 1899 we exported $1,581,783 of logs and $22,392,000 of lumber, a decrease of $1,280,000 in the raw material—logs—but an increase of nearly $3,000,000 of sawn lumber upon which capital and labour both take or ought to take larger toll than upon the unsawn logs.

By those who hold that the more labour that is put upon an article before it goes out of the country the better, it will not be deemed a fact to congratulate ourselves over that the pulp wood which in 1894 was of the value of $393,260 was in 1899 of the greater value of $842,086.

The table giving the export of squared white pine is instructive.

In the first two years of Confederation the export of square white pine was 821,427 tons, equal to 410,714 tons a year. In the next ten years, 1870-79, the export was equal to an average of 313,435 tons a year. In the next decade, 1880-89, it was equal to an annual average of 181,144 tons, and the last ten years, 1890-99, it was an annual average of 106,932 tons.

The following statement shows changes which have taken place in the export trade measured by dollars :

	First 5 yrs. 1869-72	Last 5 yrs. 1895-99
Timber, sleepers, railway ties	26%	9%
Other wood	3	10.6
Lumber	65	72
Ships	3	0.4
Other manufactures	3	8
	100	100

MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company
of Toronto, Limited
CONFEDERATION LIFE BUILDING, TORONTC
BRANCH OFFICE:
IMPERIAL BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in anyway affecting it. Even when we may not be able to agree with the writers, we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE POSSIBILITIES FOR LUMBER IN SOUTH AFRICA.

THE present is an opportune time to draw the attention of Canadian manufacturers generally, and lumber manufacturers in particular, to the possibilities that will exist, upon the termination of the war, for the development of our export trade with South Africa. The annual imports of British South Africa are in the neighborhood of $110,000,000, or only $30,000,000 less than the imports of Canada, and this notwithstanding that the white population is but one-fifth that of the Dominion. From these figures, representing the imports of a country in which very little has been done to develop natural resources, some conception may be formed of the possible extent of the imports during a period of industrial development such as will undoubtedly follow as soon as British supremacy is established over the whole of South Africa.

No single article of merchandise will be more in demand than timber. The forests of South Africa are of little account, and the people are almost entirely dependent on other countries for their supply. Although in the past no special effort has been made by our lumber merchants to develop a trade with that country, we find that in 1897 the province of British Columbia exported to South Africa timber to the value of $70,000, and in each of the two succeeding years to the value of $50,000. An immense quantity of timber will be required in connection with the development of mines, railway building, reconstruction of destroyed buildings, and as a result of the general commercial development.

It is only reasonable to suppose that there will be more competition to secure the trade of this country than heretofore, but there seems no reason why Canada should not supply a large portion of the requirements in timber products. British timber merchants have been and are now shipping timber to the South African market which was purchased either in America or in the Baltic, and it may be presumed that Canadian merchant would find a handsome profit in supplying the market direct.

It is not too early to consider this question and weigh carefully the possibilities of materially extending our business connection with South Africa. The United States is already taking action in this direction, and Canada should not be left behind. A feature which will facilitate trading with that country is that the productions of Canada and South Africa are so different in character that there should be no difficulty in obtaining return cargoes for steamers. A first requisite is a direct steamship service between the two countries, and we look to the Dominion government to take steps immediately to establish such a service.

THE SITUATION IN RESPECT TO EXPORT TRADE.

THE Canadian export trade in timber products is one which has gradually expanded each year, the figures representing the export of last year being over thirty million dollars. The interest which foreign importers have shown in the timber of this country has been more apparent in the past year or two than at any previous time, and there are indications that further expansion of the export trade in timber products will be witnessed. This issue of the CANADA LUMBERMAN is intended to furnish information regarding the timber resources of Canada, and, figuratively speaking, to bring together the exporter and the importer. In the advertising pages will be found the announcements of manufacturers and exporters of almost every variety of wood goods, such as pine and spruce lumber, box shooks, spool wood, dowels, bobbins, staves, clothboards, mangle rollers, pulp, wooden-ware, etc., also the advertisements of leading importers of timber products in Great Britain and other foreign countries. These advertisers are, we believe, thoroughly honorable and rseponsible, and are among the most enterprising in the trade.

The information given in this number regarding the requirements of foreign countries is recommended to the careful study of Canadian timber merchants. In it they may find valuable hints pertaining to business methods, as well as much information specially bearing on the timber trade. The communication from the Curator of the Canadian Section of the Imperial Institute is particularly suggestive. Mr. Watson reports that last year he received fully two hundred letters in connection with woodenware, and points to this as evidence of the opportunities that exist for the extension of trade.

In respect to British trade, it has been said that in some instances business has not developed as satisfactorily as was desired, and that there has been some disappointment on the part of both exporter and importer. It may not be amiss to point out the peculiar conditions which have existed during the past year or two, and which have in a measure been responsible for this. Following some years of depression, the lumber trade of Canada rapidly improved towards the end of 1898, and since that time a period of marked prosperity has been enjoyed. The result has been that producers of timber products found a ready market in Canada and the United States for almost their entire production, at high prices. Consequently, export trade was given secondary consideration, and orders for stock offered by dealers in Great Britain were refused. It is also said that the prices which are sometimes offered by foreign merchants are by no means tempting and do not warrant the risk which is involved in doing an export trade. Further, it is a common complaint that the ordinary specification, from Great Britain in particular, is so exacting that the Canadian manufacturer does not feel disposed to supply the stock unless at a price which he consider represents the value of the most carefully selected goods.

On the other hand, it is manifestly in the interest of the Canadian manufacturers to give greater attention to the manufacture of their stock, cutting it to sizes common to foreign markets. It has been suggested that business would be facilitated if recognition could be secured in this country for a system of grades.

It would also assist trade very greatly if foreign dealers who are in the market for timber products would open up correspondence in the fall of the year, so that lumbermen on this side would be in a position to get out the necessary stock and quality of logs to supply the requirements. Business conducted along this line would, we feel certain, be fruitful of good results to all parties concerned.

There are many exporters of Canadian timber products who are not in a position to maintain a branch establishment in foreign countries, and who may be in some doubt as to the most practical course to pursue to extend their foreign connection and place their goods on the markets of other countries. Much of the trade from the United States has, we understand, been carried on with considerable success through agents and brokers. These brokers are closely in touch with the requirements of the market, and advise their clients as to the classes of goods which should be exported. In some instances the brokers will purchase the stock outright, but it is the usual custom to make consignments pending a sale, the practice of the most reliable brokers being to allow the shipper to draw on them for three-fourths of the estimated net proceeds against bills of lading. Thus it is apparent that it is necessary that the shipper should carry out his engagements in a straight-forward and business-like manner, and that the business can only be carried on with a basis of mutual confidence ; on the one hand, the producer must feel that he is dealing with reliable and capable people, who will sell his goods to the best advantage, and on the other hand, the broker must be assured that the shipper is a man whom he can thoroughly trust.

It may not be generally known abroad that the Canadian government has adopted a preferential tariff which gives a preference of 33⅓ per cent. in the duties on goods imported from Brit-

ish possessions. This should be the means of increasing very materially the trade between Canada and the Mother country.

The above remarks, while specially referring to Great Britain, are in a measure applicable to other countries

The extent of our timber resources is well set forth in this number. It may not be amiss to say a word regarding the saw milling establishments. There are, in Canada, it is estimated, about six thousand saw mills, large and small, varying in capacity from two to three thousand to several hundred thousand feet per day. Mr. Booth's total annual output is in the vicinity of one hundred and twenty-five million feet, and the total output of the Ottawa Valley reaches six hundred million feet. And the Ottawa Valley is but one of the lumbering districts for which Canada is renowned. The equipment of our saw mills is equal to anything in America, our lumbermen having shown themselves alive to the necessity of adopting modern and up-to-date improvements. Recently there has been installed in some of our mills the double acting band saw, by which a board is cut from the log by the reverse as well as the forward movement of the carriage. There is also to be found in connection with our pine and spruce producing saw mills modern wood-working plants in which the lumber is worked up into manufactured and partially manufactured articles, such as doors, sashes, boxes, etc. Likewise some of the hardwood mills are equipped with machinery for making hardwood specialties, such as mangle rollers, bobbin stock, spool wood, and similar lines.

EDITORIAL NOTES.

The Minnesota labor authorities have recently published some valuable statistics regarding the lumber industry. The most interesting, perhaps, refer to the average production of lumber per man per day, which was found to average 517 feet. In the Southern States, however, statistics collected show the average daily production for each man to be 1,365 feet, the highest being 2,500 feet and the lowest 470 feet. It would seem fair to place the annual daily production of lumber per man at less than one thousand feet. This is a factor in the cost of lumber which is not always given full consideration, and which represents an expenditure, we would say, of about two dollars on every thousand feet of lumber. It should be stated also that these figures do not include logging operations, but simply the process of manufacture after the log has reached the mill.

The discrimination of the insurance companies against steamships loading at Canadian ports is apparently affecting the shipping trade of this country. It is learned that more than the usual quantity of lumber from the Ottawa valley is being shipped to England via Boston, while the shipments from Montreal have been no greater, if as great. It is to be hoped that our Canadian legislators have not yet given up the fight to have this unjust discrimination removed, and that in the near future Canadian ports will be placed on an equal footing with those of the United States. The trade of this country is also suffering from excessive freight rates charged from certain points. The rates on manufactures of wood are considerably higher than for corresponding distances in the United States, and the manufacturer in the United States thus enjoys a decided advantage over his Canadian competitor. It should be the duty of the Railway Committee of the Privy Council to endeavor to compel the railways to grant more equitable terms to shippers.

TRADE OPPORTUNITIES IN THE ORIENTAL MARKET.

Until very recently the eyes of Canada were turned almost exclusively towards the east, and her thoughts occupied with commercial matters in Europe. During the last few years it has occurred to many that the Pacific ocean, instead of being the back road from the country, might become a highway fully as important as the Atlantic, and this idea is certain not to be disappointed by results. Trade with Australia, China, Japan, Malaya, and Polynesia is no mean prize to strive for, and the splendid Pacific highway at our doors places us in a position to compete favorably with any country. The rapid advances made by the United States and Japan in the Oriental trade show that business methods adjusted to the established ideas of the east will bring a quick return, and that the lack of flexibility inherent in British trade methods is resulting in the loss of the previous overwhelming commercial supremacy. If Canada is to take part in the Oriental market which should be expected owing to her favorable geographical position, it will have to be brought about by a careful study of the existing and prospective conditions and demands and by enterprise in pushing sales.

Many discussions have taken place regarding the trade possibilities of China, and as many diverse opinions have been expressed, varying from the optimistic idea that the millions of China represent a market for our exports equivalent to a similar population in Europe, to the pessimistic opinion that these Chinese millions will eventually swamp our markets by their cheap productions. Both of these extreme opinions are based on the supposition that the country has been opened up to trade and that foreign investments have been rendered secure. The truth, as is generally the case, appears to lie between these extremes, for on one hand no one who knows in any degree the conditions existing in the east will allow that its ability to absorb western products is at all commensurate with its population, and that any deductions made from results in European countries are very misleading. On the other hand, Japan has progressed far enough to act as an object lesson in the increased cost of labor which results from an increase of production, and, speaking generally, it will be conceded that when a nation has arrived at some state of stability in her manufactures, the labor cost of the output will not be found to vary from the standard all over the world. For instance, labor in Europe is cheaper than in America when reckoned by the cost per hour, but it is found that in spite of this fact the labor cost of turning out manufactured articles is not very different owing to the greater rate of production per hour of the American artisan. This equalizing effect will be found to act as a corrective, and it does not appear at all probable that our western commerce is in danger of extinction at the hands of Oriental competition. The Oriental will be a keen competitor, but judging from his character he will not originate, but will be a very successful copyist. The initiative will be found without doubt in Europe and America.

Apart from China and the French colonies in the East, trade there is less restricted than in Europe. In China the unwillingness of the ruling classes to admit the foreigner, the insecurity of capital, the fluctuating currency, and greater than all, the poverty of the millions, are the great obstacles in the way of the western trader. These are obstacles that cannot be appreciated at their full value without a knowledge of the Chinese character, of its inertness, its placid content with things as they are, its sense of superiority over the Barbarian. Under these existing conditions no opening of the trade door will take place from within, but the country will have to be burglarized by the Occidental nations, and this will probably not be long deferred. What form the forcible entry will take is not apparent, but it appears that as it requires an Asiatic to deal with an Asiatic, Japan and Russia are best fitted to obtain the advantage and to hold it when obtained. If the open door policy prevail there will be large openings for railway enterprise. Many lines are already projected, but the question as to whether they would pay in many cases is exceedingly problematical, as China has a tremendous canal system, with cheap native labor as the motive power. However, many will be built, and this will require the services of many engineers and great quantities of materials. In the mining field the prospects are exceedingly good, the country having coal in many provinces and minerals in abundance. This, with cheap labor, will stand in the way of great importations of raw materials, and whatever staples are required will be manufactured in the country, so that given the open door policy, the first effect would be the importation of engineering materials and machinery, but it seems improbable that any great increase in staple exports could take place. This lesson may be learned from the history of Japan, where imports are decreasing and exports increasing—although the process in China may be very much slower.

There is no effort made to thrust manufactures under the eyes of the customer and make trade. The Canadian Pacific Railway Company, in establishing the splendid steamship service to the East, has done much for Canada and Canadian trade, and it is owing to this fact that most of the Europeans and many of the Orientals have crossed Canada, and its products are known and could be largely extended in this field, where enterprising management is seldom met with.

TO FOREIGN MERCHANTS.

Foreign merchants desirous of importing Canadian timber products will find it to their advantage to correspond with the manufacturers and dealers whose announcements appear in this number and from whom almost every variety of wood goods may be obtained. When writing kindly mention the Canada Lumberman as the medium of communication.

A WELCOME VISITOR.

Messrs. Clarke Bros., Bear River, Nova Scotia, write: "We regard the Canada Lumberman as a very welcome visitor, and do not wish a break in its visits."

THE CANADIAN FORESTRY EXHIBIT AT THE PARIS EXPOSITION.

The Canadian Forestry Exhibit at Paris is a collective exhibit got together by Mr. J. M. Macoun, who represents the Dominion Government at Paris. The Provincial Governments of British Columbia, Manitoba and Quebec contributed largely to the material shown; the remainder of the exhibit was secured from private individuals, principally in Ontario, or by purchase. The result as shown at Paris is a very complete representation of the woods and wood products of Canada. Sections, 3 feet 6 inches long, of every tree of commercial value form the basis of the exhibit; these have all been cut and polished on one face with the exception of large specimens of Douglas fir, spruce and cedar from British Columbia and of elm, oak, sycamore, beech and maple contributed by Sutherland, Innes & Co. and by John Harrison & Sons. Next in importance to these is a collection of 38 deals six feet in length and of varying width. These represent the principal Canadian commercial woods and have all been polished in Paris by an expert.

From a commercial point of view the Canadian exhibit far excels that of any other country, and a jury made up entirely of men engaged in the lumber trade, either as importer or broker, has awarded the Grand Prize for the best commercial exhibit to Canada.

The high wall which forms the back of the Canadian exhibit is covered with chair-stock furnished by the North American Bent Chair Co. and hickory and oak spokes from the factory of John Heard & Sons, while the pillars which support the second storey of the Forestry building are decorated with handles of all descriptions and with wood specialties from the Columbia Handle and Novelty Co. and J. H. Still. Dobell, Beckett & Co. show a fine collection of square timber and the Sutherland, Innes Co. a complete line of cooperage stock. The restricted space allows of no very carefull grouping of the specimens, but each article is carefuliy labelled and either Mr. Macoun or his assistant is always on hand to furnish information.

The principal exhibitors of deals and other unmanufactured lumber are the W. C. Edwards Co., the Hawkesbury Lumber Co., Henri Menier and Gilmour & Co., while in special lines Ker & Harcourt (spools, bobbins and turned wooden boxes), John Harrison & Sons (butchers' skewers), Adam Beck (cigar boxes and flooring), The Patent Cloth-board Co. (cloth-boards and veneers), John H. Grout & Co. (fruit baskets of all kinds), Jean Roux (hubs), and Wm. Cane & Sons (woodenware) are the principal exhibitors. Very beautiful collections of polished woods are shown by Carl Zeidler and the Canadian Office and School Furniture Co. A very fine office of antique oak made by the latter firm attracts much attention.

Two collections of photographs do much to beautify the exhibit; one of these is a series of eighty photographs of trees framed in their own wood, furnished by the Geological Survey Department, the other is a series of more than 100 photos illustrating lumbering operations in Canada.

Altogether the exhibit is a most creditable one and has already done much to make the forest resources of the Dominion known to foreigners visiting the exposition. It is to be regretted that so few of those engaged in the manufacture of wood products have sent specimens of their work. Though examples of no branch of the industry are lacking, very many lines shown were secured by purchase. It is to be hoped that the Glasgow Exhibition next year will be taken advantage of by Canadians to make a magnificent display of our forest products.

TIMBER RESOURCES OF LAKE ST. JOHN.

A remarkable illustration of the vast forest wealth of the great north of the Province of Quebec is furnished by the unexpected development of an enormous field for lumbering operations in the region made accessible to shipping ports by the construction of the Quebec and Lake St. John Railway. A decade or two ago, when white pine was considered to be almost the only timber that gave value to Canadian forests, it was erroneously supposed by many people that Messrs. Price Bros. & Co. had practically denuded of the profitable merchantable timber all the timber lands in the Saguenay and Lake St. John country. Now that spruce is virtually king in most of the forests of Quebec, and pulp wood the delight of millionaire speculators, the eyes of the public, and of the lumber, pulp and paper trades are being gradually opened to the enormous wealth of the spruce forests in the territory tributary to the Quebec and Lake St. John Railway and its connections.

Some idea of the present proportions of the lumber trade in the country traversed by this line may be formed from the fact that in 1899 the shipments of the various mills located in it, apart from the local consumption of their produce, amounted to the equivalent of 83,196,000 feet board measure, and consisted of 5,472 cars of sawn lumber, 636 cars of square timber, 763 cars of ties and 12 cars of logs. In addition to this, there were 2,426 cars of pulp and paper, though this industry is practically in its infancy in the Lake St. John country. There are between twenty-five and thirty saw mills in this territory, and many times that number would undoubtedly follow the extension of the road through the richly wooded country between Lake St. John and James Bay. More than half the export deal trade done by the port of Quebec in recent years is furnished by these mills over the Quebec and Lake St. John railway.

An official report to the provincial government made in 1898 shows that out of a total area of 19,200,000 acres in the territory of Lake St. John, less than 500,000 acres are under cultivation or cleared, and the remainder is covered with forests. The principal kinds of timber are spruce, balsam fir, white birch, cypress and a little pine. White, black and red spruce constitute more than 75 per. cent of the timber. Fire has ravaged this territory in some places, but the disastrous effects of the great fire of 1875 in the Mistassini region are no longer visible; the second growth is as fine as the first as regards the size of the trees, while the wood is sounder and less knotty.

The quantity of pulp wood in this country is practically unlimited. Taking an average of only five cords to the acre, we obtain fabulous results, showing that this territory can provide an almost inexhaustible supply of raw material. Mr. Langelier, who recently explored this section of the country for the Department of Lands, Forests and Fisheries, estimates that the first cut of pulp wood in it would be about 100,000,000 cords, which would yield over 65,000,000 tons of pulp, or a million tons per annum for 65 years. It is calculated that this would be sufficient for the half of Europe, and that "the coniferous forests of the region of Lake St. John exceed in extent those of Norway, are nearly equal to those of Prussia, and to half those of Sweden.

The water powers of the grand discharge of Lake St. John, and of the several large rivers by which the lake is fed, greatly exceed those of all the rivers in Sweden and Norway, where the pulp industry is carried on to a considerable extent. It is calculated that they total over 650,000 horse power. Already there is a large saw and pulp mill at Chicoutimi which turns out thirty tons of dry pulp per day. Its capacity is about to be quadrupled. Another one is about going into operation at Jonquieres, and a third is about to be constructed on the Metabetchouan. Two large companies, one English, the other American, with a combined capital of nearly $6,000,000, are at present negotiating for water power privildges on the Grand Discharge. One proposes to erect the largest pulp and paper mill in the world, and the other an enormous calcium carbide factory, and in the magnitude of their operations they may exceed the tremendous works at Grand Mere and Shawenegan, on the Great Northern branch of the Quebec and Lake St. John railway. It may be mentioned, en passant, that the output of the industries at Grand Mere consists of fifteen to twenty million feet annually of sawn white and red pine and spruce, 130 tons daily of dry ground wood pulp, 60 tons per day of sulphide pulp, 40 tons daily of paper and 30 of cardboard. The new pulp and paper mill at Shawenegan is expected to have four times the capacity of that at Grand Mere. There are also valuable timber and pulp lands in the great extent of country stretching away from Lake St. John to James Bay. Mr. Henry O'Sullivan, Dominion Land Surveyor and Civil Engineer, who headed a government exploring party through this territory in 1897, reports immense areas of magnificent spruce forest to the north of the height of land. Of other sections of the country traversed by him he says: In the virgin forests, spruce, fir, tamarac, and cypress or banksian pine, are the chief conifers, while the deciduous trees are limited to poplar of different varieties, white birch, willow, alder, hazel, pembina and similar undergrowth, with, occasionally, black ash along the river and lake shores. I saw no white pine, and although the cypress or Banksian pine is decidedly a native of that region, it is only in the dry burned districts, and on the poorer heights in the neighborhood of Lake Nemiskan, on the Rupert river, that it was seen in abundance. In fact, pine of any kind seldom flourishes on such rich clay soil as is found in the basin of the Nottoway. There is an abundance of spruce and tamarac wherever the country has not been burned. Here and there areas more or less extensive were swept by fire from twenty-five to fifty years ago, and are now well grown up with poplar, white birch, spruce, tamarac and cypress of fair size, according to age, insuring an abundance of pulp wood for ages to come.

Canadian Manufacturers of Timber Products

THE HUNTSVILLE LUMBER COMPANY.

ONE of the first firms in the Georgian Bay district of Ontario to engage in the export of lumber to Great Britain was the Huntsville Lumber Company, illustrations of whose mills appear on this page. The head offices and mills of the company are located at Huntsville, and are modern in every respect. The company manufacture white pine lumber and shingles, hardwoods, etc. They are owners of valuable timber limits from which their log supply is obtained. For some years past a large percentage of their output for export has been purchased by Messrs. F. A. Lightbody & Company, of Glasgow, Scotland. The close attention which they devote to the manufacture of their lumber has gained for it a high reputation. The officers of the company are: A. Tait, president; Wm. Turnbull, secretary; and Orville D. Tait, treasurer.

Mill of the Huntsville Lumber Company, Huntsville, Ont.

The lumber cut is almost all of the white pine variety. It is sorted off the carriers onto the rollers, and from the latter automatically transferred to cars, on which it is hauled to the piling ground near by, where it is filed in line from high platforms and tramways. There are no less than 250 piles, for all kinds and sizes, qualities and assortments of lumber. The piling grounds adjoining the mill, and facing the Ottawa river, are 50 acres in area, fitted with a network of platforms. Railway communication is established with them by a spur line of the Canadian Pacific Railway, while transportation by water is conducted from the docks with which the river front of the premises is lined. All lumber is kept in the yards at least 60 days before being shipped.

Yards of the Huntsville Lumber Company, Huntsville, Ont.

Fire protection is afforded by an extension of the Hull waterworks system and by the company's fire engine and private hose. The main mill, built of frame on stone foundation, is roofed with galvanized iron, while the engine house is built of stone, thus affording immunity from fire.

In recent years the mill has cut extensively on deals for the British market, but this season's cut will be mostly of thin lumber for the American market. This cut, it is expected, will exceed 40,000,000 feet. The cut of deals last year amounted to 10,000,000 feet, and thin lumber 30,000,000 feet. A considerable quantity of deals will be cut this season also.

Over 250 men are employed in and about the mill, and 25 teams are constantly engaged between the mill and piling ground. The importance of this industry to the sister cities of Hull and Ottawa may be realized when it is stated that the monthly wage bill for the mill and yards amounts to $10,000. Labor troubles are unknown problems in this business, and the army of employees, many of whom have passed almost a life time in the employ of the Gilmour firm, are happy and contented.

The Gilmour-Hughson limits cover the principal lumber territory along the Gatineau river, and are 3,500 miles in extent; some are 200 miles distant. Each season there are four main drives of about 80,000 logs each. All these drives come down the Gatineau, which empties into the Ottawa a short distance above the mill. On these limits employment is given during the season to 700 men and more. There is a greater quantity of spruce than pine on the limits, but nevertheless the supply of the latter is sufficient to keep the saws busy for a number of years to come.

Mr. John Gilmour, a member of the firm, is a grandson of the founder of the original mill. Relatives also operate large mills at Trenton, and have lumber interests elsewhere. Mr. W. C. Hughson, the other partner, is a son of the late John C. Hughson, who was well known in the early days of Canadian lumbering. He had similar interests in the United States, but established his first Canadian mill at Peterborough in 1855. He also operated, with the present member of the family, mills at Rice Lake, Sarnia, and in Muskoka, on the Georgian Bay.

The Gilmour Hughson Co., Limited, has a reputation for honest dealings and enterprise on two continents, and in Ottawa and Hull its business interests are booked on as a mainstay in the communities.

GILMOUR & HUGHSON.

The claim is made for Gilmour & Hughson's mill, with all show of reason, that it is the best equipped modern steam saw mill in the world. Situated on the Ottawa river about a mile east of Hull and directly opposite the city of Ottawa, the mill in its architectural lines of beauty, and general appearance of activity, is an object of interest to the stranger and citizen alike. The present mill was built six years ago and fitted with modern machinery at a cost of $200,000. The main mill is 160 feet long and 80 feet wide, flanked with a platform 250 feet long and 80 feet wide. The engine and boiler house, a stone and brick structure, is 60 feet long and 30 feet wide. The mill proper is equipped with a Wickes' gate, a pair of twin circular saws and two band saws. There are also well equipped lath and shingle mills, containing four modern lath machines and two up to date shingle machines. The machinery is driven by engines of a capacity of 1,000 horse power. The fuel used is sawdust, fed automatically in less than two minutes after the log leaves the water. All the sawdust and waste is used for this one purpose, and the experience of the managers is that the mill is thus operated with greater economy than if driven by water power.

Saw Mill of Gilmour & Hughson at Hull, Que.

CLARK, SKILLINGS & COMPANY.

On this page is shown an illustration of the spool wood mill of Clark, Skillings & Company at Newcastle, N. B. This mill is situated on the deep water terminus of the Intercolonial Railway, and has specially good facilities for summer shipment of goods, as well as the advantages of the railway for ocean transport via St. John during the winter months.

Clark, Skillings & Company have been engaged in the spool wood business for the last nine years, their annual output being about three and one-half millions. Their principal mill is situated at Newcastle, to which centre is taken the manufactured stock of two movable mills situated in the same district. The wood is sawn in the winter and early spring and bundled when dry. A special feature is made of the shed accommodation to protect the wood from damp as soon as it is bundled.

Spool Wood Mill of Clark, Skillings & Company at Newcastle, N. B.

The company also manufacture large quantities of dowels, backsets and spool blocks. They have an establishment in Maine, and the head office is at 21 Bothwell street, Glasgow, Scotland.

GILMOUR & COMPANY.

Messrs Gilmour & Co., of Trenton, Ontario, in addition to their regular lumber operations, are making and forwarding large quautities of box shooks to England and Mexico, the firm having been successful in opening up an extensive trade with these countries within the past year or two. The company have recently enlarged their box factory, equipped it with the latest labor-saving machinery, and are working hard to keep pace with their orders. The box factory has a capacity of 35,000 to 40,000 feet per day. Their door factory is now taxed to its utmost capacity to fill orders for their well-known brands of English pine doors, large quantities of which they are shipping weekly to the varions English ports. The factory is capable of turning out from 400 to 500 doors per day.

Recently Messrs. Gilmour & Co. obtained patents for lumber manufactured under a new process, and they are now engaged in making doors out of this lumber, veneered in walnut, mahogany, cherry birch, maple, or any other wood that the trade may demand. Several sample orders have been filled for the continental markets and the buyers report them satisfactory. Their prospects are bright for an enlarged trade in this make of door, as well as for all kinds of interior finish in patent lumber. The firm are also engaged in the manufacture of veneers, and are prepared to quote on bones for export trade.

DONALD FRASER & SONS.

One year ago the above named firm acquired the Quebec timber limits of the late James Miller, of St. John, N. B. Operations for getting out ten million feet of logs had been arranged, and the Messrs. Fraser took over the work as a going concern about the 1st of March, 1899, with the result that nearly twelve million feet of logs were cut and driven into Lake Temiscouata from Touladi River. About one and one half million feet was cedar, a small proportion pine, and the remainder spruce. A large saw and shingle mill being necessary to convert the logs into deals, etc., the firm decided to build at Cabano, on the western side of the lake and near Fort Ingalls station, on the Temiscouata Railway, forty miles from River Du Loup, on the St. Lawrence, and thirty-five miles from Edmundston, the northern New Brunswick terminus of the C. P. R. They are thus in a position to ship via the St. Lawrence route or by St. John, the winter port of Canada.

Mill of Donald Fraser & Sons at Cabano, Que.

The mill is a very large one, being 200 x 80 feet, with a brick boiler and engine house, detached, 40 x 50 feet, with engine capacity of 450 h. p. The saw mill contains twin circular saws for slabbing logs, two stock gangs (one the "Wickes" patent, being of the largest size made), two re-saws, two patent parallel edgers, slab slashers and latest improved deal trimmers. The equipment also comprises the most modern machinery for hauling logs into the mill, besides live rolls, transfers, slab, sawdust and refuse carriers, conveniently situated. Near the latter are two "Ross" patent lath machines with a capacity of one hundred thousand laths per day. Later in the season box making machinery will be added. The firm will then be in a position to utilize about everything in their logs except the bark and surplus sawdust.

Extending along one side of the mill is the shingle department, comprising butting and barking machines and eight "Dunbar" shingle machines, the stock for which is carried from the barking machines by a chain sluice just in front of each machine. The shingles are assorted according to grade by the operater of each machine. The bunchers work on a floor three feet lower than the mill floor, and have a very clean and light room. Continuing along beyond the shingle machine is a two block clapboard machine, the device of the senior member of the firm. It is unique in construction, rapid in operation, and correct in principle. The yard room is ample and the railway connections with it are complete.

The firm have already erected a fine boarding house and several houses for their men, and intend building about forty more this season, as well as a first-slass store. They have a tug boat on the lake to handle the logs and are now building several lighter scows at River Du Loup to load large vesse's that cannot lay at the whart. Their limits are principally on the Touladi river and comprise about six hundred miles, said to be of the finest description of timber.

The firm also have mills at Fredericton, steam power, and at River Dechute, water power. They expect to saw this year thirty million feet of long lumber, sixty million shingles, besides lath and box shooks correspondingly during the year. An enterprise such as this means a great advance in the prosperity of the surrounding country and is duly appreciated.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VI. TORONTO, ONT., AUGUST 1, 1900 No. 28.

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:
IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canaian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

WANTED AND FOR SALE

Advertisements will be inserted in this department at he rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

GOOD DIRECT ACTING STEAM SAW MILL and 200 acres for sale, with several years' supply of timber at hand. For particulars address T. A. PICKARD, Owen Sound.

WANTED—Competent man to take charge of large logging operations in B. C. Must have experience in rough country. Address, stating experience, Box 60, CANADA LUMBERMAN.

WANTED—Three Ply stock, 3-16 in. thick, about 24 x 20 in., 40 to 50 M feet per month. Any cheap hardwood will do. Clear of defects. Send sample and price to JOHN W. HUSSEY, No. 1 Broadway, New York.

FOR SALE.

DRY HARDWOOD LUMBER—150,000 FEET 1 in. soft Elm, 80,000 feet 1 in. brown Ash, 150,000 feet plain and quartered red and white Oak, 100,000 feet 1 in. and 2 in. hard and soft Maple, 40,000 feet 1, 1¼, 1½, and 2 inch clear Chestnut. For particulars apply LONDON LUMBER CO., London, Ont.

WANTED

WANTED, IN SEPTEMBER AND OCTOBER, Green Hard Maple Squares, 6½" x 6½", 12 feet and up. Cash on delivery at any station in Ontario or Quebec. Address,

Box 36, CANADA LUMBERMAN

FOR SALE

ONE 8 INCH 4 SIDED MOULDER, ONE tenon machine No. 161, one mortise machine. These machines were made by the best firms in Canada and are new and up-to-date, only used a short time; also one 38 h. p. return tubular boiler, with foot front and fittings, only used a short time; can furnsh maker's guarantee. Will sell cheap for cash or exchange for a 35 h.p. portable boiler and 30 h.p. engine if as good as new. For further particulars apply to JOHN R. MCKAY, Lansdowne, Pictou Co., N. S.

LONGFORD BRIDGE STONE, Ashlar, large and small Rubble and all kinds of Building and Foundation Stone, Window Sills, Steps, Etc.

A. McPHERSON & CO.
Longford Mills P.O., Ont.

COMPETENT LUMBER PILERS WANTED for mill in B.C. Address, stating wages, Box 789, CANADA LUMBERMAN.

WANTED.

FOR IMMEDIATE SHIPMENT, SEVERAL cars of 1½ in. to 3 in. Prime Rock Elm. OTTAWA LUMBER CO., Ottawa.

FOR SALE.

2 TO 2½ MILES SECOND HAND 30-FT. Steel Rails and Fish Plates, in good condition; also Yard Locomotive. JOHN J. GARTSHORE, 83 Front St. West, Toronto.

FOR SALE—At Wiarton, about 30,000 feet 12 x 12 in. and 30,000 feet 10 x 10 in. Cedar Timber, 10 feet and up long. Also a smaller quantity of 4 x 4 in., 5 x 5 in., 6 x 6 in., and 2 in. and 3 in. Cedar, and 20,000 feet 12 x 12 in, 20 to 30 feet Hemlock. PICKARD & ROWAN, Owen Sound.

SAW MILL SITE

GOOD SAW MILL SITE ON SOUTH END of the Georgian Bay, near Midland; extensive Lumber Docks, Houses, Store Buildings, etc.; water power. THE MUSKOKA MILL AND LUMBER CO., Ltd., Toronto, Ont.

FOR SALE

A very valuable timber limit, seventeen square miles, consisting of the following timber:—12,000,000 Birch, very fine; 5,000,000 Hemlock; 2,000,000 pine; a variety of Black Ash, Spruce, Basswood, Little Elm and Oak. Also lots of Maple and Beech.

The advantages of this limit is in the fact that the furniture factory at the nearest mill takes every board of birch and ash.

The limit is well watered and easily lumbered. All necessary creeks are improved and need little repairs. Price $35,000.

Address GEO. F. RICH,
401 Can. Atlantic Hotel, Parry Harbor.

TENDERS

Tenders for the purchase of the Company's Saw Mill and contents, situated at Coal Creek, B.C., will be received by the undersigned up to AUGUST 15, 1900. This mill has a capacity of one hundred thousand feet per day, and is equipped with all the latest facilities for the handling of a large output, including:—

Six 60 x 16 Steel Boilers, complete.
One No. 3 Band Mill (Wm. Hamilton Mfg. Co.)
One pr. No. 9 Circular Husk Frame with top saw rig.
One pr. of 20 in. x 24 in. Engines, complete.
One 14 x 20 Cunningham Ford Engine, steam feed complete.
One Steel Refuse Burner, 70 feet high, 30 in. diameter.
Three Wilken's Steam Canters, complete Shafting, Pulleys, Belting, Saws, Frictions, etc.

In addition to the above there is also a Planing Mill, fitted with Planers, Boring and Mortising Machines, etc.

Detailed lists of the machinery can be seen at the mill, Coal Creek, B.C.; in the office of R. Marpole, General Superintendent, Vancouver; or the undersigned, Winnipeg, or will be mailed on application.

The lowest or any tender not necessarily accepted.

Terms of settlement—Twenty-five per cent. cash, balance in equal payments in 30, 60 and 90 days on approved security.

JAMES OSBORNE,
General Superintendent C.P.R.
Winnipeg, Man.

WANTED.—Party having good Portable Saw Mill, to cut about 3 million feet of Pine and Spruce Timber on Soo Branch C.P.R., close to R.R. Send particulars to Box 15 CANADA LUMBERMAN.

IMMEDIATE.

WANTED—Quotations, c.i.f., for export purposes, on Spruce, Pitch Pine, White Pine, Oak, Walnut and Poplar. Correspondece requested by first mails. Address—K CTIBOR, 142 East 37th St., New York.

FOR SALE.

DOWELS AND DOWEL SQUARES OF ALL dimensions, manufactured from the finest White Birch. For particulars apply to CLARK, SKILLINGS & Co., Newcastle, Miramichi, N. B.

FOR SALE

SAW MILLS—One semi-portable, first class order, capacity, 8,000 per day; one heavy mill, 40 h. p. boiler and engine, capacity 20,000 ft. Cheap for cash, or might exchange for timbered land at the north. Box 156, Thamesville, Ont.

CURRENT TRADE CONDITIONS.

ONTARIO.

Taking the province as a whole, trade in lumber is very quiet, but in some sections, notably Ottawa, a brisk local business is doing. The movement of stock from the mills is quite active, but most of this was sold early in the spring to be shipped out during the summer months. The situation in the Georgian Bay and Ottawa valley districts seems to be improving, and manufacturers are showing a strong disposition to maintain prices. It cannot justly be said that there has been any appreciable decline, as is evidenced by the sale of a large quantity of pine mill culls at $10 at the mill. Our Ottawa valley correspondent reports that the tendency is towards higher prices for lumber, and that the price of lath has advanced fifty cents per thousand.

Visitors to the Georgian Bay district confirm the reports that a large percentage of the logs taken out last winter are hung up, with little prospect of getting them out for this season's sawing, but it is expected that in the Ottawa valley nearly all the logs will reach the mills.

Hardwood dealers tell of a satisfactory volume of trade during the month of July, but with a small margin of profit. Manufacturers have been holding stock at firm prices, and the dealer in order to effect a sale has sometimes divided his profit with the buyer. Consumers are purchasing very meagrely, but they may be expected to buy more liberally in the near future, as there seems little hope of being able to purchase hardwood lumber this season at prices much lower than those ruling at the present time.

QUEBEC AND NEW BRUNSWICK.

The midsummer dullness in the lumber market has presented itself in a somewhat pronounced form. There are no shipments of any consequence being made to the United States market, and local trade is by no means active. Prices for spruce deals are weaker, although it cannot be said that there is any great quantity of dry stock unsold. The proposed harbor improvements at Montreal, which are to be commenced this month, will require considerable timber.

Export trade has been seriously handicapped by high freight rates. The withdrawal of steamers for transport service to China has caused a further advance in rates, and although tempting offers are made, few charters are being effected. The labor difficulty at St. John has been settled, the men returning to work last week.

MANITOBA AND BRITISH COLUMBIA.

The movement of grain by the farmers in Manitoba and the Territories is as yet light. Until after the grain is marketed trade in lumber on country account will be unimportant, but this is being offset in a measure by a good demand in Winnipeg and the larger towns. Prices are steady and no reports of cutting are heard of. In British Columbia the mills are working to their full capacity. The loggers are taking steps to keep up the price of logs, and to protect themselves the manufarturers will be compelled to sell their lumber at present prices, if not slightly higher. The export mills have sufficient orders to tax their capacity for the season to its utmost.

UNITED STATES.

The actual trade in white pine lumber is very light, and the situation in respect to prices is difficult of solution. From some quarters it is reported that sales are being made at figures ranging from 50 cents to $1.50 below the list, while on the other hand, the largest manufacturers are understood to be holding firmly to list prices. The log supply seems to have had quite an effect in maintaining the strength of the market. It is feared that some of the mills will not be able to get a full supply of logs for their season's operations, and this, of course, will reduce the output of lumber for the season. The movement of lumber has been so backward that some of the manufacturers find their piling capacity taxed to its utmost, and unless the stock can be moved in the near future, they may be obliged to close down. Eastern buyers have shown a little more disposition to contract for stock at upper lake points, as the freight rate from Duluth to Buffalo has been reduced to $2.25, as compared with $4.50 in the fall of last year. But in the absence of a brisk demand from retailers and consumers in the east, the buying by wholesalers has not been heavy. High grade stock is little asked for, box lumber seeming to be in most urgent demand. At Saginaw white pine is held at $16 and up for log run, $15 and $16 for box lumber, $14 to $17 for Norway, and $14 and $14.50 for mill culls.

In hardwood circles a slightly improved trade is reported, but the volume of business for the month of July was small. Prices are about nominal. A firm of hardwood dealers in Buffalo, writing to the CANADA LUMBERMAN, states that there does not seem to be any price list at the present time. Each firm appears to be governed by conditions which exist in its particular case, and that if prices were reduced even $5 per thousand, the volume of trade could not be materially increased. White ash seems to be in short supply, and as it is expected that

furniture factories will shortly go into the market to buy, prices of this stock are likely to keep up. Owing to high water the usual supply of ash and oak from the southwest is not forthcoming.

The demand for spruce is better than it has been, and dealers are looking forward to a good fall trade in anticipation of increased building operations. Quotations at New York range from $18.50 to $20. Hemlock is lower in price, the minimum figures being $13 at Buffalo and $15 at Philadelphia and New York city.

FOREIGN.

Prices for lumber are firmer in the British market than they were at last report, due to the difficulty in making vessel charters. It is believed that if the freight situation is not relieved before the autumn, prices heretofore unheard of will rule. The prospect at the present time is that the import of wood goods into the United Kingdom this season will be exceptionally light. There was an average quantity of spruce received at London in the month of July, but it had no unfavorable influence on prices. Third quality regulars are still quoted at £9 c. i. f., but the bulk of shipments which arrived were sold in advance. Concerning the arrival of a cargo of Canadian deals, etc., the Timber Trades Journal says: "The pine deals are principally of broad dimensions and of first quality, and as the stock of this discription is probably the lowest on record, there is every likelihood of these parcels being disposed of ex ship. From the dressed pine boards landed a fair amount of deliveries from ship's side are being made. Broad whitewood boards have been imported only to a limited extent of late, and, being in demand, the one or two parcels ex this liner should find purchasers ex quay."

Unfortunately the disturbances in China have closed, temporarily at least, a promising market for the lumber of British Columbia. During the early part of this year large shipments were made to China, and Canadian lumbermen were looking forward to a growing demand from that quarter. But when that country is again opened to development an export trade of great magnitude may be expected.

STOCKS AND PRICES.

Last week the amount of lumber received at Buffalo by lake was 4,245,000 feet.

The str. Ramleh is loading deals at Sillery Cove, Quebec, for Dobell, Beckett & Company.

White pine shingles are quoted at Saginaw at $4.15 and $315, and cedar shingles at $3 and $2 respectively.

The Nelson Saw & Planing Mills, of Nelson, B. C., have just received a boom of logs containing 600,000 feet.

The Rathbun Company's saw mill at Tweed, Ont., closed last week, after cutting 240,000 feet of lumber, 47,000 railway ties, and 700 cords of slab wood.

The str. Ailsa Craig sailed from Halifax on July 24th for Liverpool, with 1,554 standards of deals, valued at $32,700. Chas. J. Willis & Company, of Sackville, N. B., were the shippers.

Last week at Duluth, Minn., Saundry & Company sold a cargo of mixed lumber at the following prices: No. 2 and 3 shop, 2 inch, $25; 1¼ and 1½ inch, $22; No. 3, 6 inches and wider, $14.50; 1½ in. box, $15; No. 5, $10.

The Saginaw Lumber & Salt Company last week received at Saginaw, Mich., a raft of 3,000,000 feet of logs from the Georgian Bay. This company is taking over 30,000,000 feet. The Charltons have also sent over a couple of rafts.

The steamship Feronca is loading deals at West Bay, N. S., for the United Kingdom. The str. Labuan cleared from Parrsboro, N. S., on July 25th, for Manchester, with 3,452,507 feet of deals, scantling and boards, shipped by M. L. Tucker for W. M. Mackay.

A correspondent writes from Alpena to the American Lumberman as follows: The condition of the Alpena market and the movement of lumber bears no comparison to the conditions of one year ago. It is estimated that there is now on the mill docks from 25,000,000 to 30,000,000 feet of lumber, and one mill has shut down because the firm has no more piling room available. Another concern has 7,000,000 feet on the mill dock and will have to shut down the mill unless shipments increase.

Following is a comparative statement of timber measured and culled at Quebec up to 31st July, as reported by the Supervisor of Cullers:

	1898.	1899.	1900.
Waney White Pine....	1,112,043	1,237,183	748,951
White Pine	751,023	438,437	317,415
Red Pine.....	132,319	110149	20,973
Oak.....	599,881	442,240	331,173
Elm.....	395,314	405,851	445,252
Ash	27,923	54,146	73,550
Basswood.....			241
Buttternut.....	887	60	92
Tamarac		415	71
Birch and Maple.....	106,538	231,946	386,374

An estimate has been made of the probable output of the large Ottawa valley saw mills for the season of 1900, the total production being placed at 500,000,000 feet. J. R. Booth will likely reach the eighty million mark. The Hull Lumber Company, who are running the old Bronson mill, will cut about 25,000,000 feet; W. C. Edwards, Ottawa, 30,000,000 feet; Rockland Mills, sixty to seventy millions; McLaurin & McLaren, 25,000,000; McLaren, of Buckingham, 30,000,000; Gilmour's Hull mills, 40,000,000, and mills at Braeside, Arnprior and Pembroke, 100,000,000.

Mr. R. H. Roys recently returned to Saginaw, Mich., from the Georgian Bay district, and states that fully 35 per cent. of the logs put into the streams last winter are hung up. Owing to this cause many mills started sawing late and a number of new mills which were built during the winter did not start early. He says the feeling is very strong as regards prices, and reports the sale of 2,500,000 feet of mill culls to go to Ohio at $10. When the freight and $2 duty is added it brings the price up to about $14, which is a high figure for mill culls. According to Mr. Roys, there is no accumulation of lumber, and it is not expected there will be much congestion in this regard.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.)

The local market furnishes the chief feature of interest at present. While export trade with the United States is only moderate, and that with Great Britain little better, the extensive building operations in Hull and Ottawa consequent on the fire has created a brisk demand for all lines of building lumber. Prices, with the exception of lath, have not advanced, however, in the past fortnight. The figures show an advance of 20 per cent. over those ruling the same time last year. Lath have advanced 50 cents all round, the better class selling from $3.50 to $3.75, and second grade $2.50 to $3.00.

The local mills are all running full time, and planing factories, sash factories, etc., are rushed with orders. Prices which were high before the fire, took a jump shortly afterwards, and have retained their position with prospects of another slight move upwards.

Although the yards are again piling high with lumber for export trade, the shortage caused by the fire will be felt for many months to come. Lumber is being shipped in quantities by rail direct from the saw, and considerable shipping is also being done by water in the green. The increased total demand has had its effect, depleting the supply otherwise destined to reach the foreign market.

It has been rumored on the street that Ottawa lumber magnates were to come to an understanding and by concerted action protect themselves against the vagaries of the market. The proposed deal in short meant the formation of a company to regulate the output of the local mills, and thus guard against an overstocking of the market and a possible decline in prices. No definite action has been taken in the matter, and though prominent lumber men state such steps may not be taken for some time, the impression prevails that for mutual protection they will ultimately have to arrive at an understanding as to the placing of stock on the market.

The first and probably the only raft of square timber to come down the Ottawa this season was piloted through the Chaudiere slides last week. The raft was formed on the Coulonge, having been cut off Gillies Bros.' limits. It consisted of thirty-two cribs of timber, containing in all 40,000 cubic feet. To cover the distance to the destination, Quebec, the raft was floated a fortnight. Only ten years ago between fifteen and twenty such rafts were floated down to tide water, containing at least 1,500,000 cubic feet of timber.

This year considerable square timber was shipped from the Upper Ottawa country by rail. Amongst others interested in the shipments were William Mackie, George Gordon, Allan Francis, Booth & Shannon, and Gillies Bros.

Gillies Bros'. mill at Braeside, near Ottawa, is working full time at present, with prospects of a seasons's output of 35,000,000 feet. The operations on the limits this coming season will be conducted on a large scale, though not as extensive as last season.

Reports from the various log drives show that but few of the firms centering on the Ottawa and Gatineau have logs "tied up." The last logs have just been moved out of the Dumoine for J. R. Booth and E. B. Eddy & Co. None of the mills have as yet experienced slack time on account of a scarcity of logs.

The Ottawa Lumber Co.'s limits on the Rouge promise to be the scene of extensive operations again next season. Large quantities of spruce taken out last season are being cut at the mill.

Indications point to another season of all round activity on the limits, and the men will at no distant date be returning to their work. The wages are likely to remain as high as last season owing to the demand for labor.

The W. C. Edwards & Co. have taken charge of the Capital Milling Co.'s plant and premises, both of which are undergoing a thorough overhauling. New machinery will be installed and increased facilities provided for the turning out of the heavier planing work. The finer branches office furnishings, etc., will be similarly treated in their Edinburgh headquarters.

Recently an employee in Davidson & Thackray's planing mill met with an accident, death ensuing in a couple of days. Although there was a rush of work on at the mill every department was shut down and the employees attended the funeral in Hull in a body with the members of the firm.

Sutherland & Holbrook have just been awarded the contract for the erection of a new paper finishing establishment for the E. B. Eddy Co. The new building will be a three story one, 500 feet long and 100 feet deep. The building will be a solid brick one and will be ready for occupation on Sept. 15th.

SALE OF CANADIAN LUMBER.

Foy, Morgan & Company, London, Eng., held an auction sale of wood goods on July 18th, at which the following prices were realized for Canadian lumber:—

SPRUCE—Ex. Greta Holme, from Quebec—10-15 ft. 3 x 11 in. unassorted, £9 10s; 12 ft. 3 x 9 in., £8 10s; 10-14 ft. 3 x 9 in., £8 10s; 10-14 ft. 3 x 7-8 in., £8 5s. Ex. Starlight, from Quebec—10-13 ft. 3 x 9 in., £8 15s. Ex. Annie M. Smull, from Miramichi, N.B.—9-22 ft. 3 x 11 in., £6; 6-23 ft. 3 x 9 in., £5 5s.; 6-19 ft. 3 x 7-8 in., £4 17s 6d. Ex. Greta Holme, from Quebec—11-13 ft. 3 x 9-10 in., third quality, £6 5s.

PINE—Ex. Menmon, from Quebec—12-27 ft. 1½ x 7 in. unassorted red pine, £8 15s. Ex. Abbey Holme, from Quebec—12-16 ft. 2 x 7 in. first, second and third quality red pine, £10. Ex. Werneth Hall, from Quebec—9-14 ft. 2 x 7 in. third quality, £9. Ex. Bede, from Quebec—4 ft. x 3-4 in. third quality, £4.

Messrs. Cowan & Co., of Galt, have, owing to the increase of business in the province of Quebec, opened a wareroom at 302 and 304 St. James street, Montreal, which is under the management of W. H. Fisher.

K. Ctibor, who has been in Weymouth, N. S., for two years past acting as Nova Scotian buyer for F. Ctibor, Buenes Ayres, S. A., manufacturer of native woods and importers, left for New York a few days ago on his way to Europe for a few months on a business trip. Mr. Ctibor, whose advertisement appears in this issue, is asking for quotations on native woods of various kinds. He has been a heavy buyer of spruce hitherto in Nova Scotia.

RANDOLPH & BAKER.

Two miles from the mouth of the great St. John river, which for generations has been disgorging lumber in quantities comparable with any in the world, are the mills of Randolph & Baker, Limited. This firm is known as one of the most prominent in the lumber manufacturing business in the Maritime Provinces. About the first of this year the business of the firm was transferred to a joint stock company, composed of Messrs. A. F. Randolph and C. P. Baker and their sons, Mr. A. F. Randolph being president of the company.

The business of Randolph & Baker is now confined almost exclusively to manufacturing for the European trade, though years ago they did a large business with the United States, sending as much as 8,000,000 feet of lumber over the border in one year.

The bulk of the lumber exported is handled by brokers, Mr. Malcolm Mackay, of St. John, at present acting in that capacity for them. Besides their British shipments they have exported considerable lumber to Australia and South Africa, and at time of writing two vessels are loading lumber at their mill for Australia.

Though the mill of this firm was built in 1871, nearly thirity years ago, it is to-day considered one of the best and most modern of mills sawing dimension lumber for the English market. In that time, of course, many improvements have been made, for its owners are believers in the policy of keeping up to date. The mill stands about a mile up the river from St. John, on what is now an island, though formerly a peninsula, the government having cut a canal through the neck of land joining it to the shore for the purpose of allowing logs to be taken through by a shorter route from Grand Bay. There are nearly a quarter of a mile of wharves in front of the mill, upon which are enormous piles of lumber awaiting shipment. The mill property is 151x62 feet, with engine and boiler rooms attached 120x40 feet. In the mill are two large gang saws and three lath machines, run by two engines of 150 h. p. each.

The boilers, of which there are eight, are shell boilers, the furnace and boilers being designed with a view of destroying the abundance of fuel and not for economy.

The haul up, put in a few years ago, is a patent improved device, being an endless chain of heavy square links, fitted with rigid dogs and running upon a steel track up the slip. By it a continuous stream of logs, butt to butt, run into the mill from the river without break and without any attention but that given by one man, who touches them with his pole alone as he stands upon the raft. Improved steam roll flippers pick the logs right and left from the bed to the gang carriages, and the longer ones are sawn upon the bed by circular cut-offs.

From the mill the lumber goes to the wharves over live rolls and is from there distributed by gravity on branch runs in the various directions required. Of long lumber about 20,000,000 feet is manufactured, while of laths between fifteen and sixteen million are produced. These laths are sold to the United States trade entirely. In the booms near the mills about 3,000,000 feet of logs can be accommodated. The timber, spruce almost entirely, comes from the upper reaches and tributaries of the St. John.

A great advantage which this mill enjoys is the ability to co-operate with the manufacture of lime. Great quarries of the purest of lime rock stretch along the cliffs near by. In the manufacture of lime much fuel is needed in the burning, and this the mill is able to supply in abundance. In the lime kilns adjoining the mill about 70,000 barrels of lime per year can be manufactured.

There are good cooperage works in connection with the mill, where all the barrels are manufactured in which to ship the lime.

The waste from the mill is carried to the kilns over tramways, and the destruction of this waste in such an advantageous manner is no small item, as it saves the expense of destroying by other means. The lime is disposed of almost entirely in the Maritime Provinces.

Randolph & Baker's Saw Mill and Lime Kiln at Randolph, St John, N. B.

In and around the saw mill there is usually engaged a force of 125 men, while including the lime works a total of 140 men are employed by the firm.

Mr. A. F. Randolph, the president of the company, is of Fredericton, and is the senior member of the firm of A. F. Randolph & Sons, wholesale provision merchants, of that city. He is a native of Digby, N. S., and is now President of the Peoples Bank of Fredericton.

Mr. C. P. Baker, the managing director of the company, is a native of St. John, and has been in the lumbering and milling business all his life. He and Mr. Randolph formed their partnership in 1871, when the mill was erected. He now has his residence in Randolph, near the mill. His son, Mr. Chas. F. Baker, is the secretary of the company.

THE SUMNER COMPANY.

This company is very extensively engaged in the manufacture of wood products, comprising sawn lumber in dimension suitable for export and home markets, cedar shingles, railway sleepers, telegraph and telephone poles and fence posts, "Princess" pine sleepers and timber, spruce pulp wood, etc. Their principal mills and offices are at Bathurst village, on the line of the Intercolonial railway, thus placing them in a position to make shipments by either rail or water. The capacity of the saw mill is eight million superficial feet per year, althongh it does not usually produce above five to six million feet. There are the necessary lath and box making machines, and re-saws to work up into marketable products the slabs, edgings, end pieces, refuse deals and boards, and boom poles. The mill is also equipped with four "Dunbar" shingle machines each with a capacity of fifteen to seventeen thousand shingles per day.

The mill is operated with steam power; the engine being 300 h.p. The boiler house is built of brick and is separated from the mill proper, thus ensuring safety from fire. A part of the sawdust and refuse is used for fuel, the remainder being conveyed by chain to a furnace situated a safe distance from the mill.

Mr. Frank Curran,
Manager of The Sumner Company.

A noticable feature is the taste shown in the mill yard—the piles being neat and well arranged. In connection with their shipping the company have a large tug boat for towing lighters to the vessels laying out in the harbor, towing logs to the mill, etc.

The Sumner Company own two hundred and fifty square miles of timber limits on three rivers, from which they derive their supply of logs for the Bathurst mill, in addition to which they own one hundred and fifty square miles on either side of the Intercolonial Railway a few miles south of Bathurst, from which they get most of their stock of sleepers and cedar poles. In the winter they run a single mill on these limits.

Mr. F. W. Sumner, the principal of the company, resides in the city of Moncton (of which he is at present Mayor), and conducts the largest hardware business in New Brunswick outside of the city of St. John.

The company also have a very fine general store at Bathurst village.

Mr. Frank Curran (of whom we show a portrait) is general manager of the lumber branch of the business.

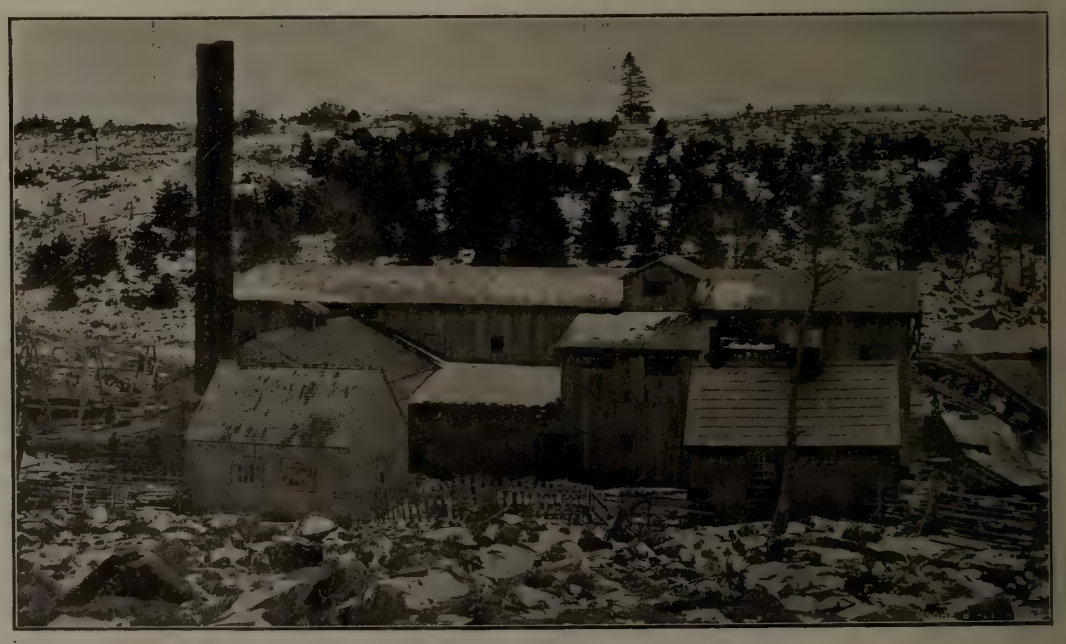
The Sumner Company's Mill and Deal Yard at Bathurst, N. B.

SWAN-DONOGH LUMBER COMPANY.

The Swan-Donogh Lumber Co., of North Tonawanda, N. Y., ranks among the foremost of the lumber firms engaged in the export trade. North Tonawanda is situated on the Niagara river, about ten miles above the world famed Niagara Falls, and is the point at which lake navigation ends and the Erie canal commences. It is the great distributing market for the forest products of North-Western Ontario and the states of Minnesota, Wisconsin and Michigan. The Swan-Donogh Lumber Co. have a dock frontrge of one-third of a mile on the Niagara river, with a piling capacity for an annual turnover of fifty million feet. They have recently added a bonded yard for handling Canadian lumber for export. Their planing mill, dry kiln and box factory are fully equipped with the latest machinery for the manufacture of all kinds of lumber, box shooks, mouldings and maple flooring, and have a capacity for turning out ten cars daily.

In the plant are included two sheds under cover of which two million feet of seasoned lumber can be stored and kept ready for immediate shipment. The company also operate a lime kiln, using for fuel the waste products of the factory, and do a large business in white lime of a superior quality for chemical and building purposes.

This company do an extensive trade with the United Kingdom, shipping constantly white pine and hardwoods in the rough or worked to order in any thickness. Their maple flooring is thoroughly kiln-dried and worked 7/8 and 11/8 inch thick by 2¾, 2¾ and 3¼ inches in width, and is bored, butted, hollow-backed and polished ready for laying. Box shooks and mouldings are made to order and schedules of sizes and prices will be furnished on application.



Saw Mill of Alfred Dickie at Ship Harbor, N. S.

The high standing of the company is well known, and the directors are men of large experience and with a thorough knowledge of the trade, whose personal reputation is a guarantee that all business transactions with them will be mutually satisfactory.

ALFRED DICKIE.

No name is more widely known in lumbering circles in Eastern Canada than that of Alfred Dickie, whose operations are in the province of Nova Scotia. The illustration on the previous page shows his new saw mill at Ship Harbor, where Mr. Dickie owns about 40,000 acres of timber lands, covered for the most part with spruce of the first quality. The past winter was the first in which Mr. Dickie carried on lumbering operations on this property, and the cut of logs was about 6,000,000 feet. The mill is modern and thoroughly equipped in every way for the manufacture of lumber; in fact, it is one of the best mills now owned by Mr. Dickie.

Mr. Alfred Dickie.

The location of the mill is both beautiful and convenient, the site being on a bank overlooking the harbor. In this harbor vessels can load two and one-half million feet of lumber to within one hundred and fifty feet of the mill, which is only ten miles from the open sea. The dimensions of the mill are 130 feet long by 40 feet wide; it has brick engine and boiler house 36 x 34 feet, containing three large tubular boilers and a 300 h. p. engine. The equipment consists of gang and rotary saws, patent edgers, lath machines, etc. The cutting capacity is 80,000 feet of lumber and 60,000 lath and palings per day. At present the equipment is being enlarged by the putting in of a pulp plant for the purpose of grinding the offal of the mill into pulp. The machinery for this latter purpose will be driven by water power, of which there is a never-failing supply.

In connection with the mill there are lathes, drills and every equipment of a first-class machine shop, so that all repairing and machine work is done within the mill. There is also a first-class electric light plant which permits of operations being carried on day and night.

The second illustration is a view of Mr. Dickie's new mill at Lower Stewiacke. About one year ago his large mill at that place was destroyed by fire. At that time he had a number of contracts on hand which required immediate execution, but with his usual pluck Mr. Dickie was equal to the emergency, and by the assistance of portable mills he succeeded in filling his contracts punctually. A new mill rose from the ashes of the old one in an incredibly short time, being in full running order within two months.

It will be interesting to give some figures of the quantity of deals to be manufactured by Mr. Dickie this year. His total output will be about 40,000,000 feet, of which 6,000,000 feet will be cut at Ship Harbor, 15,000,000 feet at Tusket (Dickie & McGrath); 6,000,000 feet at Stewiacke; 3,000,000 feet at Three Fathom Harbor; and about 10,000,000 feet by outside mills. Mr. Dickie is a man thoroughly qualified by education and practical experience to carry on in a most thorough and scientific manner a business of such magnitude.

Mr. Dickie has been fortunate in having associated with him men who would labor conscientiously in behalf of his interests. Mr. J. H. Gillis, his manager at Ship Harbor, entered Mr. Dickie's employ some four years ago, and since that time has had practically the entire oversight of his lumbering operations with the exception of those at Tusket. Last summer he superintended the building of the new mill at Stewiacke, and then removed to Ship Harbor to superintend the construction of the new mill there.

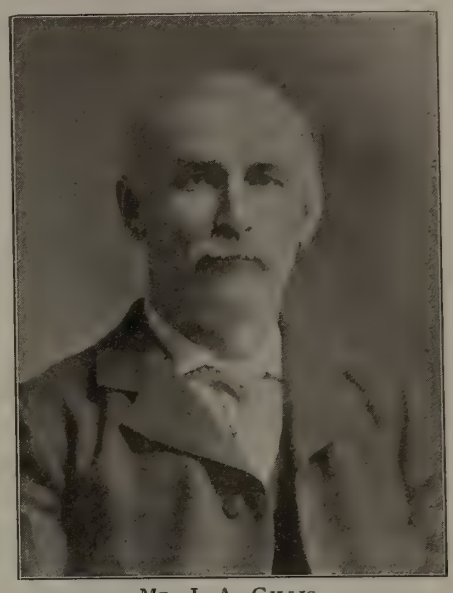
Mr. Alfred Dickie's New Mill at Stewiacke, N. S.

Mr. M. L. Killam, millwright for Mr. Dickie, has been in his employ about one year, and came from New York. He is thoroughly acquainted with millright work in every department, and has proven his ability beyond a doubt in the construction of the two mills at Stewiacke and Ship Harbor.

Portraits of Mr. Dickie, Mr. Gillis, and Mr. Killam are presented on this page.

KEENAN BROS.

The firm of Keenan Bros., of Owen Sound, Ont., are extensive dealers in hardwoods. In making their purchases they cover the territory between Windsor and Montreal, and consequently are in a position to supply anything in their line. Their specialty is soft elm or orham wood, although they have recently placed themselves in a position to supply maple flooring in long lengths, or flooring blocks, and solicit enquiries for dimension stock in maple, birch or elm. They are prepared to quote prices on birch, basswood, maple, rock elm, black ash, or soft elm, delivered to any point in Europe.



Mr. J. A. Gillis.

HYDRAULIC AND CIVIL ENGINEERING.

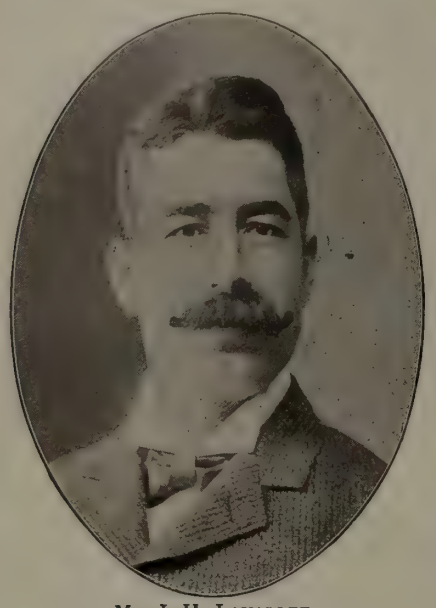
Attention is called to the advertisement of C. Errol LeMoine, C.E. & D.L.S., on page 12 of this issue. Mr. LeMoine has had a lengthy and thorough experience in the exploration and surveying of territory in the province of Quebec and in Newfoundland, and can consequently furnish accurate and reliable reports on timber lands, water powers, mining propositions, and fishing privileges. His office in Quebec is well equipped, and he and his staff are prepared, on short notice, to undertake hydraulic work, surveying and exploring. Special attention is given to the selection of pulpwood property, on which Mr. LeMoine can impart valuable information.

Mr. M. L. Killam.

Knechtel & Young, of Turtle Lake, Ont., propose moving their saw mill to Rosseau in the fall. They will considerably increase the capacity of the mill.

CANADA WOOD SPECIALTY COMPANY.

In December, 1899, there was incorporated the Canada Wood Specialty Company, Limited, with head office in the town of Orillia, Ont. The capital stock of $50,000 was subscribed by Orillia capitalists. The purpose of the company, as might be inferred from the name, is to manufacture lumber wood specialties. The company have erected at Orillia a three story brick factory, 50x150 feet, with large dry kilns in connection. Two floors are used for manufacturing purposes, and the third for store and shipping rooms. The machinery installed is the most modern an up-to-date that could be found. It is the in-



MR. J. H. LAVALLEE.

tention to engage in all kinds of special wood working and to manufacture stock lines of flooring in maple, birch, pine and spruce mouldings in all domestic woods, and turned goods of every description, including square, octagonal and hexagonal turnings, broom-handles, curtain poles, ends and rings, parquette flooring in maple, oak and birch, etc.

The company is under the able management of Mr. J. H. Lavallee, whose portrait appears herewith. Mr. Lavallee organized the Orillia Export Lumber Company in 1897, and this company, under his management, has succeeded in working up a large trade in pine and hardwood lumber throughout Canada, United States and Europe.

Mr. Lavallee started his career as a lumberman in the Ottawa valley twenty-three years ago, but he is yet a young man, being only 38 years of age. He has made several trips to England for the puprose of making himself thoroughly familiar with the requirements of that trade, and in addition to his willingness to give customers just what they purchase, he possesses an actual knowledge of what they require. We feel certain that intending purchasers will make no mistake in placing their orders with the companies he represents.

J. S. FINDLAY.

Perhaps no manufacturer in Canada has given more attention to the manufacture of specialties for local and export purposes than Mr. J. S. Findlay, whose hardwood lumber business has now been established for seventeen years. His mills and factory are located within the limits of the thriving town of Owen Sound, Grey County, Ont., and are devoted exclusively to the manufacture of hardwood lumber and specialties pertaining thereto. The annual output of lumber is upwards of 2,000,000 feet, and consists of maple, ash, soft and rock elm (orham), basswood, beech, birch, oak, etc. The mill is on the main line of the C.P.R., and shipping is facilitated by a switch placed at the mill yards. The plant is furnished with steam power generated by two 60 h.p. boilers, and the machinery is driven by two engines. The equipment consists of a very complete and modern sawmill plant, and machines for the manufacture of various specialties, such as octagonal and turned maple mangle rollers and blocks, maple flooring and flooring blocks, elm coffin stock and various other specialties for foreign markets. There is also a steam dry kiln in connection for thoroughly drying such stock as requires to be dry when shipped. Mr. Findlay has lately purchased extensive tracts of timber lands in close proximity to his mill, and is in a position to fill orders for the various lines he manufactures in a most satisfactory manner. He will be pleased to communicate with foreign importers of hardwood lumber and specialties.

THE SUTHERLAND, INNES COMPANY.

The Sutherland, Innes Co., Limited, manufacturers of cooperage stock, lumber and other wood goods, have their head office at Chatham, Ontario, Canada. They also have branch offices and agencies in New York city; New Orleans, La.; Mobile, Ala.; Liverpool, Eng.; Bordeaux, France; Hamburg, Germany; Rotterdam, Holland; Barcelona, Spain; Genoa, Italy; Bergen, Norway; in fact, in all the principal cities in the world. Their mills are situated in Ontario, Michigan, Ohio, Indiana, Mississippi, Louisiana, Arkansas and other points. The New Orleans office attends principally to the shipping of tight barrel stock, cottonwood box shooks, cottonwood and hardwood lumber. The Mobile office is being engaged in looking after shipments of pitch pine and gum, or what is known to the European market as satin walnut. The New York office attends to the shipment of goods from the northern and eastern mills, and also to the New York and Pennsylvania local trade of the company, which is very extensive. The Liverpool office looks after the interest of the company's clients in Great Britain and Ireland, while the Continental agencies look after the business of their own districts.

The company at the present time is making a specialty of high grade cottonwood lumber, in which they are doing an immense export business. This lumber, they state, is not as well known or as extensively used in Europe as it might be, but the trade is increasing yearly as the lumber becomes better known.

The company have warehouses at all of their mills, and in addition to this, carry heavy stocks at their warehouses at Duluth, Minn., Suspension Bridge, New York City and New Orleans, so that they are always in a position to supply their customers promptly with goods in first-class shipping condition. They make a specialty of high grade goods for export, and in fact control the export markets in their specialties, as their reputation is such that buyers can depend upon their goods being exactly what they represent them to be. Parties desiring barrel stock of any kind, lumber of any description, or in fact any kind of wood goods, cannot do better than write to The Sutherland, Innes Co., Ltd., Chatham, Ontario, Canada.

THEIR MILL AT RENWICK.

The mill of the Sutherland, Innes Company at Renwick, of which a view is shown, is specially built for the manufacture of lumber, staves and hoops, being fully equipped with dry kilns, storage sheds, shipping sheds, and a

MILL AT RENWICK OF THE SUTHERLAND, INNES COMPANY, CHATHAM, ONT.

tramroad running back from the mill into the timbered lands owned by the company. The saw mill is of the circular pattern, with a capacity of 25,000 feet per day, and the stave mill has a capacity of 40,000 staves per day, with a full set of the latest Greenwood pattern stave machinery made by Park Bros., of Chatham, Ont. The hoop mill has a capacity of 50,000 hoops per day, with a triple set of Ward Michael machinery made by Messrs. McKeough & Trotter, of Chatham, Ont.

The boiler house is of brick with iron roof, and has a battery of three 16x60 boilers, plenty of steam being necessary for steaming the hoops and stave timber and for use in the dry kiln, as well as for operating the engines.

There is one 50 h.p. engine for the saw mill and a 45 h.p. engine for the stave and hoop mills, and smaller engines for the fan in kiln, pumps, etc. This mill is probably the best in Canada for the purposes for which it was built, and is so constructed that it can run the year round. It takes from seven million to eight million feet of logs annually to keep the mill running. The products are distributed not only in Canada and the United States, but reach Europe, Asia and South America. There is no heading made at this mill, the heading department having been burned out, and the heading for matched cars from this mill is hauled in by teams from the heading mill a few miles away.

KER & HARCOURT.

The business of Ker & Harcourt, now carried on in Parry Sound, Ont., was first established in Streetville in 1850 by William Ker & Bros., in connection with their furniture factory, and in 1857 they added the spool and bobbin business which is now being conducted. On the death of the senior partner the business was conducted by John and Henry Ker under the style of J. & H. Ker. They moved to Toronto some years later, and carried on business on Adelaide street. Later some inducements in the way of cheap lumber and water power at Walkerton induced them to move to that place. The business was then given over to T. Ker, the older members retiring from active business, and J. Harcourt securing an interest in the same after being for fifteen years in the employ of the firm.

After eighteen years successful business in Walkerton, the firm decided to move to Parry Sound, where they have been established for two years. Of late they have been enlarging their plant, putting in many new and expensive machines. They employ about fifty hands, and turn out a large variety of work in the wood turning line, in addition to spool and bobbins, including druggists' boxes, dowels, handles, and wood turned work of all description.

THE ANDERSON FURNITURE COMPANY.

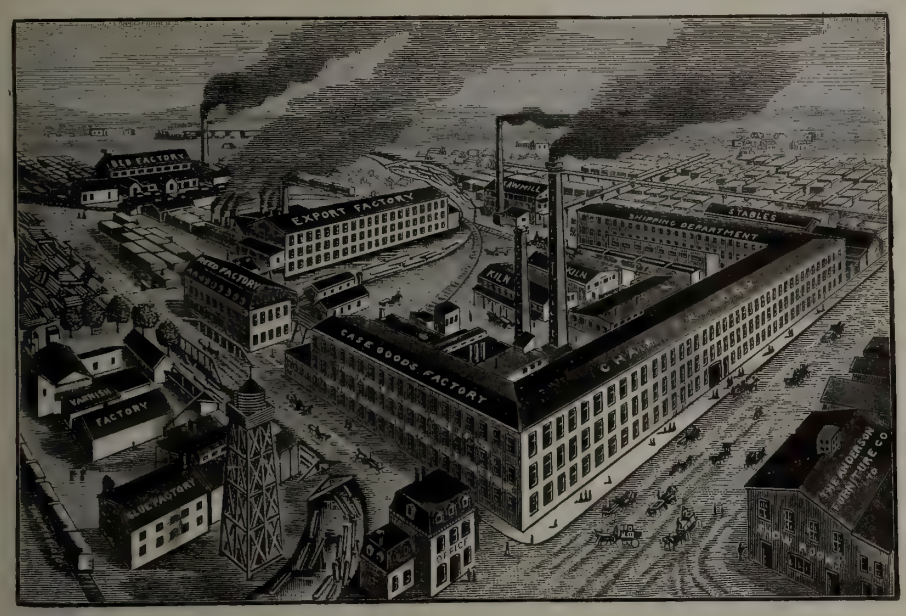
What is said to be the the largest furniture factory in Canada is owned by the Anderson Furniture Company, Limited, and situated in the town of Woodstock, Ont. The factory site occupies some 25 acres of land; the floor space of the building in actual use for manufacturing is in round numbers 200,000 square feet. In the yards are railway switches upon which a hundred cars could find a siding if necessary. The cars run to the doors of the drying kilns and the shipping rooms. Speaking generally of the equipment, it may be said that in no other furniture factory in Canada are the materials used in furniture making produced to such an extent upon the premises. The company is the maker of its own glue, varnish, rattan reeds and chair canes, importing directly from the source of supply all their rattan; they manufacture all their lumber in their own saw mill, in fact, they produce nearly everything at first cost, enabling them to put furniture on the market at the lowest possible cost.

They have a battery of boilers aggregating 900 horse power, and twenty-five drying kilns, with a capacity of a quarter of a million feet of lumber. Their saw mill is equipped with the best bandsaws obtainable, with a capacity of 50,000 feet per day; they have their own fire protection water works, their own photograph gallery and electric light plant, their own weaving plant for making wire spring beds.

The market of the Anderson Furniture Company is the world at large, and Canada in particular. They have representation in Australia, New Zealand, South Africa,

Great Britain and Ireland, in fact, in every country and clime where Canadian furniture can be sold.

With an able and efficient corps of foreman and skilled mechanics, consisting all told of 600 hands, they turn out about 2,000 chairs a day, and a vast amount of every kind of furniture, including 930 different styles of chairs and numberless different styles of tables, sideboards, bedroom, parlor and dining room suites, wire spring beds and mattresses, reed and rattan goods of every description, baby carriages, cradles and cribs, secretaries and chiffoniers. The carving room is equipped with the latest machinery for doing the finest work. The number and variety of the styles of the company's rattan goods are simply endless; their designs of sideboards, parlor, diningroom and bedroom goods are as bright and up-to-



Factory of the Anderson Furniture Company, Woodsock, Ont.

date as efficient and artistic designers can make them.

The shipping facilities of this company are perhaps unequalled by any other manufacturing concern in Canada. The shipping switch can accommodate forty cars, and such are the arrangements in the matter of obtaining cars that consignments of furniture can be shipped over almost any road in North America without trans-shipment. Side by side in the shipping room can be seen at all times consignments of furniture for both extremes of this continent, embracing every part of Canada, for England and Scotland, for South Africa and Australia, all testifying to the rapid growth of Canada's foreign trade.

Among the most recent improvements of the plant might be noted the following: The whole plant overhauled and the equipment revised up to date with the latest machinery, a new storage-room 300 feet long, the saw mill already mentioned, new and commodious drying kilns, besides a number of the latest and best machines obtainable for the chair and other departments.

It might be mentioned that special designers are employed in special order departments, and sketches and estimates will be furnished for special orders upon application to the company. Catalogues illustrating the manufactures of this company will be supplied to all applicants sending their business card.

THE TRACADIE LUMBER COMPANY.

Some four years ago Mr. Henry B. Foster, of Bangor, Maine, who for some years had been connected with one of the largest lumber operators in the Eastern States, concluded to inspect some of the lumber chances in New Brunswick, and finally deciding that the "Sweeney" grant, on the Big Tracadie river, was a good investment, purchased it and in 1897 began the erection of a mill. It being estimated that about 80 per cent. of the timber was pine, Mr. Foster decided to build a band saw mill, deeming it the least wasteful in point of saw kerf. The machinery was supplied and erected by the Waterous Engine Works Co., Brantford, Ont.

The site upon which the mill is built is an ideal one. It is on the northerly bank of the Big Tracadie, about three miles from its outlet into the Gulf of St. Lawrence. The mills stand upon a point at an abrupt bend in the river, but instead of the bank forming a regular curved outline, a short bay or nook runs a short distance inland at the angle, then divides, one running west, the other north—the former a half and the latter a quarter mile, and each about thirty rods wide with deep water. A row of piers across the corner of the main river holds a boom, so that the logs—either loose or rafted—are entirely protected at any time and in all weathers. The logs are rafted about six miles up the river, then floated to the mill on ebb tide.

The saw mill contains, on main mill floor, one "Allis" band mill, band resaw, patent edger and trimmers, jump-up slab saw, jump-up log saw, and "snap-dragon" sawing machine. The logs are taken in by patent haul-up. Live rolls and transfers convey the stock to any point desired. Steam kickers and niggers are used to handle logs on log bed and carriage.

The pine logs are all sawn into one inch boards—being cut by the large band saw into 2⅛ inches thick, then split into boards with the band resaw. This is done perfectly, and practically doubles the capacity of the mill.

All very crooked pine logs that are too large for the snap-dragon are sawn alive on the band saw and piled up to dry for box stock. In this way from one-third to one-half more can be taken from the log than if edged in the long lengths.

The system of yard piling is complete. The boards are delivered from the trimmer on a platform at the side of the mill, are sorted on two-wheel trucks and run to their respective piles.

The best logs of both spruce and pine are sawn into clapboards, being cut the proper length on the mill bed with the large jump-up saw. The bolts so cut drop through a slide and go to the machines on the floor below; two clapboard machines are run.

Stock that is short or not suitable for clapboards is sawn into box stock on the snap-dragon, as is also the small, crooked logs and boom poles; the latter and the slabs and edgings are put through a circular re-saw and paling machine in four-foot lengths and are used in the meantime for sticking the boards, and later they can be used for pickets.

The yard is well equipped. A wide platform level with mill floor runs parallel with mill across the water front of piling ground. At right angles other platforms, alternating with railway tracks, are run, on each side of which the boards are piled. The foundations of the lumber piles are set with a spirit level to ensure uniformity. At present there is about three miles of platform, and the piling ground covers about forty acres.

Last year the company erected a complete modern box mill, altogether apart from the saw mill, except the steam to run an engine of 125 h.p., which is the motive power. The machinery in the box mill is the latest and most up-to-date that could be obtained. The cutting off and edging of box stock entails a great deal of manual labor, and to make the work as easy on the men as possible, and at the same time get more and better work, the sliding tables on the machines, wherever possible, are made with ball and roller bearings, and all are so arranged that each process advances the work with the least possible amount of handling.

Adjoining the box factory there is a building fitted with planers and trimming saws for finishing up the clapboards. The sawn stock is all air dried before being finished; after being finished the clapboards are housed ready for shipment. All the edgings and trimmings of box stock is "hogged," that is, put through a machine that cuts them into small pieces, which, with the sawdust and shavings, are conducted through a system of galvanized iron piping to the boiler house and fed automatically to the furnaces. The sawdust from the different machines in the saw mill is also conducted to the furnace, and with the box factory refuse makes an excellent fuel.

In connection with the mill the company have an hotel, the accommodations of which are equal to the average first class country town hotel. A large number of the employees board in it, and there is an air of neatness and cleanliness about it that is refreshing. The example set by the management in having the surroundings neat is emulated by the men employed, which is not only seen in the hotel but in all their work.

A large steam fire engine, with capacity of 1,000 gallons per minute, is placed outside the mill with a plentiful supply of hose to reach to any part of the premises. The Gulf Shore railroad—a branch of the Caraquet road—has its terminus at the mill, over which the company ships its products. The company have ample territory to draw their supply of timber from for a long time, with a drive not exceeding thirty miles on the Big Tracadie river.

The capacity of the saw mill is ten million feet, and of the box mill four million feet per annum. Mr. Henry B. Foster is general manager, and Mr. R.H. Wing superintendent. These gentlemen have had large experience in lumber and box manufacturing in the State of Maine, and both carry the necessary enthusiasm into the business to make it a success. Mr. Foster is also interested in a horse stock farm.

THE LACHUTE SHUTTLE COMPANY.

A somewhat unique industry in Canada is that of the Lachute Shuttle Company, of Lachute, Que., manufacturers

Saw Mill and Box Factory of the Tracadie Lumber Company, Tracadie Mills, N. B.

of shuttles, bobbin and spool tubes, skewers, picker sticks and cloth rolls for use in cotton and woollen mills. This company have also just installed machinery for the manufacture of broom handles, dowels and excelsior, and employ about sixty hands. The business was originally started by David Hambleton about fifteen years ago, and was afterwards run for about ten years under the name of John Hope & Company. The Lachute Shuttle Company took over the business about one year ago and have been increasing it ever since. At the present time they have orders booked to take the output of their factory for the next six months, but are always pleased to give quotations. The mill machinery is operated by steam and water power, the latter being quite sufficient to double their present capacity, which it may be necessary to do in the near future.

TIMBER PROPERTIES FOR SALE.

Mr. Thomas Coolican, timber broker and financial agent, Quebec, Canada, is authorized to offer for sale a large lumber establishment controlling nearly 700 square miles of timbered lands, water powers, saw mills, stores and other equipments. As there is an inexhaustible supply of spruce and balsam on this property, it offers unequalled advantages for starting pulp and paper industries. The shipping facilities are excellent, being favored by railway and ocean transport. Mr. Coolican has also on his list other valuable timber locations, quarries, sea-island moss for upholsterers, etc. His announcement will be found on page 7.

THE NORTH PACIFIC LUMBER COMPANY.

Prominent among the large manufacturing firms in British Columbia is the North Pacific Lumber Company, of which Mr. J. M. Foitrais is the general manager. The mills being located at Barnet, on Burrard Inlet and the Canadian Pacific Railway, affords the company excellent shipping facilities. A view of the mills is shown on this page.

The output of the mills is very large, and consists of fir, cedar, and spruce lumber and timber, both rough and dressed, a specialty being made of dressed dimension timber. The timber planers face up to 24 inches by 30 inches. The company are also in a position to supply car and ship material, box shooks, sash and door stock, and other manufactures of timber, and solicit correspondence from buyers. Their announcement will be found on another page.

MILLS OF THE NORTH PACIFIC LUMBER CO. AT BARNET, B. C.

LUMBERING OPERATIONS IN THE EASTERN PROVINCES.

[Correspondence of the CANADA LUMBERMAN.]

Price Bros. & Company, Quebec, have purchased the timber limits and mills of the Rimouski Lumber Company at Rimouski, and are preparing to build a large steam saw mill just below the Intercolonial Railway bridge, at the mouth of the Rimouski river. The mills of the Rimouski Lumber Company are run by water power and are situated about two miles up the river. There are eight shingle machines, a rotary saw and a planer in the mill. After the new mill is built the old one will be used exclusively for a shingle mill. The company own about three hundred and fifty square miles of limits on the Rimouski river. Mr. Seale is general manager of the company's mills on the lower St. Lawrence.

John Fenderson & Company, Sayabec, have been improving their yard facilities by building elevated platforms. The lumber is taken up from the mill by carrier chains and deposited on a table, where it is sorted on two wheel trucks and then run out to the respective piles. The firm have also put in a very complete system of fire protection ; two inch iron pipe was laid through the yard, with hose connections where convenient, the whole system being operated by a powerful steam pump. They are now running to full capacity on lumber, shingles and lath. Mr. Charles Fenderson is superintendent.

J. & P. Nadeau, Port Daniel, P.Q., have a new shingle mill equipped with three "Dunbar" machines, and are turning out good stock.

Thos. J. Caldwell, New Carlisle, P.Q., has a saw and shingle mill seven miles out of town, but is not operating it during the summer. He is building a planing mill in the town and expects to have it ready for work by 1st September.

R. J. Miller, Carleton West, P.Q., has a steam saw and shingle mill which he operates in the summer season. He has a winter mill at New Mills, N.B., also.

New Richmond Lumber Co., Limited, New Richmond, P.Q., are taking out only about three million feet of spruce lumber this season. They also supply cedar for three shingle machines run by James Starrak. Mr. Wardeoper is manager of the mills.

R. H. Montgomery, New Richmond, has a rotary saw mill and will saw about three million feet during the season. He has fine timber limits on both Grand and Little Cascapedia rivers.

Nadeau & Sons have a steam saw and shingle mill at Grand Cascapedia—seven miles up the river. Their sash and door factory was burned, and as yet they have not decided on rebuilding.

George McKeen, of St. John, N.B., has a fine steam saw and shingle mill at Nouvelle, P.Q. The mill is a rotary and has a capacity of thirty thousand feet per day. There are five "Dunbar" shingle machines with a combined daily capacity of eighty thousand shingles. C. B. Dever built the mill the past winter. Mr. W. K. McKeen is superintendent.

David Richards, Campbellton, has made a number of changes and improvements in his mill. During the winter he added three "Dunbar" shingle machines and also an engine to run them. He now manufactures lumber, lath, shingles and clapboards. The mill is very conveniently arranged.

George Moffatt, Dalhousie, has added a rotary to his gang mill, for sawing timber and dimension stock.

F. R. Mooneault & Co., Sayabec, have purchased a limit at St. Moise and intend building a saw and shingle mill there this season. They will remove the machinery of their mill at Sayabec and add to it, making three shingle machines and a rotary.

King Bros. & Co., Ltd., Cedar Hall, have added a shingle plant to their saw mill, and are now running four "Dunbar" shingle machines. Cedar Hall is a pretty village on the westerly side of Lake Metapedia, about midway its length, which is fifteen miles with a width of about two miles. It was on this lake, within sight of the mill, that the lamentable boating accident occurred a few weeks ago in which Mr. James King, president of the company, lost his life. Of a party of six people in the boat not one was saved. Mr. Nowlin is manager for the company at Cedar Hall, and his wife and only child were in the party. The company have saw mills in a number of places throughout the province of Quebec, and are also largely interested in asbestos mining at Thedford Mines. Their head offices are in Quebec city.

CANADIAN FORESTRY ASSOCIATION.

The report of the first annual meeting of the Canadian Forestry Association, held at Ottawa March 8th, 1900, has been issued. It contains a complete report of the proceedings of the Association, a st of the officers, and some excellent forest scenes. The objects of the association are also fully set out. Persons interested in forestry should identify themselves with this association, which promises to do much towards the preservation and perpetuation of our timber supply. Applications for membership should be sent to Mr. R. H. Campbell, treasurer, Department of Interior, Ottawa.

By September the sulphite mill of the Riordan Paper Company at Hawkesbury, Ont., will be turning out eighty tons of pulp per day. Shipments are now being made to England as well as the United States.

Persons interested in the timber trade who are not already subscribers to the CANADA LUMBERMAN are reminded that the subscription price throughout Canada and the United States is only one dollar per year. The price to foreign countries where extra postage is charged is two dollars per year. For this sum both weekly and monthly editions are given. A subscription form will be found in each paper for the convenience of persons who wish to become subscribers. Attention is also directed to the "Wanted and For Sale Dapartment" of the weekly edition, which has been found of great service to those who have availed themselves of it. It is an excellent medium for persons who have lumber or second-hand machinery for sale, or desire to purchase same, and almost invariably brings results.

Foreign Markets for Canadian Timber

GREAT BRITAIN.

Dear Sirs,—The general timber trade practically runs itself and is conducted through certain established channels. It is rather the trade in manufactured or partly manufactured articles that has come before my notice within the past year or so, and in these directions I should judge Canada has great opportunities, and also, from what I hear, a great deal to learn before these same opportunities can be taken due advantage of.

Probably due partly to temporary trade activity, British importers have not been able to obtain their customary supplies from the United States and elsewhere, and enquiries have been addressed to this office, often by influential firms, for the names of Canadian manufacturers of such articles as broom, tool and implement handles, mouldings, doors, chair parts, furniture, skewers, dowels, etc., all goods for the production of which Canada possesses great natural facilities. Names have been supplied, correspondence has ensued, and in some cases British firms have sent out representatives to examine into the possibilities of arranging for supplies of goods.

There are, as has been mentioned in previous letters, a certain number of Canadian manufacturers who have, through personal enterprise and a careful investigation of this market, established a steady trade. Apparently, however, their output is fully arranged for and they are unable to entertain offers of additional trade. As regards the majority of the others who might under certain conditions develop export trade, my general information is to the effect that many are at present debarred from doing so from various reasons, amongst which may be noted: (1) Lack of sufficient capital to permit of the production of goods upon the considerable scale necessary for a profitable export trade; (2) the absence, from the same cause, of the latest and most improved machinery as used in the large United States mills and elsewhere; (3) ignorance of the requirements of the United Kingdom market in the way of patterns, shapes, etc., in general use.

I need hardly say that the above does not refer to the Canadian manufacturers who possess an established trade, but to many who have taken up the question of possible export with United Kingdom houses who have made enquiries through this or other Canadian commercial agencies. I persume that it is largely for their benefit that you are making the present enquiries, and even if not algether palatable, the views of British importers as they have been expressed to me, must be of some practical value.

Personally, I should judge that Canada is destined to develop a very considerable trade with this country in goods of the nature indicated. Something can be achieved by correspondence, but my advice to anyone possessing the plant and capital necessary for export trade would be to pay a visit to the United Kingdom and devote a few weeks to studying its chief centres. A personal knowledge would then be obtained not only of the kind of goods in use in this country, but, further, of the business methods in vogue, a very important detail. Many Canadian manufacturers possess, I am told, a very erroneous idea as to the immense quantities of goods handled by the large importers,and write to United Kingdom houses as if they could supply half a dozen different lines, whereas one of these importers would often take the total output of half a dozen large factories devoted mainly to the production of a single line. Another highly important matter is for the Canadian exporter who has neither a permanent nor temporary agent in this country, to place himself in the hands of one really first-class house instead of trying to carry on transactions with a dozen or more smaller buyers. There are in most of the large cities influential firms who possess an excellent connection and are, further, familiar with the features of the particular country of origin of the goods, and their services are invaluable. Some of these large house are also prepared under certain conditions, to render valuable financial assistance to manufacturers who require it.

For the benefit of the smaller manufacturers and the education of the Canadian workman, I have often thought that a most practical step would be for a journal such as yours, or some central authority, to send over a representative to purchase and collect current samples and models of the woodenware and manufactures of wood in demand in the United Kingdom, and to exhibit the collection at the principal Canadian fairs, exhibitions, etc. It is quite obvious that in a conservative country like this, people will have what they want, and it is absolutely a waste of time to endeavor to sell them anything different, even if, as occasionally happens,the article offered is a superior one.

I have been able to place a good many United Kingdom and Canadian houses in communication, and am pleased to say that in many cases the preliminary information furnished has been advantageously followed up. I am always pleased to receive such enquiries and can generally place correspondents in touch with first-class houses. There is, however, no road to success save by personal application and enterprise, and if Canadian exporters of manufacturers of wood will study the requirements of this market in an intelligent manner, the result should amply repay the initial trouble.

Harrison Watson,
Curator Canadian Section Imperial Institute
London, England.

REPORT OF THE HIGH COMMISSIONER.

Much valuable information is contained in the last annual report of the High Commissioner of Canada to the Department of Trade and Commerce. Of the market in Great Britain for wood specialties he says:

BROOM HANDLES, ETC.

Inquiries frequently reach me from English and Scotch houses who are desirous of importing broom and tool handles, dowels and other wooden ware of various kinds, and I have been able to place a number of my correspondents in communication with Canadian lumber firms and others who are in a position to supply the goods. The following information has been supplied by a firm engaged in the import of wood handles to this country, and may prove of use as a guide to those who may contemplate engaging in the trade:

"Broom Handles in Basswood or White Pine:—Dimensions, 50 inches by 1⅛ inches. The diameter to be the same throughout the length and not tapered like the broom handles in use in Canada.

Quality.—They must be well sandpapered and graded as follows:—First, all white wood and free from knots; second, free from knots but with some discolourments; thirds, with some knots.

Quantity.—We buy by the carload and the proportions of the different grades should be: Firsts, about 50 per cent.; seconds, about 35 per cent.; thirds, about 15 per cent.

Importers here have some reason to complain of unfair grading, and it will pay millers to be scrupulously attentive to this matter.

Hoe Handles in Basswood or White Pine:—Dimensions—60 inches by 66 inches and 72 inches by 1¼ inches. Quality and grading same as broom handles.

Irish Shovel Handles in Basswood:—Dimensions.—72 inches by 1⅝ inches.

Quality.—One grade only—the best. These handles are used for heavy work and knots weaken them too much, therefore handles having knots in them must be discarded and not shipped,as they are only good for firewood here. This, of course, increases the cost of this handle, but that cannot be helped.

Packing.—All these handles are put up in bundles of 12 dozen, sewn in cheap sacking to prevent them being soiled.

Prices must be quoted, freight and insurance paid to the following ports:—Glasgow, Liverpool, Dublin, Belfast, Londonderry and Cork. The railroad agents quote through rates from any station in Canada. It is quite useless to quote f. o. b. cars, as we cannot ascertain the freight here. We might point out that when selling freight and insurance paid it is not necessary to prepay the freight. The freight can be made payable here, but of course in that case the amount of the freight must be deducted from the invoice.

Payment.—We will pay cash against bills of lading and insurance policy for two-thirds of invoice amount, balance to be remitted promptly upon receipt and well-finding of the goods. As we get to know the seller we would of course pay the full amount against documents."

It may be mentioned that other inquiries have been received from time to time from firms requiring laths for Venetian blinds, plasterer's laths, wooden mantel-pieces, spruce wood for boxes (planed and cut to size), spruce bars, hickory for golf sticks, vehicle wheels, 3-ply hardwood (veneers), blocks for paving, rings for sieves, hardwood for furniture, wood meal or wood flour, staves for barrels, birch and maple dowels, fir props for mining purposes, walnut boards of good quality, wooden screws, doors, sashes and moulds, white birch caps for mucilage bottles and brushes for the same.

SPOOL WOOD.

Occasionally I receive inquiries from those who desire to supply the large thread and cotton firms in this country with spools and spoolwood. Generally speaking, these people purchase spool wood direct, although some of the business is done through agents. Several of the most important, like J. & P. Coats, Ltd., Paisley, Clark & Co., Paisley, and Jonas Brookes & Co., Huddersfield, have purchased largely from Canadian sources in the past, but owing to various causes (principally perhaps the careless selection of the wood), they have been more inclined to purchase from American shippers.

Dear Sirs,—The timber products for which a large demand exists in this country, and towards which the careful attention of Canadian manufacturers and exporters may very profitably be directed, are imported from the Dominion of Canada in great and increasing quantities. They comprise wood manufactured from almost every description of tree grown in the colony, embracing oak, elm, birch, ash, hickory, etc., and also the different varieties of the pine, yellow, red and white, for all of which a ready and desirable market can almost invariably be found on this side. So numerous and diverse are the dimensions used by our consumers that it would be impossible within the limits of a short notice like this to specify them at any length, but we may say briefly that the following are the principal sizes shipped to the Clyde ports, in the various wood goods, with the current prices attached, viz:

Oak—Logs of first class quality,the dimensions of which run from 25 ft. and up long,averaging from 50 to 70 cubic feet per log, are quoted at 2s 10d to 3s 2d per cub. ft.; second class wood at 1s 10d to 2s 2d per cub. ft.

Elm—First class wood, from 45 to 50 feet average per log, is quoted at from 3s to 3s 3d per cubic foot.

Birch, in logs from 8 feet and up long by 13 to 20 inches square, price 1s 9d to 2s for 15 to 17 inches average diameter; 1s 5d to 1s 6d for 13 to 14 inches average diameter. It should be noted that there is always a good market for birch planks and boards, the sizes of the former running from 8 feet upwards in length and from 6 inches and up wide by 2 to 5 inches thick. Boards of similar lengths and widths by 1, 1½ and 1¾ inches thick.

Ash logs from 10 feet and up long by 8 inches and up diameter with bark on, used for cartwright purposes, prime logs, 1s 10d to 2s 3d per cubic foot, according to size and specification. For cabinet work, 12 feet and up long by 16 inches and up, with bark off, hewn almost square, price from 2s to 2s 3d per cubic foot.

Hickory—Second growth, in the round, with bark on, 10 feet and up long by 8 inches and up diameter, price from 1s 8d to 2s 6d per cubic foot, according to quality.

Square and Waney Yellow Pine Logs, under 23 feet long, and averaging 50 to 100 cubic feet per log, over 23 feet long, averaging 60 to 100 cubic feet per log, are quoted at 2s 8d to 2s 10d for prime wood; second class wood, 1s 8d to 2s 2d per cubic foot.

White Pine Deals, graded in four qualities, numbered

1st 2nd, 3rd and 4th. Boards, first quality, from 12 ft. up x 12 in. and up x 3 in., from 3s 3d to 3s 6d per cubic foot; undersized, first quality, 12 ft. up x 7-11 in. and up x 3 in., from 2s 3d to 2s 7d per cubic foot; boards, second quality, from 12 ft. up x 12 in. and up x 3 in., from 2s 4d to 2s 6d per cubic foot; undersized, second quality, from 12 ft. up x 7-11 in. x 3 in., from 1s 10d to 2s per cubic foot; regulars, third quality, from 12 ft. up x 11 in. and up x 3 in., from 1s 4d to 1s 6d; undersized, third quality, from 12 ft. up x 7-10 in. x 3 in., from 1s 1½d to 1s 2d per cubic foot; regulars, fourth quality, from 12 ft. up x 11 in. and up x 4 in., from 1s to 1s 1½d per cubic foot; undersized, fourth quality, from 12 ft. up x 7-10 in. x 3 in., from 11d to 1s.

WHITE PINE SIDINGS—The sizes constantly in demand are 1, 1¼, 1½, 1¾ and 2 inches, more especially 1½, 1¾ and 2 inches thick. These usually run 12 to 16 feet long by 8 inches and up wide, average 11 inches, and the price is 2s 3d to 2s 8d per cubic foot.

SPRUCE DEALS—The dimensions of these are from 9 to 18 feet in length by 6 inches and up broad by 3 inches thick, and the price, which depends on width and quality, is from 10½d to 13d per cubic foot.

RED PINE DEALS are very much enquired for, and the sizes going into consumption are 12 feet and up long by 7 to 12 inches wide by 3 and 4 inches thick; price, 1s 9d to 2s per cubic foot.

CANT & KEMP.

Glasgow, Scotland.

DEAR SIR,—We take it that our Canadian friends are wishing to do an export trade in the manufactured article rather than in logs, also that they are desirous of doing the trade in such manner as will bring them the most profit and of a permanent nature. A permanent trade means that they must gain the confidence of their clients.

Our experience with American hardwood is that there is no reliance to be placed in large ash logs, i.e., 16 to 20 inches diameter, because of the dead wood that is shipped, and which may amount to 20% of the bulk, or even more. Consequently, timber merchants in England feel that their only security is to buy timber of second growth, which means small trees that throw out but little stuff, except when sawn into very small scantlings, and which is very wasteful.

In England we do not buy what we term "low meadow" ash if we know it, because that is sure to dry up light, same as some of your ash (that is not dead wood). Neither do we buy any ash plank that is artificially dried.

As regards exporting ash lumber, partly manufactured, if your lumbermen wish to cater for the general market, they cannot do better than saw it into planks 3, 3½, 4 and 4½ inches thick, as they would be sure of ready sale at fair prices, even if sold by auction. If they wish to supply scantling it would be too risky unless sawn to order, which means supplying the consumer direct. In order to create a trade of this kind it would be necessary to gain the confidence of each individual consumer, if he has to pay cash down on your side of the Atlantic before shipment, which, by the bye, is, I imagine, the only workable system, unless lumbering firms open out their own establishments on this side the same as your other manufacturing firms do, and which our export experience (of 40 years) teaches us to be the right course; or in other words, follow out the old adage, "If you want anything done well go and do it yourself," don't trust to agents solely.

Hitherto the principal importation into England from America has been to the west coast, to the neglect of the east side of this country, whereas the railway freights in England are almost prohibitive to the effecting of sales from Liverpool, although freights from America to Liverpool may be more favorable than to other ports. Consequently there is undoubtedly an opening for enterprising Canadian lumbermen to establish themselves at eastern ports and import entire cargoes, which might include all kinds of lumber.

My remarks, although thus far confined to ash, apply pretty much to oak, and here I would remark that all hardwood lumber (barring birch), whether in planks or scantlings, would be best stacked 12 months in the open air before shipment, and would also pay good interest for the trouble taken. Whitewoods, in 1-inch boards, ready planed, are a good sale, because they are naturally already seasoned ready for use; in fact, last November I myself bought £350 worth of canary whitewood (American), and I know other manufacturers do the same. Spokes sawn to special dimensions should also be in demand where the consumer is catered for, even if not turned up ready for use, but must be of good quality and sawn from small trees.

As regards the present demand for lumber generally, I imagine that we have seen the maximum for a time. The great "boom" of the last 18 months was too artificial, being the result of unsound and fleeting causes, consequently likely to produce a slight reaction for a time at least.

The price of iron to a certain extent influences the consumption of lumber, but a slump in the price of iron may be nearer than the iron manufacturers desire, but will not be able to stop. The tendency is towards substituting iron for wood wherever possible, because one scarcely knows what timber costs, there being so much waste, and then the capital which it sets fast is far greater than in iron, which is procurable much more easily if one's stock of materials runs short; whereas to buy seasoned hardwood, it is almost impossible to get it even at prohibitive prices.

In our business we have to hold a 3 or 4 years' stock of timber because we dare not force the seasoning of hardwood artificially.

Yours truly,

Suffolk, England, JAMES JOSIAH SMYTH.

DEAR SIR,—Wood goods are so thoroughly well known to your readers that it makes it somewhat difficult to give you any details of interest. It is, of course, quite unnecessary to tell you that Canadian lumbermen obtain a large share of this country's business in timber of all descriptions supplied by your country, and in cut timber particularly there has been a great development of late years. As to wood specialties you mention, we presume you refer to finished stock, such, for example, as doors, architraves, etc., but this is hardly in our line of business, as we supply the raw material to buyers, who manufacture in their mills here the finished article. Naturally enough, our buyers are not anxious to develop the trade in manufactured goods, but it is year by year becoming a more prominent feature in the imports from Canada and America to this country.

If we might venture an opinion between the Canadian and American timber exporters, we would say that the former are more conservative in their operations than the latter, which is particularly noticeable in cut timber. American shippers were not slow to observe that instead of in all cases shipping timber in the log, they could, with more advantage to themselves and also to the buyers here, ship it in lumber, and in this manner they have practically monopolized a trade which was formerly in the hands of Canadian lumbermen. To give an instance of this we might mention oak, which the Canadians ship in the log mostly, whereas the Americans cut the logs into the finished sizes required by railway companies here—the chief consumers of it. This is an enormous trade now, and must be a corresponding loss of trade to your country. The same remarks apply to oak cut into boards of all thicknesses from one-half inch upwards, suitable for the furniture and similar trades here. Ash also used to come almost entirely from Canada, now the bulk of it comes from America. This further applies to walnut, hickory and butternut (poplar), all of which now come almost entirely from the United States, and represents a large import.

As you will gather from our remarks, our opinion is that to retain a larger share of the timber trade of Europe, Canadian lumbermen must give more attention to the lumber requirements rather than the log requirements of buyers here.

EDMISTON & MITCHELLS.

Glasgow, Scotland.

DEAR SIRS,—Until the last three or four years the imports of timber from America to the east coast were limited chiefly to cargoes of white pine, oak, birch and ash timber, with some white pine deals and cargoes of pitch pine lumber, sawn and hewn, with some pitch pine deals, in both cases deals as stowage. Spruce formerly was limited to the west coast and London chiefly, because manufacturers would stick to the old style of sending these in short lengths, and mostly consigning them for sale by auction, never knowing either what prices they would get or what the charges would be. However, in later years there seems to have been others besides ourselves who have endeavored to educate shippers to take contracts for spruce deals, battens and boards (we believe even spruce flooring would go), of fair average lengths c.i.f., and we are advised that many thousands of standards have been sold to this neighborhood. The advantage to shippers ought to be clear, as there is no risk of auction prices or of landing charges.

In round figures, the dimensions required (there may be others) for well-sawn properly dried square spruce for east coast ports, are: 2½x11, 3x11, 3x9 inch, chiefly 11 inch, not under 16 ft. average, say 9 to 24 ft.; 3x7, 2½ x7, 2½x6½ in., not under 15 ft. average, say 9 to 24 ft.; 2x6, 5, and 4½ in., not under 14 ft. average, say 9 to 24 ft.; 1x11, 9, 6 and 7 in., not under 14 ft. average, say 9 to 24 ft.

Prices probably, if separated, instead of, as has been usually, all-round at one price, might be: 1st deals, £10 c.i.f.; 2nd battens, £7 5s c.i.f.; 3rd scantlings, £6 10s c.i.f.; 4th boards, £6 10s c.i.f. But the market may go down, as it has been driven up pretty high.

There is certainly an opening at present for red pine deals, battens, and flooring, if shippers would only make what is wanted, say 3, 4 x 11 and 9 in., not under 16 ft. average; 3x7, 2½x7 and 6½ in., not under 15 ft. average. Flooring, tongued and grooved, 1¼x7, 1x7, ¾x7 in., chiefly inch, would no doubt sell also, and deals and battens still better, if they were sorted, 1st and 2nd as one quality, and 3rd and 4th as another.

For the last forty years it has been true that when anything became too dear something else has been used. The same law of supply and demand still exists, and it seems that with communications extending changes are more rapid, but we have seen falls from 20 to 100s per standard c.i.f., and may see something thereof again.

For the benefit of exporters we can add that 3 and 2½ x 11 inch, 150 standards each, are coming here from Black Sea, 17 to 18 feet averages. This we have not heard of before but it only confirms the above paragraph.

Yours truly,

"IMPORTER."

GERMANY.

DEAR SIRS,—For the German market the dimensions of ¾, 1, 1¼, 1½, 1¾, and 2 inch spruce are mostly in demand, only lengths of 10 ft. and up, selected clear, 6 in. widths and up. There is no demand for 1¾ in. thick boards either in American or in English trade, but large quantities of this dimension are required in Germany and all over the Continent. American manufacturers do not like to produce this thickness, therefore there is a difficulty in importing American lumber. Mills on the Gulf of Mexico in the Eastern and Southern States of the U.S.A., have lately found that a continental trade is only possible in producing 1¾ inch stock. I am quite sure that spruce will find a good market in Germany, but only first quality in above quoted thicknesses, particularly 1¾ and ¾ inch stock.

For myself, I am willing to take large quantities of spruce 1¾ and ¾ inches thick, first and second qualities, clear 1½, 1¾ x 5 and 6 inches, 10 feet and up. I have already had correspondence with Canada, but without success. A good export trade with Germany in Canadian lumber to all continental ports in large quantities is possible as soon as manufacturers adopt continental dimensions.

AD. MESSERSCHMITT.

Kastel Mainz, Germany.

WEST INDIES.

DEAR SIRS,—The principal imports of white pine lumber in this market are from the Maine ports of the United States, and a large proportion of Canadian wood brought through in bond to New York, also pitch pine from the southern section of the United States. The class of lumber required is shown by the following specification furnished by a leading lumber merchant:

White pine boards, in lengths from 12 to 16 ft. long by 1 x 12 in. A large quantity of 1 in. white pine is used, grooved and tongued, planed 1 and 2 sides; square edged, planed 1 and 2 sides.

White pine planks, in lengths from 12 to 16 ft. long by 1½ and 2 x 12 in.

Spruce pine boards, various lengths, 1 in. thick, 6 in. wide and upwards.

Hemlock is not liked in this market.

Pitch Pine Boards—Flooring boards, 6 in. wide,

grooved and tongued, planed 1 and 2 sides, 1, 1¼ and 1½ in. thick. Rough boards, 10 and 11 in. wide, 1, 1¼ and 1½ in. thick, long lengths preferred.

Pitch pine planks, long lengths, 2 x 12 in. and 3 x 12 in.

Pitch pine scantling, varying in size from 2 x 3 in. to 12 x 12 in., smaller sizes more used.

The above should be of good wood, more especially pitch pine, to be free of sap. Most importers of pitch pine forward their own cargo specifications for market requirements.

Yours truly,
EDGAR FRIPP,
Commercial Agent for Trinidad and Tobago.

DEAR SIRS,—The lumber imported into this and the other Leeward Islands includes pitch pine scantling and flooring boards, white pine boards of the three qualities known as "New York," 1st quality Canadian shipping, and 2nd quality Canadian shipping, and spruce boards, both 1st and 2nd quality, but very little of the latter. As regards white pine and spruce boards, only the ordinary shipping widths and lengths are imported. Prices vary according to the state of the market, and are governed by the supply and demand in this and the neighboring islands, including Barbados, from whence cargoes are generally offered. It is not the practice here to import direct from Canada, so far as Canadian white pine and spruce are concerned. There is, however, a quantity of so-called "New York" white pine boards imported here from New York direct, by steamer. This lumber is superior in quality to the ordinary run of "shipping" Canadian, being, however, if I am rightly informed, Canadian lumber selected in New York. The same lumber could therefore be shipped from Canadian ports. The price paid for New York white pine is generally about $3 to $4 per foot more than for Canadian 1st quality.

Yours faithfully,
R. BRYSON,
Canadian Commercial Agent.

St. Johns, Antigua.

SOUTH AMERICA.

DEAR SIRS,—In recent years the forests of Southern Chile have been made to supply a great part of the local demand, but lumbering operations are primitive, and the moving of logs is considerably hampered by natural conditions, so for long or large timbers and good flooring stock the trade has to fall back upon Oregon Pine (Douglas Fir), which is imported from Puget Sound and Burrard Inlet in cargo lots. Formerly there was a considerable trade in white pine, whole or part cargoes, from New York and the St. Lawrence, but importations are now greatly diminished, and limited to straggling lots of 10 000 to 25,000 feet at a time, mostly "clear" or "good cutting up" stock. There is also a limited demand for white oak, ash, and black walnut for cabinet purposes, although native Rauli wood, which is fine grained and somewhat resembles Californian redwood, now enters largely into the local furniture trade, and the Rauli finishes nicely in imitation walnut or imitation mahogany.

All foreign lumber is subject to a heavy import duty, equivalent to about $4.65 per thousand feet. Ourselves and other merchants here are always keenly alive to any possibility of extending trade, and would long since have availed of Canadian lumber to a greater extent if the way was open to business, so we must confess that we see no prospect of developing the consumption of your lumber in this market.

W. R. GRACE & CO.

Valparaiso, Chile.

CORRESPONDENCE

EXHIBIT AT THE IMPERIAL INSTITUTE.

LONDON, S. W., July 11th, 1900.

Editor CANADA LUMBERMAN:

DEAR SIR,—Your article on the Canadian, and more especially the Ontario exhibit at the Imperial Institute, will be of great practical value if it induces Canadian business men to assist in making the present unequal display more representative of the great and varied resources of the Dominion. The industrial features of Ontario in particular are almost wholly lacking, and this at a time when, to judge by the very marked increase in commercial inquiries received at this office, the presence of exhibits of wooden ware, leather, paper and pulp, preserved goods, and many other lines in which export trade is being developed, would be of material benfit. There are, however, several inaccuracies in the article in question which call for explanation, if not correction. There are no specimens of Indian work in the Ontario court. Although the major portion of the fine collection of fruits has been here for some years, there are nearly 50 jars selected from the crops of 1899, as indicated on the labels. Some of the older specimens have certainly rather deteriorated, but the whole collection was examined only last winter by one of the largest fruit buyers in this country, and since then such specimens as he considers serviceable have been refilled with preservative liquid and those past redemption have been thrown away. This fruit collection has rendered yeoman service insofar that specimens have been lent to many agricultural and other exhibitions, where they have attracted attention to Canada's fruit growing resources. Probably it will be brought quite up to date in the near future.

Although Niagara Falls are represented by a dozen views—and the Falls have probably attracted more tourists to Canada than any other scenic feature—the writer has neglected to mention the presence of more than a dozen large photographs of vineyards, peach farms, etc.

Another feature of the fruit industry is further represented by part of the contents of a large show case of canned goods), fifteen of the Guelph Agricultural College, several of the Petrolia Oil Wells, the Sudbury Nichol Mines, and a number of the Ottawa Houses of Parliament, etc., whilst no reference is made to an exceedingly good mineral collection of some 500 specimens.

However, there can be no doubt that the display in the Ontario and also the Canadian sections is not what it should and might be. It is hoped that many of the exhibits now at Paris will subsequently be handed over to the Institute, and a number of Canadian business men who have visited London in connection with the Congress and other matters have promised their assistance in rendering the display more adequate. Every effort has been made by Canadians and others on this side interested in the welfare of Canada, to have the resources of Canada worthily represented in the capital of the Empire, but it is quite obvious that no satisfactory results can be obtained without the active co-operation of Canadian manufacturers, shippers and others associated with the development of Dominion trade.

Yours faithfully,
THE CURATOR.

AT THE PARIS EXPOSITION, 1900.

Messrs Joseph Owen & Sons, Limited, Stanley Saw Mills, Liverpool, have branches at London, Manchester, Leeds, Tunstall, Staffs. The business of the firm includes every variety of timber. They are large importers, selling wholesale at docks, and are manufacturers in all departments of the trade. While thus comprehensive, their specialty is probably in the supply of timber exactly adapted to the wants of railway and tramway carriage constructors and carriage builders generally. They have a connection with carriage builders throughout Great Britain and also on the Continent. With the latter place their trade has increased rapidly since the Paris Exposition in 1889, on which occasion they secured two awards. Their stand in this year's Exposition is No. 632, in Group vi. The exhibit, though small, being confined to a space of 12 feet by 10 feet, shows as much of the variety we have alluded to as possible. To show the large range of boards kept in stock we might say that the stand is lined with splendid specimens of Honduras Mahogany, Walnut, Wainscot Oak, American Ash and Birch, Figured Pitch Pine, Haurie Pine and Whitewood, effectively placed so as to contrast in colours and display the figure of the wood. The floor is paved with parquetry in Oak, Walnut, Sycamore, Yellow and Pitch Pine. On three of the walls of the interior of the stand (lined as described) are hung, artistically grouped, beut rims for wheels, carriage head and wings, car and cab bent shafts, carriage poles, spokes and felloes and Warner wheels. There are also Caspstan bars and handspikes as supplied by the exhibitors to the British Admiralty. A handsome Mahogany counter has been provided whereon are shown two Diplomas of the former Exhibition. Under the counter are Elm Naves of different designs, and over the entrance there are rims bent to various sizes and a stand of spokes. The space has certainly been utilized to the best advantage, but it is to be regretted that it is so limited as not to afford means of displaying the large planks of Ash, Oak and other timbers which it has long been the practice of the firm to exhibit at the Royal Agricultural and other shows in England where their allotments have been much larger.

The construction of the Crocker improved turbine is well shown in the fourth edition of the Jenckes Machine Company's water wheel catalogue. The various illustrations pertaining to the Crocker wheel show the adaptability of the turbine to the varying requirements and local conditions. The table of horse powers, which are guaranteed to be substantially correct, have been extended from 40 feet to 100 feet head. The figures are given for any wheel from 15 to 55 inches. There are also other valuable tables and rules which evidently have been prepared to meet the needs of the practical man and to facilitate the calculations and estimates required in connection with water wheel works. Diagrams of the principle methods of setting have also been inserted.

THE NEWS.

—The death is announced of R. W. Warne, saw mill owner, Hillgrove, N. S.

—It is reported that the insurance rates will be increased in the lumber district of Ottawa.

—As yet no steps have been taken to rebuild the Stetson & Cutler saw mill at Kingsville, N.B.

—J. Hickling, of Maxwell, Ont., proposes to rebuild his mill destroyed by fire on June 20th.

—Gilmour & Company, Limited, of Trenton, have been granted incorporation as a joint stock company.

—Wm. Playfair has recently bought the old Duncan saw mills at Lavant, and has removed to that place.

—McLachlin Bros., of Amprior, Ont., are refitting one of their saw mills for the purpose of cutting shingles and cedar ties.

—The Dominion Paving Company, of Toronto, is establishing a mill at Lindsay, Ont., for the manufacture of paving blocks.

—A factory for the manufacture of cooperage stock will likely be established at Glasgow, Ont. A Mr. Davidson is interested.

—Haley & Sons, of St. Stephen, N. B., are shipping box shooks to England. They employ 38 hands in their mill, and are doing a splendid trade.

—The First National Bank of Vancouver, B.C., is said to have sold the Michigan saw mill there to eastern parties, who will put in new machinery and increase the capacity to 100,000 feet per day.

—Jos. Howard, of Howard Station, Newfoundland, is organizing the St. George's Lumber Company. He owns 50 square miles of timber lands on the line of the Newfoundland railway, and is building a large steam sawmill.

—The insurance apraisers have fixed the insurance losses of the Hull Lumber Company, as a result of the recent fire, at $58,000. This does not cover the loss on lumber sold, but simply the lumber in their yards which had not been contracted for.

—Kalte & Teshemasher, proprietors of Port Elgin Iron Works at Port Elgin, Ont., have asked the corporation for a loan of $5,000 and exemption from taxation for ten years. In return they agree to put in a plant for the manufacture of wood-working machinery.

—The W. C. Edwards Lumber Company, of Ottawa, have secured control of the Capital Planing Mill Company and the Ottawa Specialty Company, and will in future carry on the business conducted by these two concerns. They will install considerable new machinery.

—Dr. W. Stewart Webb is said to have completed one of the largest jobs of tree planting ever undertaken in the United States by one man. He set out 155,000 white and Scotch pine on his Shelburne farms in Vermont, and it took 400 men a whole month to do the work. The trees are two or three feet high, laid out in 24 groves. Drives have been laid through them in two places, the rest being accessible only on foot. About 12,000 of the trees form a covering especially for pheasants. About 50,000 smaller trees have since been planted. The trees came fron Illinois, and cost, with the planting, $50,000.

—The following statistics are furnished by R. J. Skinner, timber inspector for British Columbia, and are for the fiscal year ending June 30th: There were collected in royalties on cut timber during the last twelve months $77,000, an advance of $15,000 over the previous year, while the estimate was exceeded by $7,000. There were no returns from the Cowichan or Chemainus mills, as they cut off the E. & N. railway reserve. During the year 80,000,000 feet of non-royalty producing timber was cut. In 1896-97 timber royalties were estimated at $50,000 and $52,000 was collected. In 1897-98 royalties were estimated at $55,000 and $57,500 were collected. In the following year the estimate was $60,000 and $65,000 was collected, while in the 1899-1900 the estimate was $70,000 and $77,000 was collected.

—Chief Game Warden Tinsley is trying to lessen the number of outbreaks of forest fires by sending out the following rules for campers on the public domain:—"Never build a fire where its flames can communicate to grass or brush or branches. Never build a fire without first noticing the lay of the land with respect to controlling it after it is kindled. Never leave camp for the day with the fire to burn unattended. Extinguish it thoroughly. Under no circumstances, when moving camp, leave the fire to burn or to smoulder. Put it out. To extinguish a fire built upon the ground, where there is turf or the roots of trees in the soil, pour water upon it until the ground is thoroughly soaked; then dig around about and well outside the circumference, throwing the earth in toward the centre, and then wet it down again."

CASUALTIES.

—While working at E. P. Hoar's saw mill at Moncton, N. B., Chas. Claire was severely crushed by a log, and at last report was in a precarious condition.

—C. W. Bubar, manager of the Columbia River Lumber Company's logging operations, was accidentally drowned on July 5th while attending to his duties at Cedar Creek, B.C.

—On July 6th the heading jointer in the Sutherland & Innes' mill at Alvinston, Ont., burst, seriously injuring a number of workmen. Daniel McLeod had his skull fractured and was not expected to recover.

—Samuel Howard, who was injured in a saw mill at Powassan, Parry Sound district, died at the General Hospital in Toronto a fortnight ago. Howard was cutting a log when the gear of the saw became deranged. The log was thrown from the carriage and pinned deceased against the wall of the building.

PERSONAL.

The death took place last month of the wife of Joshua Prescott, jr., the well known lumber merchant of Sussex, N.B.

Mr. L. H. Hamilton, Land Commissioner of the Canadian Pacific Railway, has returned from Cuba, where he devoted himself to prospecting certain timber and mineral fields in which Sir William Van Horne and other Canadians are understood to be interested.

Mr. Robt. Dollar, of San Francisco, Cal., was recently on a visit to the East. Mr. Dollar was at one time engaged in lumbering operations in Ontario, where he has many friends. He visited Camden, N.J., and placed a contract with the New York Shipbuilding Company for the construction of a steel steamer of 5,000 tons capacity.

Mr. James Sharpe, of Burke's Falls, Ont., has recently returned from British Columbia. Mr. Sharpe has decided to erect a large shingle mill at New Westminster, on the Fraser river, and will put in four Dunbar shingle machines manufactured by Alex. Dunbar, of Woodstock, N.B. Mr. T. B. Tait, late of Burke's Falls, will be the manager of the new concern.

Mr. David Bell, formerly one of the best known lumbermen of Canada, died in New York on June 29th. Mr. Bell went to Pembroke, Ont., in 1842, and after engaging some time in the boot and shoe business, entered into partnership with his brother John and conducted a large lumbering business. He also entered into partnership with Mr. A. T. White and Hon. P. White, and afterwards with Mr. W. Hickey.

CANADIAN MANUFACTURERS' ASSOCIATION'S TRADE INDEX.

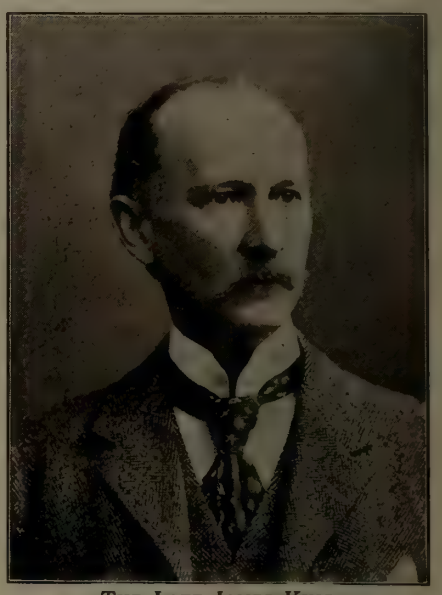
The Canadian Manufacturers' Association have prepared a classified list of members of that organization for circulation in foreign countries, with a view to the promotion of Canadian trade. It is to be regretted that this pamphlet should have been titled "Canadian Trade Index". The title is misleading, conveying as it does the impression that the book is an index to manufacturers in all lines in Canada, instead of which it is, as stated, simply a list of members of the Canadian Manufacturers' Association, and comprises but a small proportion of the total list of manufacturers of the Dominion. It is consequently misleading and calculated to give foreigners the idea that as a manufacturing country Canada occupies an unimportant position. True, it is stated in the preface that the book "is by no means a complete directory of the manufacturers of Canada and comprises only those who have formed themselves into a voluntary association for the purpose of advancing as far as possible the manufacturing interests of the country as a whole". This statement, however, being printed in small type, is likely to be overlooked. It is very desirable that a work of this kind, designed to be distributed abroad, should be of a more comprehensive character, and should properly represent our manufacturing resources.

OBITUARY.

JAMES KING.

The late James King, of Quebec, mention of whose untimely death was made in our last issue, was born in St Antoine de Tilly, Lotbiniere county, on February 18, 1848. He was the youngest son of the late Chas. King, of Sylvester, Megantic, and received his early education at Lennoxville, taking the degree of B. A. in 1867, and that of M. A. in 1873 at the University of Bishop's College.

In early life Mr. King turned his attention to commercial pursuits, notably that of lumbering, and at the time of his death was a member of the timber and exporting firm of King Bros., who are among the largest operators in the province of Quebec. They have mills at different points in the eastern townships, and in this way have contributed much to the development of Lower Canada.



THE LATE JAMES KING.

King Bros. are also largely interested in the asbestos industry, and the late Mr. King was vice-president of the Mining Association of the province of Quebec. He was also a director of the Union Bank of Canada.

In 1892 Mr. King was elected to the Provincial Legislature by the conservative party as representive of the county of Megantic, and proved a valuable member of parliament. In religion he was a member of the church of England.

The deceased was buried at Lyster, and as a graceful tribute of respect nearly every door on the route from the station to the cemetery bore crape.

HON. A. R. DICKEY.

The news of the drowning of Hon. A. R. Dickey, which occurred on July 3, was a great shock to the residents of Amherst, N. S., and to many friends of the deceased throughout the Dominion. Hon. Arthur Rupert Dickey was the second son of Senator R. B. Dickey. He was born in Amherst, N. S., in 1854 and educated at the College school at Windsor, N. S., and at the Moncton University, where he graduated in 1875 with the degree of B. A. He was called to the Nova Scotia bar in 1878 and practiced law until the time of his death. In July, 1888, he was returned to the House of Commons as the Conservative representative for the riding of Cumberland. He held three successive portfolios in the late Conservative government, being appointed Secretary of State in 1894, Minister of Militia in 1895, and Minister of Justice in 1896.

Deceased was connected with several business enterprises, and had lately devoted considerable attention to the lumber business, being the owner of valuable timber properties.

Amongst the numerous processions in Liverpool on the occasion of the celebration of the occupation of Pretoria, was a grand patriotic exhibition on a large scale by Joseph Owen, Ltd., timber merchants, Bootle. There was a fine representation of an armour-clad train filled with soldiers dressed in khaki. A great swarm of soldiers, some in khaki and some in red, followed the procession. It wound up with a triumphal car made of raised tiers on lorry covered with cloth and decorated with flags. Many military figures were seated in the car, and in the centre, in the place of honor, was a living effigy of John Bull.

A CORRECTION.

OTTAWA, ONT., July 9th, 1900.

To the Editor of the CANADA LUMBERMAN :

DEAR SIR,—My attention has been called to the concluding portion of the paragraph at the bottom of the first column on page 12 of the July number of the CANADA LUMBERMAN, which reads, "It is understood that the Ottawa Saw Works, whose factory was burned in the recent fire, are not likely to rebuild," and I therefore write to say that you have been misinformed, as the factory of the Ottawa Saw Works is about two-thirds rebuilt at this writing, and by the time you go to press will have been completely finished.

The recent disastrous fire did, unfortunately, completely demolish our factory, and necessitated a dissolution of partnership, but the business is being continued by myself; and when the new factory is completed, which will be more than double the size of the old one, a limited company will be formed with a capital of $100,000 in order to extend the business and meet the increasing demands which have been made upon us. The new company will equip the works with the most modern machinery, some of which will be imported from Sweden, so that when we are ready for work, which will be some time in October, our capacity for band-saws will be equal to the combined capacity of all our Canadian competitors put together; whilst our other departments manufacturing gangs, circular and other saws will be proportinately increased.

Associated with myself in the general management of the new company, especially in the band-saw department, will be the head saw-filer of one of the largest, if not the largest, saw mills in the Dominion ; a man of great experience and foresight, whose intuitive knowledge of the requirements of band-saws and band-sawing have placed him at the head of his profession, so that the users of band-saws and proprietors of large saw mills will have the added confidence of knowing that every band-saw which leaves our works will have been personally overhauled, inspected and examined by a thoroughly practical mill man. The other parties associated with me will be prominent New York business men, who will provide the necessary capital, in addition to which the Sandvik Steel Works of Sweden, from whom we have secured the sole and exclusive right to use their saw steel in the Dominion of Canada, have determined that, inasmuch as the Ottawa Saw Works made its reputation for band and gang saw by using their steel, the future of the new company shall be well taken care of; hence, the prospects are very bright indeed, and we hope, therefore, that you will publish this letter so that those who may have read the paragraph above referred to may see that the source of inspiration was, to say the least, erroneous. I remain,

Very respectfully,

P. M. FEENY,

Ottawa Saw Works, Ottawa.

WOOD PULP DEPARTMENT

THE ST. JOHN SULPHITE FIBRE COMPANY.

THE manufacture of pulp in New Brunswick is to-day interesting capitalists more than ever before, and one of the reasons might be said to be the great success attending the operation of the new mill of the St. John Sulphite Fibre Company at Mispec, some six miles from St. John, N.B. This mill is situated on the Bay of Fundy, at the mouth of a small stream, where schooners may load the pulp to be taken to St. John for trans-shipment to Europe. The wood supply for years will likely come from the Mispec stream, but the output of the St. John river is almost as easily available, and that from the numerous streams emptying into the bay can be easily towed to the mill.

The buildings are brick and are situated on the bank of the Mispec river. Nearest the stream is a building with frontage of 430 feet and extending back 68 feet. Back of the wood room and above it is the acid system, which extends back about 120 feet. This structure is 150 feet in length. Above this department is the sulphur room 120x40 feet. The digester building occupies a still higher level and is 130x36 feet, the main portion being 100 feet high. The blow tank building and filtering plant are between the digester building and the paper-making department. It is one story above the machine room and one floor below the digester department, which places the blow tank sufficiently below the digesters to cause the pulp to flow by gravity into them from to digester.

The logs are taken up into the wood room by means of a patent haul up, and cut by two steam jump saws into lengths of 2 feet 6 inches. These pieces are carried by a conveyor to the barking machines. From the barkers the cut up logs are moved along on a conveyor to the chippers. Immediately under the chippers and on the floor beneath are chip breakers. The small pieces of wood next pass through the shaker, which separate the sawdust and slivers from the chips and deposit the latter on a conveyor which carries them up to the chip loft in the digester building. The chips are placed in the digesters, two immense iron tanks, each capable of turning out ten tons of pulp at each cook. The digesters are filled with chips and 20,000 gallons of sulphurous acid put in. Then the digesters are made steam tight, and steam admitted at the bottom and the temperature brought up to the desired point and kept at that till the wood is cooked into pulp, which occupies from 10 to 14 hours. The pulp flows from the digesters to the blow tanks, which are 20 feet beneath the bottom of the digestors. These tanks are hard-pine vats, 28 feet long and 18 feet in diameter. The pulp is washed in them and acid and resinous matters removed. Then it goes to the pulp opener, where the fibre is opened up, and next to the riffler or sand trap to be further cleaned, and after to the stuff chest in the machine room. From this chest the pulp passes on to the first screens and from them to the paper machine, which run it out and dry it in sheets similar to paper. At the end of the last mentioned machine there is a reel which winds the pulp up into rolls. The slitting and cutting machines having done their part, it goes into the baling press, where it will be made ready for shipment.

There is ample water power to run the mill. The stream has been dammed at a spot where the greatest power possible to be obtained can be had. The dam, which is built of solid masonry, is 54 feet high and 240 feet long at the top. Its length at the bottom of the gorge is 80 feet. It is 120 feet wide at the base, and tapers off to eight feet at the top. The stone work is faced with timber on the water side. The flume, which is made of iron, is five feet in diameter. It leads from the dam on the surface of the ground down to the water wheels in the mill, and is 830 feet long. There are four water wheels in all, one for each department, which will develop 600 horse power. In addition to this the company have a 250 horse power compound steam engine as an auxiliary in case the steam gets blocked up at any time. In the boiler room they have 500 horse power of steam boilers for use in the cooking and drying of the pulp.

A most complete electric lighting plant has been put in.

The daily capacity of the mill is 30 tons, but the building is so arranged as to permit of doubling the output.

Mr. M. F. Mooney, of the firm of B. Mooney & Sons, contractors and builders, St. John, N. B., who had previously had much experience in the building and operation of pulp mills, recognized the advantages of the site, and about two and a half years ago went to Scotland to float the enterprise. This was easily accomplished, and the mill was built entirely by Scottish capital. Its directors at present are: John Galloway, of Leggie, chairman ; Chas. Anderson, of Fitzkil, Leslie ; Wm. Dixon, of Markinch, and Philip Grosset, of Leven, the last of whom is managing director. Mr. M. F. Mooney and Mr. Grosset are the managers in St. John.

THE CUSHING SULPHITE FIBRE COMPANY.

The Cushing pulp mill, as it is commonly called, owned by the Cushing Sulphite Fibre Company, stands on Union Point, which juts out into the St. John river just above its mouth, and a few stones' throws from the big suspension and cantilever bridge at St. John, N.B. Just in front of the mill site are the famous reversible falls where the St. John river rushes in seething rapids seawards at low tide, and the waters of the Bay of Fundy stream inland at high tide in equally tumultuous descent. Rivers that vary their monotony by rushing up river in full volume half of their time are indeed playful phenomena which are seldom seen elsewhere.

The Cushing mill is nearing completion, and it is expected that by the first of September it will be in operation. It has been erected with much expedition, and it sprawls and towers over Union Point in such magnitude as to give rise to wonder at its early completion. Its location is at the mouth of a river down which comes more lumber than in almost any other river in Canada. It is also the first pulp mill on the river, though there are several others in the province, and more are projected.

St. John has for years been one of the great lumber manufacturing centres of Canada. The St. John river drains some 30,000 square miles of timber lands, which doubtless will supply material for pulp for many generations. The Cushing lumber mill, which is just beside the pulp mill, is known as one of the most modern in equipment, and its output has been something enormous. It will now serve a second purpose in catering to the needs of its new rival, and its refuse material will be utilized in the making of pulp instead of being destroyed as formerly. The two mills will be worked in conjunction, the pulp mill being designed and erected so as to take advantage of the output of the saw mill. Huge carriers transport the refuse from the lumber mill across the yard to the furnace of the pulp mill, and much that is useless as lumber and might have been burned, will find its way into the pulp itself.

The machinery in the pulp mill will be operated largely by electric power, which will make a great saving in belting and mechanical power transmission contrivances. A splendid electrical system is being installed, which will form one of the best electrical plants for manu-

PULP MILL OF THE ST. JOHN SULPHITE FIBRE COMPANY AT ST. JOHN, N.B.

Arrangements are now under way for the securing of of capital from Buffalo and New York for the Blanche River Pulp & Paper Company, which received a concession from the Legislature at last session, and it is the intention to push on the work at once should negotiations prove successful.

facturing purposes in the maritime provinces.

The buildings stand upon sloping ground, making an advantageous location. Some hundreds of yards of wharf stretch along the water front, affording excellent shipping accommodation.

The sizes of the different buildings are as follows: Machine house, 180 x 66 feet; screen house, 144 x 60 feet; blow-off house, 144 x 30 feet; digester house, 144 x 28 feet; wood house, 160 x 45 feet; boiler house, 131 x 75 feet; engine house, 50 x 60 feet; chemical house, 156 x 50 feet.

The mill is to be of a capacity of 50 tons per day, requiring in its manufacture an equivalent of some 150 cords of wood per day. The building is so adapted that the plant may be increased to a capacity of 100 tons.

A few details of the fittings and machinery will interest our readers, though a complete description is not now available. In the machinery house is a Fourdriner pulp machine built by the Bertrams, of Edinburgh. It is 158 inches in width and has 25 drying cylinders. The screen house contains 10 Wendal screens, built by Chas. Wendal, of Bury, England. There are three blow-off tubs, having a capacity for one digester. Gravitation carries the pulp from these tubs to the screens. The three digesters each have a capacity of 10 tons of pulp. They were made in Liverpool by Fawcett, Preston & Co., Ltd.

In the wood room are ten American and eight English barking machines. The chipper was made in the Glorsop Iron Works. Knots are to be removed by means of automatic screens which separate them from the chips. The plant will be be run on the vat system.

The engines which provide the power are of 500 h.p., and were supplied by the Salford Iron Works, of Manchester, Eng. This firm also supplied the electrical machinery, including generaters and dynamos. The boilers are twelve in number and these supply the steam for the digesters as well as the engines The conveyors were furnished by the Jeffrey Manufacturing Company, of Columbia, Ohio. Wm. C. Hill & Co., of Kalamazoo, Mich., supplied the log stop and loader and the two cylinders for the steam jump saws. The St. John Iron works supplied the log bed and considerable of the shafting. The larger part of the shafting and pulleys came from the Phœnix Foundry, of St. John, owned by the Jas. Fleming Co. The electrical work is being done by the Canadian General Electric Company.

The construction and equipment of the mills is in the hands of the well known firm of B. Mooney & Sons, of St. John, the brick coming from their brick yards a few rods distant. Nearly 3,000,000 bricks have so far been laid, and the buildings complete will contain 3,500,000. Mr. W. K. Bradbury is the superintendent and Mr. C. A. Allen the engineer of the works.

The magnificent brick chimney in connection with the plant was a few weeks ago badly shattered by lightning, and as a consequence will probably be taken down and rebuilt. It was an 11-foot chimney of a height of 200 feet, and said to be the tallest in Canada. Though insured, it was not equipped with lightning rods, and the electrical shock cracked it in places, for a distance of 70 or 80 from from the top.

The saw mill of Andre Cushing & Co. cuts about 30,000,000 superficial feet of lumber annually. The firm ship to Great Britain, Australia, Spain, Canary Islands, Argentine Republic, South Africa and the United States. Their shipments to South America are the largest from St. John. Mr. Geo. Cushing is the head of the firm of Andre Cushing & Co., and is managing director of the Cushing Sulphite Fibre Co. Capt. Edward Partington, of Manchester, is the president of the latter concern, and it is needless, perhaps, to say that he is one of the best known paper men in the United Kingdom.

ADDRESS .....
ST. JOHN SULPHITE FIBRE CO., LTD.
ST. JOHN, N. B., CANADA

MESSRS. B. MOONEY & SONS.

Elsewhere in this issue will be found illustrations of two large pulp mills—that of the St. John Sulphite Fibre Company, Limited, at Mispec, about six miles from St. John, N. B., and that of the Cushing Sulphite Fibre Company, Limited, in St. John. We regret that we cannot make the illustrations of this article complete by the addition of another—that of the pulp mill owned by the Maritime Sulphite Fibre Company, Limited, of Chatham, in the same province, the firm of B. Mooney & Sons being the builders of these three mills. By their work in connection with them they have not only added to their reputation as contractors and builders, but have fairly established themselves as the largest pulp mill building concern in the Dominion.

At a time when pulp and its manufacture is creating interest in Eastern Canada as it never did before, and when new pulp projects are coming forward in so many directions and in such promising manner, it is most opportune to give our readers a short sketch of the firm which is so well able to carry out from start to finish the building, equipment, and even operation, of the largest mills. A conception of the magnitude of the mills of the Cushing Sulphite Fibre Company and the St. John Sulphite Firbre Company may be obtained from the illustrations. The Maritime Sulphite Fibre Company have the oldest and one of the largest mills in the Maritime Provinces, and it was in the construction of this mill that the firm gained its first experience in the building of pulp mills. It is not as builders alone that the firm may be spoken of, but as practical pulp mill operators, for Mr. M.F. Mooney can operate

Mr. Patrick Mooney.

a mill when erected as few others can. He knows every detail of the manufacture. He is at present manager of the Mispec mill, and its success is beyond dispute in every way.

To mention a few of the other large contracts fulfilled by the company in late years, one may speak first of the large Gibson cotton mill in Marysville, N.B., which is one of the largest in Canada, occupying as it does an entire block, with a front of 418 feet, being four stories, with deep basement, and containing some 8,000,000 bricks.

Centenary church, one of the finest Gothic edifices in the Maritime Provinces, the churches of St. John the Baptist, Holy Trinity and St. Peters, all in St. John, were built by this firm. Miserecordi hospital, Aberdeen school, the electric light station, Pender's nail works, and the new high school, in St. John, are from their hands. Of outside work, to speak briefly and of but a single instance, they built seventeen large brick buildings in Eastport, in the State of Maine, in one summer—that of 1887.

We present the portraits of the two senior members of the firm, Messrs. Patrick and Michael Mooney. Mr. Edward Mooney is a third partner, all being sons of the lately deceased Bernard Mooney, whose name the firm still bears.

Bernard Mooney came to this country in 1861, from the south of Ireland, and after a short time in Musquash, near St. John, he moved to

Mr. Michael Mooney.

Carleton and then into the city. For some years he worked at his trade as stonemason, which he had learned in Ireland. After the great fire in St. John in the memorable year of 1877, he opened a brick yard in Fairville, a mile from the city, and engaging in contracting had no small share in the rebuilding of the city after the fire in which nearly $23,000,000 worth of property had been swept away. Nearly 200 buildings were erected under his direction in the few years following. His sons grew up in the business, were part and parcel of it, and since his death, in 1890, have carried it on with steadily increasing success, until now the concern is the largest building firm "down east."

The old brick yard has now an area of 10 acres, with all its plant lately remodelled and enlarged, so that it turns out about 50,000 bricks daily. It is but a stone's throw from the new Cushing mill into which so many of its bricks have found their way. Its clay supply is unexhaustible, and it seems destined to aid in the construction of many other mills.

The Messrs. Mooney have always been well known in the community and are held in high esteem by their fellow citizens.

PULP NOTES.

It is said that Mr. Menier purposes building pulp mills on Anticosti Island. He owns 2,500,000 acres of excellent pulp wood land.

Olin Scott, builder of pulp machines, Bennington, Vermont, recently shipped six screens to Hamelin & Ayres, of Lachute Mills, Quebec.

Capt. L. F. McKenzie, of the firm of McKenzie Bros., shippers and traders at Vancouver, B.C., has just returned from a trip up the British Columbia coast, his mission being to select a suitable site for a pulp mill. Mr. McKenzie is understood to be acting for an eastern syndicate. He states that at the point selected there is an abundance of water power and raw material, and that the work of building will be commenced in a few weeks.

THE PILING OF PULP WOOD.

A correspondent asks the Paper Trade Journal the question: "What is the best outfit for piling pulp wood for winter use"

The answer given is as follows: Several appliances are in use for that purpose. The usual one seems to be a chain conveyor working in the bottom of a V-shaped trough. A speed of 80 to 100 feet per minute will enable two 80-foot logs to be carried up each sixty seconds. There must be a distributing carrier at the top of the hill along which the logs are to be distributed, and a man is necessary at the transfer from one conveyor to the other. There will also be necessary a gang of men to roll down and pile the logs after they are discharged from the conveyor. To handle two logs per minute, at least four men will be necessary, and they will have their hands full, too. This means that at least six men will be needed on the piling ground, besides those engaged in floating logs to the carrier. Again, with this device, the carrier must extend to the extreme point to be covered by the piling ground, and cannot be changed except at great expense. There is another way of piling logs, viz., the aerial cable. When this method is employed, a scow is fitted with a hoisting engine and put in the water among the logs. A pair of shears on each bank of the river serve to sustain the cable, which is anchored at convenient places beyond the shears. As the piling proceeds, the shear on the hill is carried right up on the top of the log pile, thus enabling the logs to be piled much higher with quite a short set of shears. A double cable is used, both ends being passed to winding drums on the scow, and suitable sheaves being supplied on the shears. From two to six logs can be carried at the same time on this carrier, chains being passed around the bunch of logs which the shipper decides can be handled at one load without trouble. Two men have plenty of time to attach the chains to logs, as well as to bunch them, while two more can do all the floating and rafting necessary. One man can handle the boiler and the hoisting engine, making with two men at the top of the log pile, seven hands to do the whole trick. A single cable arrangement of this kind will easily handle over two logs per minute, where they range from 16 to 60 feet in length. But the beauty of this arrangement lies in the fact that no piling of the logs is necessary after they have been dropped by the carrier. The man on the log pile has the load dumped just where he wants it, and the engine pulls the chains out from under the bunch That is the last of it. The logs do not have to be touched after thus being left, and the whole business can be easily and quickly shifted along the river as often as a pile is finished. An actual count of logs handled by one of these rigs showed the handling of nine loads of logs in twenty minutes, aggregating twenty-five logs in nine loads. This is better than two logs per minute, at a less expense than with the chain conveyor, to say nothing of the saving of wages in the piler's gang.

It is expected that the new pulp company at Lorette, Que., will commence operations next month.

The Quebec Government has sold to American parties two valuable water powers at Lake St. John. The purchasers bind themselves to erect within four years pulp and other establishments at the Grand Discharge to the value of $4,000,000.

ST. JOHN, N. B., CANADA

DEMAND FOR CANADIAN PAPER AND PULP.

London, E.C., June 30th, 1900.

Editor Canada Lumberman:

Dear Sir,—I am quite convinced that Canada has not yet grasped the importance of assiduously cultivating the English market in paper. She has given signs occasionally that she intended turning her attention to us, and has even gone so far as to ship consignments of News at intervals, just to show us, as it were, what she could do if she chose to grapple with the business seriously.

I have watched with interest these spasmodic samplings, and have had not a little direct experience of them. In fact, so much have I been impressed with the idea of Canada's ability to do an immense business here that I have striven hard for two years to urge upon the leading makers in Canada the importance to them of this market. With your permission, I should like to give those interested some facts as to the magnitude of possible business and other useful particulars.

English mills can only turn out a small proportion of the daily demand for "News." Of box boards they make none of the class made from wood pulp used in such large quantities here, present supplies coming chiefly from Austria, Finland and other "Continental" countries in higher qualities, and "News" boards chiefly from the States, but these are sent only at rare intervals now.

It is computed that we use from 7,000 to 10,000 tons of "News" every week, and of this quantity English mills cannot produce more than a third. It is scarcely necessary to add that the demand increases at a rapid rate, and that English mills are doing little to increase their output. In fact, the tendency is quite in the other direction. English makers of "News" find they can turn their machines to more profitable uses. The making of glazed and unglazed printings pays better than "News," and the future will see less and less "News" made here and more and more imported. The question is, will Canada wake up and step into the arena and fight for her position. Canadian makers can sell "News" paper here at prices which mean ruination to home makers, and still make a good profit. There is no reason for this to be done, a good price can be got for Canadian News, and whoever cuts prices to a lower price than English and Scandinavian makers usually quote, is needlessly throwing away profit. Personally, I think Canadian News such as has recently been sent here should fetch the highest market quotations. It is much superior to any European make, and most large buyers here would be willing to pay as much for Canadian News as for English.

The whole of the "News" trade in this country should in years to come be in the hands of Canada. There are other reasons besides her natural position as mistress of vast timber limits to urge this. It is certain that England must look outside for her supply of pulp and "News", and if the mother can hand over her orders to her daughter she will naturally prefer to do so than to buy from alien sources.

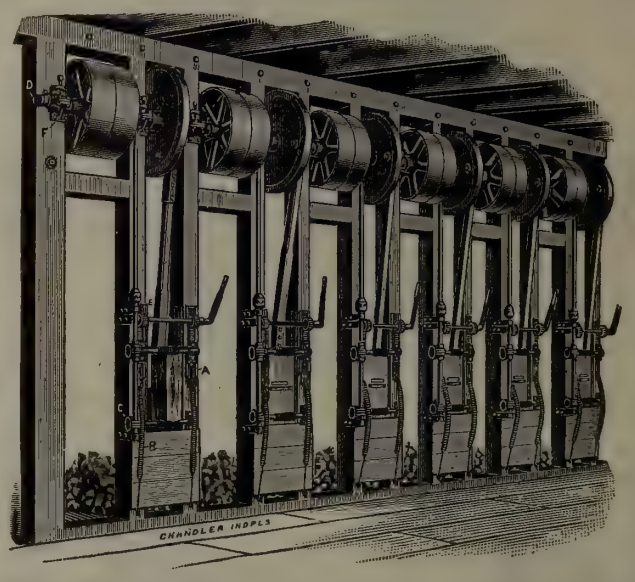
In box boards made from either mechanical or chemical pulp there is a very large business to be done, and Canadian mills as certainly should supply us with these as with "News."

Another time I may, if you will permit me, go more fully into the "board" question, also into the subject of better class wood pulp papers.

I shall be glad to give fuller information to any manufacturer and reply to any enquiries as fully as I am able. I am, Sir,

Yours truly,
Geo. Mawson.

The Best Excelsior Machine in the World



When two or more knives are run with one belt, all must stop when the belt is stopped to set bits or from any other cause. Our Machine has a belt for each knife, hence but one knife stops at a time. This great advantage should not be overlooked by purchasers. Time is money. Our Machine cuts more excelsior in a given time than any other machine. Get our circulars and prices.

IS ON THE HIGHEST WAVE OF POPULAR FAVOR

Province of Ontario

CANADA

THE Province of Ontario offers one of the most inviting fields for the employment of capital and labor in the development of natural resources to be found anywhere in the world.

The extensive forests of White Pine in the northern districts have long furnished large quantities of Sawn Lumber, as well as Deals and Square Timber for the export trade. Birch Timber for cabinet making, Hemlock for bark and rougher building purposes, and especially Spruce and other woods suitable for the manufacture of pulp and paper, have come very actively into demand.

Extensive tracts, comprising thousands of square miles, covered with the foregoing and many other useful varieties of hard and soft woods, are still in the hands of the Crown.

The mineral wealth of Ontario is very great, but as yet is for the most part undeveloped. This Province is one of the two sources of the world's supply of Nickel, and a large portion of the Nickel Belt remains unexplored. The Goldfields of Northwestern Ontario are steadily growing in number of mines and value of output. Important developments are in progress in Iron ore, large bodies of both the magnetic and hematite varieties of which exist in various parts of the Province. Copper, Silver, Zinc, Graphite, Corundum, Talc, Actinolite, Mica and other valuable minerals occur in workable deposits, besides Marl for cement-making, Limestone, Building Stone, Granite, etc., also Clay for brickmaking and pottery. The Petroleum, Salt and Natural Gas industries of the Province are well known and extensive.

There are numerous water powers on the rivers of northern and northwestern Ontario, many of them of large capacity and suitable for manufacturing purposes. Crown leases on condition of actual development are obtainable on easy terms.

The Crown is owner of immense tracts of wild land, much of it suitable for agriculture. In fact, the unsettled part of the Province is of much greater extent than Old Ontario. In certain districts the lands are disposed of as free grants, in others sold for 50 cents an acre ; and the occupants obtain their Crown patents upon completion of settlement duties.

Trout, Bass, Whitefish, etc, are abundant in the great lakes and inland waters, and there is plenty of game in the forests, such as Deer, Moose, Grouse, etc., which may be taken in the lawful seasons.

For fuller particulars, methods of acquiring title to land, timber and minerals, etc., also for copies of reports and publications descriptive of the newer regions of Ontario and their resources, apply to

ROBT. BELL, JR., Seaforth Engine & Machine Works SEAFORTH, ONT.

THE PROVINCE OF QUEBEC CANADA

THIS particular portion of British North America might appropriately be called "The Land of the White Spruce," and in view of the rapid development of the Pulp and Paper Industry, merits marked attention from Capitalists interested therein.

Quebec Province will be a large producer of White Pine for many years to come, being by no means exhausted of this variety of timber, but the major portion of the Pine-bearing lands are under license.

The area of DISPOSABLE timber lands, principally Spruce-bearing, in round figures is, say 150 millions of acres; upon a great many of the rivers important water powers exist, capable of developing an enormous amount of energy for pulp-producing industries; labor throughout the Province is cheap; and facilities for inland transportation are excellent; in a word, Quebec Province can hold out to the Pulp and Paper Trade the most tempting inducements for heavy investments.

The Minerals of the Province are well worthy of attention; it is admitted that the Apatite and Asbestos of this country stand at the head of the list; the Province is rich in Iron, Magnetic and Bay ores being particularly abundant. The vast beds of Magnetic Black Iron Sand on the North Shore of the Gulf of St. Lawrence are receiving attention at the hands of experts, and may shortly be worked. Mica (Black, Amber and White), exists in abundance. The prospects of the Gaspe Oil Fields appear to be better than ever. Graphite, Copper, Gold and Silver are being exploited without any sensible diminishment, and the Building Stone and Brick-making industries continue to be as extensive as in the past.

The Province has at its disposal between 6 and 7 millions of acres of land surveyed and laid out for Colonization purposes, and offers excellent inducements to intending Settlers; the price per acre is, in the main, nominal.

The Fisheries of the Province have a world-wide reputation; the Cod, Herring and Mackerel fishing of the Gulf are very important and flourishing industries; the shore and inland Salmon fishing, especially the latter, are unsurpassed, whilst the Brook Trout fishing on inland rivers and lakes, taken as a whole, is unequalled anywhere in the world.

As regards Game, Quebec also takes a prominent and leading position; the greatest of the Deer family (the Moose) is increasing in numbers all over the Province; the Caribou and Red Deer are found in profusion. Migratory Feathered Game, Geese, Ducks and Shore Birds seem to be as plentiful as ever, and the same may be said of the Ruffed Grouse throughout the length and breadth of the Province.

Fur-bearing animals are as numerous as heretofore, and it is expected that the Beaver, which has received special protection of late years, will rapidly increase in numbers and once more be a factor in the Fur trade.

Intending Investers, Settlers, or people interested in Fish and Game, can obtain particulars and information by addressing

HON. S. N. PARENT,
Commissioner of Lands, Forests and Fisheries,
QUEBEC, P. Q., CANADA.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

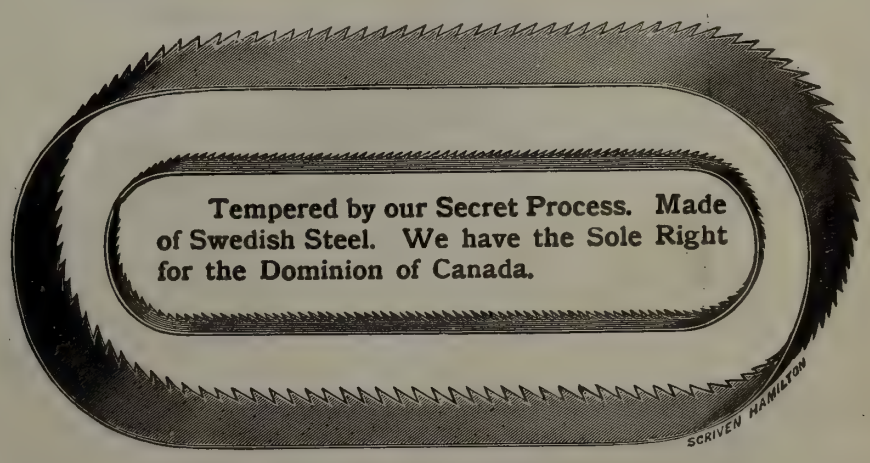
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



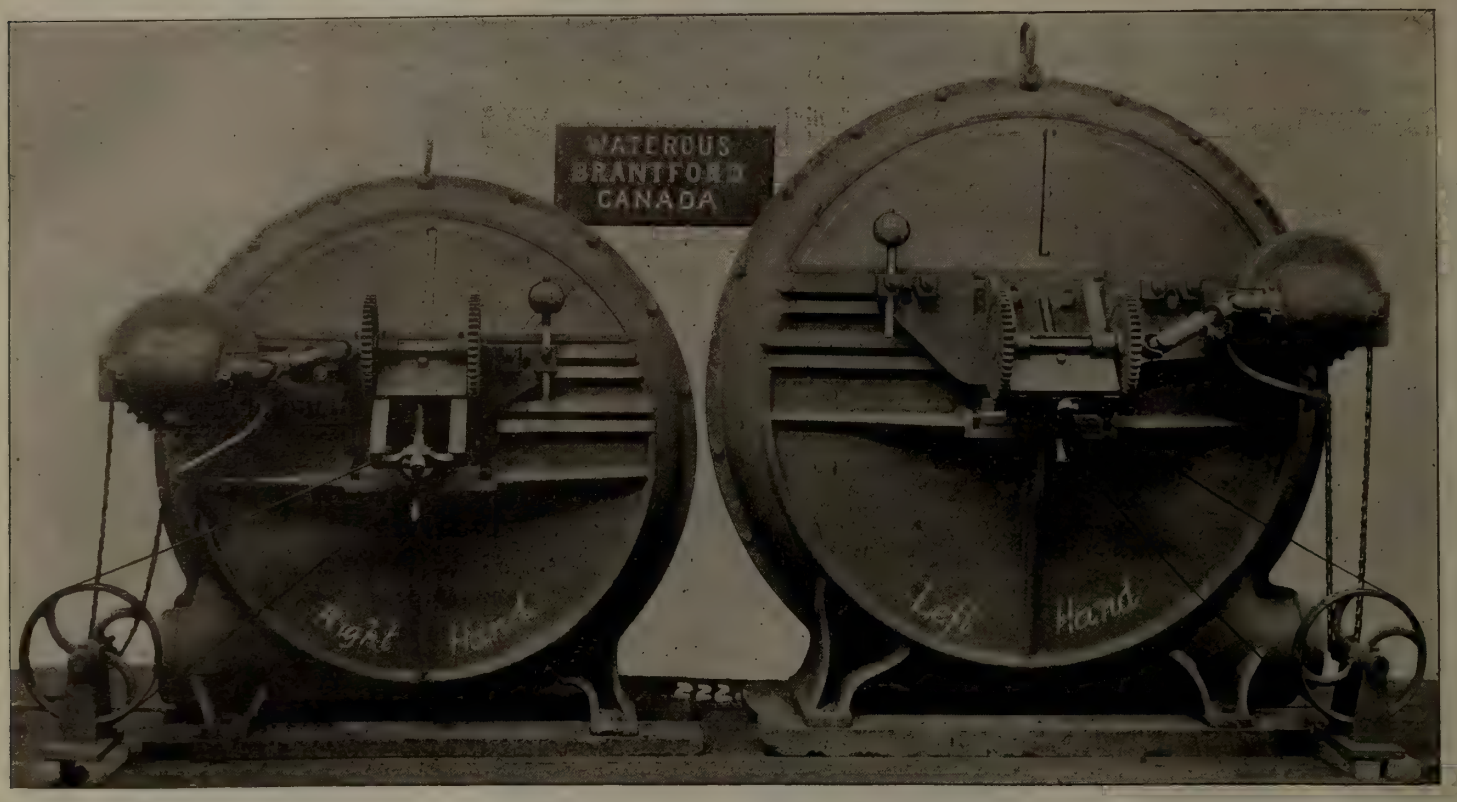
We Manufacture

HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

PULP WOOD MACHINERY



Large range of

BANKERS

52″ Barks to Medium Diameter.
60″ Barks to Large Diameter.
96″ Barks Slabs 48″ long.

Cases faced, making perfect fit and tight joint—bottoms of bearings and brackets they bolt to planed, making perfect alignment.

Runners heavily banded.

Steel Blower Wings when desired.

Machines all very heavy, built for fast work.

Butterfield's Patent Turning Attachment fitted to these machines.—Our cutting up rig handles 100 to 125 cords per day, taking logs from the water and delivering them cut into 16 to 26 inches, or any length, to the barkers.—Only 2 men required to operate this outfit.

PULP MAKING MACHINERY

SUCCESS GRINDERS

(Like cut) with adjustable take-up to bearings.

R. H. SMITH CO., LIMTED.

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simonds' Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

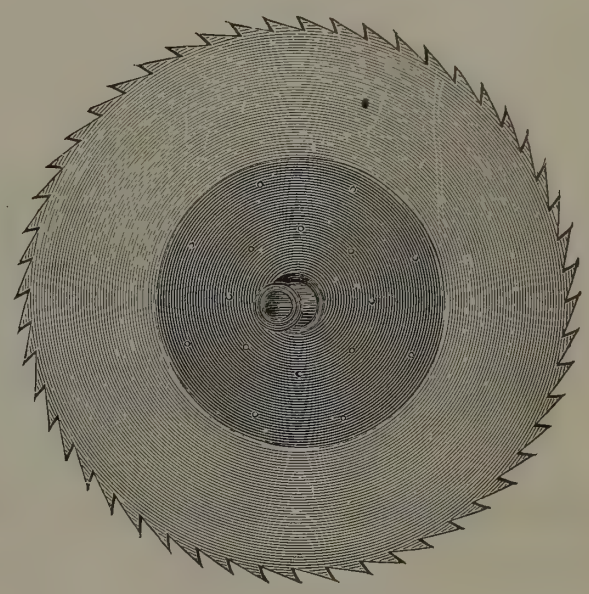
R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one.

W.G.S.



THE "LEADER" CROSS-CUT SAW

These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

THE "LEADER" SAW SWAGE

Made in 3 Sizes—$2.00, $2.50, $3.00 Net.

OUR PRICES ARE RIGHT. KINDLY ALLOW US TO QUOTE YOU BEFORE PURCHASING.

R. H. SMITH CO., Limited, St. Catharines, Ont.

Northey Triplex Power Pump

FOR BOILER FEEDING AND GENERAL PRESSURE PURPOSES

In the Northey Triplex Power Pump we offer a machine put together with the skill brought by years of experience in pump building, and with full provision made for the varied demands likely to be made upon a pump of this character. A feature of value is that the three cranks are placed 120 degrees apart, thus giving a practically constant flow of water—minimizing strain on pump and economizing power. The pump can be readily repacked and taken up, and all details are carefully worked out. It can be conveniently operated by electricity, by water power, or by belt from engine. Different styles and sizes made to suit all duties.

WE ARE MANUFACTURERS OF OVER FIVE HUNDRED DIFFERENT STYLES AND VARIETIES OF STEAM AND POWER PUMPS FOR STATIONARY AND MARINE PURPOSES. WE INVITE ENQUIRIES FROM ENGINEERS, MINE SUPERINTENDENTS AND OTHERS FOR THEIR REQUIREMENTS IN OUR LINE. CATALOGUES AND SPECIFICATIONS FURNISHED UPON REQUEST.

We are also manufacturers of the Northey Gas and Gasoline Engine which has proved to be the handiest and most convenient power for small or intermittent power users in the market. Suitable for machine shops, pumping and electric light plants, etc. Write for illustrated descriptive booklet.

THE CANADA LUMBERMAN

VOLUME XXI. NUMBER 9. | TORONTO, CANADA, SEPTEMBER, 1900 | TERMS, $1.00 PER YEAR. SINGLE COPIES, 10 CENTS

BRITISH COLUMBIA BUILDING AT WINNIPEG EXHIBITION.

THROUGH the generosity of the lumber manufacturers chiefly, the exhibits of British Columbia at the Winnipeg Exhibition will in future be housed in an attractive building devoted exclusively to the products of that province. Exterior and interior views of the building which has just been erected for the purpose are shown on this page. It will be of some interest to readers of THE LUMBERMAN to relate the steps which led to the erection of such a building and to give a few particulars of its construction.

Last spring the Winnipeg Industrial Exhibition Association instructed their manager, Mr. F. H. Henbach, to visit the province of British Columbia with a view of securing a large exhibit from the coast. The leading lumber and shingle manufacturers, always on the alert for an opportunity to make known the excellent qualities of British Columbia lumber, met together and generously donated material to the value of $1,100 f.o.b. mills for the purpose of erecting a building entirely of Douglas fir and red cedar, which in addition to showing the excellent quality of their lumber and shingles, could be used annually for the exclusive accommodation of all British Columbia exhibits. The Dominion Government granted the sum of $1,000 to aid the project, and the result was that Mr. Henbach secured for his association a particularly handsome and useful addition to their already extensive buildings for an outlay on their part of some $1,100. The cost of the completed structure was about $3,200, which cost would have been increased to $4,200 had not the C. P. R. generously carried the material, seven cars, from New Westminster to Winnipeg free of charge.

BRITISH COLUMBIA BUILDING AT THE WINNIPEG EXHIBITION.

The building is an attractive looking structure and is located almost directly in front of the new grand stand. It is 80 by 48 feet, and is sided with one-half inch bevel cedar to a height of ten feet, above which is a ten-inch cedar band, studded with four-inch rosettes, and above that again a three-foot course of red cedar shingles, oiled. The main roof is shingled with random width red cedars, stained a moss green, relieved by a ten-foot belt course of band-sawn dimensions of lighter tint. The roof projection, which extends six feet all around the building, is lined with clear Douglas fir, V joint, oiled, and the interior lining of the entire building is of the same material, with ceiling panels, doors, sash, casings, aprons, etc., of red cedar, all of which have been given three coats of oil, enhancing, if possible, the natural beauties of the wood. The flooring is of clear fir, all vertical grained, four inches wide and in length from 20 to 32 feet, which makes very few joints and a floor that is practically indestructible.

The building was erected under the supervision of the directors of the Exhibition Association, aided by Mr. A. F. E. Phillips, Winnipeg representative for the Brunette Saw Mill Company and the Pacific Coast Lumber Company, of New Westminster, and by Mr. G. W. Campbell, representative for the British Columbia Mills, Timber & Trading Company, of Vancouver.

INTERIOR OF BRITISH COLUMBIA BUILDING AT WINNIPEG EXHIBITION.

The British Columbia lumber manufacturers and their Winnipeg representatives are doing much to promote the interests of Douglas fir and red cedar lumber and shingles, and are to be commended for the enterprise and generosity shown in erecting this building.

—The Yale Columbia Lumber Company have established a large saw mill at Cascade, B. C.

ADVANTAGES OF ELECTRICAL TRANSMISSION.

WHAT is to be gained by electrical transmission of power in a paper mill over the ordinary method of belts and ropes?

This is the question asked by a correspondent of the Paper Trade Journal, and the answer given is as follows: A well designed electrical outfit will carry power from water wheel to machine cheaper than it can be done by either belt or rope connections. This is true within certain distances, depending upon surrounding conditions. Probably a belt would carry 50 horse power to a pulley 50 feet from the water wheel cheaper than it could be done by a generator and motor. But were the distance 1000 feet the electrical method would be much cheaper. There is, then, around every prime mover, an imaginary circle, beyond which it pays to put in electrical transmission. But when once the circle area is passed and a generator and motor is installed, then it pays to drive electrically all the machines inside the circle as well. To pay, the generator must be directly connected to water wheel or engine. The efficiency of a good generator is above 95 per cent., and a motor equally efficient cuts the loss of power due to transmission down to 90¼ per cent. This is as can be done by a single countershaft transmission, for each drive of that kind consumes 10 per cent. of the power delivered. Thus, for a drive that requires six beltings the loss would be nearly 47 per cent! Exactly figuring, the power transmitted through six beltings would be a trifle more than 53 per cent., and six beltings between water wheel or steam engine and machine are frequently found in a paper mill. Another point in favor of the motor is, when a machine is to be idle its motor is promptly stopped, and all power consumption ceases save a very small percentage consumed by the generator and chargeable as its share to the idle machine. With belt transmission the countershaft losses are permanent; they go on all the time, whether work is being done or not. In more than one mill of ancient engineering 50 per cent. of the power generated is consumed in running shafts, etc.

—The Ottawa Saw Works have secured the large building of the Ottawa Investment Company on Victoria Island, Ottawa, and expect to be in operation by the 15th of this month. The output of the factory will be considerably larger than the previous one.

ARE LUMBER PRICES TOO HIGH?

By JOHN CHARLTON, M.P.

[Written for the CANADA LUMBERMAN.]

Complaints on the part of consumers of lumber are made that prices are maintained at too high a figure, and an expectation seems to be entertained that prices now current will recede. The belief that prices are too high is ill founded; whether a reduction will be forced upon lumber producers remains to be seen.

Lumber prices have advanced from thirty to forty per cent. above the low rates current from '95 to '98. This is a smaller proportionate advance than has taken place during the same period in the prices of iron, steel, hardware, various structural materials, etc. This percentage of advance is not in excess of the percentage of advance in wages paid in the woods, in saw mills, on lumber drives, and in other departments of lumbering operations. There has been an increased cost in the various kinds of supplies used by lumbermen; this advance in many cases being in excess of the percentage of advance in lumber. The cost of mill machinery and mill repairs has also increased very materially during the past two years.

Another element bearing upon the cost of lumber production is the constant tendency to increased cost of logging, in consequence of operations being pushed further from the main streams and the points more distant from the mills. The supply of timber in Canada, on the main rivers, such as the Ottawa, Gatineau, Coulonge and others, if not entirely exhausted, is of so small account as to be scarcely worth considering. Year by year old limits are exhausted, and new operations are commenced at more remote points. Many of the Ottawa lumbermen are obliged to put in their supplies to their distant camps in the winter preceding the one when the logs are to be cut, and banked upon the driving streams, and it requires two years, and in some cases three years, from the time supplies are sent to their camps before the logs reach their mills. The cost of the logs to these mills, and in fact to all mills in Canada, is constantly increasing. Many of the Ottawa mills lay down their logs at a cost exceeding $9 per M, exclusive of crown dues and stumpage.

Another feature of the lumber trade having to do with the cost of production, is the constant tendency to increase in the price of stumpage. The stock of white pine in Canada is rapidly diminishing. A popular illusion is the generally entertained belief that we have a boundless supply of pine. The truth is that the end is in sight, and the utmost care should be observed in husbanding our timber resources. The opinion is expressed by some gentleman, quite conversant with the question of timber supply, that we have not in Quebec and Ontario a materially larger amount of white pine than to-day is standing in the States of Michigan, Wisconsin and Minnesota, where it is estimated the present rate of consumption will exhaust the supply in the next seven to ten years.

The cost of logging in Canada is largely in excess of the cost of the same kind of work in the American lumbering states, with the same length of haul and stream drive. When in Washington upon the Joint High Commission, in connection with my investigations upon the lumber question I addressed letters to a great number of lumber firms both in Canada and in the United States white pine states, as to the cost of lumbering, and the result of the investigations then instituted proved that the excess of cost in Canada over the cost in Michigan, Wisconsin, and Minnesota, on the same length of haul from stump to stream, and drive from stream to mill, was on the average somewhat in excess of 40 per cent. This was due to the rough character of the country in Canada, and to the broken nature of the streams, which required extensive improvements by way of construction of slides and dams.

The prices paid for lumber from 1895 to 1898 furnish no proper basis for estimating what would be a reasonable and proper scale of prices at the present time During that period lumbermen were almost invariably losing money. Those who secured the return of a new dollar for an old dollar invested were the fortunate exceptions. Our lumbering concerns in Canada were kept afloat through the liberality and broad-minded policy of the banking institutions which stood at their backs. The interests of the bank and the lumberman were mutual, for the failure of one would impair securities and inflict loss and trouble upon the other.

At a conference held by lumber representatives of the Canadian and American lumber interests, which I was instrumental in arranging for at Washington during the sitting of the Joint High Commission, in February, 1898, the American lumbermen assigned as a reason for their determination to secure the continuance of the $2 duty, the fact that their business under free lumber had been a losing one. The Canadian representatives asserted that the same had been the case with themselves, and a comparison of notes between these representatives of the lumber interests, from the two countries, revealed the fact that almost if not all the firms represented upon that conference had been heavy and continual losers during the period of depression from 1895 to 1898. It may be asked, "Why should these firms continue to prosecute their business under these adverse conditions; and, if losses were being made, why not suspend operations?" In answer to this query, it may be said that lumbermen hoped from year to year for an advance in prices that would at least cover the cost of production. To suspend lumbering operations involves many serious consequences. A great lumbering firm gathers together a staff of woodsmen, among them men of capability and energy, to take charge of running camps, making logs and timber, scaling logs, running drives and other work of that description, also skilled sawyers and a competent saw mill staff of book-keepers, foremen, yardmen, inspectors, engineers, filers, etc. Farms have been opened at the camps, which must be kept up or the labor and expense bestowed upon them will be lost. Teams have been transported to the scene of operatoins in the woods at great expense, and to suspend operations simply means the complete disorganization of the complicated business, which it has taken years to build up and place in an efficient condition. To allow such disorganization by suspension would involve loss of time and money in again placing these extensive operations on a working basis, and so the lumbering firm naturally decides to hold together and keep on, trusting that times will take a turn for the better, and that the article which they produce will command in the market a price adequate at least to the cost of producing it.

For the last year prices have been satisfactory to the lumber trade, because they have afforded a moderate and reasonable profit. The impression that profits have exceeded this limit is unfounded, and in a nswer to the question, "Are the prices of lumber too high?" I answer most emphatically that they are not; that they now stand upon a basis which covers the cost of production and affords a reasonable profit only, and that the great lumber industry of Canada, which has struggled for years with adverse influences and disastrous conditions of the market, is entitled, now that it has its head above water, to keep it there, and go on with operations which under present prices are reasonably successful, and minister most effectively to the general prosperity of the country.

LYNEDOCH, August 21st, 1900.

LEGAL DECISIONS.

PIGGOTT V. ROACH.—Judgment on appeal by defendants Roach and Simpson, from the judgment of the County Conrt of Essex in favor of the plaintiffs in an action for replevin of a carload of lumber. The plaintiffs were the vendees and the question was whether the property had passed to them. The contract was with the defendant Roach, but the defendant Simpson got out the lumber, and the defendant Roach gave him a bill of sale upon it. The lumber was piled at the place agreed, and was there culled by the plaintiffs' agent, and was then placed on cars by the defendant Simpson, who subsequently had it consigned to his own banker and drew on plaintiffs for the price. Plaintiffs refused the draft, asserting a debt due them by the defendant Roach, but on the defendant Simpson ordering the goods to be returned to him the plaintiffs replevined. The question was whether the property passed by delivery to the culler. The appellants contended that nothing took place when the agent of the plaintiffs came down to cull which deprived defendant Simpson of the property, and that the reservation of the right of disposition over the goods prevented the property passing. Held, that the property in the lumber passed to defendant Simpson. He took a receipt for the lumber from the railway company in his own name, and consigned it to the order of his own agent. (Rogers v. Devitt, 25 O. R. 84.) Appeal allowed with costs and action dismissed with costs.

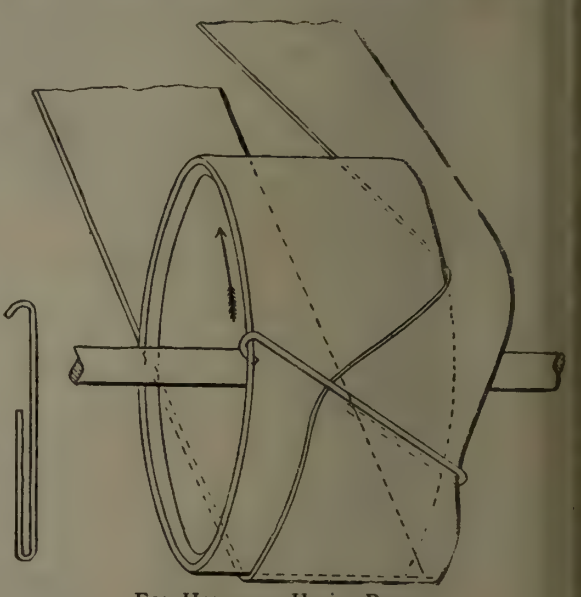
SPEED OF LOG CHAINS.

What is the proper speed at which to run a log chain for taking logs from the water, or for carrying them into or through the mill? asks a correspondent of the Paper Mill. The answer given is:

For long logs a chain should run at 70 to 90 feet per minute. Some chains are run 100 feet per minute, but that is pretty fast for long logs. The shorter the average length the faster may the logs be handled. Where the average is between 16 and 60 feet, a chain had better not travel more than 80 feet per minute. When, however, 4 foot wood is to be handled, the chain may run at 200 feet per minute with excellent results.

FOR HANDLING HEAVY BELTS.

The accompanying sketches show a very simple device for putting on heavy belts when it is necessary to shut down in order to do so, and where a rope is usually employed for the purpose. Take a piece of 5-16 or ⅜-inch round iron and bend it as shown in the small sketch at the side, and hook the short end over the edge of the rim of pulley and the long end under the belt as indicated. Start up the engine slowly, and when



FOR HANDLING HEAVY BELTS.

the belt is on it is not necessary to stop, as it is when a rope is used, because the short end of the hook will always straighten out and disengage itself. It is a good plan to use a bar of as light iron for the purpose as will answer, since it will straighten out and free itself with less strain on the belt. I have never used this method on iron pulleys, but presume it would be necessary to file a little notch in the rim to allow the hook to catch in. It works admirably on wooden pulleys.—A. C. Mills, in American Machinist.

PREVENTING BOILER INCRUSTATION.

UNITED States Consul Hughes sends the following from Cobourg, under date of May 17, 1900:

A. Reis, of Antwerp, has patented the following method for preventing incrustation in boilers: A mixture of sugar, tannin extract, silicate of potash or soda, and boric acid is added to the boiler water to keep the salts in solution; when the water attains a density of about 15° to 25° Be, the boiler is "blown off." The working periods range from a fortnight to three months, according to the quality of the water in use. Glycerine and alkaline sulphates are sometimes used in the mixture.

It seems pertinent to dwell for a moment on the subject of timber limit values. Recent events suggest the enquiry, has the appetite for pine timber limits been appeased? Or may it be that so much has been heard of late regarding the magnificent fortunes awaiting the holders of pine limits that it has created a desire on the part of owners for an immediate realization of this unexpected wealth, and they have fixed their reserve bids beyond what others have considered to be the market value of the property. The fact remains that several auction sales of good timber properties have recently fallen flat. Going to one of these sales a few days ago, a few minutes after the appointed hour, about a dozen persons were seen departing from the chambers, and an inquiry from the auctioneer elicited the response "no bid." This is in striking contrast to the results of similar sales held in the fall of last year, when every one seemed to want limits and excellent figures were received. What is the deduction?

* * *

Few men of his years have had a wider experience in the lumber business than Mr. J.M. Thomson, now on the road for Meaney & Company, Toronto. About ten years of his expeirence was gained in the Eastern States; for some time he was manager at Calendar for Robert Thompson & Company, of Hamilton; and for a few years was in charge of the business of the late Hon. A. R. Dickey, at Sheet Harbor, Nova Scotia. He knows the business from start to finish. When at Sheet Harbor Mr. Thompson had considerable to do with British trade, of which he has very pleasant recollections. "The first specification submitted to me" said he, when relating some incidents, "was not easily decipered, but I soon became accustomed to the trade and found it very satisfactory. Once you get a connection with a British house," he added, "you can rely on their business, provided you fill your orders properly. Their specifications call for different sizes than are generally used in this country, but it is not a difficult matter, with the specifications before you, to cut the stock as desired." Mr. Thompson is one who believes that Canadian manufacturers might easily supply a much larger quantity of stock to the British market if they would push for the business and give the Britisher what he requires. He does not think that they are as hard to satisfy as is generally supposed.

* * *

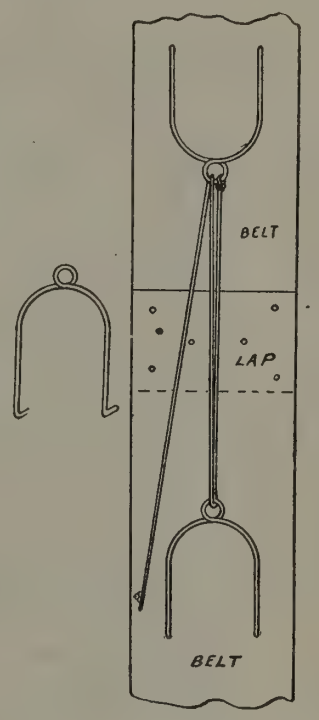
One who is laboring earnestly for the extension of Canadian trade is Mr. Thomas Moffat, whom I met in Toronto recently. Mr. Moffat is the Canadian Government agent at Cape Town, South Africa, and has spent the past few months in Canada securing information from manufacturers, and incidentally renewing old acquaintances. Mr. Moffat believes that if our manufacturers would advertise themselves in South Africa it would be the means of bringing them considerable business. Another suggestion made was that samples be sent to the Canadaian buildings in Cape Town, which are under the control of the commission firm of Moffat, Hutchins & Company, of which he is a member. They would there be inspected by importers. Speaking more particularly of lumber, Mr. Moffat stated that a considerable quantity was now being received at Cape Town from British Columbia, whereas a few years ago almost the entire importation from the Pacific coast was from Washington and Oregon. And I believe Mr. Moffat was largely instrumental in changing the course of trade from the Western States to British Columbia. It was a source of satisfaction to learn that the British Columbia product has now a firm hold on the market, and is believed to be better than the Washington production, there being a difference in grain. The western fir meets with favor in South Africa on account of its large size. The demand there for large timber has been a drawback to shipments from eastern Canada. Quebec pine deals, for instance, would average perhaps sixteen feet in length, while the building trade in South Africa calls for an average length of about twenty-two feet. The reason of this is that the rooms there are made larger than in this country. Mr. Moffat spoke very emphatically as to the desire of importers to get consignments direct from the manufacturer. He sees no reason why the manufacturer cannot ship direct. In proof of this statement, he referred to a commission which had been given him to purchase a cargo of deals direct from some of the Canadian mill owners, the object being, of course, to secure the stock at the lowest possible cost by eliminating middlemen's profits. M. Moffat returns to his home in Cape Town some time this month.

WOOD PRESERVATION.

Another addition to the numerous existing processes designed to prevent decay in wood is now being introduced into Great Britain by the Xylosote Company in the shape of the Hasselmann system. In this the timber to be treated is enclosed in a cylindrical vessel in which a fairly high vacuum can be produced by a suitable air-pump. When the sap has been drawn ouf of the pores under the diminished pressure a solution of metallic and mineral salts is allowed to flow into the vessel, and the wood is steeped in this for some hours under a certain pressure of steam and at a temperature of about 130 deg. C. Then, after been dried, it is ready for use. The impregnating liquid is a solution of the sulphates of copper and iron, whose preservative properties are generally acknowledged, together with some aluminium, potassium, and magnesium salts. The inventor of the process maintains that the copper destroys any germs of decay that may be present, while the iron combines with the cellulose, or woody fibre, to form a compound which is insoluble in water and hence cannot be washed out by the action of rain. The salts in this way are made to permeate the substance of the wood, and are not merely deposited mechanically as minute crystals in the pores by the evaporation of the solvent. It is claimnd for the process, which, apart from the drying, takes about four hours, that it greatly reduces the inflammability of the wood, enables it to take a brilliant polish, and increases the hardness of certain soft woods to such an extent as to render them available for purposes to which formerly they could not be applied. Another advantage attributed to it is that it saves the expense of seasoning in the ordinary way, since perfectly green wood after treatment neither shrinks nor warps. The process appears already to have gained considerable recognition abroad; thus it is stated that the Bavarian State railways and post office have contracted to have all their sleepers and poles up to 1905 treated by it, while the Swedish Government has adopted the system and ordered 600,000 sleepers preserved by its use.

A HANDY BELT STRETCHER

"Rex," in the American Miller, describes a belt stretching device he has used for ten years past and considers the most convenient tool, barring saw and hammer, that he has in the mill. The forks are made out of ¼ to ⅜-inch round iron. The turned points should be one-half inch long



and slightly hooked so they will not pull out of the belt.

Punch holes in the belt far enough above and below the lap or lace so they will not be too close together when the belt is drawn tight. Tie the rope in the eye of the upper one, bring it down and through the eye of the lower fork and then up and through the upper one again. Now, pull down on the rope until the belt is sufficiently tight, then take a loop hitch with the loose end around the taunt rope below the upper eye and you are ready to splice.

With this simple arrangement a miller can take up an elevator or other belt with less labor and time than by any other method I have seen.

The rod for making each fork should be 16 to 18 inches long and the eye should be at least one inch in diameter, so the rope will pass through without riding. The cost will not be over 25 cents.

The Orillia Export Lumber Company write: "The Export Number has come to hand, and we think you have succeeded in getting out a very nice number indeed."

W. H. McAuliffe, of Ottawa, has purchased property on Duke street in that city, on which he is building several residences. He will open a lumber yard in the year,

MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company

One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in anyway affecting it. Even when we may not be able to agree with the writers, we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

COST OF PRODUCTION IN RELATION TO LUMBER PRICES.

MUCH has been heard of late of the excessive cost of lumber, and many projects, we are told, have been postponed until such time as they could be carried out at a lower cost. These opinions have been formed, no doubt, as the result of the sharp advance in the price of lumber which took place during the winter of 1899-1900, but without a study of the actual situation. True, lumber is high when compared with the prices ruling three or four years ago, but it should be remembered that these were years in which the industries of the country were operated at little profit, if not at an actual loss, and lumber was no exception to the rule. Indeed, it may fairly be said that from the year 1893 to 1898 there was no profit in the lumber business, and many of our lumbering concerns which struggled through these years of depression were only enabled to do so by the assistance of the banks.

The present selling prices of lumber are no higher than will afford a reasonable margin of profit to manufacturers, and the conditions of the lumber industry are such as to render it extremely improbable that prices will decline to the low point of four years ago. The one reason for this is found in the increased cost of production. The advance in lumber as compared with four years ago is equal to about $4 per thousand feet, or say 25 per cent., while the cost of production has increased almost as much. Unfortunately, it is the law of supply and demand, rather than the cost of production, that fixes the price of any manufactured article, yet the desire, if not the necessity, of realizing a profit from investments cannot but exert an influence on the price of the article, even if some time should elapse before this effect is visible.

The cost of producing lumber may be divided into four items: First, stumpage; second, supplies and woodmen's wages; third, transportation of logs to the mill; fourth, manufacture of the lumber, in which is included saw mill equipment.

Regarding the first item it cannot well be disputed that there has been a marked advance in the cost of stumpage, probably equal to one dollar per thousand feet of lumber. This has been brought about, not by an extraordinary demand for lumber, but by a more general realization of the fact that our timber supply, although yet large, will soon become depleted if not properly husbanded. It does not appear, therefore, that it will be possible for lumbermen to purchase standing timber in the future at a lower price than at present.

Next we come to the largest item in the expense of producing lumber, namely, wages for men and teams. A conservative estimate of the advance in this item would be 35 per cent. A well-known Ottawa firm is authority for the statement that wages of woodsmen are 70 per cent. and that of teams 50 per cent. higher than they were four years ago, so that the estimate of 35 per cent. is extremely low. For the coming winter's operations foremen are being engaged at $60, log-cutters at $28, teamsters at $26, road-makers and shanty-hands at $23, and cooks at $45 per month. And even at these figures difficulty is being experienced by the lumbermen in securing sufficient men. In the Maritime provinces also the increased cost of labor is reported to be from 25 to 50 per cent., and it would seem that these conditions apply throughout the Dominion. Until this year the advance in the cost of camp supplies had not been correspondingly large, and did not represent more, perhaps, than 15 to 20 per cent. The supplies for the coming season's operations promise to cost considerably more than last year, as there has been an all round advance within twelve months equal to about 12 per cent. Sugar and raisins are nearly 30 per cent. higher, currants 60 per cent. higher, Japan tea 25 per cent. higher, and molasses 12 per cent. higher. Flour, pork and peas are selling at the same figures as last year. There has been a slight advance in other supplies, while scarcely an article required by lumbermen has declined in price. The principal advance in hardware and iron goods has been in axes, which are quoted about 20 per cent. above the prices ruling last season. From these figures it will be seen that so far as supplies are concerned the cost of logging operations during the coming winter will be considerably higher than for many years past.

The third item, namely, transportation of logs to the mills, is each year becoming a more important factor in the cost of producing lumber, although it is a question which is seldom given consideration by the public. When it is stated that in some instances the logs are driven five hundred miles to the mill, and frequently great difficulties are encountered in the process of rafting, it will be admitted that this question should receive some attention. While the drives usually start in April, the first of them do not arrive at the mills until July, and during that time considerable expense is involved in the process of driving. Ottawa mills once near the limits now get their supply from the headwaters of the Ottawa and Gatineau rivers. This reminds us that while the value of timber limits is increasing, the quality of the timber is in many cases much inferior to that which lumbermen would purchase some years ago. This is prove by the policy of the lumbermen, who now cut on what are called white pine limits, spruce and red pine that years ago would be passed by.

Lastly, we come to the question of manufacturing the lumber. A saw mill cannot be built to-day nearly as cheaply as it could four years ago, nor can the expense of repairs be kept at as low a limit. But, as with logging operations, labor is the largest item of expense around the saw mill. We doubt if there is a manufacturer in Canada who is not paying higher wages to his employees than he paid four years ago. This advance is probably equal to 20 per cent.

Considering the above conditions, is it reasonable to expect that lumber prices will materially decline? With one or two exceptions, the prices at which lumber is now being held are warranted by the cost of production, and there is no reason why they should not be maintained. It rests with the lumbermen to take a firm stand on the subject of lumber prices, and to secure for themselves the profit to which they are entitled. Their action thus far in this respect is to be commended, as while in the United States some of the lumbermen have given away and thus broken down the market, the Canadian manufacturers almost universally have refused to dispose of their stock except at the figures asked. The past two months have witnessed a rather slack demand, but there are indications that the trade is now picking up, and that all the lumber manufactured in Canada in the next few years will be wanted at reasonable prices.

EDITORIAL NOTES.

As time goes by, the advocates of the legislation prohibiting the export of saw logs from Ontario are finding more and more reason to congratulate themselves on the wisdom of their policy. A number of Michigan saw mills have already been placed on Canadian soil, and others will follow as necessity demands. It may reasonably be expected that in a very short time the Georgian Bay district will not only outrival the Ottawa valley as a lumber producing centre, but that it will be the seat of extensive wood-working plants also. The true value of our raw material can only be obtained by working it up to the fullest extent in this country, and there are indications that this will be done in the near future.

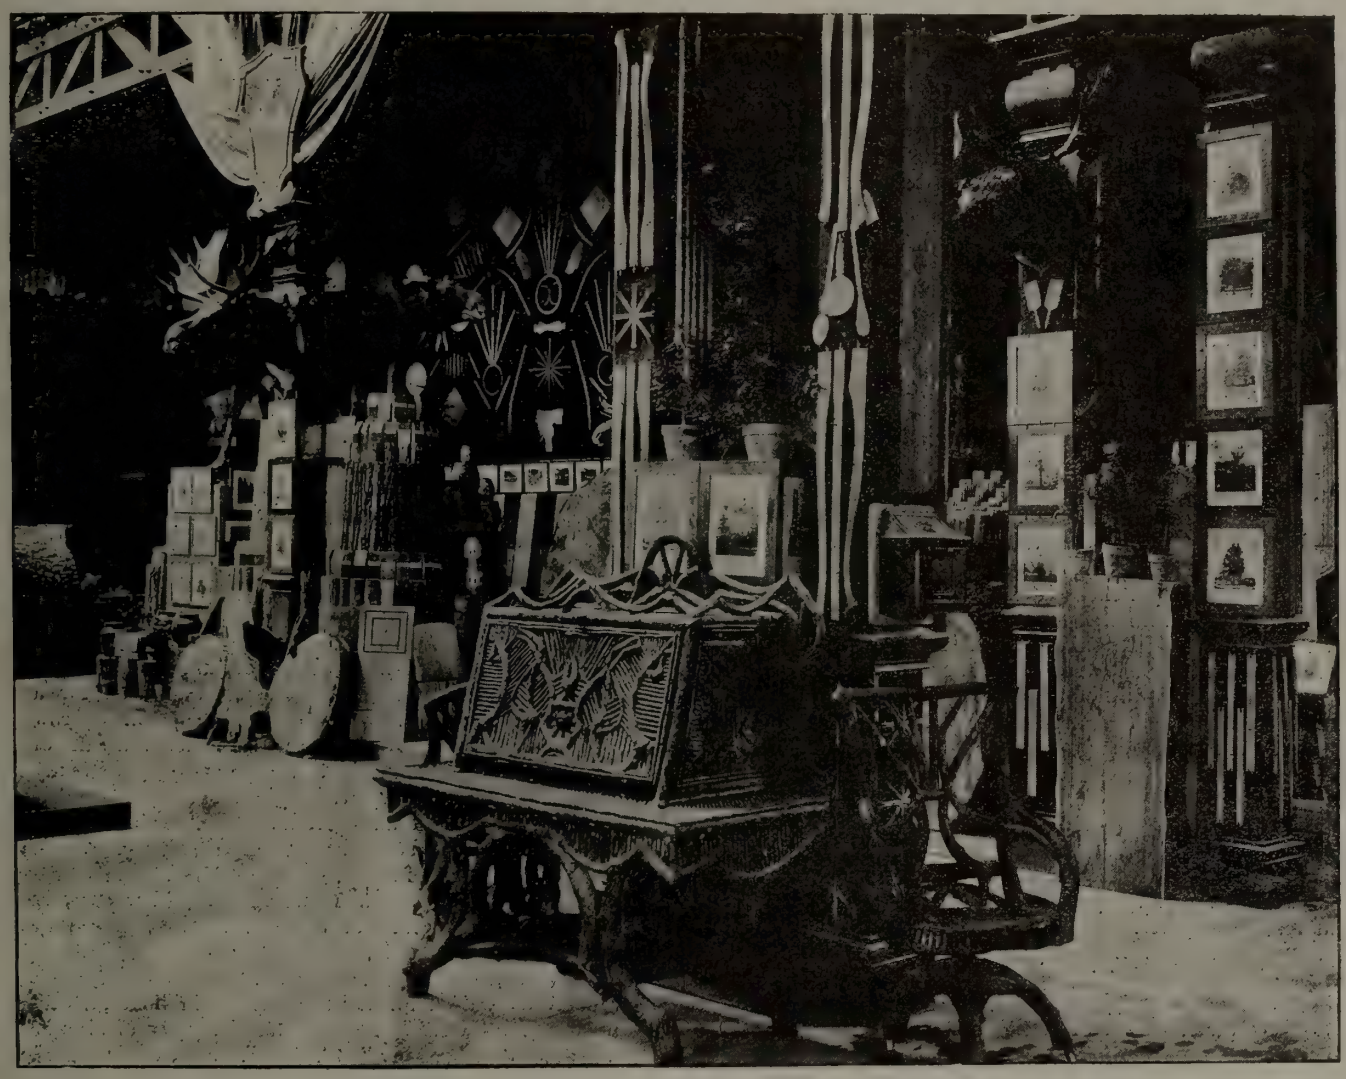
THAT the Canadian exhibit of timber products at the Paris Exposition should have been awarded the grand prize is an honor of which we, in common with every reader of THE LUMBERMAN, should feel proud. It is a forciful reminder that we possess a forest wealth greater than that of any other country in the world. Much credit is due Mr. Macoun for his efforts to secure a representative exhibit of Canadian timber products, notwithstanding that in some instances it was

found necessary to purchase the goods. Yet this exhibit is not the best that Canada can produce, and it is hoped that at the Glasgow exhibition next year an exhibit will be made which will surpass both in variety and quality that made at Paris. It is the duty of the Dominion and Provincial Governments to defray the expenses of the exhibit, but the goods should be supplied by the manufacturer, and in such a manner that every line of wood goods made in this country will be represented.

The approach of the fall season is apt to remind lumbermen of the inconvenience which they expeirenced about a year ago owing to a shortage of freight cars. During the months of October and November considerable loss was occasioned manufacturers and dealers owing to awaiting shipment last fall. It may not be amiss for lumbermen to take time by the forelock and endeavor to prevent a recurrence of the difficulties encountered last year.

THE CANADIAN FORESTRY EXHIBIT.

The accompanying illustration of the Canadian exhibit in the foreslry exhibit at the Paris Exposition is reproduced from the Timber Trades Journal. Speaking of the exhibit this journal says: "In contradistinction to some of the other exhibits which have been organized to illustrate the theoretical and scientific operations of forest growth rather than the practical employment of the various woods, the Canadian exhibit is to all intents and purposes a "timber trade" one, and the commercial side of the question has been kept well to the fore. Of course, we find the usual display of big trunks, notably the giant Douglas fir, the sample of which is 7 ft. in diameter, but the bulk of the specimens are in the form in which they are known to commerce, and there is also a large display of manufactured articles. The space devoted to this exhibit, which is almost at the end of the Palais des Forets, on the left hand side, is about 1,000 ft., and many specimens are also to be found in the Canadian Pavilion at the Trocadero. To relieve the monotony of the wood specimens, there are a number of interesting photographs illustrating lumbering operations, and a few natural history specimens and plants of various firs and pines. There are some fine samples of Canadian white pine, and in addition to the Douglas log we have referred to, we noticed a magnificent plank of the same wood 25 ft. long, 4 ft. wide and 4 in. thick. Amongst the manufactured goods are elm hubs, maple skewers (which were the subject of much curiosity to French visitors, they not being used in France), staves, hickory and red oak spokes, oak and hickory handles, &c."



Canadian Exhibit in the Forestry Pavilion at the Paris Exposition.

CIRCULATION IN STEAM BOILERS.

The important facts regarding circulation in steam boilers, as viewed by Engineering News, are summed up in a recent issue of that journal as follows: Circulation in a boiler is of value, and should always be secured to a sufficient extent to keep the heating surfaces bathed in water and to prevent their undue heating and the injury of the boiler through unequal expansion. The more rapid the circulation the better will this end be attained; and some gain is also to be secured through the reduced tendency of sediment to deposit on the heating surface. It is in these directions, and not in any increased evaporative efficiency, that the gain from good circulation is to be found. While in theory rapid circulation should very slightly improve the economy of a boiler, the gain is too slight to be discernable.

their inability to obtain cars with which to make shipments. Whether this fall will witness a repetition of this condition cannot yet be known. The cause was said to be that the cars were being used for the movement of grain from the west. The wheat crop this year is above the average in Ontario, perhaps slightly below the average in the United States, but somewhat short of the average in Manitoba and the Territories. Thus, it may be expected that the quantity of wheat to be moved this fall will be almost as great as a year ago. We do not think that the railways are in much better position in respect to rolling stock than they were last year, and we would not be surprised if something in the nature of a car shortage was again experienced by the lumbermen. It should be said, however, that the volume of lumber to be moved during the next three months is certain to be less than that

Business for Minnesota lumbermen in Manitoba and the northwest provinces has shrunken tremendously in the past few years of good times. During the hard times the business of handling Minnesota lumber across the line was very profitable to those who knew how to handle it well. But to-day better prices can be had on this side for all the lumber made here. When the balance of prices turns again Minnesota lumbermen will practically have to work up a new business with the prairie Canadians.—Mississippi Valley Lumberman.

HANDLING SHINGLE SAWS.

J. W. Ball, in The Wood-Worker.

The shingle saw is one of the many tools that requires much and better care than the ordinary filer gives them. There are so many different sizes and styles of shingle saws, also so many different machines and kinds of timber to be worked, that the same rule may not apply to all, but there are many "helps" for this kind of business which are of value to nearly all who follow it.

It would be a fine thing if there could be a standard speed for saws, also a standard size and thickness, but as there is not we must reach out for the experience of others; as one idea leads to another we may gain by its products.

If we could all learn to make a saw there would not be so much trouble in running these thin-rimmed saws, as we could determine the quality of the steel much better, understand the weak parts better and learn to doctor them. So many mills depend upon their filer that he should get the best of knowledge and practise it on his saws.

Now, as a shingle saw differs from a board saw so much, it must be treated so much differently. I will give a few rules that work well on 15 to 18 gauge saws by 8 to 10-gauge centres, from 42-inch down to 36-inch diameter. I think to speed a shingle saw 16x9-gauge up to 16,750 circular feet per minute, or in other words a 40 inch saw to about 1,600 revolutions per minute, is not too much speed, nor is it too slow for the good of the saw plate or cutting qualities, and can be strained to that motion very easily.

I do not approve of a real thin saw, say 18-gauge on rim and 8-gauge at collar, for it is rather wedge-shape and requires so much speed to teeth. Why not reduce the centre to 10 and rim to 16 or 15-gauge? I have run such saws and like 9 or 10-gauge centres instead of 8 or 7-gauge. A 40-inch saw works well with a 25-inch flange or collar, with not less than 16 to 19 screws to hold saw solid to it. Some like 16 screws around edge of collar and three at centre. Either three or none at centre is all right if saw is properly hammered and flange true. As to shape of teeth, as well as number, for hemlock and pine, 80 teeth is plenty.

For 40-inch saws of 16 gauge I use teeth 9-16-inch to 5/8-inch in length, with either spring set or swaged full. Spring set is very good and is the easiest. Use set or cramp very close to point of tooth, but be careful and not disturb extreme inside corner, as most all pressure sets mash the point of tooth and then an upset must be used to get inside corners. Without it the teeth will sprawl or straddle, which will cause the saw to heat and make thick and thin shingles. I saw one sawyer using his saw this very way. He shortened the teeth because his saw would not stand hard timber, not knowing that the teeth were spraddling and jerking extra set to his saw every time he would crowd it too fast. Examine this; it is a common occurrence with many.

Run just enough hook so that saw will not snatch or grab. Too much hook will have a tendency to lead the saw with the grain of the timber, and not enough will simply scrape instead of cut. The back of tooth should be beveled a trifle where you run with spring set. This will leave the outside corner of tooth the highest and will stand to run easier and longer than if filed squarely on back. I would not advise any one to bevel face of teeth, as it is too fine a job for practical use without an automatic filing machine, and I am treating on hand fitting; so file the face of tooth square.

Do not let backs of teeth get high; keep them cut down well in order to have sufficient dust room and clearance. I give the shape of teeth that I find give the best satisfaction where a file is used instead of an emery wheel. Notice the bevel on the back of teeth Nos. 1 and 2. Only

No. 1. No. 2.

run the bevel back about 3/8 of an inch and a little less if tooth is real slim, and leave the balance of the tooth square as possible. No. 1 tooth can be gummed with round file, burr, or emery wheel, using 7 inch flat file to dress the tooth with. This will leave a fine edge. The saw should be kept perfectly round so as to permit each tooth to do its share of the work. Be sure to joint your saw often enough to have good full corners. It is bad to joint a saw real heavy, as you will file it out of round if it requires too much dressing. Better joint or round your saw often and not too much at a time.

I claim that in order to have a perfect cutting saw that after jointing it file the backs of the teeth thin. That takes off most of the wire edge and will allow the gauge to be used all right. Then set it, if spring set is used, and after that file the face of the teeth square. Some file backs and fronts of teeth first, then set the saw, but that does not leave a perfectly square face after setting or springing the point of the tooth, as some teeth may get twisted at extreme points just where the saw does its work.

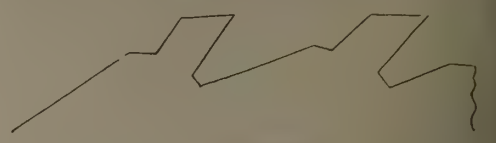
As to lead, run just enough lead to clear the saw plate and no more. Always determine the amount of lead you carry when your shingle saw is under full motion, as the tension in it may cause it to dish a little when standing still. There is lots to learn about hammering shingle saws and it comes under a little different heading, but should be well understood by expert filers as well as by saw makers.

In setting a shingle saw use a gauge with small screw to adjust it with. File the ends of screws that come in contact with the points of the teeth down to about 1 1-16 inch diameter; they will wear off more evenly than a gauge using the full size of screw bolt, say 3-16 inch, thus allowing more even spread to the teeth. You must have a saw set correctly in order to have it do smooth work.

There is a certain feed for every saw that does best. On hand feed machines do not jam, but start into the cut carefully and then increase to a good, strong, even feed. Do not hold the saw in the cut too long, as it may cause too much friction on rim of plate. Do not feed too slowly nor let your saw simply scrape and heat and dull the points. This is often done. When the saw becomes a little dull, stop and sharpen it. You would not whittle with a dull knife long at a time.

This kind of fitting and style of saws and speed will stand about all any sawyer cares to give them in hemlock or pine timber. If your saw is soft, do not feed as hard as on a hard saw, or it will loose its tension too soon.

The reason I caution filers about the shape of saw teeth so much is because it is necessary. I give the shape of tooth I saw a young filer get in his saw. It was beyond anything I ever looked at. You may judge for yourself. It is only a



A Bad Example.

good example. The sketch shows two such teeth. Look at that notch in the back of the teeth. Look at the backs at or near the points. They are so high that they would rub and not allow much feed. Do not use lots of hook and hold it back with the back of the teeth. Always have tooth strong at the point where these teeth are lacking.

ELECTRICITY FOR PLANING MILLS.

The J. P. Will Co., of Louisville, Ky., who for a while operated a part of its planing mill by electricity, in a letter to The Wood-Worker, says: "Our experience has been that where constant service is required, and considering the advantages and disadvantages of both kinds of power, the expense of operation by steam or electricity is about equal. A decided advantage resulted, however, in using the electricity during the winter season of depression, incident to planing mills generally, in that the motors could be started at any time to do little jobs which occasional small orders necessitated, and which could not be handled as readily if steam had to be raised to run the plant, and also bear the expense of an engineer. To enable us to use the electric power thus, periodically, we had an agreement with the company supplying our current, to allow us the greatest discount, regardless of the quantity of current consumed during the month, hence our ability to get out a small job at the same rate of expense as a larger one. Another small advantage was the reduction in insurance rate, owing to the risk being less, because no fire was needed in the mill. Another item to consider is the sale of refuse, which meets with a ready demand, owing to the scarcity of good kindling wood and bedding for stock, and, of course, is not required when fuel is not needed to provide steam. As stated above, we did not use the electric power long enough to determine defintiely as to the relative merits of same compared with steam, but from our estimate we believe it would be cheaper to operate a plant requiring 50-h. p. with steam; but if less than that capacity is needed we believe electricity would be the most advantageous and economical, especially so if as low a rate can be obtained as our rate here in Louisville, which is 10 cents per 1,000 watts, less 70 per cent. discount."

O. H. Camirand & Company, saw millers, Granby, Que., have formed a partnership.

Constructed of solid brick, on stone foundation, three stories high, and 50 by 100 feet in size, the new planing mill of G. W. Murray, at Winnipeg, Man., is one of the most substantial and complete establishments of the kind in Canada. The first floor is devoted to interior finishing work in pine and other soft woods, on the second is placed all the heavy machinery, and the third will contain the hardwood finish and cabinet work.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VI. TORONTO, ONT., AUGUST 29, 1900 No. 32.

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:
IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canaian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE—At Wiarton, about 30,000 feet 12 x 12 in. and 30,000 feet 10 x 10 in. Cedar Timber, 10 feet and up long. Also a smaller quantity of 4 x 4 in., 5 x 5 in., 6 x 6 in., and 2 in. and 3 in. Cedar, and 20,000 feet 12 x 12 in., 20 to 30 feet Hemlock. PICKARD & ROWAN, Owen Sound.

TELEPHONE POLES FOR SALE

THE UNDERSIGNED HAVE FOR SALE 2,500 Telephone Poles, all lengths, from 25 to 55 feet. Quotations given by mail or wire when requested. GEORGE & McGREGOR, Killaloe Station, Ont.

FOR SALE.

40 M feet 1¼ in. Basswood.
60 M feet 1½ in. "
30 M feet 2 in. "
also 1, 1¼, 1½, 2, 3, and 4 inch Hard Maple; 1 and 1½ inch Black Ash, and 1¼ and 2½ inch Red Birch.

THOS. MYLES' SONS,
Hamilton, Ontario.

CURRENT TRADE CONDITIONS.

ONTARIO.

The lumber buyer is still waiting for the manufacturer to lower his figures before he enters into contract for any considerable quantity of stock. Influenced in his actions by the law of supply and demand, he does not feel that the situation at present warrants the purchase of but sufficient stock to supply his customers, while the manufacturer appears to have faith in the future of lumber prices and is offering little inducement to buyers in the way of lower prices. A quiet trade is the natural result of these conditions, and until the demand from consumers shall infuse more life into the trade, no improvement can be expected. The large pine manufacturers report a satisfactory movement of stock at good figures, but few new sales, and the same may be said of hardwoods. The supply is much more plentiful than it was at the corresponding period last year, and yards that were then entirely cleaned out are now well filled with stock. The increased cost of production, however, would seem to justify manufacturers in holding their stock at a reasonable figure, as at present there is but a fair margin of profit. High wages are being offered for men to work in the woods, and labor seems very scarce.

QUEBEC AND NEW BRUNSWICK.

Throughout the lumber trade a slightly better feeling seems to prevail. Shipping to Great Britain is now quite active, and freight rates are a little easier. It is reported that a raft of square and waney pine timber was sold last week at Quebec at 50 cents per cubic foot, an advance of about ten cents on the price obtained for similar timber last year. If the figures are correctly reported, they reflect a strong market for pine timber. Prices of elm, birch, and ash are unchanged. Apart from European shipments the spruce market is quiet. In the absence of a good demand prices are unsettled. No material improvement is looked for until about the middle of September, by which time it is expected the fall movement of stock shall have commenced. Clapboards and shingles have not recovered from their recent lethargy.

UNITED STATES.

The lumber situation in the United States has been strengthened by the statistics collected and just made public by the Mississippi Valley Lumbermen's Association. These show the condition of white pine stocks in Wisconsin, Minnesota and at points below on the Mississippi river. According to figures submitted by manufacturers, and which are beleived to be correct, the stock of lumber on hand on August 1st of this year was 1,625,808,373 feet, a shortage of 224,680,048 feet as compared with August 1st, 1899. It was also shown that the cut of this year will be 485,850,000 feet less than last year. These figures have inspired confidence in the future of the lumber business, and have had a tendency to strengthen prices. At the meeting above referred to, the question of advancing the price of white pine was considered, but it was decided to reaffirm the old list. Lumber buying is still backward, but the number of enquiries have created a strong hope of an active fall trade. The reduced prices of iron and steel have stimulated building operations in the Eastern States. The manufacturing demand, however, is not so strong as last year. Such orders as have been placed indicate a broken condition of retail stock, and as soon as trade shall pick up liberal buying will no doubt result. Hemlock lumber has weakened and is now said to be selling in Buffalo at $13. Spruce is quiet, but manufacturers are holding prices steady. At Boston, 9 inch and under is selling at $15, 10 and 12 inch at $16, and spruce boards, planed one side, at $14. Hardwoods have not improved within the past few days. Maple and ash are rather dull of sale, elm is in moderate request, and oak is called for to a considerable extent.

GREAT BRITAIN.

The receipts of Canadian lumber at British ports have been quite heavy of

late. But notwithstanding prices show a further upward tendency. F.o.b. transactions are reported at the following prices: 1st quality pine, 11 in. x 12 ft., £26; 2nd quality, same dimensions, £18 to £19; 3rd quality, £12; 4th quality, £8. Several sales of 3rd and 4th quality have been made at the above figures. At a recent sale held by Churchill & Sim, a parcel of 1st pine, 13 ft. x 11 in., from Montreal, sold at £30, and two lots of 12 ft. to 13 ft., 3x⅞, dry, of the Hawkesbury cut, brought £21 5s per standard. There is likewise a splendid demand for spruce. The latest prices have been £9 12s 6d for 2nd quality 3x9, and £9 for 3rd quality, 11 in. of 2nd quality bringing £10 15s c.i.f. London. The docks contain a large quantity of slating battens, and it is said that the market in this line is likely to be overdone unless the consumption increases.

Square and waney timber is steady but not particularly active. Waney pine has been sold at an advance of 6d per cubic foot on the price obtained for similar stock last year, but recent sales have shown a slight decline in the price of birch. This is said to be due to the action of certain merchants in placing too much stock on the market. Maple timber has been sold at auction at 16½d per cubic foot, elm timber at 19½d, and ash timber at 19d.

STOCKS AND PRICES.

The "Scottish King" is about to load a cargo of lumber at Montreal for the U.K.

R. & T. Ritchie, of Aylmer, Que., have contracted to saw 10,000 of Gillies Bros'. logs now lying in the Baillie boom.

F. E. Sayre is reported to have purchased the lumbering property of the late Hugh McLean at Salmon River, N. B.

The British bark "Brushels" has just sailed from Vancouver, B. C., for Cape Town, South Africa, with a cargo of lumber.

The "Manchester Shipper" sailed from Parrsborro, N. S., on August 21st for Manchester, with a cargo of 3,494,632 feet of lumber, shipped by George McKean.

A large quantity of lumber will be required for the proposed harbor improvements at Port Colborne, Ont. The contractors estimate that they will use 4,000,000 feet this year.

Thos. E. Stewart, of Upper Musquodoboit, N. S., owns 900 acres of timber limits on the headwaters on the Musquodoboit and Moose river, and wishes to let the contract for logging same.

During the month of July of this year there was received at Buffalo 15,552,000 ft. of lumber, against 34,574,000 feet in the corresponding month last year. In shingles there was a decrease of 6,981,000.

Peter Wallace, of Midland, Ont., has secured the contract from the Georgian Bay Lumber Co. to take out 10,000,000 feet of logs during the coming winter. It is estimated that the company will make a large cut on the Blind River.

The German ship "Marie" sailed last week from the Moodyville, B. C., mills, for London. She carried 512,000 feet of lumber below decks. The "Wilhelmina" is to load lumber at the Hastings mill, Vancouver for Delagoa Bay. The "Louiana" and the "Lindfield" are both loading at the same mill for foreign destinations.

The following is a comparison of the cargo shipments of lumber and lath from British Columbia during the first seven months of the years 1899 and 1900:

	Lumber		Laths	
	1900	1899	1900	1899
January	2,792,002	1,097,776	117,270	183,000
February	5,090,554	2,324,055	131,670	.....
March	5,048,064	3,112,573	543,430	.....
April	4,022,033	1,811,014	298 300	.....
May	6,130,380	6,200,317	708,000	.....
June	7,165,890	3,650,522	.....	.....
July	2,813,067	3,590,262	.....	172,620
Total	33,071,590	25,786,519	1,799,670	355,620

A.F. & D. Mackay, of Liverpool, Eng., recently held an auction sale of birch timber from St. John. The sale was moderately well attended by local buyers, but bidding was dull, and prices ranged from 15½d to 26d, the whole averaging 17½d for 15½ in. deep foreign. Early last month a parcel of the same average depth was disposed of at an average price of 20½d per foot. This shows a decline of about 3d per foot, which is ascribed to the forced sales of timber.

Following is a comparative statement of timber measured and culled at Quebec up to 27th August, as reported by the Supervisor of Cullers:

	1898.	1899.	1900.
Waney White Pine	1,606,278	1,598,665	1,366,183
White Pine	1,028,761	543,889	505,666
Red Pine	216,538	159,541	62,796
Oak	844,206	487,604	429,302
Elm	471,077	446,408	586,031
Ash	34,532	56,514	81,227
Basswood			241
Buttternut	955	60	142
Tamarac		415	71
Birch and Maple	106,592	231,946	392,149

On Friday, August 10th, Alfred Dobell & Co., Liverpool, held an auction sale of Halifax spruce deals ex Ailsa Craig. The specification was only fair, the bulk being of short lengths. The 16 ft. and up were well competed for, the 3 by 11 realizing £9 17s 6d, the 3 by 10 £8 7s 6d, the 3 by 9 £8 6s 6d, and the 3 by 8 £7 15s. The shorter lengths, 9 ft. to 15 ft., sold at from £7 to £8 15s per std, the whole cargo realizing an average price of £7 10s per std. The scantlings brought £6 12s 6d and £6 15s, the deal ends £6 12s 6d, and about 25 stds. of boards £6 7s 6d per std.

BRITISH AUCTION SALE.

The following prices were obtained for Canadian lumber at a sale held by Churchill & Sim, London, England, on August 16th:

PINE—Ex. Devona, from Montreal—12-16 ft. 1x10 in. dry, £11; 12-16 ft. 1x10 in., £10 15s. Ex. Oceano—12-13 ft. 2x8-17 in., £17; 12-13 ft. 2x7 in-, £16; 12-13 ft. 2x4 in.., £16 10s; 5-11 ft. 2x4-14 in., £14. Ex. Arnage, from Montreal—16 ft. 2x11 in. second quality, £13; 13 ft. 2x11 in., £12 10s; 12-15 ft. 2x11, £13; 12-16 ft. 2x12-20 in., £12; 12-15 ft. 2x10 in:, £11; 15-16 ft. 2x9 in., £11; 12-24 ft. 2x9 in., £11 10s; 15-16 ft. 2x8 in., £9 15s; 12x14 ft. 2x8 in., £10; 12-16 ft. 2x7 in., £9 10s; 12-16 ft. 1½x16 in., £11; 12-13 ft. 1½x9 in., £10; 12-16 ft. 1½x8 in., £9 15s.

SPRUCE—Ex. Cheronea, from Hopewell Cape, N. B.—15-18 ft. 3x6 in., first, second and third quality, £7 15s; 12-15 ft. 3x6 in., £7 10s; 9-11 ft. 3x6 in., £7 15s. Ex. Greta Holme, from Quebec—9-16 ft. 3x6 in., first quality, £10 5s; 6-8 ft. 3x6 in., £9 15s. Ex. Hildawell, from Quebec—13 ft. 3x9 in., second quality. £10 10s; 6-8 ft. 3x9 in., £8 10s: 6-8 ft. 3x7 in., £8; 6-8 ft. 3x6 in., £7 15s; 6-8 ft. 3x9 in., third quality, £8 5s; 6-8 ft. 3x7 in., £8; 6-8 ft. 3x10 in., £9; 8 ft. 3x9 in., fifth quality, £7; 6-8 ft. 3x7 in.-5, £6.

Eight pieces of elm timber, 11 to 14 inches average and 36 feet in length, sold at £5 per load.

THE BARBADOS MARKET.

The following review of the lumber marke of Barbados is given by Messrs. S.P. Musson, Son & Co., in their circular of August 4th:

There is still a fair demand for both white pine and spruce lumber. We note one arrival with white pine during the fortnight, which has been placed as follows—$23.08 for first quality, and 18.08 for second quality. Last sale of spruce $20.29 for first and $16.29 for second quality boards, and $18.00 for planks.

Gaspe cedar shingles have arrived freely. We placed 187 M. large, ex Success, at $5.07 per M; other sales ex same vessel have been made at $4.56 for large, and $3.03 for small; cedar laying at $2.03 for a cargo of 485 M. ex New Dominion; spruce layings at $2.00.

FIRES.

Fire recently destroyed Livingston's saw mill and hoop and handle factory at Blythe, Ont.

Doolittle's saw mill on the fourth concession of Malshide, near Centreville, Ont., was burned last week.

The sash and door factory of Geo. Bradshaw on St. James street, Montreal, has been damaged by fire to the extent of $5,000.

The saw mill of Logan & Sutherland, at Musquodoboit Harbor, N. S., was destroyed by fire last week. The loss is about $20,000 and insurance small.

The saw mill of R. B. Miller on the Red Mountain railroad, six miles below Rossland, B. C., was burned recently, together with 500,000 feet of lumber. The loss is estimated at $22,000, and there is no insurance.

SHIPPING MATTERS.

The current rates of freight to Buffalo are $2.25 from Duluth, $1.62½ from Menominee, and $1.40 from Georgian Bay.

The German ship Wilhelmina, which is loading lumber at Vancouver, B.C., for South Africa, gets 92s 6d, which is said to be the highest freight rate yet paid on lumber from the coast to South Africa.

BUSINESS NOTES.

P. J. McGuire & Company, timber jobbers, of Whitney, Ont., are said to be asking for an extension of time for three years.

Messrs. Calder, Henderson & Livingston, wood brokers, Glasgow, Scotland, have moved from 109 St. Vincent street to 102 Hope street.

LUMBER FREIGHT RATES.

CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, 9½ cents per 100 lbs Ottawa, Rockland and Hawkesbury to Montreal, for export only $1.10 per M ft., domestic 4½ cents per 100 lbs; Quebec, $2.10 per M ft., domestic 8½ cents per 100 lbs.; Arnprior to Montreal, for export only $1.60 per M ft., domestic 6½ cents per 100 lbs.; Quebec, export $2.60 per M ft, domestic 10½ cents per 100 lbs.; Pembroke to Montreal, for export only $1.85 per M ft., domestic 7½ cents per 100 lbs; Quebec for export only 2.85 per M ft., domestic 11½ cents per 100 lbs.; Ottawa to New York, all rail, 15 cents per 100 lbs; Arnprior to New York, 17 cents per 100 lbs.; Pembroke to New York, 18 cents per 100 lbs.; Ottawa, to New York and points within regular lighterage limits of New York Harbor, seasoned pine lumber, lots of 50 M feet and up, via Williams Barge line from Albany, $3 per M feet, lath 60 cents per M pieces, lots 250 M pieces and over; from Rockland and Hawkesbury Ons., sasoned pine lumber $2.85 per M, lath 5;tts per M pieces; from Arnprior, seasoned pine lumber $3.50 per M feet, lath 70 cents per M pieces; from Douglas, Eganville and Pembroke, seasoned pine lumber $3.75 per M feet, lath 75 cents per M pieces, Ottawa to Buffalo, 12 cts. per 100 lbs.; Ottawa to Port Huron and Detroit, 14c. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c., exports 11c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents. export 13 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany, 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N.B., and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N.S., and common points, 21 cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs. Rates quoted above are in cents per 100 lbs.; when quoted per M ft., minimum carload will be 10 M ft., lumber not exceeding 3,000 lbs. per M ft. Lath minimum carload 30 M pieces, not exceeding 600 lbs. per M pieces. Ottawa rates apply on shipments from Rockland and Hawkesbury.

NOTES FROM THE EASTERN PROVINCES.

[By a Travelling Correspondent.]

The shingle machine manufactured by Messrs. McFarlane, Thompson & Anderson, of Fredericton, is one which has a wide reputation. It is of the well known Dunbar pattern, and the first machine of the kind made is still running in good order in Estey's mill at Fredericton. The McFarlane machine is constructed for heavy work, and is the kind demanded in British Columbia where they have such heavy timber. They have sent quite a number to that province and have several orders on hand from there now. E. H. Heaps & Co. have used the Dunbar machine before and are now asking for more. Stetson, Cutler & Co., of St. John, recently put in four of their machines, and King Bros., of Cedar Hall, Quebec, have ordered two. The factory has lately been working overtime.

Jas. Neill, the well known hardware merchant of Fredericton, received many orders the past season for his lumbermen's driving calks from all over the Dominion. He manufactures them in his factory near St. Mary's. Mr. Neill handles all sorts of lumbermen's supplies, including belting, Dodge split pulleys, etc.

T. E. Babbitt & Son, Gibson, turn out about 1,500,000 feet of deals, and between two and thece million shingles. Their mill consists of a rotary, two shingle machines and a planer. They ship shingles and hemlock boards to Boston.

W. A. & J. H. Hay, of Millville, York county, took out two and a half million feet of logs last season. They have a water power mill, with rotary, clapboard, shingle and lath machines and two planers. They sell mostly log lumber to the American market. John McAdam is cutting up 400,000 feet for J. Hallid, of Millville, at his steam mill four miles from Millville. J. Hallid got out about 2,000,000 feet of logs from the Keswick this year.

Aaron Price, of Lower Hainesville, is cutting between two and three million feet on the same river.

Thos. W. Flett will next winter double the capacity of his already good sized mill at Nelson, on the Miramichi. He has in the past been rushed with business. An engine of 125 horse power and boiler of 150 horse power will be put in. Mr. Flett turns out a great deal of box wood which he has been cutting with a kicker resaw machine and Drake shingle machine. He will put in a box sawing machine, made by the Garland Company, of Bay City, Michigan, with a capacity of 12,000 superficial feet per day. Mr. Flett claims that he could not get a suitable machine in Canada to do the work.

A good joke is told on himself by one of our New Brunswick shingle machine manufacturers, of whom the LUMBERMAN'S readers have recently heard. It was in the days of long ago when he was new in the shingle machine business, but well versed in the mechanical arts. Shingle machines were few and far between on the upper St. John, and the shingle business was but just beginning. None were made within a great distance and transportation was slow. Our friend's reputation for turning out mechanical combinations had gone abroad, and he was one day requested to manufacture a shingle machine for early use. As he had never before seen such an article, he based his following calculations and actions on descriptions given him in the rough and brief view afforded him of the various parts of a machine which had arrived in a knocked down condition at the wharf in the town on its way up the river. The building of the new machine went on satisfactorily and was successfully accomplished. There seemed but one drawback on the day of the trial, though two or three had previously suggested vaguely that something looked wrong, and that drawback was, that the machine was built left-handed. Its future history is not recorded.

Shipments during last year to Spanish ports from St. John amounted to eleven cargoes, all sent by Andre Cushing & Co. Seven of these cargoes went to Las Palmas, being made up of white pine and spruce lumber, pickets and laths, and aggregating 3,000,000. kilogrammes. Two cargoes went to Linerlffe, one to Valencia and one to Barcelona. The only shipment in the past year from St. John to Portugal was one sent last July, consisting of spruce and pine boards, cedar and spruce shingles and laths, and having a total value of $1,700.00. The Portugese consul here thinks that manufacturers of box shooks could work up a good business with his country in that line.

The Yarmouth Steam Cooperage & Box Factory is doing a rushing business in cooperage stock at present. This factory is run by G. F. Allen & Co., who have a steam mill at Brazill Lake and a water power mill at Pleasant Valley. They ship about 1,000,000 feet per year to South America. Their factory in Yarmouth turns out barrels, casks, boxes, shooks, house framing material, etc.

D. R. Saunders last year remodelled his saw mill at Lake Aunice, N. S., and substituted steam power, putting in engines of about 50 h. p. It is a circular saw mill and cuts from 1,500,000 to 2,000,000 feet of South American stock per year. This mill was originally owned by D. A. Saunders, who sold out to his son. D. A. Saunders has been in the lumber business about 15 years and now has a mill at Salmon River about 7 miles from Yarmouth, where he cuts about 1,000,000 feet a year of South American stock. Another mill which he owned at Norwood was burned.

The Blackadar Milling Co., of Nova Scotia, do a large business in their section. They have a water power gang saw mill at Metaghan, N. S., and a steam power circular at Hectanooga. They cut South American stock, deals and laths, and ship from four to five million feet a year. Another mill at Meteghan, owned by Parker, Eakins & Co., of Yarmouth, and managed by Mr. N. J. Raymond, is a water power circular, cutting from two to three million feet a year of South American stock.

Campbell's lumber mills and store buildings at Weymouth Bridge have recently been equipped with electric lights, supplied by a dynamo in the engine room. The same dynamo will also supply light to business houses and residences in the vicinity.

Chas. Burrill, the lumber insurance broker of Weymouth Bridge, N. S., and the managing director of the Sissiboo Pulp & Paper Co., is recovering from the effects of an accident while out driving.

Three hundred and fifty car loads of lumber have been shipped from Hartland, a small village on the Upper St. John, so far this year. This is largely the output of the Sawyer mills there.

Messrs. Tabor & O'Neill, a new wood working concern in Fredericton,-which is getting to be pretty well known, have secured a large order from Donald Frazer & Sons for interior finish required in the erection of some 20 or 25 new cottages and bulldings near their new mill on Temiscouata Lake.

Mr. O'Neill, a lumber merchant of Cardiff, Wales, who was on a business trip up the St. John river at the time of the railway accident on the Grand Falls bridge, and was severely injured thereby, has settled with the C. P. R. authorities for a sum said to be in the vicinity of $4,000. He has recovered sufficient to travel again.

Jas. Porter, M.P.P., is adding to his saw mill at Andover, N. B., a new roller wheat and grist mill. The new structure is about 35x50 feet and of three stories.

CANADA'S COMMERCIAL AGENTS.

FOLLOWING is the official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries :

J. S. Larke, Sydney, N.S.W., agent for Australasia.

G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.

Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.

D. M. Rennie, Buenos Ayres, Argentine Republic agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders :

J. G. Colmer, 17 Victoria street, London, S.W., England.

Thomas Moffat, 16 Church street, Cape Town, South Africa.

G. H. Mitchell, 15 Water street, Liverpool, England.

H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.

Harrison Watson, Curator, Imperial Institute, London, England.

POWER REQUIRED FOR CIRCULAR SAWS.

A circular saw with 900 revolutions per minute, and having a feed of 60 feet, operates upon the timber being converted at the rate of fully 1 in. per revolution. A saw having 60 teeth, under these conditions, cuts about 1-50th of an inch per tooth.

The feed speed above mentioned for a circular saw—provided that the machine is of efficient construction—when in action upon soft wood may be accepted as correct and considerably under the possible degree. Some may imagine that a circular saw, when cutting at the rate of 60 feet per minute, absorbs double the power the same tool would need when acting at 30 feet in equal depth and kind of timber, but such is not the case. Five-horse power may be necessary to give effective power to a saw when acting at the rate of 30 feet, but ten horse power is by no means absorbed when cutting the same wood and depth at 60 feet per minute. It may be safely assumed that the power in this case at 60 feet travel will not require more than 7½-horse.

These conditions or results arise from the action of saw teeth. Double cutting with a certain machine does not imply two-fold power. The action of a saw tooth may be compared to that of a paring chisel on end wood. With a chisel, 40 lbs. may be sufficient to pare 1-32 of an inch, but 80 lbs. is not necessary to pare 1-16 off the end of the same material ; 60 lbs. will in all probability accomplish the latter operation. Saws of all descriptions are governed bp the same law, and with keen cutting tools the ratio of power is not increased in equal proportion as production.

Generally all band and reciprocating saws operate on the timber at right angles. That this is the best position for saws to be placed is not practically correct. Of course, it is a very difficult matter (I may add impossible) in many cases for saw mill engineers to alter this state of things. To cut and convert timber at an oblique angle is much the more practicable method, i.e., at an angle of about 30 degrees with the grain or fibre of the wood. With this system less power is expended, and the work produced much more satisfactory and smooth. Besides, saws are not so liable to run out of truth or deviate from their assigned track. To adopt this method with vertical log or deal frames may be deemed impossible, but could with much advantage be practiced by the horizontal band mill and saw frame.

The action of the straight-faced saws is the same, irrespective of the depth or width of cut, but the action of circular saws is vastly different, and is governed by the depth of cut. Thus, while a circular saw is in action on a piece of timber the full depth of saw, it is cutting at all the angles contained in a quarter of a circle. The action of teeth at the top is quite different from their action at the lower portion of the timber. For instance, a saw cutting a deal 12 in. deep, the lower half is cut at a position approaching right angles, but the upper half is cut more obliquely, or at the average angle of 45 or 50 degrees. To assert which half requires the more power exceeds the discrimination of most men, but as the circular saw in this case is invariably acting against the fibre of the wood more so than the lower part of deal or log, it may safely be assumed that the power necessary to drive the saw in the various arcs of cutting contact is closely the same.—Saw Mill Engineer, Liverpool, England.

PERSONAL.

—Mr. Alex. McDougall, of the Fernie Lumber Company, Fernie, B. C., has recently been on a visit to friends in Eastern Ontario.

—The news has been received of the death of Mr. John L. Murray, of Doaktown, one of the best known lumbermen in the province of New Brunswick.

The CANADA LUMBERMAN was recently favored with a call from Mr. J. J. Whaley, of the firm of Cockburn, Whaley & Company, lumber merchants and exporters, Guelph, Ont. This firm deal in white pine and almost every variety of hardwoods. Mr. Whaley reports a steadily increasing business.

—Mr. J. E. Murphy, of Hepworth Station, Ont., returned about one month ago from a trip to British Columbia, whither he went on a prospecting tour with a view to engaging in the lumber business on the coast. Mr. Murphy is well satisfied with the situation there. An abundance of timber can always be depended on, but prices of lumber, he says, are lower than they should be, considering the excessively high wages. He expects to remove to Vancouver next spring.

THE NEWS.

—John Humbersone has purchased a saw mill at Ripley, Ont.

—It is reported that another pulp mill is to be built at Thorold, Ont., by American capitalists.

—The business of E. W. & O. A. Miller, saw mill owners, Woodstock, N. B., is being wound up.

—The new mill of the Victoria Harbor Lumber Company at Victoria Harbor, Ont., has commenced operations.

—The assignment is reported from Sherbrooke, Que., of E. F. Knene & Company, saw millers, with mills at Keene's Siding.

—The Rathbun Company, of Deseronto, are building a new saw mill at Bancroft, on the extension of the Central Ontario Railway.

—James C. Wright's steam saw mill at Hopewell Hill, N. B., closed down about Auguust 1st, after cutting 600,000 feet of lumber.

—The Wm. Tytler Lumber Company, of Vancouver, has been dissolved, Wm. Tytler retiring and E. C. Cargill continuing the business.

—C. & I. Prescott, of Albert, N. B., are offering for sale their timber limits in Restigouche county, consisting of 129 square miles.

—The Blind River Lumber Company, of Blind River, Ont., are installing a new electric light plant for lighting their mills and docks.

Mr. D. K. McLaren, of Montreal, has been awarded a silver medal at the Paris Exposition for his exhibit of oak tanned leather belting.

—The King mill property at St. John, N. B., has been purchased from Stetson, Cutler & Company by Randolph & Baker, of St. John.

—The William Tytler Lumber Company has applied for foreshore rights to establish a saw-mill on the water front at Vancouver, B. C.

—Eddy Bros. & Company, of Bay City, Miich., are moving their saw mill to Blind River, Ont., a result of the Ontario saw-log legislation.

—J. F. Maunder, of Little Britain, Ont., has made important improvements to his planing mill, and has put in a new Goldie & McCulloch Wheelock engine.

—The Knight Bros. Company, of Burk's Falls, Ont., have made application to the town authorities for a bonus to assist them in enlarging their saw mill and woodworking factory.

—The Rouge Boom Company expended last season on improvements on the booms at the mouth of the Rouge river over ten million dollars, and to facilitate driving over twelve million dollars.

—J. R. Booth, of Ottawa, has purchased the water lots on the north side of the Chaudiere bridges at Hull. The erection of a large sash and door factory on the property is said to have been spoken of.

—The Hadley Lumber Company, of Chatham, Ont., have just put in a new boiler, purchased from Hunter Bros., of Kincardine. Wm. Newman, of Wiarton, has installed in his mill a new boiler of the same make.

—The Burrill Johnston Iron Co., of Yarmouth, N.S., has been building a flume for the Sissiboo pulp mill which will be 200 feet long, tapering from 19 to 15 feet and weighing about 115 tons. A railway car could run through it as through a tunnel.

—The Royal City Mills, of New Westminster, recently made a large shipment of timber to Sorel, Que., to be used in the construction of Government work there. Many of the pieces were from 16 inches to 2½ feet square and from 50 to 96 feet long, requiring three flat cars to carry them.

—The imports of lumber into the United States from Canada in 1899 were 673,622,000 feet, valued at $6,990,175, against 348,876,000 feet, valued at $3,464,718, in 1898 and 674,851,000 feet, valued at $6,795,376, in 1897. The shingles imported by the United States last year were 545,484,000, valued at $999,862, against a valuation of $830,298 in 1898, and $434,232 in 1897.

—Price Bros. & Company, of Quebec, have purchased the timber property of the Rimouski Lumber Company at Rimouski, Que. The mills are situated about two miles up the Rimouski river, and contain a rotary saw, planer, eight shingle machines, etc. The limits comprise 350 square miles. It is the intention of Price Bros. & Company to build a steam saw mill at the mouth of the Rimouski river.

—A meeting of the citizens of Chatham, N. B., was to have been held last week to consider a proposition made by John Moravec to erect a pulp mill at Morrison's Cove, adjacent to the town. The plans of the proposed mill have been prepared, the cost of construction being estimated at $200,000. Mr. Moravec was formerly associated with the Maritime Sulphite Fibre Company, of Chatham, but severed his connection with that company a short time ago.

According to the American Consul at Nantes, M. Eugene Harang, of No. 1, Place du Commerce, Nantes, wishes to be placed in direct correspondence with dealers in certain lines of goods. He wishes to obtain prices on "sapin blanc," or white pine. This wood is used in the manufacture of wood pulp. Last year the mills at Nantes, the largest in France, consumed 52,000,000 pounds of pulp made from Norwegian pine. The wood used is cut from trees having a diameter of not less than four inches, usually larger, but too small for good lumber. It is cut in lengths of 44 inches. The gentleman also wishes to correspond with parties exporting stave timber used in the manufacture of casks.

—A meeting of persons interested in forestry was held in Vancouver on August 8th to consider the formation of a branch of the Canadian Forestry Association. Interest in this matter was aroused by an address given in the council chamber by Sir Henri Joly de Lotbiniere, Lieutenant-Governor of British Columbia, who has always taken a deep interest in forestry. The chair was occupied by Mr. Hewitt Bostock, M.P., and there were present J. R. Anderson, Deputy Minister of Agriculture, Major-General Kinchant, Acting Mayor McQueen, Colonel Falk Warren, T. Wilson, T. Duke, Fruit Inspectors Cunningham and R. M. Palmer, J. J. Banfield, M. C. Nelson, A. Philip, T. C. Keith and H. G. Ross. It was decided to form a provincial association, Mr. Hewitt Bostock being appointed convener, Col. Warren treasurer, and Mr. T. Wilson, of Fairview, secretary. A vote of thanks was tendered to the Lieutenant-Governor for his interesting address.

CASUALTIES.

—John D. Gorman, an employee of the Hastings saw mill at Village Bay, B. C., fell off a boom of logs and was drowned on July 12th.

—William Burke, an employee in Black's saw mill at Fergus, Ont., was found dead in the boiler room on July 18th. Death is supposed to have resulted from heart failure.

—The explosion of a boiler in Gordon & Company's saw mill at Cache Bay, Ont., resulted in the death of Andrew McQuinn, second engineer. Low water is said to have been the cause of the accident.

PUBLICATIONS.

THE remarkable growth in the popularity of metal for building purposes is well illustrated by the new catalogue just published by the Metallic Roofing Company, of Toronto. This catalogue is the most artistic and complete one ever issued by any firm engaged in this line of business. It comprises 150 pages and is handsomely printed and substantially bound. The edition of this catalogue weighs over ten tons and its production cost upwards of $7,000. It illustrates and describes the various lines of metal ceilings, corrugated iron ceilings and doors, steel clap boards, fire proof laths, etc., manufactured by the company. The Metallic Roofing Company were the pioneers in the manufacture of the above class of goods, having started sixteen years ago by manufacturing only one line of metal shingles. They are supplying large quantities of their mcterial for the construction of saw and pulp mills and wood-working factories.

THE WASTE OF FUEL FROM BOILER SCALE.

THE waste of fuel supposed to result from raising steam in lime crusted boilers has been made the subject of many a paragraph in text-books and other publications, and most readers are quite familiar with the statement that a film of ordinary scale, not thicker than a sheet of writing paper, would cause the loss of a very appreciable percentage of the coal burned under a boiler—something like 10 per cent.; scale a thirty-second of an inch thick would cause 25 per cent. loss; a sixteenth of an inch 50 per cent., and so on. Referring to this recently in a lecture at Cornell University, Mr. Walter M. McFarland, formerly an engineer officer in the United States Navy, said that to any engineer who went to sea in the old days when the working conditions caused an immense formation of scale on the heating surfaces, the utter lack of truth in this statement ought to have been manifest, his own expeirence having shown that a considerable thickness of clean uniform scale made apparently little difference. On the United States ship Vandalia, for example, there were two boilers which were used only for distilling, under normal conditions, and after a little experience these boilers were run alternately until scale had been accumulating for about three months, and yet it was found that the amount of water distilled for a given amount of coal burned was practically the same at the end of three months when the scale was nearly a quarter of an inch thick as when theheatin gsurfaces were clean. It is, of course, true that under these circumstances the boilers were being worked at only a fraction of their full power. On one occasion, however, when there was a little discussion about this point, some one suggested a very simple test, and when one end of a piece of scale about eight or ten inches long from one of the tubes was held in the flame of a lamp it was found that the other end heated up with astonishing rapidity, thus showing that the statements which had been made about the non-conductivity had been greatly exaggerated.—Cassier's Magazine for August.

THE GREAT TORONTO FAIR.

As there seems to be a feeling of general prosperity throughout the country this year, the attendance of visitors at the Toronto Exhibition, which opened on the 28th ultimo, promises to exceed that of any previous year. Many who have never been to this great fair before are talking of going, and those who have been before are going again. The entries in all departments, especially that of live stock, are the largest in its history, and this is a pretty good indication that the exhibition will score another great success. Although some of the manufacturers of reapers and mowers have decided not to exhibit at any fair in future, there will still be a good exhibit of other farming implements at this exhibition. The special attractions, which will to a great extent be of a patriotic character and up to date, promise to be most interesting, including, among other things, a representation of the siege and relief of Mafeking, in the present South African war. Many interesting trophies, brought back by the returned members of the Canadian contingent, will be on exhibition. It is astonishing the great interest that is taken in the Toronto Fair throughout the country, and the present one is no exception. The usual cheap excursions are given on all the railways.

AN interesting case has just been decided in one of the United States law courts. The owners of a saw mill in Illinois, which was burned last May, sued an insurance company under the following somewhat novel circumstance. The case hinged upon a fine point, as to whether certain parties were agents of the mill owners or of the insurance company. The mill burned upon the date that the policy, which was sent for cancellation, was received through the mails by the agents who had procured the insurance for the mill owners. These agents were insurance agents, but, as they could not place that particular insurance, they had obtained it through other agents. The agents have now decided that agents No. 1 were the agents of the mill owners and not of the insurance company, and hence the policy was still in the hands of the owners when the mill burned.—Insurance and Finance Chronicle.

WOOD PULP DEPARTMENT

A PULP MILL PROJECT.

RECENT developments bring the prospects of a new pulp mill near St. John nearer realization, and it is now thought that the erection of one at Musquash, about 15 miles from the city, will soon be proceeded with.

The Lancaster Pulp and Paper Company was incorporated by a special act at the last session of the legislature, and among its promoters are some well-known gentlemen. They have secured the Knight property at Musquash, consisting of some 36,000 acres of land in fee simple and 9,000 acres of land in form of license, having eighteen years to run. The property controls ten large lakes and all other water privileges which are contained in an old grant given over 100 years ago. The water supply is said to be perpetual, having a very firm reservoir capacity capable of development at a very low cost. The growth of timber has been stated by experts to be the finest in quality to be obtained. The timber experts, Messrs. Andrew Hammond, of Milford, Me., and Geo. T. Crawford, of Boston, claim that the property and its opportunities for the making of pulp are superior to any known by them. One of the company's promoters claims that the annual growth of timber on the property will equal nearly 30,000 cords, and that on account of the numerous driveable streams in all directions the pulp wood can be delivered at the mills for about $1.50 per cord. Musquash is about 15 miles along the northern Bay of Fundy shore west of St. John. The site of the proposed pulp mill immediately adjoins the saw mill of J. & B. L. Knight. Being so near the winter port of Canada, the mill will have great advantages in receiving supplies and in making shipments at all seasons. Mr. B. F. Pearson, of Halifax, one of the best known business promoters in Eastern Canada, is interested in the project. Mr. Chas. Burrill, Weymouth Bridge, N. S., is also interested.

The pulp mills in Nova Scotia are reported to be working to their utmost capacity, and the shipments of this year promise to exceed those of any previous season.

WOOD PULP IN FRANCE.

THAT section of the French Agricultural Society which concerns itself with forest products recently communicated with Messrs. Darblay, of the Essonnes Paper Mills, asking them a series of questions with a view of discovering why wood pulp cannot be made as well in France as in any other country, and if so, why, assuming the necessary material to be procurable locally, the great bulk of that commodity at present used in French paper mills comes from Scandinavia, or at any rate from foreign countries?

The firm, in their response to the queries indicated, went into the matter at considerable length. Dealing with mechanical pulp, it was stated that about 400,000 tons per annum of this material were consumed in the French paper mills, and it was pointed out that in order to turn out mechanical pulp profitably a very large amount of motive power was necessary, say 60 to 70 horse power to produce one ton of pulp in a working day of 24 hours. An annual consumption of 400,000 tons means in round numbers 11,000 tons per day, the production of which would necessitate consumption of power to the extent of 5,000 h.p. In the Scandinavian countries, and in fact in the north of Europe generally, water power to this extent can be easily found, but in France it would be practically impossible to do so. Even the expenditure of an enormous amount of money would not suffice to provide what is necessary. For instance, an outlay of from nine to ten millions of francs at Bellegarde, on the Rhone, has only resulted in providing a maximum of 3,000 horse power at a cost of about 3,300 francs per horse power.

In Norway, on the contrary, power can be obtained at a fourth of this rate, and further, there is practically nothing to be paid for the carriage of the wood, it being floated down the streams from the place where it is cut. In default, therefore, of finding the necessary water power in France, it is evident that the profitable manufacture of mechanical wood pulp is almost an impossibility. Even assuming that in certain cases steam power to the required amount could be raised, it would cost from 250 to 300 francs per horse power per annum; that is to say, from 45 to 50 francs per ton of pulp made. The manufacture of this quantity would consume about 3½ steres of wood (1 stere is equal to about 35 cubic feet), and taking the price per stere at 15 to 20 francs, the total cost of production works out at about 100 francs per ton.

So far as chemical pulp is concerned, its production, of course, requires less motive power, but nevertheless a good deal of steam raising is necessary, the wood having to be dealt with at high temperatures. The manufacture of this class of pulp must, therefore, resolve itself mainly into a question of wood and coal, and the latter is very high priced just now. Messrs. Darblay consider that fir and aspen are the best woods from which to prepare pulp, especially the latter, which is thought to be, as regards the quality of its fibre, quite equal to the best rags. Those varieties of fir that are generally found in France are usually very knotty, and this is a condition that produces impurities in the pulp. Even apart from this the timber is not grown locally in sufficient quantities to enable wood pulp to be made out of it to any extent worth speaking of.

If the total amount of forest land in France is taken as nine millions of hectares (1 hectare equalling nearly 2½ acres), not more than 276,000 of these are devoted to the growth of fir. This quantity would produce perhaps 400,000 cubic metres (or steres), of wood, one-fifth of which, having regard to the quantity which is used for other purposes, would be available for the manufacture of pulp. The pines that grow in the Maritime districts could no doubt be made available for the manufacture of pulp destined for use in the production of common papers, but this would not be so profitable a business as the manufacture of a better class of pulp for use in white paper, such as printings, etc.

The cost of transport has also to be considered, and in France this is generally very heavy, having regard to the relatively low value of such a material as timber. For instance, the carriage of wood from the district of Poitou to the neighborhood of Paris would cost practically as much as its freight from Norway to Rouen. The legislation of 1892, the outcome of which was the imposition of a duty on wood pulp representing nearly 10 per cent. of its value, was designed to promote the possibility of the French paper maker manufacturing his own pulp, and of

course, where the circumstances allow of his doing so, he very much prefers this to buying it abroad, but in deciding whether or not to start up a pulp mill as an adjunct to a paper manufactory, all the circumstances mentioned above, together with many others which would have to be taken into account in the calculations, must be considered in detail.—Paper Trade Review.

PULP NOTES.

Col. McCaskill, of Niagara Falls, Ont., is considering the erection of a paper mill at St. Catharines.

The pulp mills of the National Paper Company, at Indian Lorette, Que., were destroyed by fire last month, at a loss of $15,000.

The act to incorporate the British American Pulp, Paper & Railway Company has been assented to by the Governor-General.

C. E. Fish, of Newcastle, N. B., sent a wood pulp stone to the Paris Exposition, and has received word that his exhibit has been awarded a medal.

A pulp mill promoter recently examined available sites at Newcastle, N. B., for a pulp mill, and it is possible that one may be located there in the near future.

A despatch from Quebec states that Wm. Hutt has leased the water power at Fraserville Falls for thirty years, and that he will erect large pulp and paper mills.

The St. John Sulphite Fibre Company, of St. John, N. B., have sold their output of pulp for this year and over half of next season's production. The manager, Mr. M. F. Mooney, recently closed a contract for 5,000 tons to be shipped to Great Britain next year.

Incorporation has been granted to the Michipicoton Falls Power Company, Limited, with a share capital of $40,000. The company will engage in the manufacture of lumber and pulp wood and the generation of electrical power. Wm. Thoburn, woollen manufacturer, of Almonte, and Frederick Francis, lumberman, of Pakenham, are directors of the company, the head office of which will be in Toronto.

Wm. Power, of Quebec, has purchased from the Estate Kidston, of Glasgow, an extensive timber limit situated in Stoneham and Tewkesbury, on the Jacques Cartier river, Province of Quebec. The limit is heavily timbered with spruce, and Mr. Power will probably erect a pul pmill thereon.

T.G. McMullen, M.P.P., of Truro, N.S., last year began the erection of a large dam on the Salmon river, at Union, about ten miles above Truro, with a view of building a pulp mill. During a freshet last fall the dam was washed away, but it has now been rebuilt and work on the pulp mill will be commenced at an early date. Mr. McMullen proposes to operate the mill by electric power transmitted a considerable distance.

The Dominion Government has been advised that pulp wood forwarded to France from Canada, via New York, will no longer receive the benefit of the minimum tariff. The reason given for excluding shipments via New York from the privilege of the low tariff is that there now exists a direct steamship connection between France and Canada.

WOOD FLOUR.

MR. HARRISON WATSON, Curator of the Canadian section of the Imperial Institute, London, England, writes that wood flour is an article about which there are constant inquiries. It is a very fine powder used in the production of explosives, and also in the manufacture of linoleum, oilcloth, etc.

So far it would appear that no Canadian firm is producing the material, the reason given being the heavy cost of the special machinery required, and the stringent regulations made by buyers. Several Canadian firms have taken up the matter with the idea that the material was saw-dust. This, however, is incorrect, as it is a fine white meal, requiring special production.

There appears to be a very considerable demand for the material both in the United Kingdom and on the Continent, and there is scarcely any doubt but what it would pay Canadian manufacturers to buy the special plant to produce this article in large quantities for these markets.

Use a sight-feed oiler for the purpose of dropping oil upon the piston rod of your engine as it travels to and fro; it will save packing and reduce friction.

PILING HARDWOOD LUMBER.

END-PILING under sheds, says the Wood-Worker, is probably the best method of stacking hardwoods for seasoning. A Michigan concern has used this method several years, and finds it very satisfactory. Its sheds are 30 feet wide, 200 feet long, and high enough to take in a 16-foot board. The capacity of such a shed, the stock being end-piled, is 200,000 feet. The sheds are, of course, built especially for such work. End-piling costs 15 to 25 cents per thousand feet more than cross-piling, but the results are claimed to more than counterbalance this.

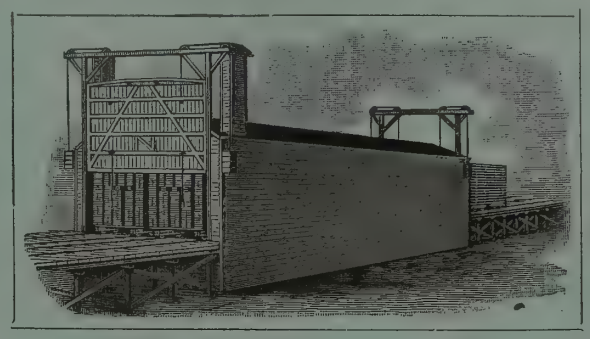
THE DRY KILN THAT DOES NOT Disappoint

THE DRY KILN THAT DOES NOT Disappoint



THE DRY KILN THAT DOES NOT Disappoint

THE DRY KILN THAT DOES NOT Disappoint

The Standard Seemed the Most Common Sense Dryer, and We Made No Mistake in Our Choice.

BRANTFORD, Ont., April 4, 1900.

THE STANDARD DRY KILN CO., Indianapolis, Ind.

GENTLEMEN:—Having had for the last twenty years considerable experience with Dry Kilns—Hot Blast and others—without getting the desired results, last spring there being no dry lumber to be had, especially in hardwoods, this compelled us to take up the question of more drying capacity. After very careful consideration The Standard seemed the most common sense dryer in the market, and we are more than pleased to say that we made no mistake in the choice. We have had the best of satisfaction from exhaust steam only, not requiring to use any live steam. If we were adding another kiln, we would certainly put in another of your make. It is a great saving on stock; it comes out in splendid shape. Yours truly,

THE SCHULTZ BROS. CO., Ltd.

THE STANDARD is the highest type of development of the **Moist Air** System of Drying. Hundreds of users in all parts of the world say THE STANDARD has absolutely **no equal.**

Northey Triplex Power Pump

FOR BOILER FEEDING AND GENERAL PRESSURE PURPOSES

In the Northey Triplex Power Pump we offer a machine put together with the skill brought by years of experience in pump building, and with full provision made for the varied demands likely to be made upon a pump of this character. A feature of value is that the three cranks are placed 120 degrees apart, thus giving a practically constant flow of water—minimizing strain on pump and economizing power. The pump can be readily repacked and taken up, and all details are carefully worked out. It can be conveniently operated by electricity, by water power, or by belt from engine. Different styles and sizes made to suit all duties.

WE ARE MANUFACTURERS OF OVER FIVE HUNDRED DIFFERENT STYLES AND VARIETIES OF STEAM AND POWER PUMPS FOR STATIONARY AND MARINE PURPOSES. WE INVITE ENQUIRIES FROM ENGINEERS, MINE SUPERINTENDENTS AND OTHERS FOR THEIR REQUIREMENTS IN OUR LINE. CATALOGUES AND SPECIFICATIONS FURNISHED UPON REQUEST.

We are also manufacturers of the Northey Gas and Gasoline Engine which has proved to be the handiest and most convenient power for small or intermittent power users in the market. Suitable for machine shops, pumping and electric light plants, etc. Write for illustrated descriptive booklet.

AN EASTERN LUMBER FIRM.

PROMINENT among the lumber exporting firms of Nova Scotia are Clarke Bros., whose operations are carried on in Digby county. The firm is composed of Messrs. W. W. and W. G. Clarke. An illustration of their large Lake Jolly mill is shown on this page. The building is 136 feet in length and 26 feet wide, two stories high, the mill proper being on the upper floor. Besides the equipment for the manufacture of ordinary lumber, the mill contains shingle, lath and clapboard machines, planers, resaws, etc., and is modern in every respect. There was installed during the past summer a battery of three boilers with a capacity of 150 horse power, and a 125 horse power engine. Saw-dust and the refuse of the mill are used as fuel for the boilers. The capacity of the mill is about 40,000 feet per day.

Messrs. Clarke Bros. own about ten thousand acres of timber land, but they have been carefully preserving it to provide for future needs by purchasing perhaps two-thirds of their log supply from small land owners and loggers along the Bear river. Their average output is about 8,000,000 feet, made up of spruce, pine, hemlock and hardwoods. They own large tracts of hardwood limits containing a good quality of beech, birch and maple, which they expect to utilize to a greater extent in the near future. The shipments of this firm are chiefly to South America, Cuba, United States and the West Indies, special attention being given to South African business. The firm also carry on an extensive business as general merchants at Bear River, and are owners of five vessels, ranging from 150 to 500 tons, engaged in their own trade. Their cable address is "Clarke," Bear River.

LAKE JOLLY MILL OF CLARKE BROS., BEAR RIVER, N.S.

UTILIZATION OF SAWDUST.

IN Austria a new method of utilizing sawdust has been invented. At the sawmills of Joseph Fialla the experiment has been tried of making briquettes of the sawdust for domestic heating purposes. The dust is heated to dryness and then to the point where the tarry elements begin to exude. These are used as the consolidating matter, the hot sawdust passing on steam-heated tables to a press which forms them into briquettes, five by three by one and one-quarter inches, weighing about one-half pound. It is said that they give four per cent. of ash and that their heating power is equivalent to that of lignite. The press makes 19 bricks per minute, and with 300 days of work produces 6,000,000 briquettes per year. The experiment has shown that the cost of manufacture is 16 cents per thousand, while the selling price is $1 per 1,000

FORESTRY FROM A LUMBERMAN'S STANDPOINT.

The following interesting chapter on the above subject is extracted from the report of the Ontario Forestry Commission, just issued :

The question has now reached a stage at which the various types of forest embraced in the Crown domain should be considered with the view of adopting such special treatment in each case as its peculiar features demand, in order to realize the best results. No timber berth or township can be found in the Province where all the trees are of one species, but in many tracts of smaller dimensions pine so largely predominates as to give a specific character to the whole area. In such instances the timber is frequently found at two or three stages of growth. Some very old trees may be seen, many of them showing decay at the butt and slowly dying of old age, while the main body are sufficiently advanced to have killed off the competitors which started even with them in the race, the place of the latter having been taken in part by seedling pine or by the shade enduring hemlock or spruce. In all probability the trees of the main body commenced their growth with the usual surroundings of poplar and birch over which the pines in the course of time asserted an easy supremacy, or they may have been subjected to a severe competition with their own species or with other conifers which they have been enabled to outlive by reason of quicker growth, better adaptability to the locality, or more robust qualities.

SELECTIVE CUTTING.

This type of forest is the easiest to understand and treat in accordance with the principles of forestry by selective cutting. The merchantable timber should be cut down and marketed, and many of the smaller trees, growing too close together under the shade of their neighbors, should also be removed, as they would ultimately die before attaining maturity. But due care should be taken to preserve the forest cover and yet to make sufficient openings in it to allow the sunlight to reach the younger trees and give the seed a chance to germinate.

When these considerations are borne in mind, it will be seen that no absolute rule can be applied as to the smallest tree that should be cut, as a tree which it would be desirable to spare if growing in one situation considered with regard to its neighbors, might be clearly superfluous in another. A pine that would make a 10-inch butt log sixteen feet long would be regarded as merchantable, but it would not be good forestry practice to cut it unless a sufficient number of smaller trees be left standing near it to fairly cover the ground. It has been demonstrated by many specimens now in the Bureau of Forestry, that the accelerated growth of the young trees resulting from the removal of the overtopping mature vegetation, will quite equal, if not surpass the total growth of the forest before it was entered upon by the lumberman. It is a question that can only be determined on the spot, how far the shade enduring varieties should be cut in a forest consisting chiefly of pine, as they may be of great use in keeping the soil of the forest covered when too great a gap has been made in the forest canopy. If the smaller but merchantable timber is to be extensively cut away, the retention of the shade enduring trees is desirable, if the reproductive value of the forest is to be retained.

HARDWOODS AND PINE.

In a mixed forest of hardwood and pine where the former prevails, it will nearly always be found that the pine trees are large and old, the remnants of a former forest growth before the advent of the hardwood. The latter possesses such a thick shade that where it prevails pine seeds dropped under its cover either will not germinate or attain only a very sickly growth. A specimen of pine struggling to live under such conditions, examined under a magnifier, showed a growth of only one inch in diameter during a period of thirty to forty years. In such a case, if the perpetuation of the hardwood forest is desired, the pine should at once be cut as fully ripe, together with as many of the large hardwood trees as are considered desirable, leaving the space gained to the smaller trees. If on the other hand the district is not considered suitable for a valuable hardwood growth, it should all be cleared off, leaving a pine tree here and there in sheltered localities if possible, and the surface of the ground should be burned over to get rid of the rubbish and debris. It will then present favorable conditions for seeding by the ever-prevalent birch and poplar, to be followed by degrees by the pine seedlings springing from the scattered old trees left standing.

PURE PINE FOREST.

A pine forest may often be seen where the trees are nearly all the same age—or it may be differing by ten or twenty years, and where they have succeeded by their abundant growth in overshadowing and killing out every other variety, the only difference observable being in the diameter of the trees, brought about by the diversity of their individual surroundings. The tall and slender trees have maintained the struggle for existence with insufficient sunlight, having been overshadowed by their more favorably situated neighbors, and while they are of small diameter, it would be of no use to leave them standing, as when the others were removed they would only blow down and encumber the ground. The only course to pursue if the reproductive character of the forest is to be maintained, would be to preserve the trees on any neighboring ridge or hillside, the height of which would secure the distribution of the seed over a wide area, or in case the country is comparatively level, then clumps of trees growing on the highest ground available should be allowed to stand for that purpose.

After the remainder of the forest has been levelled, the ground should be burned over to destroy the covering of pine needles and the litter left by lumbering operations, so as to leave the soil in the best condition for future seeding. In doing this due case should be taken to leave a cleared space around the groups left standing, so that the fire cannot reach them.

MIXED CONIFERS.

One of the most difficult conditions to deal with, where the growing of a future crop of pine is the end in view, is

when the existing forest consists mainly of balsam, spruce and hemlock intermixed with good-sized old pine trees. In such areas it will be found that few seedlings of pine are coming up among these shade enduring trees, unless it may be on high land or where the canopy happens to be thin. The young pine is not so tolerant of shade as the other conifers. Hemlocks, for instance, may be seen growing up in the gloomy shade of their parent trees where a pine seed would not even germinate. The treatment of a forest of this kind will depend entirely upon its locality. If the less valuable conifers can be cut down and marketed without loss, then by all means remove a sufficient quantity of them to insure such opening in the canopy as will admit light enough to permit the growth of the young pine. If on the other hand the ground is covered thickly with young trees of the shade enduring species, with little or no pine growing amongst them, then a clean sweep may as well be made, first cutting the mature pine trees with the exception of a sufficient number in well-chosen localities spared for future seeding.

As to whether fire should be used or not in clearing the ground depends on the number of young pine trees coming up. In many districts where pine is being cut and which it is desirable to retain in timber, the spruce, balsam and hemlock cannot be cut so as to repay the outlay. The forester must be guided by the existing conditions in the locality, or allow the question to stand over for future solution, bearing in mind that new factors are likely before long to simplify the problem.

It is very evident, for instance, that if Chicago and other cities on or near the lake frontier, continue to increase in population at the same rate as in recent years, all varieties of timber will greatly increase in value, and the kinds now slighted by the lumberman for want of any profitable market, if growing in territory tributary to the lakes so as to admit of easy transportation, will be an increasingly valuable asset.

Though, as has been said, no two forests are alike, and a great variety of special conditions as to soil, climate and location may create frequent divergencies in the result, yet the evolution of an ordinary pine forest can easily be traced in its broad general outlines. The rocky and broken region of Central Ontario, the same style of country in Wisconsin, and Minnesota, with the gravel ridges and sand flats of Michigan, are peculiarly the home of the pine tree. No doubt large quantities grow in New York, Pennsylvania and the North-eastern States, but were found more as exsisting among the hardwoods which the soil was better fitted to nourish than as the prevailing forest type. Its adaptability to the districts where it specially flourishes and predominates, is shown by its power to maintain itself and thrive in conditions adverse to other species. While it grows on rich soil and attains its greatest proportions alongside the hardwoods, it will flourish where its roots are only embedded in the fissures of rocks or amongst the disintegrated blocks and debris at the foot of escarpments where hardwoods could only survive as stunted bushes.

FOREST EVOLUTION.

The prominent features in the evolutions of a pine forest can be seen in its various stages in almost any pine district. While a pine-covered tract is overrun by one of the frequently recurring fires to which all coniferous forests are liable, it will usually be found that here and there a tree or a small group of trees has been spared by some favoring circumstance.

What then takes place is that the ground is first seeded by poplar and white birch, trees which are very widely distributed and each year shed immense quantities of seed well adapted by their structure for being carried long distances by the wind. The seedlings of these varieties spring up immediately and during their earlier years grow rapidly, covering the burned over ground. Conifers, on the other hand, do not bear seed every year and are not so prolific.

White pine, so far as has been observed, seeds irregularly perhaps every third or fourth year, so that as a rule the deciduous trees which have seeded first hold possession, get a good start and commence to shade the soil, making an ideal condition for the growth of young pine. When a seed year for pine comes round, then those trees left in the district will distribute their seed and seedling pines begin to make their appearance among the varieties already growing. Finding the requisite amount of light and shade amongst the poplars, they grow up under these favorable circumstances as forest trees, shedding their lower branches as they grow older owing to the close neighborhood of the older trees and shooting upward rapidly.

It is a matter of common observance that pine growing up without shade progresses more slowly, as the main strength of the tree is put forth in developing the branches, which expand at the expense of the stem. The restriction of space in the forest, however, promotes the upward growth as the trees struggle towards the light. If a sufficient number of parent trees have been left to cover the ground fairly with a young growth, then commences a conflict for existence between the rival occupants of the soil. It will be generally found that in say from twenty to thirty years after the new growth began the tallest pine and poplar are about equal in height, but after this period the struggle is very uneven.

The pine will so completely overmaster the poplar that in about thirty years more hardly a poplar or a birch will be left alive, except it may be where pine has not seeded or some other variety is disputing possession. Of course the process indicated is liable to be modified or reversed by conditions in which other varieties of forest vegetation are introduced, especially in wet or swampy places which will be occupied by the trees best fitted for such surroundings. When a forest of pine once fairly covers the ground its life may with care and attention be continued indefinitely, adding yearly by its growth to the wealth of the country, besides exercising other valuable functions in the economy of nature.

GRAVENHURST MILL OF THE LONGFORD LUMBER COMPANY.

RATE OF GROWTH

The rate of growth of pine trees is a question of great interest to all concerned in sylviculture, and as has been pointed out, the answer depends greatly upon varying local and individual considerations. As a general rule, however, any lumberman can testify that having cut the merchantable trees in a pine forest, leaving the smaller growth, he can, if fire is kept out, go back in twenty years and take another crop, not so large, it may be, as the first, yet sufficient to pay him handsomely for the operation.

The rate of growth of any given tree can easily be determined by counting the rings denoting the annual increase, the history of the life of the tree being thus written on the cross section.

The question of how far pine seed will distribute itself is more difficult of solution. After many observations conducted in different districts we are still unable to say how far a pine seed may be carried. Obviously it depends on the position of the tree and the strength of the wind. If the pareut tree stands in a hollow or even on level ground surrounded by other trees, it cannot fly very far, but if situated on a ridge or mountain—a situation much affected by pine trees—the seed could be carried a long distance. The structure of the seed is peculiarly fitted for this, as the kernel is light and attached to a broad sail of thin texture. When the cones open in the fall of the year on a tree high up on a hillside, and the seeds become detached from the cone, which is most likely to occur in a violent windstorm, they may be whirled a great distance. It is only on this assumption that the appearance of young trees springing up a mile or two from where any parent tree may be seen, can be accounted for. This will apply to all conifers, though more frequently noticeable as regards pine, as the latter are more generally found occupying high and sterile ground, where they can maintain themselves better than the other varieties.

Reference has been made to the effects of fire as regards re-forestation. When a district has been burned over once the utmost care should be taken to prevent another visitation. The deliberate or careless setting of fire in a forest should be a criminal offence. A second fire occurring soon after a first is very detrimental to the soil, besides killing off such young trees as may have appeared in the meantime. And if fire sweeps the same locality again and again, as in that part of the township of Burleigh visited by the Commission in 1897 it will leave nothing but a howling wilderness, a veritable barren land that will require generations to recover any degree of fertility.

While precautions are being wisely taken by the Government of Ontario, through their fire ranging system, to prevent forest fires, it by no means follows that fire should never be used. As has already been shown, fire is, under certain circumstances, the best and cheapest agency that can be used in preparing the ground for another forest crop. The soil is often so thickly covered with moss, needles, leaves, old trees and dead branches, in addition to the debris left by the lumbermen, that it is difficult for seed to come in contact with the ground.

THE LONGFORD LUMBER COMPANY.

AMONG the prominent manufacturing firms of North Ontario is the Longford Lumber Company, of which Mr. Wm. Thomson is president and general manager. The mills at West Gravenhurst, commonly known as the "White Mills," are located on the Northern Division of the Grand Trunk Railway, which affords the company excellent shipping facilities. The company have been fortunate in having associated with them Mr. F. S. McNab, who superintended the building of the mill in 1887, and it is largely due to him that the present complete system is being carried on.

The capacity of the mill is from 80,000 to 90,000 feet per day. It is equipped with all the latest and most improved machinery. There is a brick engine and boiler house containing two large engines. The saw mill equipment includes two Prescott band mills, the band saws manufactured by Shurley & Deitrich, of Galt, Ont. The company have their own fire protection, consisting of two large pumps, which keep the tanks supplied with water. There is no handling of waste, as it is carried by tramways to the refuse burner. A large tug boat is used for towing logs to the mill, etc. The company also have mills at Longford, Ont. A view of the mill at Gravenhurst is shown on this page.

REBATE ON EXPORTED TIMBER.

THE government of British Columbia has given notice that the order-in-council of the 1st of March, 1893, allowing a rebate on all lumber exported beyond the limits of the province, has been rescinded. There is a royalty of 50 cents per one thousand feet charged by the government on timber, but since the order above referred to has been in force, a rebate of one-half this amount was allowed when the lumber was exported from the province. This rebate has now been expunged.

Many lines of shafting require much more power to run them than is actually necessary, because heavy machinery has been located on the floor above, thus causing it to settle and throw the shafting out of line. For this reason adjustable hangers are much preferable to the old-fashioned, non-adjustable kind.

CHINESE SAW MILLS.

The accompanying illustrations of a Chinese saw mill and planing mill are reproduced, by permission, from the Scientific American. If these are representative of the wood-working industry in China, we may expect a wonderful revolution in the event of the division of the country by the European powers.

REPORT OF THE ONTARIO FORESTRY COMMISSION.

The final report of the Ontario Forestry Commission, appointed by the Ontario government to report on the subject of restoring and preserving the growth of white pine and other timber upon lands in the province, has been issued. This commission, which presented a preliminary report in the spring of 1898, is composed of Messrs. John Bertram, E. W. Rathbun, Thomas Southworth, J. B. McWilliams, and Alexander Kirkwood.

A Chinese Saw Mill.

Accompanying the report is a map prepared by Mr. M. J. Butler, C.E., showing the location of the arable and forest lands of the province.

Chinese Carpenter Planing a Log.

The general principles of forestry are first explained. It is stated that the problem of reforestation is greatly simplified when it is understood that all that is really required to be done in most cases to secure a certain, if somewhat tardy restoration of the original forest growth is to allow the reproductive energy of Nature to have full play, with immunity from fire. Then follows a description of the three forest divisions of the province, with such suggestions for reforestation as seem to be demanded by the peculiar conditions of each. The report concludes with the following summary of recommendations :

1. A large portion of the central division of the Province is more profitable from the standpoint of public revenue as forest land than under cultivation for farm crops, and as in addition to this it contains the head waters of all our principal streams, all that part of this division found upon examination to be not well adapted for farming should be added to the permanent Crown forest reserves.

2. All licensed and unlicensed lands held by the Crown where tourists, lumbermen or prospectors are permitted, should be patrolled by fire rangers, and these rangers should be controlled directly by the government.

3. Suitable regulations should be enforced to prevent too rapid or too close cutting upon lands under license.

4. No license in arrears for ground rent should be renewed, but the territory, if not suitable for agriculture, should be added to the forest reserves.

5. Fire notices in the English, French and Indian languages should be posted along the canoe routes throughout the territory north of the height of land.

6. License holders should not be allowed to cut any trees for logs smaller than will measure twelve inches across the stump two feet from the ground, except by special permission from the Department of Crown Lands and under the surpervision of the district forest ranger.

SUCCESSFUL LOG CULLERS.

At the examination for cullers held recently by the Ontario government at Arnprior, there were sixty-three candidates, fifty-two of whom were successful. They were : Arch. Milne, Patrick McClary, Wm. Cuthbertson, Thos. J. Armstrong, John A. Yuill, John McIntyre, Patrick McCart, Francis Learmonth, George Bremner, E. J. Pountney, John Graham, John Carty, Wm. Mulvahill, A. E. Price, John A. Carpenter, A. Trowse, Jas. Lindsay, R. J. Duff, Webster McCallum, Arnprior ; Patrick Gorman, Eganville ; Wm. Ryan, Killaloe ; John A. Yuill, J. H. Findlay, Donald Carmichael, Braeside ; Conelius Scully, John H. McGonigal, Whitney ; Angus McNab, Burnstown ; Arch. McNab, Jas. Donlevy, Jas. L. Lagree, Calabogie ; Chas. Duvall, Half Way ; Arthur Murphy, Ottawa ; Eutrope Savoy, North Bay ; C. H. McColgan, Quyon, Que.; James Fraser, Renfrew ; John Pigott, A. C. Brown, Fitzroy Harbor ; Daniel Thompson, Portage-du-Fort ; Robt. E. McCagherty, Ed. A. Taylor, Westmeath ; Jacob Mayhew, Northcote ; Samuel Bromley, Geo. A. Griffith, C. L. Russell, Henry Kenning, Pembroke ; J. F. Pressley, Ashton ; Michael Labelle, Waltham, Que. ; Henry Richards, John Lagree, Dacre ; Julius Berlanguet, Opinican, Que.; C. T. Young, Harvey ; Jas. Sullivan, Aylmer, Que.

THE ST. PETERSBURG STANDARD.

The Lumberman was recently asked to give an explanation of what is known as the "Petersburg Standard," the unit of lumber measurement commonly in use in Great Britain.

Thinking that other readers might be interested in the subject, we will explain that the proper expression is the "St. Petersburg Standard Hundred," the standard being a piece of wood of certain arbitrary dimensions, a gross hundred (120) of these making up the standard hundred. Locally, however, and in trade usage this standard means the amount of material equivalent to that contained in 100 of the standard pieces. The basis of the Petersburg Standard is a piece of wood 12 feet long, 11 inches wide and 1½ inches thick. This contains in American board measure 16½ feet, so that 120 pieces, or a gross hundred of them, contain 1,980 feet, board measure. This latter is easily committed to memory. It lacks but twenty feet of being 2,000 feet board measure. The St. Petersburg Standard, however, is not the only standard, so-called, and to illustrate this matter we print the accompanying table showing the different standards in use.

Name.	No. of Pieces.	Dimensions.	Equivaleut in Feet B.M.
St. Petersburg Standard	1	12 ft. x 11 in. x 1½ in.	16½
St. Petersburg Standard Hundred	120	12 ft. x 11 in. x 1½ in.	1,980
London or Dublin Standard	1	12 ft. x 9 in. x 3 in.	27
London or Dublin Standard Hundred	120	12 ft. x 9 in. x 3 in.	3,240
Christiana Standard	1	11 ft. x 9 in. x ¼ in.	10 5-16
Christiana Standard Hundred	120	11 ft. x 9 in. x 1¼ in.	1,237½
Drammen Standard	1	9 ft. x 6½ in. x 2½ in.	12 3-16
Drammen Standard Hundred	120	9 ft. x 6½ in. x 2½ in.	1,462½
Quebec Standard	1	12 ft. x 11 in. x 2½ in.	27½
Quebec Standard Hundred	100	12 ft. x 11 in. x 2½ in.	2,750

We do not know the exact proportion, but the Petersburg standard is applied to the measurement of by far the largest portion or material coming from this side of the water. It is, however, used only for boards, deals and plank, timber being reckoned by the cubic foot or by loads or tons, a load being fifty cubic feet and a ton forty cubic feet, determined by string or caliper measure, the latter being a disadvantage to the buyer of from 4 to 9 per cent.—American Lumberman.

HIGHEST AWARD FOR SCHOOL DESKS.

A great honor has been conferred on The Canadian Office & School Furniture Co., Limited, of Preston, Ontario, by the award at the Paris Exposition of a silver medal for school desks. The exhibit was made at the instance of the government to supplement the educational display. The silver medal is the highest award which could be given by the judges, and the fact that a Canadian firm has secured it is a matter of congratulation. The desks shown by the firm have attracted general attention, and, in consequence, a number of applications for price lists and samples have, we understand, been received from all parts of the world.

THE GRAND PRIZE.

Mr. Carl Zeidler, the well-known importer and exporter, of Toronto, has received advice to the effect that his exhibit has participated in the Grand Prize awarded to Canada for the best display of natural woods at the Paris Exposition. Mr. Zeidler had a most attractive exhibit of polished woods suitable for the manufacture of pianos and other like purposes. They were tastefully arranged in a case, and consisted of eighteen pieces, including hard maple planed, bird's eye maple, soft maple, soft elm, white and black ash, quarter cut and plain white oak, quarter cut and plain red oak, white and brown basswood, red and curly birch, cherry, butternut and white pine. That his exhibit attracted much attention is proven by the fact that Mr. Zeidler has received several communications from European firms asking for quotations on stock, and referring at the same time to his exhibit at Paris. One of these enquiries comes from Belgium, another from Germany, and another from England. Among the stock asked for is maple, 24x6x6, to be used for rolls for mangle machines, and white maple and other hardwoods for making small woodenware.

In the seven months ended July 31, 1900, the United States imported wood pulp to the value of $1,654,383, as against $387,042 for the corresponding months in 1899. It will be seen that there is a remarkable increase in the imports of pulp.

The August number of the "Timber News and Saw Mill Engineer," of London, England, was a special issue devoted chiefly to the forestry exhibits at the Paris Exposition. The exhibits of the different countries are described and illustrated, making a number very creditable to the publishers.

MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company
of Toronto, Limited
CONFEDERATION LIFE BUILDING, TORONTO
BRANCH OFFICE:
IMPERIAL BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in anyway affecting it. Even when we may not be able to agree with the writers, we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive carerul attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

IMPORT DUTY ON LUMBER.

THE question of an import duty on United States lumber coming into Canada was again brought up at a meeting of the Lumbermen's Association of Ontario held last month. As on previous occasions, strong sentiments were expressed in favor of such a duty. One of the members was delegated to communicate with the Premier, and upon the nature of the reply of the latter will depend the course of action to be adopted. It is probable that a meeting of the Association will be called for the specific purpose of outlining a policy.

The Lumbermen's Association of Ontario have resolved to work out their own salvation as an association of lumbermen, apart from political questions. The Association is responsible for the legislation now on the statute books of Ontario prohibiting the export of sawlogs, the practical working of which has been commended on all sides. It is not going too far to say that they will eventually meet with equal success in their demands for an import duty on American lumber.

The lumbermen desire simply to be placed on an equal footing with their competitors across the border, who are now permitted to send their lumber into Canada free of duty, while Canadian lumber shipped to the United States is subject to a duty. The free interchange of forest products is asked. If the United States is not disposed to treat with us on a fair and liberal basis, the disposition to increase the general tariff of the Dominion, and give a still greater preference to Great Britain, will gain strength. This would shut out much of the manufactured goods imported from the United States, without affecting the imports from Great Britain.

UNCERTAINTIES OF THE LUMBER BUSINESS.

THE lumber business is, we believe, fraught with greater uncertainties than any other branch of commerce. Naturally, therefore, we find at the head of our great lumbering concerns men of wonderful physique and strong mental powers, capable of wrestling with the perplexing questions which are constantly arising in the conduct of their business.

Perhaps the first great risk which is encountered is the possibility of loss by fire devastating the timber limits or consuming the mill or manufactured lumber. An instance of this was the fire at Ottawa last spring, by which saw mills and millions of feet of lumber were destroyed.

For successful operations in the woods, lumbermen are entirely dependent upon the goodness of Providence to give such weather conditions as will permit of making suitable roads for hauling the logs to the streams. When this is accomplished, there remains the further probability of having the logs hung up, owing to an insufficient supply of water for rafting purposes. As with all large employers of labor, more or less difficulty is enconntered from labor troubles, although it must be said that in Canada, in late years, the relations between lumbermen and their employers have generally been of a friendly character.

The above are conditions which each year exert an influence in lumbering operations. The present year has brought about other difficulties with which the lumbermen have had to contend. The price of lumber advanced sharply last year, and the current year was entered with strong hopes that it would prove to be one of prosperity in the trade. This has been realized only in part. Since the early spring freight rates have been steadily advancing, and at the present time are fully fifty per cent. higher than they were six months ago. The freight from Montreal to a British port is now about $10 per thousand feet of lumber. The result is that lumber cannot be placed in foreign markets at a reasonable profit, and shipments are being held over until next spring.

A still greater problem which confronts lumbermen is the labor question. It has been found almost impossible to get men for the camps, and it is feared that the production of logs this winter will be curtailed on this account. The scarcity of woodsmen cannot easily be explained. The average rate of wages in Ontario is about $26 and board per month, while in Michigan it is said that as high as $30 is being offered without securing the desired number of men. These wages are as high, if not higher than those paid in previous seasons when the same difficulty was not experienced. It would seem that workmen are not altogether fond of camp life, and that they prefer the attractions to be found in the more cultivated and inhabited districts of the country.

THE FOREIGN TRADE OF CANADA.

ALTHOUGH not pertaining specifically to lumbering, no apology need be offered for referring in these columns to the remarks of some of the speakers at the recent banquet of the Canadian Manufacturers' Association in Toronto, inasmuch as the subject of foreign trade received much attention, and many of the suggestions offered are equally applicable to all branches of industry.

Hon. G. W. Ross, Premier of Ontario, spoke strongly of developing our export trade in manufactures. We have as great facilities for manufacturing in this country as any country in the world, especially in connection with our mineral and forest resources, and he believed we had sufficient energy and skill to multiply the products of the mine and forest one-hundred fold in the next twenty-five years.

The statement was made by Hon. Mr. Patterson, Minister of Customs, that during the fiscal year ended June 30th, 1900, the total imports and exports of Canada would be over $370,000,000. He said that henceforth monthly reports would be issued, showing the exports and imports as compiled from the trade and navigation returns.

The address of Mr. Massey, President of the Massey-Harris Company, was entitled "Practical Points on our Export Trade." Mr. Massey pointed out that the ability of our manufacturers is largely measured by the cost of raw materials and transportation. There was no doubt as to our supply of raw materials, but that our foreign shipping facilities are not what they should be was very manifest. He urged that something should be done to provide better shipping facilities from the ports of the St. Lawrence.

Treaty relations were then touched upon. It was no doubt information to many to learn that by virtue of a treaty between England and France, in which Canada does not participate, English manufacturers are enabled to lay certain of their products down in France at a much lower rate of duty than those coming from Canada, and that a similar treaty has recently been negotiated between France and the United States, giving the United States manufacturer the same privilege as manufacturers in England. He understood that a similar treaty was being negotiated between the United States and Germany. These treaties will have the effect of giving the manufacturers of other countries a great advantage over those of Canada, and it is the duty of our Government to endeavor to remedy this discrimination.

Mr. Massey pointed out that two mistakes were frequently made by the seeker after export trade, first, the supposition on his part that the foreign market will readily take a surplus stock which may be a little out-of-date or inferior in quality; second, the mistake of cutting prices. He said that the foreign buyer generally takes the price as the criterion of the quality of the goods, but, of course, the goods must be of a quality to merit a good price or it cannot be obtained.

Foreign exhibitions, to Mr. Massey's mind, are more useful in the direction of opening the exhibitor's eyes to the possibilities of trade in the territory which he visits in attending the exhibition, than as an advertisement of the manufacturer's goods. While this may be true in respect

to the particular lines of goods which Mr. Massey manufactures, we do not think that it will apply in every case. As proof of this, it might be mentioned that some of the Canadian exhibitors of wood products at the Paris Exposition have already received communications which promise to result in the placing of orders. We are quite in accord with the statement of Mr. Massey that it is necessary for the prospective trader to learn the needs and conditions of the territory in which he desires to operate, and that it is easier to begin by giving the people what they want than to persuade them to take what you have, with the object that you may gradually educate the foreigner to take the class of goods used in this country.

MARINE INSURANCE.

The prevailing high rate of marine insurance from Canadian ports has again been taken up by the Montreal Board of Trade and City Council. The discrimination against Canadian ports is believed to be out of proportion to the risk involved, being one per cent. to the first of September and two per cent. after that date. Hon. R. R. Dobell is also working earnestly to secure a reduction in the insurance rates, the responsibility for which, he claims, rests on the constantly recurring losses of deck loads of lumber. His proposal, which has been agreed to by the Lloyd Insurance Company and the English Board of Trade, is that the loading of decks be done under the supervision of an inspector. He maintains that the size of the deck load need not be reduced, but that, on the other hand, under proper inspection, it might with safety be increased, so that the winter steamers would carry about six feet on deck. Some shippers are opposed to inspection, on the ground that it would cause delay and trouble. In any case, an arrangement which would place Canadian vessels on an equal footing with those sailing from United States ports, is much to be desired.

[Written for the Canada Lumberman.

THE REASON WHY SOME BELTS DO NOT GIVE BETTER SATISFACTION.

By E. H. Newton.

We often hear this or that particular brand of belting condemned because it did not give satisfaction. Some men prefer leather for all purposes, while others are partial to some other kind. If we study the conditions under which one belt will work better and last longer than another, we will find that most belts are good if the proper judgment was exercised in their selection for the work they are intended to do. The fact that a leather belt will not last in a damp place or where it is exposed to wet is no reason why the use of leather belting should be discouraged, for under favorable conditions there is nothing better than a good leather belt. On the other hand, if a rubber belt has been run where oil got on it, destroying its good qualities, or the edge has been allowed to rub against something until it is worn through, allowing the belt to separate, or, as is too often the case, the belt is too light for the work and a gum or resinous substance is used to make it stick to the pulley—under such conditions good results will never follow, for I know of no better way to destroy the life of a rubber belt than to use oil or gum on it. I have seen the rubber peel clean off the inside of belts and stick to the pulleys by the use of resin and oil. In many mills incompetence does more to destroy the belt than the work if it was properly adjusted and cared for.

I once knew a man to use up five leather belts in succession in one season, where water was allowed to get on them. The next season a rubber belt was put on the same place and covered so that it was kept dry, and at the end of the season it was nearly as good as new. Had this precaution been taken when the first leather belt was put on the result would have been equally satisfactory.

Much care should be exercised in selecting belts heavy enough to transmit sufficient power without being run too tight. If a wide belt cannot be used and a narrow one is not able to do the work, increase the diameter of the pulleys proportionately and you will overcome the difficulty. When a thick belt is run at high speed over a very small pulley with unfavorable results, if a wider and thinner belt cannot be used, increase the pulleys also, and note the improvement.

The lacing has quite a lot to do with the life of a belt, as when a belt is not properly laced the holes soon tear out, destroying the belt. I lace in three different ways for three different kinds of belt, namely, very thick, medium to thin, and cross belts. Thick belts, being usually run on large pulleys, work well with the straight lace. Thin belts on smaller pulleys work best with what I call the interwoven lace, as laced in this way the holes never tear out. But for a cross belt, rubber or leather, I prefer the lacing known as the "boot-leg," as the lace cannot wear when the belt rubs together, and laced in this way any cross belt will work well.

AMERICAN LUMBER IN GERMANY.

Mr. E. L. Harris, United States Consular Agent at Eibenstock, reports to his government on the prospects of extending the trade in lumber with Germany. He says :

"The kinds of foreign lumber which find a ready sale in Germany are black walnut, poplar and oak. The logs which the sawmills buy readily are usually not less than 24 inches, but run to 3 to 4 feet in diameter. The length is from ten to seventeen feet. The logs should have as few knots and as little sap as possible. Last fall such logs brought, c. i. f. Hamburg, about $17.85 per cubic meter (35.316 cubic feet). The average price of white oak lumber of 2 inches, 1¾ to 1½ inches in thickness, and 6 to 11 and 12 inches in width, in Hamburg and Bremen last fall was 60 cents per cubic foot. The price of poplar lumber is about the same. If our exporters would only put the very best lumber on the market in Germany, much higher prices would be realized."

"The inland cities of Germany are capable of consuming much more lumber than at present. This is especially true of logs. I personally know of German sawmill owners who would cheerfully give space and shelter gratuitously to any American firm of exporters who would be willing to keep a stock of first-class logs on hand. They themselves would at once buy large quantities. The American consignor would be at liberty to sell to anyone else in the Empire. The best policy would be to appoint some responsible agent to take charge of the stock and sell for 5 per cent. commission."

During the calendar year 1898, German statistics give the following figures on importation of wood from the United States :

Description.	Quantity. Kilograms.	Pounds.
Wood for building and manufacturing, in the log	21,797,300	48,054,328
Oak dowels	32,411,800	71,455,054
Hardwood :		
In the log	7,289,700	16,070,668
Sawed	72,400	159,613
Timber and lumber sawed	300,452,900	662,378,663
Cedar	1,684,400	3,713,428

The following is extracted from a letter written by a merchant in Hamburg :

"The modes of payment are generally as follows : The importers on this side generally pay from 50 to 75 per cent. of the invoice value on receipt of the documents, and after having inspected the lumber in order to satisfy themselves that the shipment is in accordance with the order. Lumber merchants in Hamburg who are not sharp, however, have suffered considerable losses from shipments for the following reasons : They ordered lumber from the United States, received the documents, paid one-half or three-fourths of the invoice value, inspected the cargo after having paid for the same, and then found that the lumber was not in accordance with the order. They had to sell the best they could, experiencing loss in order to cover the same, being obliged to bring suit against the firms in the United States, and, in every case I have come in contact with, the parties in Hamburg have been losers. This is caused by the expenses connected with the suit or by the firms in the United States compromising in such a manner that the firms here were obliged to accept the compromise. I know of one case in Hamburg in which the firm has lost about $14,280 in this way."

BRITISH COLUMBIA LUMBER SHIPMENTS.

The following vessels sailed from British Columbia ports, lumber laden, for foreign destinations, up to Aug. 31st, 1900 :

Vessel.	Sailed	From.	For.	Cargo-ft.
Latona	Jan. 9	Moodyville	Valparaiso	788,359
Guy C. Goss	Jan. 19	Hastings	Philadelpia	1,030,625
Altcar	Jan. 19	Moodyville	Callao	992,307
Fred J. Wood	Jan. 24	Esquimalt	Santa Rosala	14.440
Antofagasta	Feb. 28	Chemainus	Antofagasta	800,454
Errol	Mar. 10	Hastings	U. K.	1,069,195
Creedmoor	Mar. 30	Chemainus	U. K.	1,156,540
Star of France	Mar. 20	Hastings	Sydney	1,180,293
Silo	Mar. 31	Chemainus	U. K.	1,156,308

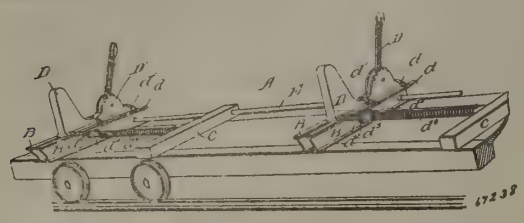
RECENT PATENTS PERTAINING TO LUMBERING.

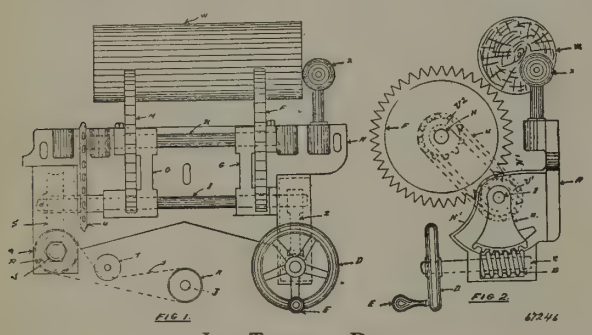
Patents have recently been granted by the Dominion Government for the following devices of interest to lumbermen :



SAW MILL.

Patentee: S. W. Butterfield, Three Rivers, Que., granted 9th May, 1900 ; six years.

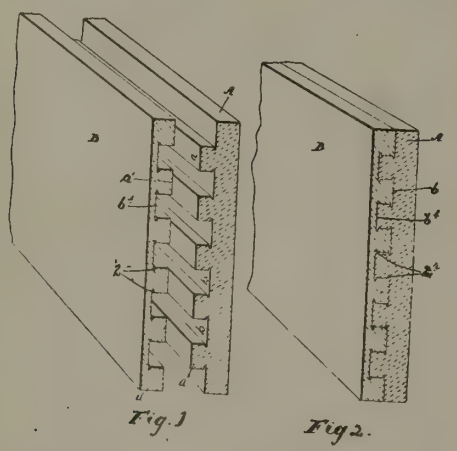
Claim : In set-saw works, an attachment for preventing slack motion comprising a set knee slidably mounted upon suitable set blocks, a rack bar secured to said set knee, a shaft fixed at one end to the set blocks and at the other end to a suitable beam, a pinion loosely sleeved on said shaft and engaging said rack bar, a collar fixed to said pinion and a coiled spring mounted upon said shaft and secured at one end to said collar and at the other end to said beam, substantially as described.



LOG-TURNING DEVICE.

Patentee: A. G. Campbell, Sherbrooke, Que., granted 9th May, 1900 ; six years.

Claim : In a log turning attachment for pulp wood barkers, a shaft held in suitable bearings, arms or brackets fastened to said shaft to form bearings for a shaft, to which wheels are fastened which revolve the blocks while being peeled. The combination of a frame, a bracket with stud fastened to said frame, an idler pulley made to revolve on said stud and a box, cast or bolted to said frame, which forms a reservoir for oil, bearings for main driving shaft to which pulley and worm are attached, which latter meshes into worm gear and imparts motion to operating parts, etc.



LUMBER MANUFACTURE.

Patentee: David Gilmour, Trenton, Ontario, granted 11th May, 1900 ; six years.

Claim : As an article of manufacture, lumber composed of two tongued and grooved parts, the tongues having plain faces and the grooves having small lateral grooves, with the fibre of the tongues pressed laterally thereinto, substantially as described.

METHOD OF MANUFACTURING LUMBER.

Patentee: David Gilmour, Trenton, Ont., granted 11th May, 1900; six years.

Claim : The hereinfore described process of forming lumber composed of two parts tongued and grooved to fit each other, said process consisting in first applying glue or cement, placing the two parts together with the tongues and grooves interlocking, and afterwards passing these parts so interlocked between heated rolls, longitudinally of the fibre of the lumber, and thus subjecting the parts to heat and pressure, successively from end to end, whereby the moisture is expelled, the surface condensed, and fiuished, and the parts united and welded together, substantially as described.

S. W. Butterfield, of Three Rivers, Que., has also been granted a patent on a machine for removing the bark from slabs of wood for pulp making purposes, and for a resawing machine. Arthur Demers, of St. Julien De Wolfstown, Que., has secured a patent for a saw frame, and Jos. Moreau, of Forestdale, Que., for a rossing or barking machine.

THE OTTAWA VALLEY.

[Correspondence of the CANADA LUMBERMAN.]

The Canadian Underwriters' Association has written the Ottawa fire insurance agents to the effect that rates on lumber in Ottawa are to be increased by one-half and three-quarters per cent. This means that the lumbermen piling within the city limits will have to pay $2.50 and $2.75 per hundred, where formerly they were only called on to pay $2. Following on the recent heavy increase in mercantile risks, the addition on lumber means an enormous tax on the city. It is admitted that the fire protection afforded in Ottawa is inadequate, and for some time there has been an agitation for another steamer. The Chaudiere lumbermen, who have a steamer and large quantity of hose, may also strengthen themselves in this particular. If this is done, the rates may be reduced, but in view of the heavy losses incurred in April's costly fire, it is not likely that the insurance companies will take such steps for some time to come. The lumbermen feel that the increased tax is an unjust one, claiming that the lumber piles were not responsible for the spread of the recent fire. As a further preventitive against fire, the city council has passed a by-law restricting the piling of lumber in certain districts. This, the lumbermen state, hampers them, but they submitted, only to receive a further handicap.

Ottawa may have a large pulp mill ere long to replace one of the Chaudiere lumber industries wiped out in April's fire. Mr. H. K. Egan, of the Hawkesbury Lumber Co., and Mr. W. C. Edwards, M. P., of the firm of W. C. Edwards & Co., have secured the water power and property on which the Hull Lumber Co.'s mill stood. The purchase price is stated to be $150,000. As yet the gentlemen interested have made no definite statement regarding the disposal of the property, but the scheme of a large pulp or saw mill is freely spoken of.

Recently eight firms operating large mills in the Ottawa Valley gave tangible evidence of their appreciation of the faithful service rendered by their employees. The employees of the W. C. Edwards Co., Rockland, to the number of 1200, took advantage of the courtesy and favor extended by the firm, and visited the Central Canada Fair in this city. The trip was made by special train over the Canada Atlantic Railway, and each excursionist was furnished with a railway ticket, giving transportation both ways. They were also provided with street car tickets and enjoyed a trolley ride around the capital. Tickets giving the employees free admission to the fair grounds were also supplied, and in the evening they occupied free seats on the grand stand and witnessed the reproduction of the battle of Paardesberg. The return trip was made to Rockland at midnight, and needless to say, the excursionists voted the day an entirely enjoyable one. By a similar arrangement the employees in McLachlin Bros. mills at Arnprior made the trip to the capital on two special trains over the Canadian Pacific Railway on the same day, visiting the fair and viewing the city as the guests of the well-known firm. There were 1595 excursionists on this trip. On Friday the employees of the Maclaren estate, operating large mills at Buckingham, and those of the Ross Bros. Estate, of the same town, were carried to the capital and its fair, over the Canadian Pacific Railway, on two special trains. All arrangements were made by the firms, which provided railway fare, exhibition tickets, etc., to each excursionist. There were on board 600 employees of the Maclaren Estate and 500 of the Ross Estate. Wednesday was proclaimed a holiday at the Chaudiere mill, and the employees of Mr. J. R. Booth's mills and the Hull Lumber Co.'s mills to the number of 2500 visited the fair. On this and the next day, Hull's civic holiday, the employees and workers at E. B. Eddy Co's. mills, in course of erection, and the workers at Gilmour & Hughson's mill, were given the opportunity of visiting the fair. Last year was the first one on which an outside firm extended the privilege of an outing to their employees. The example was set by McLachlin Bros., of Arnprior, and it is likely the affair will be established as an annual fixture by the lumber firms. Nearly $1,000 was expended by the four outside firms in fair tickets alone. In this, a memorable year of strikes and labor troubles, the action of the mill-owners has a special and healthy significance. The holiday was a great concession and boon, coming as it did in the midst of the busy season, when most of the mills are working night and day. The following gentlemen, well-known in lumber circles, accompanied the excursionists : Messrs. Alexander Maclaren, J. E. Vallilee, manager, and A. O. Anderson, bookkeeper of the Maclaren estate ; Mr. George F. Parker, manager of the Ross Bros. estate, all of Buckingham ; Claude McLachlin, Arnprior, and Messrs. W. Yule and Marion, of the W. C. Edwards Co., Rockland.

Mr. George Millen, mechanical superintendent of the E. B. Eddy Co., has the honor of being the first to penetrate the well known Gatineau lumber regions on an automobile. Mr. Millen made the trip on a newly purchased American machine, scaling hills that defy the average bicyclist.

Mr. E. B. Eddy, head of the firm of E. B. Eddy & Co., last week celebrated his seventy-third birthday. Mr. Eddy, who is hale and hearty, is personally superintending the rebuilding of his extensive establishments. He received many congratulations on his birthday from his friends in the lumber and other businesses.

The death occurred a few days ago of Mr. George Hurdman, a well-known resident of Hurdman's Bridge, near Ottawa. Deceased was the father of Mr. Charles Hurdman, of the lumber firm of Hurdman & Elmitt, and brother of Mr. Robert Hurdman, a prominent figure in Ottawa lumber circles.

It has been repeatedly rumored that Mr. J. R. Booth, the lumber king, was going to erect a large planing mill at the Chaudiere, near his present sawmill. Mr. Booth states his intentions in the matter are not yet definite. The properry used will be the site of the McKay Milling Co.'s mills, destroyed in the great fire.

PERSONAL.

The marriage was celebrated at Powassan, Ont., recently, of Miss Ray Brown and Mr. W. Trenouth, saw mill owner of that place.

The death took place recently of Mr. Chas. F. Woodman, of the well-known lumber firm of Miller & Woodman, St. John, N. B.

Mr. A. M. Regan, of Regan & Nickels, lumber merchants, Toronto, has moved into his new home, 511 Huron street, which he has recently purchased.

Mr. Wm. Thompson, of Orillia, president of the Longford Lumber Company, is receiving the congratulations of his friends on his recent marriage to Miss Wesley, of Newmarket.

Mr. George Mawson, of London, Eng., was a recent visitor at the office of the CANADA LUMBERMAN. Mr. Mawson purchases pulp and paper, and also acts as selling agent in Great Britain for Canadian manufacturers of these products.

Mr. John Stewart, president of the Maritime Sulphite Fibre Company, of Chatham, N.B., and Mr. T. H. Tayler, of the Riordan Paper Mills Company, of Hawkesbury, Ont., were visitors in Great Britain during the month of August.

Mr. Aubrey White, Deputy Commissioner of Crown Lands for Ontario, returned to Toronto a few weeks ago from a two months' tour on the European continent. Mr. White visited the Paris Exposition and speaks highly of the exhibit made by Canada, and particularly of the forestry display.

We regret to learn that Mr. John A. Bertram, son of Mr. John Bertram, of the Collins Inlet Lumber Company, was recently taken suddenly ill at Little Current, Ont. Mr. Bertram was employed as lumber inspector and in connection with his father's lumber interests. At time of going to press he is considerably improved, with hopes of a speedy recovery to convalescence.

SALES AGENT WANTED.

WE WISH TO CORRESPOND WITH SOMEONE having a good connection with the lumber trade with a view to their acting as salesman for us in the East. THE CANADIAN PACIFIC LUMBER COMPANY, LIMITED, Port Moody, B. C.

CURRENT TRADE CONDITIONS.

ONTARIO.

A light demand and firm prices continue to characterize the lumber market of Ontario. That prices hold strong under rather adverse influences is regarded as an argument in favor of higher prices eventually, and with a more active demand it is believed that pine prices at least will be advanced. Manufacturers on this side of the line feel encouraged by the decision of the lumbermen's associations in the United States to adhere to present prices. For some time prices of pine lumber in Ontario have been stronger than in the United States, and it has been feared that a break there would cause prices on this side to respond sympathetically, but this danger has now been removed. A firm stand has been taken in respect to lumber values, and the trade will patiently await the expected improvement in demand. Manufacturers and dealers are carrying fair-sized stocks, but this cannot be said of retailers and consumers, who, with few exceptions, must very soon replenish their supply. No change in Ottawa and Toronto quotations have been made this week. Some sales of lath are said to have been made at a figure slightly below our quotations, but we believe that the average prices are $2.75 for No. 1 and $2.25 for No. 2.

Attention is now turning towards logging operations. The difficulty in engaging woodsmen has not been relieved, and the cut of pine logs will likely be less, both in the Ottawa and the Georgian Bay districts, than last winter. Fewer hardwood logs also will be placed on the market, as the prices are not likely to be so tempting as last season, when the competition among buyers of logs was so keen that excessive prices were paid. During the past summer the mill owners have realized the folly of paying more for logs than they were really worth, and it may serve as a lesson for future operations.

QUEBEC AND NEW BRUNSWICK.

In some respects the spruce situation has improved within the last week. There has been a better demand from the Eastern States, and prices there are firmer on the indication of a more active fall trade. Retail dealers are now beginning to replenish their depleted stocks. A moderate trade is doing in cedar shingles at unchanged quotations.

Export business from the St. Lawrence has been given another blow by a sharp advance in insurance rates. The steamship companies at Montreal have just been advised that the rates have been advanced to 3 shillings 4 pence on steamers sailing from New York, and 17 shillings on steamers from Montreal. This discrimination is likely to prevent any further chartering of lumber vessels this fall. Some chartering for next year from the St. Lawrence has been done, two boats having been fixed from Quebec at 52s. 6d., but we understand that there are boats in the market on offer at 50s. Present rates from St. John, N. B., to west coast of England are about 67 shillings.

UNITED STATES.

A light trade in lumber continues throughout the United States. What improvement has taken place has been in the east, where some disposition is show, to stock up for fall and winter trade. The main strength of the market is in respect to prices, as at almost every point the authorized lists are being maintained. Following the meeting of Wisconsin manufacturers reported last week, the Mississippi Valley Lumbermen's Association held a meeting in Minneapolis, at which it was decided to make no reduction in lumber prices. This decision was reached after making a careful study of the situation, which showed that stocks in the hands of manufacturers were somewhat depleted, and that the outlook for business during the next year was promising. The only change was in the price of lath, which was reduced 50 cents, making the price f. o. b. Minneapolis $3 for white pine and $2.50 for mixed white pine and Norway. In the Saginaw valley it is reported that common stock is a little lower, but that good white pine is scarce and held at firm prices. Log run stocks are worth $16 and upwards. At Buffalo box grades are firmer. The factories are working overtime, and there is a good demand for box lumber at $16.50, while some dealers are holding this grade at $17. There is a scarcity of 5x4, which sells at $17.50. The only change in our quotations this week is in the Albany list, barn boards being marked down about one dollar per thousand.

The outlook for spruce is regarded as decidedly favorable. In New York prices have stiffened somewhat, from $18.50 to $19.50 being an average quotation for wide lumber, with special orders at $15 to $17. Hardwoods are showing a degree of strength, although, as with pine, the demand is light. Weakness in white ash is reported, inch firsts and seconds selling in the Buffalo market at $38. Birch is strong at $28.

Dealers in the Eastern States report a good movement of red cedar shingles, which are selling at 50 cents less than XXXX 18-inch pine. The latter are quiet.

GREAT BRITAIN.

In London pine deals of first quality are selling at £32 per standard, second quality at £24 10s, third quality at £14 10s, and fourth quality at £11 10s. These prices are the highest that have been reached for some years. Notwithstanding, the position of the market is such that an advance of from £1 to 30s is predicted before next spring. At auction sales first pine deals have averaged about £29 per standard. Spruce is equally firm, selling at £11 5s for 3x11 second quality, £10 2s6d for third, quality, and £9 10s for fourth quality delivered at London. There is considerably less stock of some classes in first hands than last year, and holders of such sizes as 3x9 and 3x11 inch in good qualities are said to command the situation. At Liverpool waney pine and elm are wanted, and enquiries are also in the market for oak and square pine. Some good sales of red pine are reported.

No business of any consequence has been closed for next year, although importers are feeling the freight market, and if reasonable rates can be secured, considerable early business is expected.

FOREIGN.

Reports from South Africa state that prices of timber have recently advanced sharply. At Port Elizabeth the rise is from 8 to 12 cents per cubic foot. It is said that British dealers have sold about 50,000 standards to that market. This, we understand, has been chiefly Baltic stock.

The Sayre & Holley Lumber Company, St. John, N. B., is applying for incorporation.

It is reported that negotiations are abou completed for the purchase by a company o the extensive lumbering business of Geo Moffatt at Dalhousie, N. B.

STOCKS AND PRICES.

The base price for hemlock lumber in New York city is $15.

Johnson & Beveridge, of Parry Sound, Ont., have again put in logging camps in the township of McKenzie.

The Dickson Company, of Peterborough, Ont., will make a large cut of logs in East Harvey township this winter.

For the week ending September 26th, 9,548,000 feet of lumber and 3,525,000 shingles were received by lake at Buffalo.

Haley & Son, of St. Stephen, N.B., have been given a contract by a Glasgow firm to supply 60,000 boxes per month for a year.

The Allen Spool & Printing Company, of Mystic, Conn., wants 100,000 feet of good white birch spool wood, 1⅛, 1 3-16, or 1¼ inch square.

On September 22nd and 23rd twenty-one lumber-laden vessels arrived at Tonawanda, N.Y., whose cargo aggregated 15,000,000 feet. This is the largest quantity of lumber received at that port during any similar period of this season. Most of the lumber went into the yards for winter stock.

At a recent auction sale held by Foy, Morgan & Company, London, England, pine deals of the Hawkesbury shipment, first quality, sold at the following prices: 12 ft. 3x12-28in., £28 15s; 13 ft. 3x11-26in., £29; 13 ft. 3x11-23 in., £29 10s. Spruce deals, unassorted, from Wolfe River, N.S., brought £9 5s for 9-21 ft. 2½x6 in., £8 5s for 10-21 ft. ¾ 7-11 in., and £8 5s for 10-20 ft. ¾x5 in.

Following is a comparative statement of timber measured and culled at Quebec up to 29th September, as reported by the Supervisor of Cullers:

	1898.	1899.	1900.
Waney White Pine	1,8 5,975	1,778,584	1,449,003
White Pine	1,060,634	591,324	564,444
Red Pine	239,349	159.937	63,780
Oak	948,644	522,178	458,948
Elm	474,194	456,841	676,163
Ash	34,735	56,646	91,701
Basswood	955		242
Butternut		60	142
Tamarac		415	71
Birch and Maple	112,500	244,530	459,333

The ship Linfield has completed loading lumber at the Hastings mill, Vancouver, B. C., and will sail for London and Southampton. The cargo consists of over one and one-quarter million feet of lumber. The large timbers make up the deck load and are consigned to the British Admiralty to be used to replace the iron spars in the Queen's Royal Yacht Victoria and Albert. Two of the spars are 32 inches square and 105 feet long, and two others 28 inches square and 90 feet long.

BRITISH MARKET FOR DOWELS.

There is a large market in Great Britain for dowels. We are in receipt of a communication from a large importing firm in London, in which they state that they are prepared to place orders for large quantities of these goods, and are anxious to learn of Canadian manufacturers who would be willing to take up the matter. The following specifications of their requirements at the present time will give manufacturers an idea of the quantity, size and price:

GOODS TO BE CONSIGNED C.I.F. MANCHESTER DOCKS.

Quantity	Size	Price Per Gross
1,000 gross	30 in. long, 6/16 in. dia.	2s 4d

200 "	36 in. long 3/4 in. dia.	4s

The specifications provide for maple dowels, to be clean, sound, smooth and free from knots. The firm in question give some of the leading banks in England as references.

Any manufacturer wishing to open up correspondence with the firm will be furnished with their name and address by communicating with this office.

DEMAND FROM THE EASTERN STATES.

At the present time, says the American Lumberman, the eastern part of the country seems to be producing the best results as far as the lumber trade is concerned. Inquiry and actual shipments in the west are but moderate in volume, although fully up to and perhaps ahead of the ordinary season, but the contrast is so marked with the trade of last year that lumbermen are inclined to call it dull. The result is an easy condition of prices and a hand-to-mouth sort of business which is not particularly stimulating.

The east, however, shows a decided improvement. The demand is good and increasing. There is some disposition to stock up for the late fall and winter trade and prices are firmer. Not in many lines is there a quotable advance; but the lists are for the most part being maintained and there is a hardening tone to values which is gratifying to all holders of lumber, and which is not objected to by buyers, inasmuch as it is caused by an improvement in conditions which beneficially affects all alike. There is less heard in the east about concessions in prices or anything of that sort than in the west, and this is true even in respect to white pine, though the white pine situation generally is a strong one.

The eastern improvement is not confined to to any particular line. It seems to affect all sorts of lumber, whether for building or for manufacturing use. It would not be strange to find the east the leader in lumber values for some months to come, for that locality has a faculty of developing strength when least expected, or on the other hand, of showing weakness when strength and activity characterizes the central and western part of the country.

THE BARBADOS MARKET.

CLAIRMONTE, MAN & Co., in their circular of September 15th, say: There is still a fair demand for spruce and white pine lumber, as our yards are moderately stocked. We note one arrival for the fortnight, sold for Demerara, at $26 for merchantable, and $22 for second quality. Latest local sales are: White pine, $23.37 for first quality, and $17.37 for second quality; spruce, $20.10 for first and $16.10 for second quality.

SHINGLES—Gaspe cedar are in full supply; we placed 187 M large ex Success, at $5.07 per M; other sales ex same vessel were made at $4.56 for large, and $3.03 for small. The cargo ex Blenheim, in store from last season, has since been sold at $3 per M. Cedar laying, $2.03 for a cargo of 485 M ex New Dominion, spruce laying $2.

The brigt. "Boston Marine," arrived from Jordan River, N.S., on September 5th, with 43 M feet white pine, sold at $26; 84 M second quality $22, deliverable at Demerara.

FOR SALE: Timber Limits on the Following Rivers:—
Du Lievre, Rouge, St. Maurice, Temiscouata, Cascapedia (Great and Little), and the Escumenac Rivers and Georgian Bay.
Mills and Water Powers also for sale.
Asbestos, Chrome and Copper Mines for sale.
Principals only dealt with.

THE NEWS.

—Mr. McLean has erected a shingle mill at Cloverdale, B. C.

—Geo. McCormick, M. P., purposes starting a veneer factory at Sundridge, Ont.

—Thomas Potter, late of Walkerton, Ont., has purchased a sawmill in Bentinck township.

—John S. Schurman, of Southampton, N. S., is sawing lumber with his portable mill for Pugsley Bros.

—Jas. Wilson, of Kingston, Ont., has installed new machinery for the manufacture of sash and doors.

—E. Livingstone, of Blyth, Ont., whose handle factory was burnt recently, will probably rebuild in the town of Sarnia.

—The McKinley Wood Lumber Co., of Parry Sound, Ont., are enlarging their saw mill and adding a new 50 h. p. engine.

—It is reported that the Pigeon River Lumber Company, of Grand Rapids, Wis., will build a sawmill on Rainy River.

—McLachlin Bros., lumbermen, of Arnprior, Ont., again this year treated their employees to a free trip to the Ottawa Fair.

—R. Wright, of Thorndale, Ont., has decided to rebuild his cheese box factory at that place destroyed by fire last month.

—The Georgian Bay Lumber Company are reported to have had plans prepared for a new saw mill to be built at Waubaushene, Ont.

—The Clarksburg Wood Rim Co., Limited, of Clarksburg, Ont., received the highest award for their exhibit at the Paris Exhibition.

—The Dunnville Planing Mills Company, Limited, has been incorporated, with a capital of $20,000 and head office at Dunnville Ont.

—T. L. Baillie, lumber merchant, of Penetang, Ont., is said to be organizing a company to carry on the business on a more extensive scale.

—It is reported that Arpin, Scott & Finger, of Grand Rapids, Mich., will erect a saw mill either at Port Arthur or Fort William, Ont.

—The Trout Creek Lumber Co., of Trout Creek, Ont., are erecting a large saw mill at Nipissing, and will manufacture lumber, shingles, etc.

—Forest fires broke out early in September along Bear river, in Nova Scotia. Some timber belonging to Clarke Bros. was destroyed.

—It is estimated that the Victoria Lumber & Manufacturing Company, of Chemainus, B. C., will cut 40,000,000 superficial feet of lumber this season.

—The Mount Sicker Mining Company have purchased the sawmill property of Thomas Lloyd at Westholme, B. C. The mill will be operated in connection with the company's mines.

—It is the intention of E. Spragget, of Grand Forks, B. C., to build a sawmill of a capacity of 50,000 feet daily on the north fork of the Kettle river, about one mile from Grand Forks.

—The Rat Portage Lumber Company, of Rat Portage, Ont., expect to commence shortly the erection of their proposed saw mill at Winnipeg. The mill will be one of the largest in the west, and will give employment to 400 men.

—The Fraser River Lumber Company, composed of Jas. Sharpe, president, J. R. Sharpe, secretary, and T. B. Tait, manager, are building a shingle mill at New Westminster, B. C., in which they will instal five Dunbar shingle machines.

—A new company has been formed, known as the Bonfield Lumber Company. They have purchased the sawmill owned by R. H. Clark at Bonfield, Ont., west of North Bay, on the C. P. R. Operations will be commenced this month.

—The British Columbia exhibit at the Paris Exposition consisted of thirteen sections of trees, four pieces of square timber, eighteen deals, 140 pieces of polished wood, unpolished boards, flooring and wainscoting, shingles and tan bark.

—N. James & Son, of the Acme Veneer Works, Orillia, Ont., are building a large addition to their factory. Besides turning out veneers, pails and chair seats, they purpose putting in machinery for the manufacture of glued-up work for pianos, furniture, cheese box heading, etc.

—The British Clumbia Mills, Timber & Trading Company write the CANADA LUMBERMAN that there is no foundation for the report that they have secured an order from the British Government for knock-down huts to be used for war purposes.

—A Rat Portage paper says: John Gault, superintendent of Mackey's lumber camps, has returned from an exploring trip through the White Fish River and Macdonell Lake district. He discovered a limit of about fifteen million feet of timber.

—A record cut is reported to have been made in the Berlin Mill Company's sawmills at Berlin, N. H., recently. In eleven hours 221,339 feet of spruce lumber was cut by one band saw, beating the world's record of 158,000 feet made last year by a mill in Maine.

—G. O. Buchanan, of Kaslo, stated recently before a meeting of the associated boards of trade of Eastern British Columbia, held in Nelson, that in the last eight years five times as much timber had been destroyed by fire in the Kootenays as had been cut up in the mills.

—A Vancouver exchange says: J. Clarke, A. Macdonald, and A. Felieu comprise a party of timber cruisers from Ontario who are staying at the Commercial. They are making arrangements to leave here early next week in a sloop on a trip up the coast to locate timber limits.

—Some Toronto parties have made a proposition to the town council of North Bay, Ont., to establish a factory there for the manufacture of veneer packing cases. In consideration of a loan of $12,000 they agree to erect a factory to cost $25,000. A Mr. Davidson is the patentee of the invention.

—E. Stewart, Chief Inspector of Timber and Forestry for Canada, returned early in September from a three months' inspection of the timber lands in British Columbia, the North-west Territories and Manitoba. He states that the government has made a grant to grow shelter belts of trees to break the winds of the prairies.

—The Metis Lumber Company is applying for incorporation. The company is capitalized at $85,000 and the head office is to be at Grand Metis, county of Rimouski, province of Quebec. Those interested include Wm. Price and A. J. Colston, of Quebec; P. G. Owen, of Montreal; Wm. Seale, of Metis, and J. H. Conant, of Watertown.

—Mr. Garden, M. P. P., will endeavor to have the government of British Columbia alter the method of disposing of timber, as the following question appears on the order paper: "Is it the intention of the government to appoint timber cruisers to thoroughly examine the timber lands of the province and to report thereon, with the object in view of setting apart timber berths, to be offered for sale by public competition?" The principle suggested is the one now adopted by the eastern provinces, and which is believed to be the best policy of disposing of timber limits.

—The second preliminary meeting of the British Columbia Forestry Association was held in Vancouver recently. A letter was read from Alex. Philip, in which he advocated the planting, under intelligent supervision, of such trees as larch, oak, ash, elm, etc., and recommended that small grants of money and lands be solicited both from the Federal and Provincial Governments for the purpose. The committee appoited at a previous session to draft a constitution reported. The constitution submitted by them was discussed, clause by clause, and adopted after several amendments were made. The next meeting of the association is to be held in New Westminster during the week of the provincial exhibition.

CASUALTIES.

Nathaniel Kennedy was drowned at St. Stephen, N. B., while engaged in building a dam for McAllister Bros., saw millers.

Fred McIntyre, employed in Chisholm's sawmill at Roslin, Ont., had his left arm severed below the elbow by falling against a shingle saw.

A sad accident occurred in the Rathbun Company's mill at West Gravenhurst recently. After the mill had been closed Chas. Clarke was engaged in disconnecting some steam pipes, when an expansion pipe gave way and permitted the steam in the four boilers to escape, the pressure of steam being about 30 pounds. Mr. Clarke was so severely scalded that he died almost instantly.

TRADE NOTES.

The employees of Chaplin's saw works at St. Catharines, Ont., held their annual picnic last month to Victoria Park, Niagara Falls.

The Mongolia Metal Company, of New York, have opened a new branch office in rooms 411 and 412 Hale Building, Philadelphia.

Messrs. Payette & Co., of Penetang, call attention in the advertisement columns of this number to their machines for the use of lumbermen.

The Dodge Manufacturing Company, of Toronto, have been awarded a bronze medal for their exhibit of wood split pulleys at the Paris Exposition.

The Canadian Rubber Company, of Montreal, have been notified that they have been awarded a gold medal at the Paris Exposition for their display of rubber goods.

The Spicer Shingle Mill Company have overhauled their shingle mill at Vancouver, B.C., and put in a Dunbar upright machine. The mill has now a capacity of 5,000 shingles in ten hours.

P. Payette & Company, of Penetanguishene, Ont., find it necessary to enlarge their buildings and increase their plant. The town council has been asked to grant exemption from taxation on the proposed additions.

Chas. D. Dickinson, the well-known tanner and larrigan manufacturer, of Woodstock, N.B., has completed the changes and improvements to his factory. He has put in some new stitching and eyelet machinery. Recently he filled some large orders for Western Ontario firms, and reports that orders now on hand will keep his factory employed until December. He puts up the Henderson patent larrigan, which may be seen illustrated in our advertising pages. This larrigan, by its peculiar construction, cannot rip, and is much more water proof. It is much in use "down east."

The attention of our readers is called to the advertisement in this issue of the Metallic Roofing Company, of Toronto, manufacturers of all kinds of metal building materials. This company make a specialty of metal shingles and siding for mill covering. Some little time ago the insurance authorities in British Columbia granted a considerable reduction in rates to owners of mills who should cover their buildings with material of this kind. As a consequence, most of the mills in British Columbia, the home of the red cedar shingle industry, are said to be covered with metal shingles. We understand that a considerable reduction in rates is also allowed by the insurance companies in Ontario where mills are covered with material of this kind. In view of this it will probably pay the owners of large mills especially, to enquire into the merits and advantages of this material.

Messrs. W. B. Mershon & Company, of Saginaw, Michigan, have just issued the fourth edition of "The Use and Care of Band Resaws" and their new catalogue combined, and will send a copy on application to anyone interested in band resaws. They advise us that they have just put on the market a new 60-inch band resaw, combining all the improvements of their former machines, but covering a little different field. Recent sales include a special band edger and an Ideal resaw to John Mahan, of Cattleburg, Ky., who has been running one of their resaws in his Saginaw mills for nearly four years, and states that the original saw blades sent with the machine have never yet been broken or cracked. Mershon & Company state that by using a band edger or band rip saw damage suits and accidents would be avoided, as a board cannot fly from them.

A convention of salesmen of the Mongolia Metal Co., at which twenty-five gentlemen from all parts of the United States and Canada were present, was held at the Murray Hill Hotel, New York, on the 6th, 7th, 8th and 10th of September. All subjects appertaining to the sale of Mongolia metal were discussed, the greatest interest in the company's business being manifested. Reports from all concerned showed that the company's business had never, during the the past fifteen years, been so prosperous as during the last year and a half, and that the prospects for the future are far better than ever before. The affair wound up by the presentation of a loving cup to Mr. E. C. Miller, the vice-president and general manager of the company. Cables and telegrams from the conference were sent to the London, Paris, Berlin, St. Petersburg and San Francisco offices of the company, and to a number of absent salesmen who could not be present.

WOOD PULP DEPARTMENT

PULP CONCESSION ARBITRATION.

As we go to press arbitration proceedings are in progress in Toronto to determine the value of a pulp concession at Sturgeon Falls, Ont. This arbitration is attracting much interest, owing to the monetary consideration involved and the fact that British capitalists are interested.

It will be remembered that about two years ago some Huntsville parties secured from the Ontario government a pulpwood concession of about 3,700 square miles and a water power at Sturgeon Falls, where it was proposed to erect large pulp and paper mills. A year later they sold out to a British syndicate, the Imperial Paper Mills Company, commonly spoken of as the Sturgeon Falls Pulp Company. The work of developing the power and erecting mills was in progress when, in December, 1899, the entire property, including the timber limits, was sold to Edward Lloyd, Limited, London, England. The latter appear to have become dissatisfied with their bargain, and refused, it is said, to meet their obligations. The Imperia] Paper Mills Company were compelled to press for settlement, and the litigation above referred to is the result.

Both parties to the dispute have refused to make public any statement regarding the trouble, but it is generally believed that the contention of the Lloyd Company is in respect to the quantity of spruce timber and the water power.

United States contemporaries are making a great cry about what they call unfair treatment on the part of Canadians and the Ontario government. They seem to forget, or have never known, that both parties interested are British companies. The original transaction between the Huntsville parties and the Imperial Paper Mills Company has never been impugned. These journals apparently hope, by giving a false representation of the situation, to injure the development of the Canadian pulp industry.

It is hoped, however, that the outcome of the arbitration will be a settlement satisfactory to both parties, and that the Lloyd Company will proceed with the development of the property. It is understood that an examination of the timber limits is likely to be made, which will occupy considerable time.

DOLOMITES IN NEW BRUNSWICK.

Professor L. Bailey, of the Geological Survey, in his report to the Department at Ottawa, says: Reference has several times been made to the occurrence of dolomites in the neighborhood of St. John. Much interest has, during the last year, been aroused in these from the possibility of their being suited for use in connection with the manufacture of wood pulp. Some time was therefore devoted to the determination of whether or not, among the limestones occurring in that vicinity, any could be found carrying a sufficient percentage of magnesia to make them suitable for such use. The result was very satisfactory, for while at each of the three quarries which have been so long worked as a source of limestone for calcination, the rock is a nearly pure calcic carbonate—95 to 99 per cent., with only a trace of magnesia—these were found to be associated at several places with considerable beds, usually white or creamy instead of grey, which are decidedly dolimitic.

Thus a sample of rock from Randolph & Bader's Quarry, in Randolph, gave: Calcium carbonate, 62.85 per cent.; magnesium carbonate, 35.32 per cent.; iron, alumina, silica, 1.83 per cent. Other specimens from the same locality, examined in the laboratory of the survey, proved to contain close on 45 per cent. of magnesium carbonate, the proportion characteristic of true dolomite. There would, therefore, seem to be no reason, so far as chemical composition is concerned, why portions of these rocks should not satisfy all the requirements of pulpmaking.

As, however, in connection with the large pulp mills at Mispec it was not thought desirable to commence operations with untried materials, and large amounts of dolomite had been imported, the practical test necessary to place their fitness beyond doubt have not yet been made.

THE AMERICAN SULPHITE MANUFACTURERS' ASSOCIATION.

An important meeting of the American Sulphite Manufacturers' Association was held in the Windsor Hotel, Montreal, early in September. Arrangements were practically completed whereby all the Canadian sulphite pulp mills will join the Association and aid in maintaining prices on both sides of the border. Four Wisconsin mills and three Canadian mills were admitted to membership, and at the next meeting to be held in Boston, on October 3, it is expected that the remaining six Canadian mills, or at least the majority of them, will be admitted.

The following is a list of the Canadian mills which it is said will join the Association: Riordan Paper Mills, Limited, Hawkesbury and Merriton, 105 tons per day; Laurentide Pulp Company, Limited, Grand Mere, 25 tons; The E. B. Eddy Company, Limited, Hull, 25 tons; Dominion Pulp Company, Chatham, N. B., 20 tons; St. John Sulphite Company, Limited, Mispec, N. B., 30 tons; Cushing Sulphite Fibre Company, St. John, N. B., 40 tons; Sault Ste. Marie Pulp and Paper Company, Sault Ste. Marie, Ont., (within 8 months), 40 tons; Maritime Sulphite Fibre Company, Limited, Chatham, N. B., 40 tons; total, 325 tons.

Out of this total of 325 tons all but 95 tons is marketed abroad. Of the 95 tons about 35 tons are at present consumed in Canada. This leaves about 60 tons for importation into the United States, leaving the Sault Ste. Marie mill out of the calculation. Although there is a duty of $3.35 on unbleached fibre, the Canadian manufacturer has in some instances been able to market his product in the United States at a profit even below the price quoted by the Sulphite Manufacturers' Association.

Under the new arrangement, the association will be in a position to maintain the steadiness of prices all over American territory.

PULP NOTES.

It is reported that J. R. Booth, of Ottawa, is considering the erection of pulp and paper mills at the Chaudiere.

The Sheet Harbor Lumber Company, of Sheet Harbor, N. S., is said to be considering the erection of a pulp mill.

A meeting was held recently at Dryden, Ont., says the Wabigoon Star, to consider the erection of a pulp mill at that place.

Charles H. Vogel, mill architect, is preparing plans for the new pulp mill to be built at Thorold, Ont., by the Thorold Pulp Company.

The organization of a company by Mr. Moravec to

uild a pulp mill at Clark's Cove, near Chatham, N. B., is progressing favorably.

C. W. Wilson, paper manufacturer, of Montreal, has applied for a lease of certain property at Indian Lorette, Que., on which o build a pulp mill.

Donald Fraser & Sons, of Fredericton, N. B., announce their intention of erecting a pulp mill adjoining their saw mill at Cabano, on Temiscouata Lake, Quebec.

A new pulp wood concern, with headquarters at Roberval, Lake St. John, Que has been formed, with capital of $30,000. A. F. Vellerand, A. C. Paquet, and others, of Quebec city, are interested.

The Sault Ste. Marie Pulp & Paper Company, of Sault Ste. Marie, Ont., have appointed Messrs. John Hudson & Company, 60 Mark Lane, London, E. C., sole agents in Great Britain for the sale of their pulp.

The site is being cleared for the erection at Webbwood, Ont., of the proposed pulp mill of the Spanish River Pulp Company, although work on the dam, mill and canal will not likely be commenced until next spring.

Negotiations are in progress for the purchase by Messrs. H. K. Egan and W. C. Edwards, M. P., of the Table Rock water power owned by the Hull Lumber Company, at Hull. The water is capable of developing 5,000 horse power, and it is said to be the intention to build a large pulp mill.

A number of English capitalists are expected to arrive in Canada shortly to make an investigation of some pulp wood properties. A represenative of these capitalists called upon Mr. Johnson, Dominion Statistician at Ottawa, a few days ago. Mr. Johnson advised his interviewer to have the capitalists explore the Moise river basin, in north-eastern Quebec, which is reported to be a dense forest of spruce timber.

An American syndicate is considering the erection of a large pulp mill at Fort Frances, on the Rainy river, a town which will soon be connected with Winnipeg by rail. J. T. Fanning & Son, civil engineers, of Minneapolis, recently made a survey of the falls in connection with the project.

The Belgo-Canadian Pulp & Paper Corporation, of which Messrs. Edmond de Vialder and Herman Cortmet, of Brussels, are the principal shareholders, have just completed arrangements to establish at Shawinigan Falls, Que., a 100 ton ground wood pulp mill, and have contracted with the Shawinigan Water & Power Company for 15,000 horse power. They have purchased over 700 square miles of heavily timbered spruce lands on the St. Maurice river. The company's engineer is Mr. A. C. Rice, of Worcester, Mass.

Good Reasons Why OUR CORRUGATED IRON Is preferred by those who know.

We use only best Apollo or English sheets.

The corrugations are pressed one at a time—not rolled—fitting perfectly, both at ends and sides without waste.

No scale, pin holes or other defects are ever found in our goods.

The galvanized sheets are coated on both sides with all the galvanizing material that can adhere to them.

The painted sheets are coated on both sides with Sherwin-Williams best quality paint.

We furnish any size or gauge required—either curved or straight.

If you desire durable quality and certain economical satisfaction, send us your specifications or write for further information.

ENGINE ROOM NOTES.

W. H. WAKEMAN, in the Wood-Worker.

It is always a good plan to watch an engine carefully for loose pins, setscrews and nuts, for an ounce of prevention of accidents in this way is worth several pounds of cure, after an engine is wrecked by the failure of a governor to do its duty.

Grate bars should fit the furnace so as to prevent waste of fuel; but they should not be wedged in so tightly that when they are expanded by heat they will be ruined.

Friction clutches and cut-off couplings are a great convenience in a mill or factory; they enable the operatives to quickly stop a line of shafting in case an accident happens, without waiting to get word to the engineer. They also save power by making it convenient, or possible, to allow one or more lines of shafting to remain at rest, when not needed for use.

When selecting hangers, choose those which will admit of taking out the shafting without removing the bolts holding the hangers; in case of repairs it may save much time and expense.

When laying out holes in belts for lacing, do not locate them so near together that the strength of the belt will be seriously impaired; and after you have laced it, draw in extra pieces of lacing so that they will come between belt and pulley when in use, as they will save the lacing that holds the belt together.

It is poor policy to allow any kind of packing to remain in use too long, and especially so in the case of valve stems on Corliss engines, which are often made of a composition that is easily cut and grooved.

When an injector has worked well for some time, then declines further service, examine the feed pipe to boiler and see if it has become choked with scale and sediment.

It is a good plan to use a little oil on asbestos wicking, when packing valve stems, but if much is put on it makes an unsightly mess on the bonnets of nickle-plated radiator valves and in other similar places.

It is very annoying to an engineer who understands his business, to find that as soon as the flywheel begins to revolve in the morning, or when starting up after dinner, some workman in the shop has started a heavy machine into operation. As a rule these machines do not turn out good work when running at a slow speed; but whether they do or not, they should never be started until the engine has attained its full speed. Machinery in silk mills and similar places are exceptions to this rule, but woodworking machinery is not.

Metallic piston rod packing is a very good thing to have, but some kinds are made in the form of a wedge, and if an engineer screws the nuts on the studs up tightly, he may get himself into trouble; therefore he should go slowly until he fully understands the construction of the packing in his stuffing box.

If the indicator diagram from your engine shows an imperfection for which you cannot account, be sure that the indicator piston is well oiled before losing sleep to worry over it, for the oil may change the whole aspect of affairs.

Boiler compounds are necessary in many cases, but as soon as scale is removed from the shell and tubes, it should be taken out without delay, as it may cause the crown sheet to be burned.

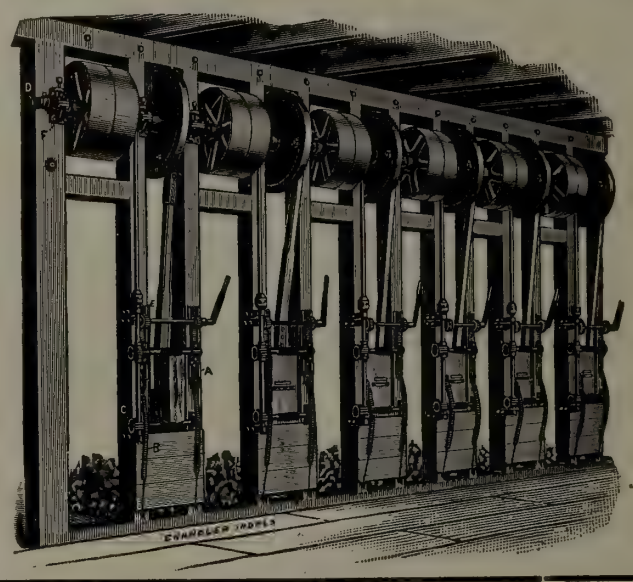
Flange unions in the main steam pipe between the lubricator and the cylinder should be packed with asbestos millboard, copper gaskets, or some other substance that hot oil will not dissolve.

Where a jet condenser is in use, some of the exhaust steam will find its way back into the boiler, after being condensed and passing to the hot well; therefore measures should be taken to remove cylinder oil from it before it is condensed.

If the main belt on your engine has run steadily for years or months, and then begins to "flop" in an unreasonable manner, do not hasten to saw a piece out of the floor through which it runs, nor yet to cut a piece out of the belt, but apply an indicator and see if the valves do not need resetting.

Every pound of back pressure on the piston of an engine means another pound of forward pressure, which in turn means more fuel for the boiler, hence the back pressure should be reduced to the lowest point possible. This is what a condenser is used for.

The Best Excelsior Machine in the World



When two or more knives are run with one belt, all must stop when the belt is stopped to set bits or from any other cause. Our Machine has a belt for each knife, hence but one knife stops at a time. This great advantage should not be overlooked by purchasers. Time is money. Our Machine cuts more excelsior in a given time than any other machine. Get our circulars and rices.

THE BARBER TURBINE.

Our representative recently had the pleasure of visiting the works of Charles Barber, at Meaford, Ont., where the well-known Barber's Canadian turbine is manufactured. Mr. Barber reports business to be in a prosperous condition. For the past thirty years he has made a special study of the question of turbine manufacture, and claims to have perfected his turbine by such improvements as were demonstrated to be necessary by experience. At the present time, he states, he is producing an article that will meet almost every requirement.

The Barber turbine is purely a Canadian invention, and one of the few that has outlived the competition from American apparatus. It is claimed that this turbine has been tested in competition with the leading American makes, and that it has invariably given better results, while at the same time being much lower in price. Mr. Barber has a complete list of all sizes, right and left hand, for both vertical and horizontal installations. His engineer has perfected an original system of installation which, it is said, entirely overcomes the difficulties of bulk-head, flume and conduit building. Persons contemplating the installation of water wheels are referred to the illustrations which appear in his advertisement, and are asked to write Mr. Barber for further catalogues and particulars.

POWER FOR ELECTRIC LIGHTING.

(1) We have a mill that requires from 35 to 40 horse power, according to the number of machines in use. Our engine is 12 inches by 20 inches, with a boiler suitable for 90 pounds pressure. How much more power will we require to run a dynamo capable of furnishing current for 600 incandescent lamps, and another one for 30 arc lamps?

(2) How much power will it require for 140 lamps on a 110 volt circuit?

The above questions are asked by a writer in Modern Machinery, and the answers given are as follows:

(1) The amount of power required depends on several things that you do not mention; therefore, we cannot attempt an answer. We should advise you, however, to put in another plant to furnish power for the electric light system you mention, for if you attempt to add to your present plant, and drive the varying load in your mill with the same engine that furnishes power for the lights, the service will be unsatisfactory and hence unprofitable. It is customary when making estimates, to calculate that one horse power will be required for 10 incandescent lamps, but this is only an estimate and should be considered as such.

(2) The power actually required to operate your lamps can be determined when the resistance that each one offers is known, and this you do not state. If we assume it to be 50 ohms on a 110 volt circuit, then each lamp will require 110 + 50 = 2.2 amperes, or 308 amperes for 140 lamps. Multiplying the volts and amperes together, and dividing the product by 746, shows that 45.4 electrical horse power will be required. If the efficiency of the dynamo is 85% the brake power of the engine will be 45.4 ÷ 85 = 53.4 horse power. Assuming that the mechanical efficiency of the engine is 90 % it must indicate 59.3, or say 60 horse power.

We are indebted to numerous contemporaries for complimentary reference to our special Export Number issued in August last.

Special attention is called to the advertisement below of Mr. Chas. Barber, of Meaford, inventor and manufacturer of the famous Canadian turbine.

A Dominion charter has been granted to the Consol. dated Pulp & Paper Company, of Toronto, Limited This company, at the head of which is Mr. John M. Poole, has taken over mills at Newburg, which will be improved and extended.

The Thorold Pulp Company, Limited, has recently been organized, with a paid-up capital stock of $30,000, for the purpose of erecting a pulp mill on the Welland Canal at Thorold, Ont. The promoters of the enterprise are Messrs. Peterson and Davidge, of Niagara Falls, N.Y., and Messrs. Morse, John Brown and E. E. Rowe, of Warsaw, N.Y. The necessary water privileges have been secured and all other preliminaries arranged. The erection of the mill will be commenced immediately, under the direction of Mr. Vogel, who has had a long experience in this class of work in the United States and who has recently taken up his residence at Thorold. The mill will be constructed of stone and wood and will have a capacity of 10 tons per day.

This Saw Stands Without a Rival

AND IS THE

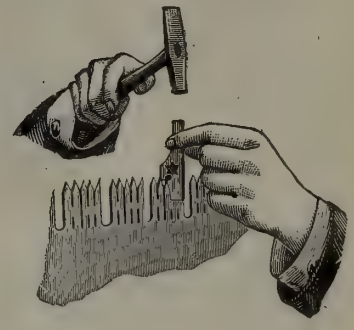
FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

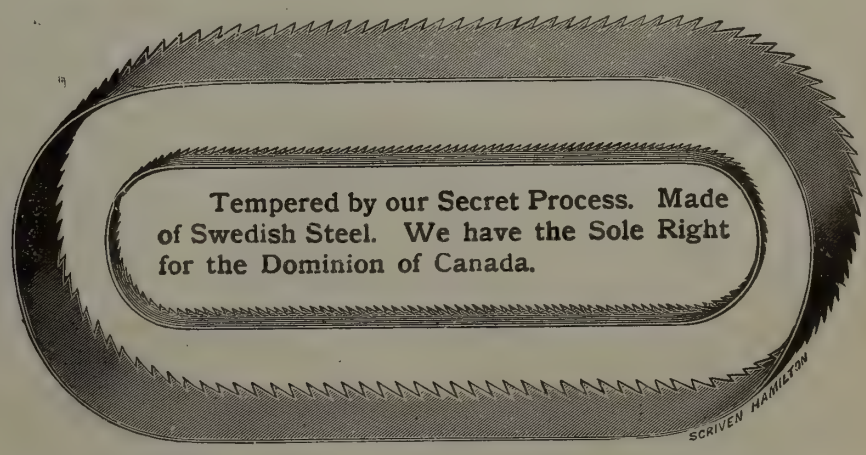
SHURLY & DIETRICH, Galt, Ont.



Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

THE DRY KILN THAT DOES NOT Disappoint

THE DRY KILN THAT DOES NOT Disappoint

THE DRY KILN THAT DOES NOT Disappoint

THE DRY KILN THAT DOES NOT Disappoint

The Standard Seemed the Most Common Sense Dryer, and We Made No Mistake in Our Choice.

Brantford, Ont., April 4, 1900.

The Standard Dry Kiln Co., Indianapolis, Ind.

Gentlemen:—Having had for the last twenty years considerable experience with Dry Kilns—Hot Blast and others—without getting the desired results, last spring there being no dry lumber to be had, especially in hardwoods, this compelled us to take up the question of more drying capacity. After very careful consideration The Standard seemed the most common sense dryer in the market, and we are more than pleased to say that we made no mistake in the choice. We have had the best of satisfaction from exhaust steam only, not requiring to use any live steam. If we were adding another kiln, we would certainly put in another of your make. It is a great saving on stock; it comes out in splendid shape. Yours truly,

The Schultz Bros. Co., Ltd.

The Standard is the highest type of development of the **Moist Air** System of Drying. Hundreds of users in all parts of the world say The Standard has absolutely **no equal.**

R. H. SMITH CO., LIMITED

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simonds' Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

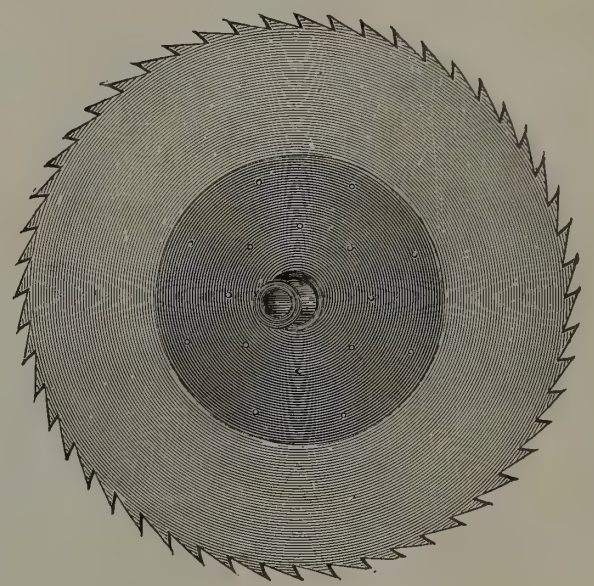
CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., LTD., St. Catharines, Ont.

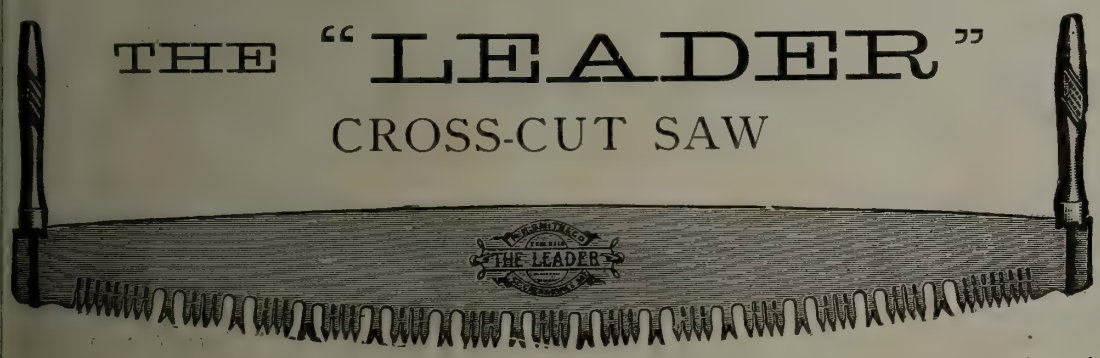
GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



THE "LEADER" CROSS-CUT SAW



These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

THE "LEADER" SAW SWAGE

Made in 3 Sizes—$2.00, $2.50, $3 00 Net.

OUR PRICES ARE RIGHT. KINDLY ALLOW US TO QUOTE YOU BEFORE PURCHASING.

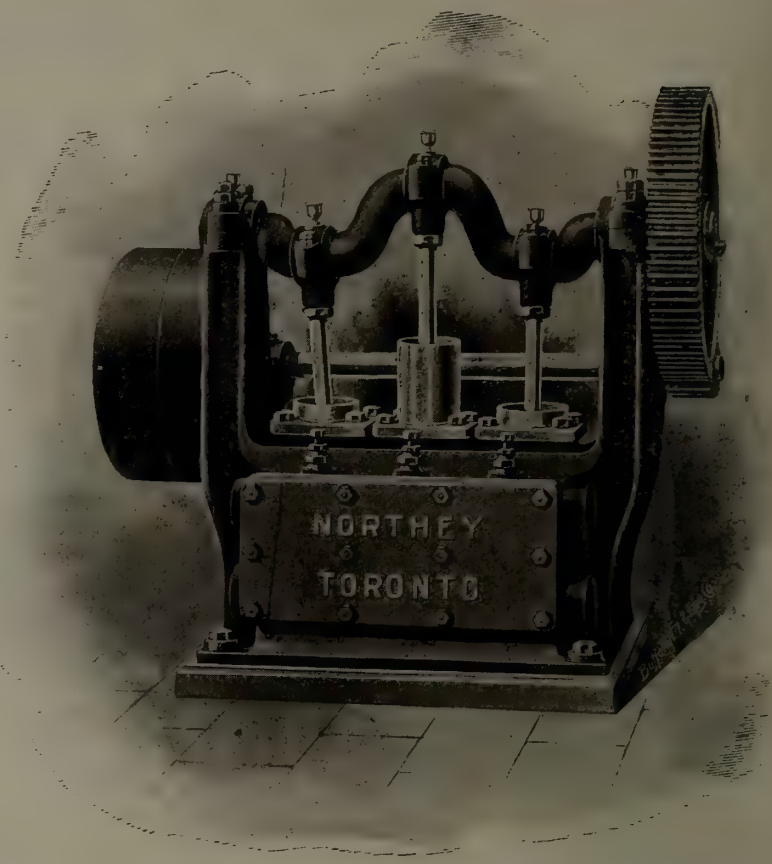
Northey Triplex Power Pump

FOR BOILER FEEDING
AND
GENERAL PRESSURE PURPOSES

In the Northey Triplex Power Pump we offer a machine put together with the skill brought by years of experience in pump building, and with full provision made for the varied demands likely to be made upon a pump of this character. A feature of value is that the three cranks are placed 120 degrees apart, thus giving a practically constant flow of water—minimizing strain on pump and economizing power. The pump can be readily repacked and taken up, and all details are carefully worked out. It can be conveniently operated by electricity, by water power, or by belt from engine. Different styles and sizes made to suit all duties.



WE ARE MANUFACTURERS OF OVER FIVE HUNDRED DIFFERENT STYLES AND VARIETIES OF STEAM AND POWER PUMPS FOR STATIONARY AND MARINE PURPOSES. WE INVITE ENQUIRIES FROM ENGINEERS, MINE SUPERINTENDENTS AND OTHERS FOR THEIR REQUIREMENTS IN OUR LINE. CATALOGUES AND SPECIFICATIONS FURNISHED UPON REQUEST.

We are also manufacturers of the Northey Gas and Gasoline Engine which has proved to be the handiest and most convenient power for small or intermittent power users in the market. Suitable for machine shops, pumping and electric light plants, etc. Write for illustrated descriptive booklet.

MODERN METHOD OF BREAKING A LOG JAM.

THE accompanying illustration shows, in operation, a contrivance arranged by Mr. Samuel Bingham, of Ottawa, for the speedy loosening of a jam or other accumulation of logs, pulp wood, ties and so forth. Mr. Bingham is probably one of the best known and most successful logging contractors in Canada, having charge of all the logs on the Gatineau river for a distance of 100 miles, from the river Desert to the Ottawa.

The view shows an accumulation of 250,000 saw logs and an equal number of pieces of pulp wood and ties. The "tie up" is located at the detaining boom on the Gatineau, situated at the Cascades. The logs are piled a distance of half a mile and to a height of 28 to 30 feet, extending the entire width of the river, about three-quarters of a mile. A sudden rise of water in the tributaries caused the accumulation of logs. In 10 days last spring over 500,000 pieces were swept in from a distance of 60 miles up stream. The current in the Gatineau on this stretch runs 20 miles an hour, and as the logs were swept down to the collection at the boom, they were forced under water, and thus coming to the surface under the other logs, raised the entire lot to a great height. The logs presented an unbroken front, and hence were even more difficult to handle than when in the shape of a jam.

METHOD EMPLOYED ON THE GATINEAU RIVER FOR BREAKING A LOG JAM.

Under ordinary circumstances, months, and perhaps an entire season, would have elapsed before the logs could have been released and sent on to the different mills. Mr.. Bingham, however, decided to put into operation a scheme that suggested itself to him last season. He secured a 60 horse power steam hoist and placed it on a platform 120 feet long and 36 feet wide. From this hoist a three-quarter inch steel cable was worked over a drum 27½ inches in diameter. The cable was 550 feet in length, and a second one was provided for cases of emergency. A number of ordinary jam dogs or hooks, single and double, were provided, as well as log tongs. When it was decided to release the logs, the tongs were first used on single logs, a number of which were taken out to make channels. The tongs, of course, were fastened to the cable, which was operated by means of the steam hoist over the drum. After the necessary channels had been cleared, the dogs and hooks were brought into play. The latter were so placed that the release of one log brought thousands with it. Thus in the operations pictured, as many as 5,000 and 10,000 were brought out at a time. The use of the tongs in the first instance gave a more direct purchase on the single logs it was desirable to release. The engineer can regulate the strength and speed of the pull as demanded by the position of the logs, number of logs to be released, etc. The contrivance is, in short, to the log stream what the reaper is to the wheat field. The latter, when compared to the sickle, does not do one-tenth the work Mr. Bingham's contrivance accomplishes. Its advantages are manifold; speed and safety to the men are important factors in its workings.

The float with the hoist can be so placed that when the logs are released it can be readily swung clear of danger. Another advantage it has is in the sorting of the different owners' logs from the jams along stream or collections at the retaining boom. As soon as one firm's logs are located, the hoist and cable are set at work there, and all are speedily released. By the old method, when the logs were released purely by the efforts of the river men with their cant hooks and pike poles, there could be no such choice or discrimination. Confusion reigned when the logs were released and they had to be sorted afterwards.

Mr. Bingham states that by the use of his contrivance, a gang of 2 jam dog men, 6 river men, an engineer and a fireman, can release an ordinary jam of 25,000 logs in a day or two. By the ordinary method this would mean perhaps months, or even a season's work on the part of scores of men whose lives were constantly being endangered and sometimes sacrificed in breaking the jam.

It took six weeks to release the 500,000 saw logs, ties and pieces of pulp wood that became wedged at the Cascades retaining boom. This was the largest collection of logs and good wood ever brought together on the Gatineau, and it was held back by one of the strongest booms in the world. At this point there are four piers stretching across the river. The largest one in the center, is 100 feet square at the base and tapers to a crown 46 feet square. It is 96 feet high. These were built by Gilmour & Co., under the direction of Mr. Bingham. Owing to the frequent change in the level of the water most of the other booms are made permanent.

The Gatineau is known as a rough river on which to run logs. In the 100 miles from the river Desert to the Ottawa, there are 47 rapids and 22 chutes. In this distance from the Ottawa upwards there is an elevation of about 1200 feet. Mr. Bingham has the river divided into 37 sections, varying in length according to presence of rapids, speed of current, etc., from one-half to three miles. These sections are patrolled by permanent men.

The present is one of the busiest seasons Mr. Bingham has had in his 26 years' work as river contractor. He has delivered 850,000 logs, measuring from 13 to 16 inches in diameter. Last year he handled 500,000 logs. Each year he handles large numbers of ties and pieces of pulpwood, as well as the saw logs. This is the first season he has not had at least one raft of square timber down the Gatineau. Mr. Bingham handles all the logs on the Gatineau, and supplies the following mill-owners: W. C. Edwards & Co., Ottawa; Gilmour & Hughson, Hull; Rideau Lumber Co., McLaren & McLaurin, East Templeton; Logan Estate, Maniwaki. He employs 350 men during the season, which extends from about May 1st to October 15th. Mr. Bingham oversees the work personally and knows the river thoroughly. He now handles the logs off limits extending 240 miles from the Gatineau. When he first started the logs were cut much nearer.

Mr. Bingham states that the reason for the decline in the production of square timber is the advance in the prices secured for finer grades. The Gatineau mill owners, seeing better financial returns in the latter, adhere to it. The Gatineau, however, was never improved for the passage of square timber as were the Coulonge, Black river and other tributaries of the Ottawa, and hence more was cut along the banks of the latter streams. Mr. Bingham cites his present season's business as proof that the Ottawa lumber business is not declining, although

the mill owners are going farther for their log supplies each year. He expects his contrivance here described to work a revolution in log driving, bringing a speedy and satisfactory solution of the difficulties that beset it, and robbing it of many of its picturesque and dangerous features.

To further facilitate the work of log driving on the Gatineau, Mr. Bingham has had a tug placed on the river this season. The boat, which only draws 31 inches of water, is built so that it can be hauled around the portages on a waggon specially built for the purpose. A great saving of time is effected in the drive, and the labors of the men lessened by the use of the tug. The unique craft is called the "Airn of Quebec."

Mr. Bingham has built the booms, piers, and other improvements on the Gatineau which facilitate his work of log driving. He has had an interesting and successful career. He was born on May 13th, 1840, at Bytown, now known as Ottawa. At the age of 13 he learned the milling business, following it for about three years, at the expiration of which

MR. SAMUEL BINGHAM, OTTAWA.

time he entered the employ of J. M. Currier and James Maclaren, for whom he worked four years. He was first employed as cook's assistant on a limit up the Gatineau, but in 1873 he turned his attention to log and timber driving, being rewarded for his application of intelligent, industrious principles by a bountiful share of success. The "River King," as he is known, is esteemed as a man whose bond and word are equally effective. His integrity and application have gained him the respect of all classes. In 1886 Mr. Bingham was nominated for parliamentary honors, but declined. Previous to this, in 1880, he was elected as representative of Ottawa ward in the City Council, holding the honor for eleven years. During this period Mr. Bingham occupied the position of Chairman of the Board of Works and Property Committee. Bingham Bridge, over the Rideau river, is called after him.

His fellow citizens had such a high opinion of Mr. Bingham's worth that they elected him Mayor of Ottawa in the years 1897 and 1898. As chief magistrate of the capital he exercised with wisdom and benefit to the city and citizens, the sterling business principles and ability that have gained him such a large measure of reward in the lumber world. Mr. Bingham is considered one of Ottawa's leading public spirited citizens. He has fitted up a public gymnasium and in other ways has given evidence of the possession of a deep regard for the welfare of the youth of the capital. He has an ideal home on Sussex street, Ottawa. He has, with Mrs. Bingham, travelled extensively, and is an interesting conversationalist, having a thorough grasp of public happenings.

SAW-MILLING REVOLUTION.

Under the above heading the Australasian Ironmonger, of Sydney, Aus., describes a saw mill equipment imported from Canada which seems to be entirely different from anything in use in that country. The characteristic features of the different machines are referred to in the following manner:

"The most modern breaking-down saw in Australasia has already been mentioned. It has been imported from Canada by Mr. H. McKenzie, Australian Mills, Sydney, and shows the veriest new chum that saw milling will be completely revolutionized by its introduction. Very different to the old pit or frame saw, it is not easy to explain in type.

"First of all, the machinery is entirely above ground. The carrier resembles in shape that of a steam hammer. The saw is a complete band, 50 feet long, resting on and travelling over a pulley 9 feet in diameter. It is swedge toothed, and is driven at the rate of about 350 revolutions a minute, and as it is cutting all the time, this equals (allowing for irregularities in driving) 1500 feet of saw per minute, rather a contrast to the old vertical saw that cut its own length, and then had to be raised ere it cut again on the down action. That is all one sees at first sight. Now for details.

"Three men in three minutes raise the saw, place it on a frame above the carrying wheel, then slide it on, pass the guide arm into position, and the saw is ready for use. The engineer stands on a platform at the back of the saw, somewhat to the left. Grasping a lever he slowly starts the saw, and having seen that it is running smoothly, brings the speed up to the standard mentioned; then, with the hand on another lever, gradually draws the log up to the saw, and the squaring begins. The carrier is a wonderful piece of mechanism. It is controlled by steam, through a 10-inch cylinder, and is 42 feet over all. The engineer has such control that, having drawn the log up and made the cut, he immediately touches a lever, releasing two coil springs, which move the whole carrier and log about three-quarters of an inch away from the saw, so as to secure its safe return; another lever opens the valves of the cylinder controlling the carrier, and the 42-foot piston travels back three times as quickly as it came forward. Strong buffers are provided to prevent over-running. The piece cut falls on a plate between the engineer and carrier, and rollers, operated by steam, carry it away to the back of the mill.

"Part of the plant is a log-hauler. The mill is situate on the harbour's edge; the logs are floating below. The hauler has to bring each log from the water, and place it upon the carrier or feeder. This is done with an endless chain, studded with spikes, which, travelling under the logs, holds them by their own weight, and carries them to the correct level. Here revolving, parabolic-shaped drums, studded in the same manner as the chain, retain and control them on the level, and help to convey each in turn to the feeder carriage. Once there, the log is secured and adjusted very safely, though simply. There is no hand-spike business, or driving in of dogs, as of yore. The feeder is fitted with strong standards, called boss dogs, which contain finger grips which are out of sight till the log is in position, and then with the movement of a lever, suddenly leap out and seize the log. They are shaped like the fingers ready to grasp, or claws, nearly half-circles, and operate up and down, taking such a grip that it is impossible to move the log. Each standard may be operated separately, so as to conform to the shape of the log. When thus fixed, the engineer, with the aid of another lever, adjusts thickness of cut, which is gauged in notches.

"By the aid of this mill, Mr. McKenzie figures to cut 30,000 ft. of timber daily. So much for the saw. Now for adjuncts.

"At the ends, fore and aft of the carrier, buffers similar to railway car buffers are fixed to reduce concussion, should such occur. Behind the engineer is fixed a gang edger, which, if needed, is brought into operation to dress the edges of any of the boards that may be at all irregular. It is a compact little machine, and does its work in good style, cutting at the same time any width required. Up another flight, Mr. Milne, the engineer, who was sent out with the mill, points out that the saws (of which there are several) have every other tooth missing, and explained that the object was to allow for the growth of new ones, as the old were worn out through sharpening, &c.; that the 50 ft. of steel, 9 in. wide, weighs something like 3 cwt., is of gauge 14. He also shows the sharpener, a smart little machine, with a rapidly-revolving emery wheel and gauge-setter, all, of course worked by steam. It is necessary to place the saw in standards, so as to have it on its back edge, and so approach the sharpener. The standards are placed in a circle to faciliate the handling.

"The makers of this really wonderful saw are Waterous & Co., of Brantford, Canada, and it cost Mr. McKenzie £3000 to secure the plant, irrespective of expenses of erection and engagement of Mr. Milne, his engineer. A view of the mill is of deep interest."

EFFECT OF SCALE IN BOILERS.

THE commonly accepted idea is that the efficiency of a steam boiler is seriously affected by an accumulation of scale. Perhaps the most often quoted estimate is that the presence of 1-16 in. of scale causes a loss of 13 per cent. of the fuel burned, ¼ in. 38 per cent., and ½ in. 60 per cent. Recently, says the Street Railway Review, we have seen published statements tending to show that the loss of efficiency due to scale has been greatly over estimated.

Prof. R. C. Carpenter, of Cornell University, writing in the American Electrician, says that so far as he is able to determine by tests a lime scale, even of great thickness, has no appreciable effect on the efficiency of a boiler. A test which he conducted when the boiler was thickly covered with lime scale showed practically as good results as when it was perfectly clean. The explanation is that the heating capacity is affected principally by the rapidity with which the heated gases will surrender heat, as the water and metal have capacities for absorting heat more than a hundred times faster than the air will surrender heat. Any deposit which curtails slightly the capacity of absorbing heat on the water side has very little effect either on total capacity or efficiency. A thin film of grease, however, being impermeable to water keeps the latter from the metal and generally produces disastrous results.

Mr. Walter M. McFarland, formerly an engineer officer in the United States Navy, in the course of a lecture at Sibley College, Cornell University, stated his experience had been that a considerable thickness of clean uniform scale made apparently little difference in the efficiency of the boiler. On the U. S. S. Vandalia there were two boilers used for distilling water, and the water evaporated per pound of coal was no more when the boilers were clean than after three months when the scale was nearly ¼ in. thick.

On the other hand, there are recent tests showing that scale does reduce the efficiency. In May and June, 1898, Prof. L. P. Breckenridge, of the University of Illinois, made tests on a locomotive boiler before and after cleaning it of scale and found that the loss due to the scale was 9.55 per cent. The average thickness of this scale was 3-64 in.; analyses of samples taken from different points in the boiler showed from 20 to 67 per cent. calcium carbonate and from 4 to 40 per cent. calcium sulphate.

Also, copies of reports of tests sent us by the Union Boiler Tube Cleaner Co., of Pittsburg, show that there is a marked increase in the efficiency of the boilers after the scale has been removed. In one case the gain was 16.3 per cent. and in another 24.8 per cent.; the thickness of the scale was not stated.

The Victoria Lumber & Manufacturing Company, of Victoria, B.C., expect to ship a large quantity of lumber to South Africa after the cessation of the war there. During the past three months they have shipped four cargoes to that market, and other vessels are now loading at their mills at Chemainus.

HISTORY OF THE LUMBER INDUSTRY IN WINNIPEG.

An interesting historical chapter relating to the arly days of lumbering in Winnipeg is found n a recent issue of the Commercial of that city. Referring to the purchase by the Keewatin Lumber Company of the retail lumber yard of Dick, Banning & Co., the Commercial says :

The transfer of Dick, Banning & Co.'s business ecalls recollections of the early days of the lumber trade in Winnipeg. As the early history of he country centres around Fort Garry (Winnipeg), so also does the early history of the lumbering industry in the province. The first account we have of the introduction of saw mill machinery was in the year 1856. Machinery for a combined saw and grist mill was purchased in Chicago, and brought into the country in the year named. The motive power for the mill consisted of a 25 horse-power engine. The machinery was transported across the country from Chicago to the Mississippi river, where it was loaded upon steamers and taken up the river to St. Paul, the head of navigation on the river. At St. Paul the machinery was loaded upon wagons and drawn by oxen across to the head water of the Red river, where it was placed upon flat boats built for the purpose, and floated down to Winnipeg. On arriving at Winnipeg the flat boats were broken up and the lumber of which they were composed was sold in the settlement. This was the first lumber imported into the settlement, and was the commencement of what afterwards grew to be a very important trade. On the arrival of the machinery at Winnipeg the work of setting up the pioneer mill was commenced, but owing to lack of knowledge on the part of the operators, considerable difficulty was experienced in making the machinery work. Finally, however, the mill was got into working order, and for a time did good service in supplying the settlement with both flour and lumber. The mill occupied a site within the present corporation limits of the city of Winnipeg, in the vicinity of Drewry's brewery, and was operated by a company of settlers. The investment, it is said, did not prove profitable to the proprietors, though there was always plenty of work to be done, and the mill was frequently kept in operation night and day. The logs sawn were the native timbers of the country, growing in the Winnipeg district, and consisting of poplar, oak, tamarac and spruce. The mill was burned in 1862, and so ended the first milling enterprise in the settlement.

About the time of the destruction of the pioneer mill another mill was established by Andrew McDermot. This was also a combined saw and grist mill, and was located near the the spot where afterwards were built the Dick & Banning and the Jarvis & Berridge mills, on the Red river. Like its predecessor, this mill was also burned down, after serving the settlement for about ten years.

About this time the flat boat trade on the Red river was commencing to assume some importance, and lumber as well as other supplies were coming in from the United States in this way. It was also customary to sell the material of which the flat boats were composed for lumber, as the boats could not be taken back up stream to advantage. Lumbering on the upper Mississippi had by this time developed to a considerable extent, and lumber was coming into Manitoba by the flat boat route from that quarter from mills located at Minneapolis, Brainard and other points on the Misssissippi river. With the construction of the Northern Pacific railway the lumber was carried to Moorehead, and thence brought down the river to Winnipeg. W. J. McAuley, of St. Paul, was the first to go into this business extensively. In 1873 he brought the first stock of lumber of importance into the settlement, which was rafted down the river as described. During the following summer McAuley & Co. commenced the erection of a saw mill at Winnipeg. This mill was sold to Jarvis & Berridge in 1879, but shortly afterwards was blown up and destroyed. It had a capacity of 30,000 to 35,000 feet per day. A new mill was built and a company formed, called the Winnipeg Lumber Co., which succeeded Jarvis & Berridge. The new company came into business at a critical time, when the lumber business was going down with the collapse of the "boom." The company did not prove a success, and the property soon passed into the hands of the banks which had advanced money to the projectors. The machinery of this mill was sold and moved to other points, some to Rat Portage. It was the largest mill ever established in Winnipeg, and had a capacity of about 100,000 feet daily, with battery of five boilers, and 250 to 300 horse-power.

The lumber firm of Dick, Banning & Co. date their commencement of operations here from the year 1872. Mr. Dick, who had visited the country during the previous year to look over the situation, returned from Ontario in 1872, with machinery for a portable mill. The machinery arrived by flat boat from Moorehead, and the cost of transporation from St. Paul was $1,410.70. The mill building was burned some years ago, but the machinery had been removed previous to the destruction of the building. Mr. Dick formed a partnership with the late W. W. Banning, who died in 1885. The mill was operated up to 1882, when the firm bought out a mill which had been established at Keewatin, Lake of the Woods, by W. J. McAuley. The Winnipeg mill was then closed and the machinery moved to Keewatin, and a portion was sold to establish a mill in the Rocky Mountains. The timber sawn at the Winnipeg mill was such as the district afforded. The firm also operated a mill on Lake Winnipeg for a while, where they built a mill in 1878, but sold out a few years later. This firm brought the first lumber from eastern Canada to Manitoba, early in the seventies. It came in bond via Duluth, thence by the Northern Pacific railway to Moorehead, and from the latter place it was brought down the Red river to Winnipeg. This firm imported lumber and building materials from Minneapolis and other points largely, especially during the "boom" days, during which time it was almost impossible to keep up with the demand. In 1882 the firm brought in 10,000,000 feet, and paid nearly $150,000 in freight that year. These were the halcyon days for the lumber trade in Winnipeg, when purchasers stood on guard waiting for a car of lumber to arrive, when it would be gobbled up, regardless of price, and always for cash down. The trade, however, made up for it during the following years, when stocks were greatly in excess of demand and prices were cut down to unprofitable figures. Before the "boom" period prices of common lumber ranged about $25 per M. During the "boom" period prices went up to $30 per M. for common lumber, but after that period declined to $15 to $18 per M.

In the year 1882 J. R. Sutherland built a mill at St. Boniface, across the river from Winnipeg. The mill was a very good one, and had a capacity of 60,000 to 70,000 feet. It was a double circular mill, and was destroyed by fire in 1884. In 1882 D. E. Sprague built a mill in Winnipeg, single circular, with a capacity of 40,000 feet in ten hours. This mill is the only one which has been in operation here of late years, and it has been operated every year since established except during one season. The logs sawn at this mill come from the Red Lake district of Minnesota, down the Red River, and some good logs are also secured on the Rosseau river in Manitoba. The timber is pine. There is little timber in Manitoba tributary to Winnipeg now. On the Rosseau river, a tributary of the Red river, in Manitoba, there formerly was a considerable pine country, but this is now nearly exhausted.

This sketch covers briefly the main points connected with lumbering at Winnipeg. With the construction of the Canadian Pacific railway eastward from Winnipeg to Lake of the Woods, the centre of the lumbering industry was established at the Lake of the Woods towns of Rat Portage and Keewatin. A number of mills have been established at these points, and for many years the Lake of the Woods mills have remained the principal source of the lumber supply for Manitoba and the prairie region bordering Manitoba to the west. Supplementary lumber supplies are drawn from such districts as Lake Winnipeg and other timber regions in the northern part of Manitoba.

Present indications point to a revival of the lumbering industry at Winnipeg. The improvement of the St. Andrew's rapids, now under way, will permit of bringing logs up the Red river from Lake Winnipeg to the city, and this may possibly be taken advantage of to some extent to bring logs from the timber country tributary to the lake to this city for sawing. The construction of the South-eastern railway from Winnipeg to the Rainy river country is another important factor which promises to aid in reviving the lumber milling industry here. The Rat Portage Lumber Co.—the largest institution of the kind in the west, operating several mills at the Lake of the Woods—has already made arrangements to establish a mill in Winnipeg. This new mill will be in operation, it is expected, next spring, and the logs for the mill will be brought from the Rainy river district, over the Southeastern railway. Thus Winnipeg promises to once more regain to some extent at least some prominence as a lumber manufacturing centre for Manitoba.

The operation of cutting down an elm tree over three feet in diameter at Jacksonville, Ill., by means of wires heated by electricity, was successful, though slow. The cautery device consisted of a piece of 7-strand No. 16 iron wire connected with an electric light circuit, three of the strands being removed to afford air space within the cable. The current used was from 120 to 135 amperes, the voltage at the machine being varied from 80 to 115. After the wire became heated it was pulled back and forth like a cross-cut saw, and in this manner it burned its way through the tree, the time consumed being 2 hours and 10 minutes.

MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company
of Toronto, Limited
CONFEDERATION LIFE BUILDING, TORONTO
BRANCH OFFICE:
IMPERIAL BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in anyway affecting it. Even when we may not be able to agree with the writers, we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

HARDWOOD LUMBER INSPECTION.

INTEREST in the inspection rules adopted by the National Hardwood Lumber Association of the United States is, perhaps by force of circumstances, spreading to Canada. Some Canadian dealers have been shipping lumber to the Eastern States, and, we understand, have agreed with the purchasers of their stock to have the lumber inspected by a disinterested inspector appointed by the above association. This condition is to be welcomed, in that it is the probable beginning of what will ultimately result in the adoption of uniform rules of inspection in Canada. Whether the rules of the National Association could with advantage be adopted on this side is a question which must be decided by the trade, but it is certainly desirable that some uniform system of inspection should become generally employed.

Although as yet little has been accomplished in this direction, the CANADA LUMBERMAN is still hopeful that in the near future the trade will recognize the necessity of standard rules to the extent of taking definite action in the matter. The modus operandi of the inspection bureau of the National Hardwood Association is one which seems commendable. The Bureau is in charge of a surveyor-general, who divides the territory into districts and appoints a district chief inspector over each, also such inspectors as are found necessary. The only remuneration to inspectors is the fee received from the buyer and seller for the inspection done. In case either buyer or seller is dissatisfisd, the lumber is reinspected by the surveyor-general, whose inspection is final, and the party shown to have been in error pays the expense of the reinspection. Each inspector gives a bond for one thousand dollars that he will discharge his duties faithfully. The fees for the measurement of lumber are from thirty-five to fifty cents per thousand feet. Each inspector makes a report to his district-chief once a month, and remits ten cents for each thousand feet of lumber inspected. The district-chief remits to the surveyor-general seven cents for each thousand feet inspected, while the surveyor-general retains as his remuneration five cents per thousand feet and remits the remaining two cents to the association. The inspector's fees are payable to the inspector on demand by either the buyer or seller, as the inspector may elect, and in the absence of an agreement to the contrary the party paying the fees collects one-half from the other party to the contract.

The markets which have already adopted the national rules include New Orleans, Memphis, Cairo, St. Louis, Milwaukee, Minneapolis, Pittsburg, Chicago, Baltimore, Buffalo, and the hardwood associations of Michigan, Wisconsin, and other States. The rules have also been endorsed and approved by the National Wholesale Lumber Dealers' Association.

THE HARDWOOD PRODUCTION.

A LESSON taught by experience is not usually soon forgotten. Such a lesson has come home to some of the hardwood manufacturers of Ontario within the past twelve months, and the result will probably be of advantage to the hardwood trade generally. The strong desire on the part of mill men to obtain a large supply of logs for the sawing season of 1900 brought about extreme competition, and in some instances such exorbitant prices were paid for logs as to make it impossible to get more than the saw bill out of them. Of course, it was argued that the past and prospective demand for lumber gave a great stimulus to buying logs, and that in the winter of 1899-1900 the outlook for high prices for lumber was exceptionally promising. But the unexpected frequently happens. The demand for hardwood lumber this year has been only moderate, and prices have accordingly receded. The mistake made in purchasing logs at almost any price became apparent.

As the logging season is approaching, it may not be amiss to express the hope that the lesson learned during the past year will not be forgotten. The tendency to over-production is one of the difficulties of the lumber trade which cannot easily be controlled. The manufacturer is, of course, anxious that his season's business shall show as large a percentage of profit as possible; in his desire to increase profits he forgets the danger resulting from over-production.

The shrewd manufacturer will not aim to make an excessive production, but will so control his output that even in the event of a depreciation of the market value of lumber, he may be able to balance up the the year with a profit. In the absence of an organization in Ontario, it is extremely difficult to control the output of hardwood umber, but if this phase of the business was given more consideration, the condition of the trade might be greatly improved. As an illustration of the usefulness of organization along this line, reference might be made to the Pacific Coast Shingle Manufacturers' Association, the members of which, by mutual agreement, close down their mills for a stated period when the supply of shingles becomes excessive. By this means the price of their product is maintained and a margin of profit to manufacturers assured.

The question of over-production formed the chief subject in the address of the president of the Michigan Hardwood Lumber Association at the annual meeting held last month. After pointing out the necessity of restricting the output of hardwood lumber, he concludes with the following timely advice: "Another important point to consider where firms come in contact in the purchase of logs, is the establishment of some uniformity in price, and not to bid up the prices out of reason, to the detriment of all interested. Better to get out a reasonable amount and make noney from it than a large amount with opposite results. This last competition also has a tendency towards accepting a poorer grade of logs, in which we all know there is no money to be made. Good lumber cannot be produced from such stock."

LUMBER CONDITIONS IN BRITISH COLUMBIA.

THE conditions surrounding the manufacture of lumber in the province of British Columbia have never been too favorable to the manufacturer. Although the industry has grown year after year, its development has only been accomplished by the exercise of great perseverance and energy on the part of lumbermen. Considering the large monetary investment and risk, the profits resulting from the conduct of the business have, in most instances, been inadequate. It is not surprising, therefore, that the lumbermen view with some alarm the recent action of the Provincial Legislature affecting the rebate on exported timber. The royalty charged by the government is fifty cents per thousand feet on log timber and shingle bolts, but for the past seven years a rebate of one-half this amount has been allowed when the manufactured product in lumber or shingles was shipped out of the province. Thus all shipments to the other provinces of the Dominion, as well as to foreign countries, were accorded the rebate of twenty-five cents. By an order-in-council, passed a couple of months ago, no intimation regarding which is said to have been given to the lumbermen prior to its enactment, this rebate on exported timber was discontinued. As the market for the timber products of British Columbia is largely beyond the boundaries of the province, a serious blow was thus dealt the lumber interests.

The ground for the action of the government is understood to be an opinion prevailing in some quarters that the province was not deriving a sufficient revenue from its timber That a government should, in the interest of the people, obtain a reasonable remuneration from the sale of its raw material, will be admitted by all, but in striving to accomplish this end, care should be exercised that restrictions are not imposed which will render the industry unprofitable and result in restricting its growth.

It may be that the lumbermen of British Columbia cannot fairly lay claim to a rebate on

timber products exported from the province, but they are certainly entitled to secure their raw material upon such conditions as will enable them to carry on the business of manufacturing lumber with pecuniary advantage. The conditions surrounding the industry in British Columbia are different from those pertaining to any other province of the Dominion. It is necessary to obtain mill equipment either in eastern Canada or from the Pacific coast states to the south. In the first instance, a large additional expense is added to the first cost of the mill by freight rates, and in the latter by the duty imposed on United States machinery. The cost of building a saw mill in British Columbia is considerably greater than that of a similar mill in eastern Canada. A second draw-back to manufacturing lumber in that province is the difficulty of disposing of the lower grades. It is impracticable to ship low grade lumber into Manitoba and the Territories, while only the higher grades can be marketed at a profit in eastern Canada.

The Canadian market is extremely limited, and the mill capacity much greater than the demand. The present capacity of the shingle mills of British Columbia, for instance, is 750 millions annually, while the demand in Canada where British Columbia shingles can be marketed is only about 200 millions. The present Dominion tariff, however, is such that the legitimate market in Canada is divided between the British Columbia manufacturer and the manufacturer in the western States. Under the customs tariff, lumber and shingles may be imported into Canada free of duty, whereas similar products shipped to the United States are subject to a duty of two dollars per thousand on lumber and thirty cents on shingles. This the Canadian manufacturer justly regards as a discrimination in favor of foreign competitors, and deprives the Canadian manufacturers of that degree of protection to which they are entitled. Why, they ask, should a duty not be imposed on American lumber similar to that on Canadian lumber shipped to the United States. But their grievances do not end here. While lumber, which must not of necessity be imported from the United States, is admitted free of duty, the tariff fixes a duty equal to about thirty per cent. on mill supplies, such as saws, belting, etc., which the British Columbia manufacturer must either import or purchase in the east at a large outlay for freight. There seems good ground for the contention that the lumber interests have been discriminated against in the matter of duty, and anything that will further hamper the development of the industry should not be countenanced by legislators having the interests of the country at heart.

The question of securing a supply of timber is one of paramount importance to the manufacturers in British Columbia at the present time. Originally established adjacent to timber limits, the mills in most cases are now a considerable distance from the forests. This has brought about a steady advance in the price of timber and rendered it more difficult to obtain a sufficient supply. The removal of the mills further up the coast will be the ultimate outcome. Some manufacturers are already considering this step, which will involve a large expenditure. The great problem is how to obtain a price for their product commensurate with the additional expense thus involved, as the price of British Columbia red cedar and fir is regulated in a measure by competition from white pine and Washington red cedar and fir. Although the cost of timber to manufacturers has been steadily increasing in recent years, the selling price of the manufactured article has not advanced proportionately. As an instance, ten years ago the price of shingle bolts was about four dollars per cord, at which time shingles were selling in Manitoba at $3 per thousand on a sixty cent rate of freight. In the past year the price of shingle bolts has been about four dollars, while the selling price of shingles in Manitoba has been in the neighborhood of $2.35 per thousand. It is significant that some Canadian manufacturers have already removed their mills to Washington, where they can enjoy the advantages of both the United Staets and Canadian markets.

The British Columbia red cedar shingle is used largely in Manitoba and western Ontario, but in eastern Ontario it has been replaced to some extent of late by the white cedar and pine varieties. One advantage claimed for the red cedar shingle is that it will not warp. The reason for this is that the logs being large, it is possible to quarter-saw the timber and still obtain a shingle of considerable width. By the process of quarter-sawing a vertical grain is obtained.

The lumber and shingle manufacturers of the coast province are progressive and energetic even in the face of adverse circumstances. That their position is not altogether enviable is easily apparent. It is hoped that the government will place no further obstacles in the path of the lumber industry, but that some of the unfair discriminations which now exist will shortly be removed.

EDITORIAL NOTES.

GREATER use of the advertising columns of the CANADA LUMBERMAN might with advantage be made by persons engaged in the various branches of the lumber business who from time to time may be seeking new positions. The "Want Column" of the weekly edition affords a quick and effective means of reaching the lumber trade. An advertisement therein is almost certain to be more fruitful of results than if placed in the daily press, while the cost will be no greater—if as great. Mill superintendents, foremen, sawyers, filers, salesmen, inspectors and others seeking positions in connection with the lumber industry are requested to use the department freely. The LUMBERMAN reaches a large percentage of the saw mills in Canada. Mill owners might also avail themselves of its advertising columns to a greater extent when in need of skilled assistance. When desired, replies to the advertisements may, without extra charge, be addressed to a box at this office, and will be forwarded to the advertiser by the publishers.

IT has been interesting to watch the struggle for popular favor between the different varieties of shingles. Our observations lead to the conclusion that the white pine shingle is losing ground, and that its field is gradually becoming more limited. In the western part of Canada, for instance, preference is given to the red cedar shingle, while in eastern Canada the white cedar shingle is largely used. In Ontario the white pine shingle may be said to still hold the market, but even in this province it is meeting with severe competition from other varieties. One of the reasons for this enroachment on the white pine field is the comparatively lower price of cedar shingles. Another reason which has been advanced is that the quality of the white pine shingle is deteriorating, and that even the clear butts sometimes have worm holes in them. It is unlikely that the manufacturers of white pine shingles will endeavor to materially improve the quality of their production, as the high price of pine stumpage makes it necessary to convert into shingles only that portion of the log which will not make merchantable lumber. It is a significant fact also that the red cedar shingle as now manufactured is a much better article than that which was submitted to the eastern trade a few years ago.

TRAVELLING LIBRARIES FOR LUMBER CAMPS.

A movement is on foot to induce the Ontario Government to extend the scope of the Public Libraries Act so as to embrace the needs of lumber and mining camps. The Public Library Board of Little Current, Manitoulin Island recently passed a resolution unanimously requesting the Minister of Education to allow them the privilege of sending out small branch or travelling libraries to the camps in the vicinity. The Public Library Act provides for the establishment of branch libraries in municipalities, but most camps are outside of organized municipalities; hence the necessity of such permission. It is recommended that a travelling library commission be appointed and a sum of money appropriated by the Government with which to purchase travelling libraries of the most approved literature. In the meantime the Government is asked to grant to Library Boards the privilege of sending small collections of books into the camps on condition that a guarantee be given by the foreman and bookkeeper that the books shall be well taken care of and returned to the library when the camps break up.

We understand that the project has been strongly recommended by prominent lumbermen, including Messrs. J. R. Booth, John Charlton, M.P., A. E. Dyment, M.P., C. Beck, N. J. Young, Georgian Bay Lumber Com., Saginaw, Lumber Co., and others, and that it is expected to receive the favorable consideration of the Minister of Education. Mr. A. Fitzpatrick, of Nairn Centre, is the originator of the movement, and we hope his efforts may be crowned with success.

OUR EXPORT NUMBER.

THE special export number of the CANADA LUMBERMAN published in September has been most favorably received by the trade at home and abroad. Many lumberman have expressed to our travelling representatives their appreciation of its value. Those who placed advertisements in this number state that they have received many enquiries from abroad regarding their products. Requests for copies of this number have been received from Great Britain, Germany, Italy and other foreign parts. As a trade developer it appears to have met all reasonable expectations.

MILLS OF MICKLE, DYMENT & COMPANY.

THE four illustrations on this page represent the saw and shingle mills owned by Mickle, Dyment & Company, whose head offices are at Barrie, Ont. The mills of the company are at Gravenhurst and Severn Bridge, one saw and one shingle mill being located at each of these places. The saw mill at Gravenhurst is operated by steam power, and consists of one circular and one band

MICKLE, DYMENT & CO.—SAW MILL AT GRAVENHURST, ONT.

saw, together with edgers, trimmers, lath machines, etc. The machines are operated by steam feed. There is a steam drag saw at foot of jack ladder for cutting bill logs of any size or length, claimed to be the only one in Canada. The planing mill is supplied with modern machinery. The capacity of the saw mill is 80,000 feet per day. In the shingle mill at Gravenhurst there are three Mowry and one Drake machines, their total capacity being 120,000 per day. The mills are provided with excellent fire protection.

The Severn Bridge saw mill contains circular and gang saws, with the balance of the equipment much the same as the Gravenhurst mill. It has a capacity of 90,000 feet per day. The mill and

MICKLE, DYMENT & CO.—SHINGLE MILL AT GRAVENHURST, ONT.

large yard are lighted by an electric light plant on the premises. The shingle mill in connection contains four Mowry machines of a daily capacity of 120,000 shingles.

The above mills are provided with lathe and repair shops and everything necessary for the manufacture of lumber to meet any demand. The lumber produced is chiefly pine, although several million feet of hemlock is also manufactured annually. The firm own extensive timber limits on the Georgian Bay district.

George Smith is building a new saw mill at Uhthoff, Ont. The engine will be 100 horse power.

THE TIMBER OF NEW BRUNSWICK.

Mr. G. W. Hay has contributed a series of articles to the Educational Review entitled "Rambles through Forest, Lake and River," in one of which he refers to the forests of New Brunswick in the following manner :

We were now entering what might be called the great spruce country of New Brunswick ; and for weeks after our course lay through interminable dark forests of these trees, intermingled with birch and maple, especially on the ridges, with a few scattering white pines and no hemlock.

If our lumbermen would select the largest and best trees for their operations, gathering the tops and branches, with some of the smaller growth in the denser portions, for the pulp mill manufacturer, this great lumber region, and others through the province, would increase in value each succeeding year. The great need in these forests is a judicious pruning of small trees, especially on the low grounds, in order to give an opportunity for the stronger and more shapely trees to grow ; and the careful removal of branches and tops to lessen the danger from forest fires. Thus the waste products of the lumberman, which have been the source of so much damage in times past to our forests, and the stunted and mishappen growth of smaller trees in the denser woods, would not only be removed, but much of it made use of for manufacturing purposes. The great lumber country around the Tobique lakes has as yet been untouched by forest fires. The systematic and intelligent methods of the lessee of these vast forests, Mr. F. W. Hale, is adding to, rather than diminishing, their value from year to year, in spite of the quantity of lumber cut. This is the case in Germany, whose forests, in spite of the large and profitable lumber "cut" each year, are constantly becoming more valuable. And this is the result of trained and intelligent supervision. And so it would be in New Brunswick if similar methods prevailed. Our game and fish wardens should be trained in forestry. It would pay the government a hundred, yes a thousand-fold, to give our game commissioner added authority over forests, give him intelligent and trusted wardens, skilled not only in the knowledge and habits of game and fish, but also in forestry. It would take a little time to train such a body of experts, but the results would be great, placing New Brunswick in a position to preserve and add to what must prove the source of her greatest material wealth —her forests, her game, and her fisheries. At the same time she would place herself in line with those countries which, by wise and effective legislation, are laying a foundation for the preservation and future development of rich material resources.

PERSONAL.

Mr. Chas. E. Clarke, who for the past year has been acting as foreman for Clarke Bros. in their lumber business at Kingston, N. S., died on September 22nd, from typhoid fever.

The wedding of Mr. W. T. Murchie, of the lumber firm of Hale & Murchie, and Miss Mabel McKeen was celebrated at Fredericton, N. B., on October 17th. The LUMBERMAN extends congratulations.

Mr. Linton, late superintendent of the Hay Furniture Company, Woodstock, Ont., has accepted a position with Gilmour & Company, of Trenton. Before leaving Woodstock he was presented by his friends with a complimentary address and diamond ring.

There died in Toronto last month one who for many years has been well known in lumber circles, in the person of Mr. Robert K. Connell. Deceased was sixty-four years of age, and was engaged as a lumber dealer. He was a grand-nephew of the late General Sir Thomas Kenah, K.C.B.

The LUMBERMAN regrets to learn of the recent illness of Mr. Geo. McCormick, M.P. for Muskoka. Mr. McCormick is again contesting that riding for the Dominion House, and although unable to take an active part in the campaign, it is regarded as a foregone conclusion that he will be returned.

Mr. Isaac Smith, a pioneer lumberman of the Ottawa valley, was called to his last resting place on October 18th. The Smith Bros. were among the first to engage in the square timber business on the Upper Ottawa, and operated extensively on their limits on the Kippewa, Coulonge, and Amable Du Fond up to about sixteen years ago, when they retired from business.

A rearrangement has recently taken place in the Crown

MICKLE, DYMENT & CO.—SAW MILL AT SEVERN BRIDGE, ONT.

Lands Department of Ontario. Mr. Alex. Kirkwood has, owing to ill health, resigned his position as chief clerk of the sales and free grants branch. His successor is Mr. J. J. Murphy, whose position as clerk in charge of the free grants has been given to Mr. E. S. Williamson, private secretary to Commissioner Davis. Mr. W. A. H. Findlay becomes secretary of the department. Mr. Williamson's successor has not yet been appointed.

A welcome visitor to the office of the CANADA LUMBERMAN a few days ago was Mr. H. H. Spicer, manager of the Spicer Shingle Mill Company, of Vancouver, B.C. Mr. Spicer left home towards the end of August and had visited Boston and some of the cities and towns in Eastern Canada, combining business with pleasure. Mr. Spicer reports the lumber trade in the Pacific coast province to be making progress, although at the same time suffering from some drawbacks which are not encountered in the east. His company are now making an excellent quality of red cedar shingles, some of which have been shipped even to the Eastern States. They have just remodelled their mill thoroughly, taking out the one

MICKLE, DYMENT & CO.—SHINGLE MILL AT SEVERN BRIDGE, ONT.

horizontal ten block and two double block machines and replacing them by four Dunbar and two Clipper machines. This has increased the capacity of the mill to 350,000 shingles in twenty-four hours. When the demand warrants the mill is operated day and night.

Gropp Bros. are building a new saw and shingle mill at Penetanguishene, Ont.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES AND OTHER FOREIGN MARKETS.

VOL. VI. TORONTO, ONT., OCTOBER 31, 1900 No 41.

CANADA LUMBERMAN

PUBLISHED BY

The C. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:
IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canaian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

WANTED—50,000 feet 1¼ inch winter sawn Basswood. THOS. MYLES' SONS, Hamilton, Ont.

200,000 FEET INCH MILL RUN BLACK Ash; 50,000 feet inch mill run Soft Elm. For further particulars apply to H. L. MERRITT, Blenheim, Ont.

HAVE YOU ANY STOCK WHICH YOU WISH to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

Limits and Saw Mills FOR SALE

The proprietors having decided to retire from this business, offer their Valuable Limits and Mills for sale. The concern is well equipped in every respect and is in operation. The cost of operation is very moderate, having about 30 miles of railway (Lake St. John) running through it. The Mill at Lake Edward is Circular Saw; that at Pearl Lake is Steam Feed Circular and Gang.

The Limits, about 280 miles, have considerable Spruce and Pulp Wood, also Bouleau and Birch. These latter have exceptionable quality, and by judges considered the best in the Province of Quebec. For terms, etc., apply to

WHITEHEAD & TURNER,
Quebec City.

Wanted—100,000 Feet Mill Cull Basswood

Write, stating price, HURDMAN & ELMITT, Ottawa, Ont.

FOR SALE.

A LARGE QUANTITY OF GOOD SOUND Tamarac Lumber in standard sizes, 2 x 4, 2 x 6, 2 x 8, etc.; Dimension timber, 16 ft. long, 4 x 4, 4 x 6, 6 x 8, 8 x 8, etc. Also other sizes cut to order. Apply to EDWARD LLOYD, Limited, Sturgeon Falls, Ont.

FOR SALE

THE SAW AND PLANING MILLS KNOWN as "Malloch's Mills," conveniently situated on the Ottawa, between Arnprior and Braeside. One Circular, Steam Rope Feed, Edgers, Trimmers, Live Carriers, Lath Machine, &c. Connected with C. P. R. For particulars, address GEO. MALLOCH, Arnprior.

CURRENT TRADE CONDITIONS.

ONTARIO.

The pine lumber market embodies features both of weakness and strength. The fall demand has been quite backward, and some of the smaller holders are showing anxiety to reduce their stocks. They are willing to give concessions in the matter of price rather than carry the lumber over the winter. The larger manufacturers, on the other hand, have not receded in the slightest degree from their decision, arrived at earlier in the season, to hold their lumber for fair prices. If, after the elections in the United States and Canada, the demand should not expand so as to absorb the greater portion of the stock on the market, it is the avowed policy of the manufacturers to pile their cut and carry it over the winter. It is yet too early to speak definitely regarding the log cut of the coming winter, but the indications are that it will be smaller than last season. There is a strong demand for hemlock lumber, and the cut of this timber will likely be increased this winter.

From point of demand hardwoods have not improved within the past week. The movement of stock is slow. A meeting of the hardwood manufacturers of Wiarton and vicinity was held at Palmerston last week, the object of which was to size up the situation in respect to the quantity of unsold stock at the mills. We are informed that the decision of the meeting was that the stock of hardwood lumber is by no means excessive, and that a few weeks of active demand would take care of the entire supply. The heaviest stocks held are of maple and elm, prices of which are somewhat irregular. The opinion of the meeting was in favor of holding firmly to present asking prices.

QUEBEC AND NEW BRUNSWICK.

The shipping season from St. Lawrence will soon be over. Lumber intended to have been shipped this fall has already been purchased, and there is therefore little demand at the present time. Manufacturers who have any stocks of spruce deals are holding out for high prices; in fact, some disparity exists between the asking price of the manufacturer and the figure which the shipper claims to be able to pay. It has been pointed out that the prices of spruce deals at Quebec, published in last issue, are higher than can be obtained for an average specification. Our best information is that first quality spruce deals are worth about $44 to $46 per standard, second quality $30 to $32, third quality $28 to $30, and fourth quality $24 to 26. Sales were made earlier in the season at higher prices, but the enormous rise in ocean freights during the latter part of the season has had a tendency to weaken the price of deals. Spruce lumber, on the whole, is reasonably firm throughout the eastern provinces, although the demand is not active. Cedar shingles are moving slowly at $2.75 per thousand for extra clear, on Boston rate of freight.

UNITED STATES.

Within one week of the Presidential election in the United States a large movement of lumber could not be expected. The business of the past week, under the circumstances, may be regarded as satisfactory. In some classes of pine lumber, particularly low grade stock, the tendency of prices has been towards weakness, while on the other hand, piece stuff and the higher grades of pine have shown strength. Some quite important sales have lately been made at Duluth, 800,000 feet of No. 3 and better at $14, and 1,000,000 feet of No. 4 at $10.50. Pine lath have been sold in that market at from $1.75 to $2.25, according to grade. In the Saginaw valley a few million feet in log run lots changed hands within the past two weeks. Box lumber there is reported as dull. This is in contrast to the Buffalo market, where the box makers are said to be picking up everything suitable for their needs. The eastern markets are improving, and after election a brisk trade is expected. From Pittsburg comes the report that 4x6 No. 2 common lumber is scarce, and 2x12 and large timbers in white pine are difficult to find. White pine lath in that market is 30 cents per thousand higher than one month ago, with a brisk demand for No. 2.

The hardwood situation is practically unchanged. In Buffalo some price-cutting by dealers is reported, but it has been confined chiefly to the smaller operators. First and second white ash is said to be selling at $38 to $40, maple at $22, beech at $20, and plain oak at $36 to $37. Basswood seems to be in shorter supply than most of the hardwoods, but the demand for this lumber is limited. Ash is firm, with stocks generally light.

GREAT BRITAIN.

The British lumber market is inclined to be a little heavy, due to the fact that the high prices, brought about largely by excessive freight rates, are causing consumers to buy only for immediate requirements. Recent auction sales have been characterized by weakness in prices, but in most instances the low values can be partly accounted for by the inferior quality of the lumber. As yet very few contracts have been made for next season's shipments. In view of the heavy stocks at Liverpool, and the uncertainty as to freight rates, importers are not anxious to contract. There is a feeling, however, that deals will sell at about the same figure as this year, although battens are likely to go at lower prices. It is now thought that the trade with South Africa next year will be considerably less than has been reckoned on.

STOCKS AND PRICES.

The bark Paul Rickmers is loading a cargo of 2,800,000 feet at the Hastings mill, Vaucouver, B.C., for a foreign port.

The Harbor Commissioners of Montreal want tenders by November 5th for the supply of timber and planks for the year 1901.

An advance of ten cents a thousand has been made at Buffalo on clears and stars in red cedar shingles, and a decline of 3 or 4 cents on perfections.

Messrs. C. C. Witthun & Company, of Wiarton, Ont., have just secured a contract to saw 2,800,000 feet of pine logs, and have commenced operations.

The Victoria Harbor Lumber Company, of Toronto, were the purchasers of the timber limits in the township of Dana sold by the Ontario Government recently and referred to in last issue. The price was $61,275.

The milling property of the late Chas. F. Woodman, at Pleasant Point, N. B., together with the supply of lumber on hand, has been sold to Chas. Miller, of St. John. The consideration is said to have been $100,000.

The Department of Trade and Commerce at Ottawa has received a communication from the Nickels Explosives

Company, an English firm, in which they state that they are desirous of purchasing box shooks in Canada.

We understand that J. R. Booth, of Ottawa, will not operate this winter to any extent on the Mississippi branch of the Madawaska river.

The probable cut of logs in the Algoma district during the coming winter will be about 100,000,000 feet. There is more activity in this district than last year.

A raft of timber from the Georgian Bay arrived at Saginaw last week for the Saginaw Lumber & Salt Company. It is the largest ever taken from Canada, containing 120,000 pieces, and scaling 6,360,000 feet. The logs were cut on Indian reserve lands on Whitefish river.

Hemlock has lately been selling in the Chicago market between $8.50 and $9. Railroad ties are bringing from 35 to 40 cents in carload lots. Eight foot posts, 4 inches in diameter, are quoted at 12 cents, 5 inch at 14 cents, 6 inch at 17 cents, 7 inch at 20 cents, and 8 inch at 35 to 40 cents.

The superintendent of the Prince Edward Island Railway at Charlottetown, P.E.I., has invited tenders for the supply of 46,000 ties, 272 pieces of sawn hemlock, 5,000 cedar posts, 200 hemlock ties, 45,000 feet perlines, and about 225,000 feet of spruce and hemlock boards and planks.

The Rat Portage Lumber Co., of Rat Portage, Ont., have 4,000,000 feet of logs in the Rainy River which they purpose shipping to Winnipeg upon the completion of the South Eastern railway to that city. Daniel Hyland, of Rainy River, who has a timber limit at Willow Creek, Minnesota, will get out 3,000,000 feet of logs this winter, which will also be shipped to Winnipeg via the South Eastern railway.

Three timber berths were sold by the New Brunswick Government last week at the upset price of $8 per mile, as follows: Prosser Brook, branch of Coverdale River and Sherman Settlement, two miles, to A. L. Wright; between Coverdale River and Turtle Creek on Albert railway, two miles, to A. L. Wright; head of Cain's River, 4½ miles, to Wm. Richards & Co., Ltd.

Following is a comparative statement of timber measured and culled at Quebec up to 30th October, as reported by the Supervisor of Cullers:

	1898.	1899.	1900.
Waney White Pine....	1,903,148	1,780,485	1,504,625
White Pine	1,062,157	597,088	570,818
Red Pine.....	239,512	159,937	63,780
Oak.....	1,072,588	600,882	488,100
Elm.....	474,194	456,841	712,468
Ash	35,164	56,646	91,745
Basswood.....			241
Buttternut.....	955	60	142
Tamarac.....		415	71
Birch and Maple.....	112,500	244,530	459,361

At a recent sale held by Foy, Morgan & Company, London, England, Ottawa red pine sold at the following prices: 12-18 ft. 4 x 9 in. first quality, $19 per standard; 12-13 ft. 3 x 11, £20 15s; 13-18 ft. 4 x 9 second quality, £16 10s; 12-18 ft. 3 x 11, £16 5s; 12-18 ft. 3 x 9, £15 5s; 15-18 ft. 4 x 9 third quality, £14 10s; 15-18 ft. 3 x 11, £14 5s; 12-18 ft. 3 x 11, £14; 15-18 ft. 3 x 9, £13 5s; 12-18 ft. 3 x 9, £13 5s. Spruce deals from Dalhousie, N.B., brought £9 for 12 ft. 3 x 9, and £9 5s for 15-17 ft. 3 x 9. Some first quality pine deals from Quebec sold as follows: 13 ft. 3 x 12-25 in., £20 5s; 12-13 ft. 3x11, £19 10s; 7-16 ft. 3 x 11-25, £20 5s.

MONTREAL LUMBER SHIPMENTS.

The shipments of lumber from the port of Montreal for foreign countries for the week ending October 27th were as follows:

Shippers.	Quantity and Description.	Value.
Grand Trunk Ry.	52 walnut logs	$41,900
" "	982 bundles walnut lumber	34,000
Watson & Todd.	61½ standards boards	.....
J. Burstall & Co.	16½ stds. deals and b ards	.....
R. Cox & Co.	15 stds. boards	.....
Watson & Todd.	60 stds. boards	.....
R. Cox & Co.	100 stds. deals and boards	.....
Grand Trunk Ry.	515 pcs. lumber	74, 00
C. P. R.	1,743 pcs. hardwood lumber	78,300

THE BOSTON MARKET.

There is a fair demand at Boston for spruce lumber, with the supply limited. The market is strong, and there is nothing to hinder prices being advanced except that the trade had enough of advancing prices a year ago, which resulted in nearly killing the demand. Now the principal spruce men seem to be satisfied to accept of a good trade at fair prices. In some instances, however, prominent lumber concerns are actually getting $2 per thousand above quotations for certain grades of spruce lumber. Boards continue especially firm: Ten and 12 inch, dimensions, $17; 9 inch and under, $15; 10 and 12 inch, random lengths, 10 feet and up, $16.50; 2x3, 2x4, 2x5, 2x6 2x7, and 3x4, 10 feet and up, $13.50; all other randoms, 9 inch and under, 10 feet and up, $15.60; 5 inch and up merchantable boards, $15; matched boards, $17 to $17.50; out spruce boards, $12; bundle furring, $12.50.

Hemlock lumber continues firm, with offerings small. Boards are very firm: Canadian and eastern, $13 to $15; Pennsylvania, $16 to $17; boards, rough, $12 to $12.50; planed, $13 to $14.

White pine is firm, with the request fairly good: Uppers, 1 inch, $56 to $58; 1¾ to 2 inch, $58 to $60; 3 and 4 inch, $68 to $72; selects, 1 to 4 inch, $52 to $64; fine common, 1 to 3 inch, $45 to $60; sheathings, $38 to $54; barn boards, $28 to $30; coffin boards, $24 to $26.

Hardwoods are steady in prices, with a fair trade. Whitewood is firmer and is selling better: 1 inch, whitewood, $36 to $38; thicker, $38 to $42; 5/8 inch, $30 to $33; saps, inch, $25 to $30; common, $23 to $25; quartered oak, $65 to $75; fancy, $85 to $95; plain oak, $35 to $45; ash, $38 to $45; cherry, $90 to $130; maple, $30 to $40; sycamore, quartered inch, $40 to $50; walnut, $100 to $130.

Shingles are dull, and the supply coming forward has been increased of late: Extra cedar, $2.65 to $2.75; clear, $2.30 to $2.40; second clear, $2 to $2.10; clear white, $1.75 to $2; extra, No. 1, $1.50; Oregon, 16 inch, five butts to the inch, strictly clear, $3.15; California red wood, $3 to $3.50.

Clapboards are unchanged because they are scarce. The demand is also small: Extra spruce, $28 to $30; clear, $26, to $28; second clear, $24 to $25; pine, extra, $36 to $38; clear, $33 to $37; second clear, $28 to $30; California redwood, clear, $42.50 to $45; second grade, $40 to $42.

Laths are doing better, with the market well sustained: One and five-eighths, $2.65 to $2.75; 1½ inch, $2.35 to $2.50.

The steamer Crewe has been chartered to load deals at St. John, N.B., for w.c. England.

E. D. Brownell, lumber dealer, Amherst, N.S., is announced to have assigned to A. T. Etter.

HANDLING SHINGLE SAWS.

By J. W. Ball, in Wood-Worker.

I shall not attempt to teach the art of saw hammering, but hope to say something that may be of benefit to the ordinary filer and sawsmith. There are so many opinions concerning the tension in a shingle saw that some filers do not know which is right. Allow me to state that I never saw one do good work until it was properly hammered. Do not go wild about some person's ideas, but try them, and if you find one that gives satisfaction, adopt it.

Saws change; the gauge, size and speed change, as well as the output of the mill, so there must be changes from time to time in the art of hammering. Take, for instance, a saw of 14-gauge rim by 8-gauge center, 42-inch, then take a 10x18 gauge 42-inch, and see the difference.

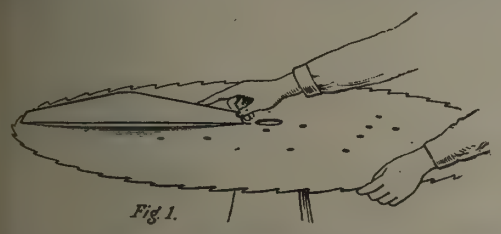

Fig 1.

The 14-gauge used to do about half the work that people now expect the ordinary filer to accomplish with the 18-gauge. Surely there is not more backbone to the 18-gauge than to the 14, but to overcome it they speed the thin saw much higher, which means more care, more hammering and more tension, and this requires steadier motion and exactness of machine work.

The arbor should be turned true and well balanced. I like to have a shingle saw collar turned true from rim to center. Some order them low at the center, but experience teaches me to have them true and alike. I have used paper between the saw and collar, to level it, which is a help where the machine shop is not handy. Some claim that by having the collar low at the center it helps to keep the saw from running out of the block, but a saw properly hammered will go to a straight line if properly dressed.

A few days ago I was called upon to hammer two 44-inch 17-gauge saws which had 24-inch collars. These saws were of excellent temper and steel, also well ground. They had been sent back to the factory, but would not work. I tested them, also the collars. One collar was high at the center, so I made a ring of paper and placed it around the outer edge of the collar, which levelled it all right. Then I tested the saws. The tension was very good at a point about two-thirds the distance from center to rim, but the center was very fast or tight, which would not permit the saw to cut straight; it would not

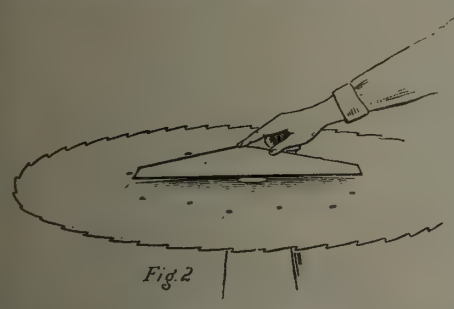

Fig 2

make even cuts, no matter what the speed might be. I hammered this saw until it showed even tension from rim to center, or, in other words, from rim to rim. I then hammered the other one, leaving them both alike as near as possible. You could not tell one from the other by the way they run, and both went to our entire satisfaction, not even trembling at extreme run, and would do good work in maple or pine grape basket tops and bottoms from ½-inch thick, 16 inches long, down to 1-5-inch thick, through knots and curls, cutting bastard stock, which tries a thin saw, as the block may have a right-hand grain for the saw to start into and come out of a left-hand grain, which will change the course of the saw if anything will. This may satisfy you that the center of a shingle saw must be opened to the balance of the saw in order to work well, no matter what the size of the collar may be. Don't dispute this without trying it.

I give herewith a sketch showing the tension in a saw that will do fine work; it is a photograph of one of these 44-inch saws that run so nicely. It has even tension all through, both sides alike, and runs about 1,450 per minute. This we will call No. 1. No. 2 is a photograph of a saw with a tight center and plenty of tension out toward the rim, but will not do good work.

In straining a shingle saw do not use the cross-face hammer to stretch the steel with, but use a round-face hammer and not very sharp. Be sure you have a tight rim on your saw before you try to run it. Some strain a saw a little more on the block side for horizontal machines. This is a help, but do not go too close to the rim with this treatment or your saw will run into the block, cutting a thick shingle, and will not last as long as if dished more near the center.

Do not hammer the rim of a thin saw any more than is strictly necessary, as the more you work the steel the faster it loses its strength. Use a short straightedge when evening up the tension, and be sure that it shows even tension from rim to center all around.

Now comes the use of the full-swaged tooth. This is a good tooth, but requires lots of work to keep it in proper shape; but without a doubt it is the proper shaped tooth for a rip saw. But do not overlook "economy," as some timber cuts well with the spring-set tooth, while some other kinds cut equally as well with full-swage; either will do the work if properly handled.

When testing your shingle saw for lumps, let the center rest upon the anvil, then use straightedge crosswise of a line from center to rim, which will readily show all bad lumps. Mark each one, and as fast as you level them erase the marks. Go around and around your saw until you are satisfied you can find no more. Use your tension gauge the same way, only letting the saw rest on each rim when you are evening up the tension on leveled side of saw, but do not try to use straightedge crosswise of the bevel on collar side. Always examine the tension in your saw after you have removed the lump, if any, as you may change the tension by taking out the little lumps.

Some ask me how heavy a hammer I would advise them to use on a shingle saw. I use a 4¼ pound hammer with not a very sharp face. But remember that you can spoil a thin saw with a 2½ pound hammer if you do not use judgment when using it.

CHIMNEY CONSTRUCTION.*

By E. J. Philip.

The construction of chimneys does not give us much thought, like many other things we have to deal with, until we have to construct one, and when you begin to look up facts it will surprise you how little real information there is to be had on the subject. In the old country, where there are many large chimneys used for all purposes, there is on record much information both in reference to building, straightening and taking down. Most of the very high chimneys are used for other purposes than producing draft to burn coal, such as carrying off the poisonous gases from chemical works, etc. There is a book published called "Tall Chimney Construction," which gives the general details of many stacks built in the old country, and from these records you can make formula to guide you in designing a new stack.

Let us consider what is the proper method of designing a chimney for any given purpose. The first question is, "What is the chimney for, or what is it to do?" for this will govern some details of the shell. For instance, if it is to produce draft for ventilation, it will not require to be lined with fire-brick, nor will there be any benefit in putting in a loose lining.

We will suppose the chimney under our consideration is to induce draft to burn coal, as that is the most likely duty of any chimney that we will be connected with.

The size of the flue is the first dimension you will require, and it will depend on the quantity of coal to be burned and the velocity of the gases up the shaft. It is easily understood that as chimney powers increase, the dimensions do not increase proportionately. To illustrate this I will take some figures from a table in a reliable work:

A chimney 70 ft. high, 30" diameter = 100 h.p.
" " 200 ft. " 66 in. " = 1000 h.p.

That is, the high chimney with five times the area equals ten times the power; and while I am not sure that this proportion is right, it seems to illustrate the way the formula works. The only correct way is to calculate the number of cubic feet of gas going up the chimney at the average velocity, and the area of this column is the area of the chimney. The rate of combustion depends on the draft, and the draft depends on the height of the chimney and the temperature of the gases. The height of the stack is nearly always determined by the surroundings, as the stack must of necessity be above any buildings or hills, and I might say that the average stack is higher than is necessary. However, when there are no buildings or hills, the following formula will establish the height. This is known as Gale's formula:

$$= H\frac{120}{T}\left(\frac{F}{g}\right)^2$$

After getting the height, the area may be obtained by Kent's formula, which is: $A=\frac{.06F.}{\sqrt{H}}$ In this rule the effective area is obtained and is two inches less all round than the actual area. This two inches is to make up the friction of shaft. We now have area of chimney and height of it. I might say that experience has shown that to burn hard screenings requires 175 feet stack, for buckwheat 150 feet, and for soft coal 80 to 100 feet. This is a pretty fair basis to start from. We will suppose our chimney is, say, 100 feet high and 40 square feet area. It looks a simple matter to construct a stack having this information, and so it is, only you must go about it in the right way. To continue your calculations after getting the size, you start at the top and work down. Authorities say that a chimney having a flue over five feet in diameter shall be 1½ brick thick at the top; from three to five feet in diameter, one brick; and under three feet, half a brick. A chimney five feet or over would have this size for the first 25 feet down and would increase ½ brick for each 25 feet. This, according to calculations, is almost too much. It can run 30 to 40 feet each stage, but will depend on kind of material, that is, whether hard or soft brick, and whether built in cement or lime; 30 to 40 feet will work with good material and workmanship. Having laid out the different thicknesses of wall, and knowing the batter, which varies with different builders and conditions from 1/16 to ⅜ of 1 inch, having this you can get the weight of shaft or chimney proper. In large chimneys it is usually specified what they shall weigh per cubic foot. After getting weight you can decide how much bearing surface you will require for the kind of soil you have at the foundation. Various bearing powers of soil are given as follows: Hard rock, native bed, 100 tons sq. foot; clay, dry, 4 to 6; moderate dry, 2 to 4; soft, 1 to 2; gravel and coarse sand, 8 to 10; sand compact and well cemented, 4 to 6; clean dry sand, 2 to 4; quicksand and alluvial soils, ½ to 1 ton per square foot.

When the ground is soft you would require piling or timbering, and to spread it out over a considerable surface. The weight in tons divided by bearing power of soil gives surface required. Wind pressure is also an important factor in getting the area of the base. I will not go into the rules affecting wind pressure, but experience has shown that at the base of shaft proper its diameter shall be 1/10th of height for square chimney, 1/11 for octagon, and 1/12 for round. In considering wind pressure it is usually figured at from 25 to 56 lbs., by different authorities. This must be resisted by foundation, as you can see that if the chimney rocks over with wind it will throw its entire weight on one side of foundation. In considering wind pressure it is necessary to take into account whether chimney is protected by buildings or standing in an open field. If the chimney is built into a building, windage may be almost disregarded except for piece above the roof.

There has been a great deal written and many discussions as to the merits of different shaped flues, but experience and tests have shown that a parallel flue is the best or as good as any shape. The arguments for taper flues are something like this, that the gases slow down due to cooling as they go up, and consequently they require more room, and the flue should get larger; others say that the gases cooling down contract in volume, and therefore the flue should get smaller so as to take the same shape as the column of gas. Experience has shown that both are correct. The gases contract and get smaller and consequently need less room, but they also slow down in velocity, due to their greater weight and therefore need more room. In this way they just balance up and require a parallel flue. Authorities say a round parallel flue is the best for all purposes, and the nearest approach is the next best.

The chimney should be finished with a cap of some material that will stand the weather. I like cast iron best, but a cap can be moulded of Portland cement, and if the stack is for smelting work, of fire clay. These materials stand well, and if there is a ladder on the chimney they can be kept in repair. A ladder should always be built on the shaft, as it makes a means of examining it at any time, and if repairs are needed they can be done easily.

Lightning conductors are also approved and disapproved; but if a chimney is the highest object in its vicinity it is likely to take the discharge from a storm over it, and a properly erected conductor will carry it off, although many stacks are standing without any.

* Paper read before the Canadian Association of Stationary Engineers.

THE NEWS.

—S. P. Benjamin has sold his mill at White Rock, N.S., for $3,000.

—Ker & Harcovrt, of Paary Sound, are building a bobbin factory at Wiarton, Ont.

—W. F. Forest has commenced the erection of a new sash and door factory at Atwood, Ont.

Lequime & Powers are removing their sash and door factory from Midland to Greenwood, B.C.

—The Cloverdale Milling Company has been established at Cloverdale, B.C., to manufacture lumber and shingles.

—Henry Pedwell, of Thornbury, Ont., has purchased a site for a saw mill at Lion's Head, and intends to build at once.

—The Mississaga Lumber Company has been incorporated, with capital of $72,000, and head office at Hamilton, Ont.

—The dissolution is announced of Bashford & Fisher, hardware and lumber, Rosthern, N.W.T., W. B. Bashford continuing.

—Mr. Misner is building an addition to his mill at Springfield, Ont., in which to manufacture heading and cheese boxes.

—It is repoted that eastern capitalists contemplate the erection of a factory at Norman, Ont., for the utilization of the waste of the saw mill.

—Cowan & Company, of Galt, are supplying machinery for the new wood-working factory of John McDonald & Company, at Chatham, N.B.

—Arthur S. Potter and J. B. McIntyre, of Pittsburg, Pa., are said to be investigating a timber belt in British Columbia, with a view to building a large saw mill.

A dispatch from Warren, Ont., states that Mr. Malloy, agent for J. R. Booth, of Ottawa, is offering from $40 to $50 per month and board for log hewers and scalers.

—A Buffalo firm have made a proposition to the town council of Welland, Ont., to establish a factory in that town for the manufacture of wooden tanks, boxes, etc.

—The Watson Point Lumber Company have commenced work on the building of a new saw mill at Sydney, C.B., which will have a capacity of 20,000 feet of lumber per day.

—Cockburn & Sons, of Sturgeon Falls, Ont., have entered a claim against the Edward Lloyd Company for $10,890 alleged to be due under contract for cutting timber.

—Sawyer & Mann, sash and door manufacturers, Revelstoke, B.C., have dissolved partnership, and the business will be continued under the name of Sawyer Bros.

—An excelsior factory is about to be established at Port Arthur, Ont., by Wylie & Company. The wood ussd will be poplar, of which there is a great quantity in the district.

—Hemlock stumpage has greatly advanced in price in late years, until it is now held almost as high as that of pine. The sale of hemlock bark covers a portion of the cost of logging.

—The mill which Edmund Hall, of Saginaw, is building at Sarnia, Ont., is not likely to commence operations before next spring. It will have an annual capacity of about 20,000,000 feet.

—H. L. M. Weller, of Toronto, has entered an action against the Blind River Lumber Company claiming commissions amounting to $3,000 on the sale of a saw mill property at Blind River.

—The J. H. Still Manufacturing Company, of St. Thomas, Ont., is seeking incorporation, to carry on the business of manufacturing wooden handles and other kinds of wooden-ware.

—The Siemon Bros. Manufacturing Company, of Wiarton, Ont., have installed a new 175 h.p. engine in their furniture factory. The machinery for their new table factory will likely be put in this month.

—George Wilson & Company, of St. Catharines, Ont., have made a proposition to the council to build a box factory to cost upwards of $15,000 in consideration of exemption from taxation and free water.

—The London Veneer Company is building a factory at London, Ont., for the manufacture of veneered boxes, chiefly for export. The company is composed of Messrs. Craig, Fitzgerald, Scandrett, and Forestal.

—Napoleon Matthew, an employee at J. R. Booth's saw mill at Ottawa, disappeared from his home in Hull two weeks ago, and has not been seen or heard from since. Foul play was at first suspected, but it is now thought Matthiew left for the shanties.

—Arpin, Scott & Finger, of Grand Rapids, Mich., are negotiating for the purchase of the large mill of Graham, Horne & Company at Fort William, Ont. If not secured, they will build a mill. The firm own 150,000,000 feet of pine timber on Pigeon river, on both sides of the border.

—Information from Ottawa received early in October stated that Roy & Savigny had just sent forty men to Crow river to work for Gillies Bros., of Braeside, and that they were then engaging 120 men, at an average wage of $28 per month, to send to the Holland & Emery Lumber Company at Wahnapitae. Chevrier & Limoges have also booked a large number of men for the camps in the Ottawa and Georgian Bay districts.

—The first of the New Ontario exploring parties returned to Toronto early in October. Mr. Baird, who was in charge of the party, reports that they started out from Grassett's Station, on the C.P.R., and travelled north and east for nearly three hundred mlies along the Moose river, turning back when only about six days' journey from James Bay. They found an almost unlimited quantity of spruce, poplar, whitewood and tamarac, also a little red and white pine and cedar.

CASUALTIES.

—Elzear Desceand, of Hull, was recently killed at J. R. Booth s saw mill at the Chaudiere. He was crushed between the head blocks of the log carriage and some timber projecting from the end of the carriage track, and died almost immediately.

—Benjamin McDonald was accidentaly killed in a lumber camp near Warren, Ont., in September last. Deceased was a native of Ottawa.

—Wm. Burd, who had been employed in Playfair's mill at Midland, Ont., for the past six years, was caught in the shafting and instantly killed on October 2nd. He was 43 years of age and leaves a widow and ones on.

A. Clothier, of Kemptville, Ont., says of the CANADA LUMBERMAN: "I have been very much pleased with THE LUMBERMAN, and think every millman should subscribe for it."
